ILLUSTRATED.

PHILADELPHIA:
J. W. LEWIS & CO.
1889.

PUBLISHERS' PREFACE.

In presenting the within History to the people of Worcester County the Publishers desire to state that when the preparation of the work had been finally decided upon, an earnest effort was made to secure the leading literary talent of this section of the Commonwealth to prepare the manuscript. The result was a gratifying success. Those most familiar with the historic literature of the County were engaged, whose names appear at the head of their respective chapters. These gentlemen approached the task with a spirit of impartiality and with a determination to prepare a work which should reflect credit alike upon the County, its citizens and themselves, and the Publishers feel that no effort has been spared either by Publishers or writers to faithfully present the history of the territory embodied herein, from its Indian occupancy to the present proud position it occupies among the counties of the Commonwealth.

Philadelphia, February 20, 1889.

CONTENTS OF VOL. I.

GENERAL HISTORY.

CHAPTER I.

WORCESTER COUNTY . . . i

CHAPTER II.

THE BENCH AND BAR . . . xvii

TOWN HISTORIES.

CHAPTER I.

LANCASTER 1

The Nashaways and their Home—King's Purchase—The Nashaway Planters—The Town Grant—The Covenant—Land Allotments—Death of Showanon.

CHAPTER II.

LEICESTER 686

Settlement.

of Common Pleas was established, to be held in each county at specified times and places, with four judges to be appointed by the Governor from within the county. This court was substantially the same as the Inferior Court of Common Pleas. The judges of the old court were appointed to the new, and no changes occurred until 1795, when Michael Gill, of Princeton, and Elijah Brigham, of Westboro', succeeded Moses Gill, who was chosen Lieutenant-Governor, and Samuel Baker. In 1798 John Sprague, of Lancaster, succeeded Artemas Ward, who resigned, and in 1800 Dwight Foster, of Worcester, succeeded Michael Gill. In 1801 Jonathan Warner succeeded John Sprague, and at a later date Benjamin Heywood, of Worcester, was appointed, completing the list of judges of this court up to its abolishment, June 21, 1811.

At the above date an act was passed providing that the Commonwealth, except Dukes County and the county of Nantucket, should be divided into six circuits as follows: the Middle Circuit, consisting of the counties of Suffolk, Essex and Middlesex; the Western Circuit, consisting of the counties of Worcester, Hampshire and Berkshire; the Southern Circuit, consisting of the counties of Norfolk, Plymouth, Bristol and Barnstable; the Eastern Circuit, consisting of the counties of York, Cumberland and Oxford; the Second Eastern Circuit, consisting of the counties of Lincoln, Kennebec and Somerset; and the Third Eastern Circuit, consisting of the counties of Hancock and Washington; and that there shall be held in the several counties, at the times and places now appointed for holding the Courts of Common Pleas, a Circuit Court of Common Pleas, consisting of one chief justice and two associate justices, to whom were to be added two sessions justices from each county to sit with the court in their county.

This court was abolished on the 14th of February, 1820, and the Court of Common Pleas established with four justices, one of whom, it was provided by law, should be commissioned chief justice. On the 1st of March, 1843, the number of judges was increased to five; March 18, 1845, to six; and May 24, 1851, to seven. On the 5th of April, 1859, the court was abolished, and the present Superior Court established, with ten judges, which number was increased May 19, 1875, to eleven, and to thirteen February 27, 1888.

The judges of the Common Pleas Court, founded in 1820 and terminating in 1859, were Artemas Ward, chief justice, commissioned 1820; John Mason Williams, commissioned as judge in 1820, and chief justice in 1839; Solomon Strong, 1820; Samuel Howe, 1820; David Cummins, 1828; Charles Henry Warren, 1839; Charles Allen, 1842; Pliny Merrick, 1843; Joshua Holyoke Ward, 1844; Emory Washburn, 1844; Luther Stearns Cushing, 1844; Daniel Wells, chief justice, 1845; Harrison Gray Otis Colby, 1845; Charles Edward Forbes, 1847; Edward Mellen, 1847, and chief justice, 1854; George Tyler Bigelow, 1848; Jonathan Coggswell Perkins, 1848; Horatio Byington, 1848; Thomas Hopkinson, 1848; Ebenezer Rockwood Hoar, 1849; Pliny Merrick, 1850; Henry Walker Bishop, 1851; George Nixon Briggs, 1853; George Partridge Sanger, 1854; Henry Morris, 1855; and David Aikin, 1856,—the last five of whom, with Judges Mellen and Perkins, composed the bench at the time of the abolishment of the court.

The judges of the Superior Court, since its foundation, in 1859, have been Charles Allen, commissioned chief justice 1859; Julius Rockwell, commissioned 1859; Otis Phillips Lord, 1859; Marcus Morton, Jr., 1859; Seth Ames, 1859, chief justice, 1867; Ezra Wilkinson, 1859; Henry Vose, 1859; Thomas Russell, 1859; John Phelps Putnam, 1859; Lincoln Flagg Brigham, 1859, chief justice, 1869; Chester Isham Reed, 1867; Charles Devens, Jr., 1867; Henry Austin Scudder, 1869; Francis Henshaw Dewey, 1869; Robert Carter Pitman, 1869; John William Bacon, 1871; William Allen, 1872; Peleg Emory Aldrich, 1873; Waldo Colburn, 1875; William Sewall Gardner, 1875; Hamilton Barclay Staples, 1881; Marcus Perrin Knowlton, 1881; Caleb Blodgett, 1882; Albert Mason, 1882; James Madison Barker, 1882; Charles Perkins Thompson, 1885; John Wilkes Hammond, 1886; Justin Dewey, 1886; Edgar Jay Sherman, 1887; John Lothrop, 1888; James R. Dunbar, 1888; Robert R. Bishop, 1888.

The Circuit Court of Common Pleas, founded June 21, 1811, had a jurisdiction which was at various times extended and diminished. Its history was closely connected with that of the Court of General Sessions of the Peace. The latter court remained substantially the same during the life of the Province and up to June 19, 1807, when it was enacted that it should consist of one chief justice, or first justice, and a certain number of associate justices for the several counties, to be appointed by the Governor with the consent of the Council. These justices were to act as the General Court of Sessions in the place of the justices of the peace.

On the 19th of June, 1809, the powers and duties of the General Court of Sessions were transferred to the Court of Common Pleas, and on the 25th of June, 1811, it was enacted "that from and after the first day of December next, an act made and passed the 19th day of June, 1809, entitled 'An Act to transfer the powers and duties of the Courts of Sessions to the Courts of Common Pleas,' be and the same is hereby repealed, and that all acts and parts of acts relative to the Courts of Sessions, which were in force at the time the act was in force, which is hereby repealed, be and the same are hereby revived from and after the said first day of September next."

On the 28th of February, 1814, it was enacted that the act of June 25, 1811, "be repealed, except so far as it relates to the Counties of Suffolk, Nantucket and Dukes County, and that all petitions, recogni-

zances, warrants, orders, certificates, reports and processes made to, taken for, or continued, or returnable to the Court of Sessions in the several counties, except as aforesaid, shall be returnable to, and proceeded in, and determined by the respective Circuit Courts of Common Pleas, which was established June 21, 1811." It was further provided "that from and after the first day of June next, the Circuit Courts of Common Pleas shall have, exercise and perform all powers, authorities and duties which the respective Courts of Sessions have, before the passage of this act, exercised and performed, except in the Counties of Suffolk, Nantucket and Dukes County." And it was further provided that the Governor, by and with the advice of the Council, be authorized to appoint two persons in each county who shall be session justices of the Circuit Court of Common Pleas, and sit with the justices of said Circuit Court in the administration of the affairs of their county and of all matters within said county of which the Courts of Sessions had cognizance. The affairs of the county were thus administered until February 20, 1819, when it was enacted "that from and after the first day of June next an act to transfer the powers and duties of the Courts of Sessions to the Circuit Courts of Common Pleas, passed February 28, 1814, be hereby repealed," and it was further provided "that from and after the first day of June next the Courts of Sessions in the several counties shall be held by one chief justice and two associate justices, to be appointed by the Governor, with the advice and consent of the Council, who shall have all the powers, rights and privileges, and be subject to all the duties which are now vested in the Circuit Courts of Common Pleas, relating to the erection and repair of jails and other county buildings, the allowance and settlement of county accounts, the estimate, apportionment and issuing warrants for assessing county taxes, granting licenses, laying out, altering and discontinuing highways, and appointing committees and ordering juries for that purpose."

The management of county affairs remained in the hands of the Court of Sessions until March 4, 1826, when that part of its duties relating to highways was transferred to a new board of officers denominated "Commissioners of Highways." It was provided by law "that for each county in the Commonwealth, except the Counties of Suffolk and Nantucket, there shall be appointed and commissioned by His Excellency the Governor, by and with the advice and consent of the Council, to hold their offices for five years, unless removed by the Governor and Council, five commissioners of highways, except in the Counties of Dukes and Barnstable, in which there shall be appointed only three, who shall be inhabitants of such county, one of whom shall be designated as Chairman by his commission." It was further provided that the commissioners should report their doings to the Court of Sessions for record, and that said court should draw their warrants on the county treasurer for the expenses incurred by the commissioners in constructing roads laid out by them.

On the 26th of February, 1828, the act establishing the Courts of Sessions, passed February 20, 1819, and the act in addition thereto, passed February 21, 1820, the act increasing the numbers and extending the powers of the justices of the Courts of Sessions, passed February 6, 1822, and the act in addition to an act directing the method of laying out highways passed March 4, 1826, were repealed. The repealing act provided that "there shall be appointed and commissioned by His Excellency, the Governor, by and with the advice and consent of the Council, four persons to be county commissioners for each of the counties of Essex, Middlesex, Norfolk and Worcester, and three persons to be county commissioners for each of the other counties of the Commonwealth, except the county of Suffolk," "that the clerks of the Courts of Common Pleas within the several counties shall be clerks of said county commissioners," and "that for each of the counties in the Commonwealth except the counties of Suffolk, Middlesex, Essex, Worcester, Norfolk and Nantucket, there shall be appointed and commissioned two persons to act as special county commissioners." Under this law Jared Weed, Aaron Tufts, William Eaton and Edmund Cushing were appointed in 1828, and served until 1832, when James Draper succeeded Aaron Tufts. No further changes occurred in the board until 1835, when, on the 8th of April in that year, a law was passed providing that in every county, except Suffolk and Nantucket, the judge of Probate, the register of probate and clerk of the Court of Common Pleas, should be a board of examiners, and that on the first Monday in May, in the year 1835, and on the first Monday in April in every third year thereafter, the people should cast their votes for three county commissioners and two special commissioners. Under this law John W. Lincoln, William Crawford and Ebenezer D. Ammidown were chosen in 1835; William Crawford, Samuel Taylor and Ebenezer D. Ammidown, in 1838; William Crawford, David Davenport and Charles Thurber, in 1841; William Crawford, Jerome Gardner and Joseph Bruce, in 1844; the same in 1847; Otis Adams, Bonum Nye and Asaph Wood, in 1850, and the same in 1853. On the 11th of March, 1854, it was provided by law that the county commissioners then in office in the several counties, except in Suffolk and Nantucket, shall be divided into three classes, those of the first class holding their offices until the day of the next annual election of Governor, those of the second class until 1855, and those of the third class until the election in 1856, the commissioners then in office determining by lot to which class each should belong, and that at each annual election thereafter one commissioner should be chosen for three years. Under the new law the office of commissioner has been filled by Otis Adams, Bonum

Nye, Asaph Wood, Zadock A. Taft, James Allen, Velorus A. Taft, Amory Holman, J. W. Bigelow, William O. Brown, Henry G. Taft, H. E. Rice, George S. Duell and James H. Barker.

The Superior Court of Judicature which was finally established June 26, 1699, but which had been in operation since the act of November 25, 1692, which was disallowed by the Privy Council, formed a part of the judicial system of the province until February 12, 1781. It has been found difficult by some to draw the line between the death of the Superior Court of Judicature and the birth of the Supreme Judicial Court. An act was passed February 12, 1781, fixing the salaries of the justices of the Supreme Judicial Court, and yet the law establishing that court was not passed until July 3, 1782. Sufficient light is thrown on this discrepancy to explain it by an act passed February 20, 1781, which in its preamble uses the language, "Whereas by the Constitution and Frame of Government of the Commonwealth of Massachusetts the style and title of the Superior Court of Judicature is now the Supreme Judicial Court of the Commonwealth of Massachusetts," and which in the body of the act uses the further language, "That the Court which hath been or shall be hereafter appointed and commissioned according to the Constitution as the Supreme Judicial Court of the Commonwealth, etc." During its existence the judges on its bench were:

	Commissioned		*Commissioned*
William Stoughton	1692	Thomas Greaves	1737
Thomas Danforth	1692	Stephen Sewall	1739
Wait Winthrop	1692	Nathaniel Hubbard	1745
John Richards	1692	Benjamin Lynde	1745
Samuel Sewall	1692	John Cushing	1747
Elisha Cooke	1695	Chambers Russell	1752
John Walley	1700	Peter Oliver	1756
John Saffin	1701	Thomas Hutchinson	1761
Isaac Addington	1702	Edmund Trowbridge	1767

John Cushing	1729	Jedediah Foster	1776
Jonathan Remington	1733	James Sullivan	1776
Richard Saltonstall	1736	David Sewall	1777

The chief justices of the court were, William Stoughton, 1692; Isaac Addington, 1702; Wait Winthrop, 1708; Samuel Sewall, 1718; Benjamin Lynde, 1718; Paul Dudley, 1745; Stephen Sewall, 1752; Thomas Hutchinson, 1761; Benjamin Lynde, 1769; Peter Oliver, 1772; William Cushing, 1775.

The Supreme Judicial Court, which superseded the Superior Court of Judicature, was established by law February 20, 1781. It was established with one chief justice and four associate justices, which number was increased to six in 1800, and the State divided into two circuits—the East, including Essex County and Maine, and the West, including the remainder of the State except Suffolk County. In 1805 the number of associates was reduced to four, and in 1852 increased to five. In 1873 the number of associates was increased to six, making the court as since constituted to consist of seven judges, including the chief justice.

The judges of the court have been

Simeon Strong	1801	James Denison Colt	1868
George Thacher	1801	Seth Ames	1869
Theodore Sedgwick	1802	Marcus Morton	1869
Isaac Parker	1806	Wm. Crowninshield Endicott	1873
Theophilus Parsons	1806	Charles Devens	1873
Charles Jackson	1813	Otis Phillips Lord	1875
Daniel Dewey	1814	Augustus Lord Soule	1877
Samuel Putnam	1814	Wolbridge Abner Field	1881
Samuel Sumner Wilde	1815	Charles Devens	1881
Levi Lincoln	1824	William Allen	1881
Marcus Morton	1825	Charles Allen	1882
Lemuel Shaw	1830	Waldo Colburn	1882
Charles Augustus Dewey	1837	Oliver Wendell Holmes, Jr.	1882
Samuel Hubbard	1842	William Sewall Gardner	1885
Charles Edward Forbes	1848	Marcus Perrin Knowlton	1887
Theron Metcalf	1848		

The chief justices of the court have been William Cushing, 1781; Nathaniel Peaslee Sargent, 1790; Francis Dana, 1791; Theophilus Parsons, 1806; Samuel Sewall, 1814; Isaac Parker, 1814; Lemuel Shaw, 1830; George Tyler Bigelow, 1860; Reuben Atwater Chapman, 1868; Horace Gray, 1873; Marcus Morton, 1882.

The administration of probate affairs up to the accession of President Dudley, in 1685, was in the hands of the County Court; Dudley assumed probate jurisdiction, but delegated his powers in some of the counties to a judge, appointed by himself. Under the administration of Andros he assumed jurisdiction in the settlement of estates exceeding fifty pounds, while judges of probate had jurisdiction in estates of a lesser amount. The provincial charter gave jurisdiction to the Governor and Council in all probate matters, who claimed and exercised the right of delegating it to judges and registers of probate in the several counties. On the 12th of March, 1784, a Probate Court was established by law, of which the judge and register were to be appointed by the Governor, until, under an amendment of the Constitution, ratified by the people May 23, 1855, it was provided by law that in 1856, and every fifth year thereafter, the register should be chosen by the people for a term of five years. In 1856 a Court of Insolvency was also established for each county, with a judge and register, and in 1858 the offices of judge and register of both the Probate and Insolvency Courts were abolished, and

the offices of judge and register of probate and insolvency were established. It was also provided that the registers of probate and insolvency should be chosen by the people for a term of five years, in that year and every fifth year thereafter. In 1862 the Probate Court was made a Court of Record.

The judges of probate in Worcester County have been

John Chandler, of Woodstock	1731 to 1740
Joseph Wilder, of Lancaster	1740 to 1756
John Chandler, of Worcester	1756 to 1762
John Chandler, Jr., of Worcester	1762 to 1775
Jedediah Foster, of Brookfield	1775 to 1776
Artemas Ward, of Shrewsbury	1776 to 1778
Levi Lincoln, of Worcester	1776 to 1783
Joseph Dorr, of Ward (Auburn)	1783 to 1801
Nathaniel Paine of Worcester	1801 to 1836
Ira M. Barton, of Worcester	1836 to 1844
Benj. F. Thomas, of Worcester	1844 to 1848
Thomas Kinnicutt, of Worcester	1848 to 1857
Dwight Foster, of Worcester	1857 to 1858
Henry Chapin, of Worcester (P. & In.)	1858 to 1878
Aden Thayer, of Worcester (P. & In.)	1878 to 1888
Wm. T. Forbes, of Westboro (P. & In.)	1888

During the short life of the Court of Insolvency the judges were Alexander H. Bullock and W. W. Rice, and the register was John J. Piper. The registers of Probate have been John Chandler, Jr., of Worcester; Timothy Paine, of Worcester; Clarke Chandler, of Worcester; Joseph Wheeler, of Worcester; Theophilus Wheeler, Charles G. Prentice, John J. Piper (P. & In.), Charles E. Stevens (P. & In.) and Frederick W. Southwick (P. & In.).

During the existence of the Massachusetts Colony the executive officer of the court was called either "beadle" or "marshal," except under Dudley, when he was called "provost marshal," and under Andros, when he was called "sheriff." Since the union of the Plymouth and Massachusetts Colonies, and the establishment of the province of Massachusetts Bay, in 1692, he has been called "sheriff." Under the province charter he was appointed by the Governor, and continued to be after the adoption of the Constitution until 1831. On the 17th of March in that year a law was passed providing that the Governor should appoint and commission sheriffs for terms of five years, and giving him power to remove them from office at pleasure. Under the nineteenth article of amendments of the Constitution, ratified by the people in 1855, a law was passed in 1856 providing that in that year, and every third year thereafter, a sheriff should be chosen by the people of each county at the annual election.

The sheriffs of Worcester County have been as follows:

	Appointed
Daniel Gookin	1731
Benjamin Flagg (*vice* Gookin, deceased)	1743
John Chandler (*vice* Flagg, deceased)	1751
Gardner Chandler (*vice* Chandler, made judge)	1762
Simeon Dwight (under the new order)	1775
William Greenleaf (*vice* Dwight, deceased)	1778
John Sprague	1788
Dwight Foster (*vice* Sprague, resigned)	1792
William Caldwell	1793
Thomas W. Ward	1805
Calvin Willard	1824
John W. Lincoln	1844
James W. Estabrook	1851
George W. Richardson	1853
	Chosen
J. S. C. Knowlton	1856
A. B. R. Sprague	1871

In the colony of Massachusetts the clerks of the courts were appointed by the courts. Under the Province the clerks of the County Courts and of the Superior Court of Judicature, and afterwards of the Supreme Judicial Court, until 1797, were distinct, and the clerk of the two latter courts had his office in Boston. The courts continued to hold the appointment of clerks until 1811, when it was transferred to the Governor and Council. In 1814 it was given to the Supreme Judicial Court, and so remained until 1856, when it was provided by law that in that year, and every fifth year thereafter, clerks should be chosen by the people in the several counties. The clerks of the courts in Worcester County have been as follows:

	Appointed
John Chandler (2d)	1731
Timothy Paine	1751
Levi Lincoln	1775
Joseph Allen	1776
William Stedman	1810
Francis Blake	1814
Abijah Bigelow	1817
Joseph G. Kendall	1832
Charles W. Hartshorn	1848
Joseph Mason	1852
	Chosen
Joseph Mason	1856
John A. Dana	1876
Theodore S. Johnson	1881

Timothy Paine, the second on the list of clerks, was appointed joint clerk with John Chandler, and continued sole clerk after the promotion of Mr. Chandler to the bench.

The assistant clerks have been,—

William A. Smith	1847 to '64
John A. Dana	1864 to '76
Wm. T. Harlowe	1876 to —

During the colonial period and up to 1715 clerks of courts were registers of deeds, but on the 26th of July, in that year, it was provided by law "that in each county some person having a freehold within said county to the value of at least ten pounds should be chosen by the people of the county register of deeds for the term of five years." This practice continued until 1855, having been confirmed and renewed by a law of 1781. In 1855 it was provided that in that year and every third year thereafter a register of deeds should be chosen for the term of three years. The registers of deeds in Worcester County have been:

	Chosen
John Chandler (2d)	1731
Timothy Paine	1761
Nathan Baldwin	1775
Daniel Clapp	1784
Oliver Fiske	1816

Artemas Ward	1821
Alexander H. Wilder	1846
Harvey B. Wilder	1873
Charles A. Chase	1876
Harvey B. Wilder	1877

On the 6th of June, 1856, an act was passed providing that three terms of the Common Pleas Court should be held annually in the town of Fitchburg, and thus that town became a half-shire. On the 29th of February, 1884, it was enacted by the General Court that Worcester County should be divided into two districts for the registry of deeds, one of which, including the city of Fitchburg and the towns of Lunenburg, Leominster, Westminster and Ashburnham, should be called the Northern District and the other, including the remainder of the county, the Worcester District; the places of registry for the two districts being Fitchburg and Worcester. It was also provided that the register then in office should continue as the register of the Worcester District, and that the Governor should appoint a register for the Northern District, who should serve until a register was chosen and qualified in his place. On the 15th of June, 1885, it was provided by law that the County Commissioners should cause copies of deeds to be made in one district belonging to the other not exceeding twenty years prior to August 1, 1884. The register at Fitchburg, under the new law, has been and continues to be Charles F. Rockwood.

It was provided by law by the Court of the Massachusetts Colony in 1654, that each county should annually choose a treasurer. After the formation of the province this provision was renewed by an act passed in 1692, and again renewed the 23d of March, 1786, and remained in force until 1855, when it was provided that a treasurer should be chosen in each county in that year, and every third year thereafter, for the term of three years. The treasurers of Worcester County have been Benjamin Houghton, John Chandler (2d) and John Chandler (3d) from 1731 to 1775; Nathan Perry, from 1775 to 1790; Samuel Allen, from 1790 to 1831; Anthony Chase, from 1831 to 1865; Charles A. Chase, from 1865 to 1876, and Edward A. Brown, from 1876 to date.

The only courts remaining to be mentioned are the Police and District Courts. The only Police Court is that in Fitchburg, of which Thornton K. Ware is justice, and David H. Merriam and Charles S. Hayden are the special justices. The Police Court of Worcester, of which Wm. N. Green was justice, no longer exists. There are seven District Courts. The First Northern Worcester Court is held at Athol and Gardner, and has jurisdiction in Athol, Gardner, Petersham, Phillipston, Royalston, Templeton and Hubbardston. Its officers are Charles Field, justice; James A. Stiles and Sidney P. Smith, special justices. The First Southern is held at Southbridge and Webster, and has jurisdiction in Southbridge, Sturbridge, Charlton, Dudley, Oxford and Webster. Its officers are Clark Jillson, justice; Henry T. Clark and Elisha M. Phillips, special justices. The Second Southern Worcester is held at Blackstone and Uxbridge and has jurisdiction in Blackstone, Uxbridge, Douglas and Northbridge. Its officers are Arthur A. Putnam, justice; Zadoc A. Taft, and William J. Taft special justices. The Third Southern Worcester is held at Milford, and has jurisdiction in Milford, Mendon and Upton. Its officers are Charles A. Dewey, justice, and James R. Davis and Charles E. Whitney, special justices. The First Eastern Worcester is held at Westborough and Grafton, and has jurisdiction in Westborough, Grafton, Northborough and Southborough. Its officers are Dexter Newton, justice, and Benjamin B. Nourse and Luther K. Leland, special justices. The Second Eastern Worcester is held at Clinton, and has jurisdiction in Clinton, Berlin, Bolton, Harvard, Lancaster and Sterling. Its officers are Christopher C. Stone, justice, and Herbert Parker, special justice. The Central Worcester is held at Worcester, and has jurisdiction in Worcester, Millbury, Sutton, Auburn, Leicester, Paxton, West Boylston, Boylston, Holden and Shrewsbury. Its officers are Samuel Utley, justice; George M. Woodward and Hollis W. Cobb, special justices, and Edward T. Raymond, clerk.

It is not proposed to include in this chapter any allusion to the judges and members of the bar who have illustrated the judicial history of Worcester County. Another chapter will be specially devoted to sketches of their character and lives. Until 1836 the bar was divided into two classes, attorneys and barristers, though after 1806, under a rule of court, counselors, were substituted for barristers, and in 1836 the distinction between counselors and attorneys was abolished. The writer will be excused if he repeats in this place substantially what he has written elsewhere concerning American barristers.

The term "barrister" is derived from the Latin word *barra*, signifying "bar," and was applied to those only who were permitted to plead at the bar of the courts. In England, before admission, barristers must have resided three years in one of the Inns of Court if a graduate of either Cambridge or Oxford, and five years if not. These Inns of Court were the Inner Temple, the Middle Temple, Lincoln's Inn and Gray's Inn. Before the Revolution this rule seems to have so far prevailed here as to require a practice of three years in the Inferior Courts before admission as a barrister. John Adams says in his diary that he became a barrister in 1761, and was directed to provide himself with a gown and bands and a tie-wig, having practiced according to the rules three years in the Inferior Courts. At a later day the term of probation was four years, and at a still later, seven. There are known to have been twenty-five barristers in Massachusetts in 1768—eleven in Suffolk County: Richard Dana, Benjamin Kent, James Otis, Jr., Samuel Fitch, William Read, Samue Swift, Benjamin Gridley, Samuel Quincy, Robert

Auchmuty and Andrew Casneau, of Boston, and John Adams, of Braintree; five in Essex: Daniel Farnham and John Lowell, of Newburyport, William Pynchon, of Salem, John Chipman, of Marblehead, and Nathaniel Peaslee Sargent, of Haverhill; one in Middlesex: Jonathan Sewell; two in Worcester: James Putnam, of Worcester, and Abel Willard, of Lancaster; three in Bristol: Samuel White, Robert Treat Paine and Daniel Leonard; two in Plymouth: James Hovey and Pelham Winslow, of Plymouth; one in Hampshire: John Worthington, of Springfield, then in that county. Fifteen others were added before the Revolution—Sampson Salter Blowers, of Boston, Moses Bliss and Jonathan Bliss, of Springfield, Joseph Hawley, of Northampton, Zephaniah Leonard, of Taunton, Mark Hopkins, of Great Barrington, Simeon Strong, of Amherst, Daniel Oliver, of Hardwick, Francis Dana, of Cambridge, Daniel Bliss, of Concord, Joshua Upham, of Brookfield, Shearjashub Bourne, of Barnstable, Samuel Porter, of Salem, Jeremiah D. Rogers, of Littleton, and Oakes Angier, of Bridgewater. How many barristers were admitted in Worcester County at later dates the writer has been unable to discover, but it is known that in 1803 Levi Lincoln had been added to the roll.

The following entry in the records of the Superior Court of Judicature will throw light on the methods which prevailed concerning the admission of barristers:

Suffolk SS. Superior Court of Judicature at Boston, third Tuesday of February, 1781; present—William Cushing, Nathaniel P. Sargeant, David Sewall and James Sullivan, Justices; and now at this term the following rule is made by the court and ordered to be entered, viz.: whereas learning and literary accomplishments are necessary as well to promote the happiness as to preserve the freedom of the people, and the learning of the law when duly encouraged and rightly directed, being as well peculiarly subservient to the great and good purpose aforesaid, as promotive of public and private justice; and the court being at all times ready to bestow peculiar marks of approbation upon the gentlemen of the bar, who, by a close application to the study of the science they profess, by a mode of conduct which gives a conviction of the rectitude of their minds and a fairness of practice that does honor to the profession of the law, shall distinguish as men of science, honor and integrity, Do order that no gentleman shall be called to the degree of barrister until he shall merit the same by his conspicuous bearing, ability and honesty; and that the court will, of their own mere motion, call to the bar such persons as shall render themselves worthy as aforesaid; and that the manner of calling to the bar shall be as follows: The gentleman who shall be a candidate shall stand within the bar; the Chief Justice, or in his absence the Senior Justice, shall, in the name of the court, repeat to him the qualifications necessary for a barrister at law; shall let him know that it is a conviction in the mind of the court of his being possessed of those qualifications that induces them to confer the honor upon him; and shall solemnly charge him so to conduct himself as to be of singular service to his country by exerting his abilities for the defence of her constitutional freedom; and so to demean himself as to do honor to the court and bar.

In the act passed July 3, 1782, establishing the Supreme Judicial Court, it was provided that the court might and should from time to time make record and establish all such rules and regulations with respect to the admission of attorneys ordinarily practicing in said court and the creation of barristers at law. Under the provisions of this act the court adopted the following rule:

Suffolk, SS At the Supreme Judicial Court at Boston the last Tuesday of August, 1783; present—William Cushing, Chief Justice, and Nathaniel P. Sargeant, David Sewall and Increase Summer, Justices; ordered that barristers be called to the bar by special writ to be ordered by the Court and to be in the following form:

Commonwealth of Massachusetts.

To A. B., Esq., of —— Greeting: We, well knowing your ability, learning and integrity, command you that you appear before our Justices of our Supreme Judicial Court next to be holden at —— in and for our County of —— on the —— Tuesday of —— then and there in our said court, to take upon you the State and degree of a Barrister at law. Hereof fail not. Witness, ——, Esq., our Chief Justice at Boston, the —— day of ——in the year of our Lord ——, and in the —— year of our Independence ——. By order of the Court. ——, Clerk.

Which writ shall be fairly engraved on parchment and delivered twenty days before the session of the same Court by the Sheriff of the same County to the person to whom directed, and being produced in Court by the Barrister and there read by the clerk and proper certificate thereon made, shall be redelivered and kept as a voucher of his being legally called to the bar; and the Barristers shall take rank according to the date of their respective writs.

In 1806 the following rule was adopted by the court, which seems to have substituted counselors for barristers:

Suffolk SS. At the Supreme Judicial Court at Boston for the County of Suffolk and Nantucket, the second Tuesday of March, 1806; present—Francis Dana, chief Justice, Theodore Sedgwick, George Thatcher and Isaac Parker, Justices; ordered: First. No Attorney shall do the business of a counsellor unless he shall have been made or admitted as such by the Court. Second. All attorneys of this Court who have been admitted three years before the sitting of this Court, shall be and hereby are made Counsellors, and are entitled to all the rights and privileges of such. Third. No Attorney or Counsellor shall hereafter be admitted without a previous examination, etc.

The rule of the Supreme Judicial Court, adopted in 1783, was issued under the provisions of the law of 1782 establishing that court, but the rule adopted by the Superior Court of Judicature in 1781 seems to have been made in obedience to no law, but under the general powers of the court. It is not known at precisely what period barristers were introduced into the Provincial courts, but it is probable that until 1781 the English custom and methods and qualifications were substantially followed without any rule of court.

The earliest sessions of the courts were held in the meeting-house in Worcester, which was built in 1719 on the Common. This meeting-house stood until 1763. In 1732 it was decided to built a court-house. The land for its site was given by Judge Jennison and it was erected in 1733. The county tax in that year was apportioned as follows:

	£	s	d.		£	s	d.
Worcester	22	15	4	Rutland	7	16	0
Lancaster	62	16	8	Westborough	18	2	0
Mendon	36	0	0	Shrewsbury	14	14	0
Woodstock	32	0	0	Oxford	14	4	0
Brookfield	27	1	4	Sutton	24	10	0
Southborough	17	6	0	Uxbridge	12	0	8
Leicester	13	19	4	Lunenburg	7	16	0

This court-house was situated near the site of the present brick court-house near Lincoln Square, and was opened February 8, 1734. It is believed that its dimensions were thirty-six feet by twenty-six. In 1751 a new building was erected, forty feet by thirty-six, on the Court Hill, corner of Green and Franklin

Streets, and is now used as a residence. The corner-stone of the brick building, now in use, was laid October 1, 1801, under the direction of a building committee composed of Isaiah Thomas, William Caldwell and Salem Towne. The original building, since enlarged, was fifty and a half feet long and forty-eight and a half feet wide, and was opened September 27, 1803, when Chief Justice Robert Treat Paine, of the Supreme Judicial Court, delivered an address. At the February meeting of the County Commissioners in 1842 it was decided to build another court-house, and the granite structure, now chiefly in use, was erected at a cost of one hundred thousand dollars on the site of the house of Isaiah Thomas, which was removed to the rear and is still standing. This building, which was originally one hundred and eight feet long and fifty-seven wide, was enlarged in 1878. It was opened September 30, 1845, on which occasion an address was delivered by Chief Justice Lemuel Shaw.

With regard to the erection of the first jail there seems to be some confusion as to dates. As nearly as can be ascertained, what was called a cage was built before 1732, and in that year the Court of Sessions ordered that, "in lieu of the prison before appointed, the cage, so-called, already built be removed to the chamber of the house of Deacon Daniel Haywood, innholder, and be the jail until the chamber be suitably furnished for a jail and then the chamber be the jail for the county and the cage remain as one of the apartments." The inn of Deacon Haywood stood on the site of the present Bay State House. In 1734, no jail having been built, the Court of Sessions hired a part of the house of Judge Jennison for prisoners; very soon after this time, probably in 1734, a jail was built on the west side of Lincoln Street. In 1753 a new jail was built farther down the same street, thirty-eight feet long and twenty-eight wide. In December, 1784, the Court of Sessions provided for the erection of a stone jail, sixty-four feet by thirty-two and three stories high, on the south side of Lincoln Square, which was completed September 4, 1788. This building was pronounced by Isaiah Thomas, then the editor of the *Spy*, as in public opinion the most important stone building in the Commonwealth, next to King's Chapel in Boston. It was built of rough quarry stone from Mill-Stone Hill by John Parks, of Groton, who gained a high reputation by his work. In 1819 a house of correction was built, fifty-three feet by twenty-seven, where the present jail stands on Summer Street. In 1832 it was rebuilt with forty cells, each seven feet by three and a half, and with three rooms for close confinement. In 1835 a part of the building was arranged for a jail, and in 1873 it was altered, remodeled and enlarged to its present dimensions. A jail and house of correction were also built in Fitchburg when that town was made a half-shire.

Under the Constitution of Massachusetts, adopted by a convention of the people at Cambridge, Sept. 1, 1779, it was provided that there should be forty districts in the State, created by the General Court for Councilors and Senators, and until the General Court should act in the premises, the several districts, with the number of Councilors and Senators, in each should be as follows: Suffolk county with six; Essex, six; Middlesex, five; Hampshire, four; Plymouth, three; Barnstable, one; Bristol, three; York, two; Dukes County and Nantucket, one; Worcester, five; Cumberland, one; Lincoln, one, and Berkshire, two. On the 24th, 1794, Suffolk was changed to four, Essex to five, Middlesex to four, Hampshire to five, Bristol to two, Plymouth was added to Dukes and Nantucket with three, Bristol was changed to two, Norfolk, which had been incorporated March 26, 1793, received three, and Lincoln was added to Hancock and Washington, which had been incorporated with two. The apportionment was again changed June 23, 1802, when the number for Worcester was changed to four; again February 24, 1814, February 15, 1816, and at various other times, which it is unnecessary to recount. By the thirteenth article of amendment of the Constitution, adopted by the Legislature of 1839–40, it was provided that a census of the legal voters of the State, May 1, 1840, should be taken, and that on the basis of the census the Senators should be apportioned among the counties by the Governor and Council, with not less than one Senator in each county. By the twenty-second article of amendment adopted by the Legislature of 1856–57, and ratified by the people May 1, 1857, it was provided that a census should be taken and forty Senatorial districts created by the General Court, and that in 1865 and every tenth year thereafter a census should be taken, and a new apportionment made. From the time of the adoption of the Constitution up to the time of the creation of Senatorial districts the following persons were chosen Senators to represent Worcester County: Moses Gill, of Princeton, Samuel Baker, of Berlin, Joseph Dorr, of Ward, Israel Nichols, of Leominster, Jonathan Warner, Jr., of Hardwick, Seth Washburn, of Leicester, John Sprague, Abel Wilder, Amos Singleterry, John Fessenden, Joseph Stone, Jonathan Grout, Timothy Bigelow, Salem Towne, Josiah Stearns, Daniel Bigelow, Peter Penneman, Timothy Newell, Elijah Brigham, —— Taft, —— Hale, Francis Blake, Seth Hastings, Solomon Strong, Levi Lincoln, Jr., Moses Smith, Thomas H. Blood, Daniel Waldo, Salem Towne, Jr., Aaron Tufts, Benjamin Adams, Nathaniel Jones, S. P. Gardner, Silas Holman, John Spurr, Oliver Crosby, James Phillips, James Humphrys, Samuel Eastman, Lewis Bigelow, John Shipley, Nathaniel P. Denny, Joseph G. Kendall, William Eaton, Nathaniel Houghton, William Crawford, Jr., Jonas Sibley, B. Taft, Jr., Joseph Bowman, John W. Lincoln, Joseph Davis, Edward Cushing, Joseph Estabrook, Lovell Walker, David Wilder, Samuel Mixter, William S. Hastings, James Draper, Rufus Bullock, Charles Hudson, Ira M. Barton, Samuel Lee, Rejoice Newton, Charles Russell, George A. Tafts, Waldo

Flint, Charles Allen, Linus Child, Ethan A. Greenwood, William Hancock, James G. Carter, Thomas Kinnicutt, Artemas Lee, James Allen, Charles Sibley, Samuel Wood, Jedediah Marcy, Benjamin Estabrook, Nathaniel Wood, Ch. C. P. Hastings, Emory Washburn, Alexander De Witt, Solomon Strong, Isaac Davis, Ariel Bragg, Daniel Hill, Joseph Stone, John G. Thurston, Stephen Salisbury, Calvin Willard, Jason Goulding, George Denny, Nahum F. Bryant, Alfred D. Foster, Alanson Hamilton, John Brooks, Alexander H. Bullock, Ebenezer D. Ammidown, Paul Whitin, Ebenezer Torrey, Pliny Merrick, John Raymond, Amasa Walker, Edward B. Bigelow, Francis Howe, Giles H. Whitney, Moses Wood, Freeman Walker, Elmer Brigham, J. S. C. Knowlton, Albert Alden, Sullivan Fay, Elisha Murdock, Ivers Phillips, Charles Thurber, Anson Bugbee, Joseph W. Mansur, Joseph Whitman, H. W. Benchley, Albert A. Cook, Edward Denny, Jabez Fisher, Alvan G. Underwood, F. H. Dewey, Velorous Taft, J. F. Hitchcock, George F. Hoar, William Mixter, Ohio Whitney, Jr.

Under the new system of Senatorial districts Worcester County was divided into districts by itself, unconnected with other counties until the apportionment made on the basis of the census of 1885, and was represented by Worcester County Senators up to and inclusive of the year 1886. During this period the following gentlemen represented the various districts of the county: J. M. Earle, John G. Metcalf, Oliver C. Felton, Charles Field, Goldsmith F. Bailey, S. Allen, Dexter F. Parker, Ichabod Washburn, Hartley Williams, E. B. Stoddard, Alvah Crocker, Winslow Battles, William R. Hill, Moses B. Southwick, Wm. Upham, Nathaniel Eddy, Sylvester Dresser, Rufus B. Dodge, Asher Joslin, John D. Cogswell, Emerson Johnson, Jason Gorham, Freeman Walker, Henry Smith, George Whitney, Charles Adams, Jr., William D. Peck, T. E. Glazier, Israel C. Allen, Solon S. Hastings, Joel Merriam, Abraham M. Bigelaw, John E. Stone, Thomas Rice, Benjamin Boynton, Charles G. Stevens, Hosea Crane, William Russell, Milo Hildreth, Lucius W. Pond, Moses D. Southwick, Ebenezer Davis, George S. Ball, F. H. Dewey, George M. Rice, Adin Thayer, George F. Thompson, George F. Very, Edward L. Davis, John D. Wheeler, Charles A. Wheelock, J. H. Wood, S. M. Greggs, Jeremiah Getchell, Aaron C. Mayhew, Luther Hill, Frederick D. Brown, Lucius J. Knowles, George W. Johnson, A. W. Bartholomew, Henry L. Bancroft, Washington Tufts, Emery L. Bates, John G. Mudge, George M. Buttrick, Baxter D. Whitney, N. L. Johnson, Moses L. Ayers, John H. Lockey, Francis B. Fay, Henry C. Greeley, George A. Torrey, Amasa Norcross, C. H. B. Snow, Elisha Brimhall, George S. Barton, Henry C. Rice, William Knowlton, Ebenezer B. Linde, James W. Stockwell, Alpheus Harding, Charles H. Merriam, Wm. Abbott, Charles T. Crocker, Thomas J. Hastings, Chester C. Corbin, John M. Moore, Daniel B. Ingalls, George W. Johnson, Charles B. Pratt, Charles P. Barton, Theodore C. Bates, Edward P. Loring, John D. Washburn, Charles E. Whitin, Charles A. Denny, Thomas P. Root, Martin V. B. Jefferson, Henry S. Nourse, Arthur F. Whitin, William T. Forbes, Charles A. Gleason, Allen L. Joslin.

Under the census of 1885 a new apportionment was made, under which the Senators for 1887 were chosen in 1886. Under this apportionment there were four districts confined to the county and one other, including Athol, Barre, Dana, Gardner, Hardwick, Hubbardston, New Braintree, Oakham, Petersham, Phillipston, Rutland and Templeton in Worcester County, and Amherst, Belchertown, Enfield, Granby, Greenwich, Hadley, Pelham, Prescott, South Hadley and Ware in Hampshire County, and called Worcester and Hampshire District. Under this apportionment the Senators have been Edwin T. Marble, William T. Forbes, Irving B. Sayles, Harris C. Hartwell, Charles A. Gleason, Silas M. Wheelock and George P. Ladd.

The districts as formed under the census of 1885, with a ratio of 11,382 for one Senator, are as follows:

First Worcester District.—Wards 1, 4, 5, 6, 7 and 8 of Worcester, with 10,786 legal voters.

Second Worcester District.—Berlin, Blackstone, Bolton, Boylston, Clinton, Grafton, Harvard, Hopedale, Mendon, Milford, Northborough, Northbridge, Shrewsbury, Southborough, Upton, Uxbridge and Westborough, with 11,433 legal voters.

Third Worcester District. — Auburn, Brookfield, Charlton, Douglas, Dudley, Leicester, Milbury, North Brookfield, Oxford, Paxton, Southbridge, Spencer, Sturbridge, Sutton, Warren, Webster and West Brookfield, with 11,217 legal voters.

Fourth Worcester District.—Fitchburg, Holden, Lancaster, Leominster, Lunenburg, Princeton, Sterling, West Boylston, Westminster and Wards 2 and 3 of Worcester, with 12,099 legal voters.

Worcester and Hampshire District.—Athol, Barre, Dana, Gardner, Hardwick, Hubbardston, New Braintree, Oakham, Petersham, Phillipston, Rutland and Templeton in Worcester County, and Amherst, Belchertown, Enfield, Granby, Greenwich, Hadley, Pelham, Prescott, South Hadley and Ware in Hampshire, with 11,127 legal voters.

This sketch of Worcester County would be incomplete without some allusion to the various organizations which have the county as the field and boundary of their operations. The Worcester County Musical Association had its origin in a musical convention held in Worcester in 1852. Its officers are, Edward L. Davis, president; William Sumner, vice-president; A. C. Munroe, secretary, and J. E. Benchley, treasurer. The Worcester County Musical School, which has been in existence some years, was organized to furnish instruction "in piano, organ, singing, violin, flute, guitar, harmony and elocution," with an efficient corps of instructors. Besides the Worcester Agricultural Society there are in the county five distinct societies—the Worcester West holding its annual

exhibitions at Barre; the Worcester Northwest holding its exhibitions at Athol; the Worcester North at Fitchburg; the Worcester Southeast at Milford, and the South Worcester. The Worcester Horticultural Society was formed in 1840. The Worcester County Homœopathic Medical Society was organized in 1866, and its present officers are: E. A. Murdock, of Spencer, president; E. L. Mellus, of Worcester, vice-president; Lamson Allen, of Southbridge, recording secretary and treasurer, and John P. Rand, of Monson, corresponding secretary. The Worcester County Law Library Association was organized in 1842, and is composed of the members of the county bar.

The Worcester County Mechanics' Association was incorporated in 1842. Its officers are: Robert H. Chamberlain, president; Ellery B. Crane, vice-president, and William A. Smith, clerk and treasurer.

The Worcester County Retail Grocers' Association was organized in 1881, and its officers are: Samuel A. Pratt, president; C. G. Parker, vice-president; E. E. Putnam, secretary, and James Early, treasurer.

The Worcester County Society of Engineers was formed in 1886. Its officers are: A. C. Buttrick, president; Charles A. Allen, vice-president; A. J. Marble, secretary, and E. K. Hill, treasurer.

The Worcester County Stenographers' Association was organized in 1887, and its officers are: Edna L. Taylor, president; F. L. Hutchins, vice-president; George E. Vaughn, secretary, and John F. McDuffie, treasurer.

The Worcester District Medical Society was organized in 1804. Its officers are: George C. Webber, of Millbury, president; J. Marcus Reed, of Worcester, vice-president; W. C. Stevens, of Worcester, secretary, and S. B. Woodward, of Worcester, treasurer.

Of county religious associations there are five belonging to the Orthodox Congregationalist denomination. The Worcester Central Conference includes the Worcester churches and those of Auburn, Berlin, Boylston, Clinton, Holden, Leicester, Oxford, Paxton, Princeton, Rutland, Shrewsbury, Sterling and West Boylston.

The Worcester North includes the churches of Ashburnham, Athol, Gardner, Hubbardston, Petersham, Phillipston, Royalston, Templeton, Westminster and Winchendon, with two churches in Franklin County.

The Worcester South includes the churches of Blackstone, Douglas, Grafton, Millbury, Northbridge, Sutton, Upton, Uxbridge, Webster and Westborough.

The Brookfield Conference includes the churches of Barre, Brookfield, Charlton, Dana, Dudley, Hardwick, New Braintree, North Brookfield, Oakham, Southbridge, Spencer, Sturbridge, Warren and West Brookfield, with four towns outside the county. The Middlesex Union Conference includes the churches of Fitchburg, Harvard, Lancaster, Leominster and Lunenburg, with eleven churches in Middlesex County.

Of County Baptist Associations there are two—the Wachusett, including the churches in Barre, Bolton, Clinton, Fitchburg, Gardner, Harvard, Holden, Leominster, Sterling, Templeton, West Boylston, Westminster and Winchendon, and the Worcester Association, including the churches of Worcester, Brookfield Grafton, Leicester, Millbury, Northborough, Oxford, Southbridge, Sturbridge, Spencer, Uxbridge, Webster and Westborough.

Of the Methodist denomination there are, strictly speaking, no county organizations. The New England Conference, extending from the seaboard to the Connecticut Valley, is divided into four districts, which include most of the Methodist Churches in the county.

Of the Unitarian denomination there is the Worcester Conference of Congregational and other Christian societies, which was organized at Worcester December 12, 1866. It includes the churches of Athol, Barre, Berlin, Bolton, Brookfield, Clinton, Fitchburg, Grafton, Harvard, Milford, Hubbardston, Lancaster, Leicester, Leominster, Mendon, Northborough, Petersham, Sterling, Sturbridge, Templeton, Upton, Uxbridge, Westborough, Winchendon and Worcester. There is also a Ministers' Association belonging to this denomination.

Of the Episcopal, Universalist and Catholic denominations there are no county organizations, and sketches of their various churches will be included in the histories of the towns in which they are located.

The Worcester County Bible Society was organized September 7, 1815, under the name of "The Auxiliary Bible Society of the County of Worcester," but has been more lately known as the Bible Society of Worcester.

In closing this sketch a list of the present officers of Worcester County should be added. It is as follows: Judge of Probate and Insolvency, William T. Forbes; Register of Probate and Insolvency, Frederick W. Southwick, of Worcester; Sheriff, Augustus B. R. Sprague, of Worcester; Clerk of the Courts, Theodore S. Johnson, of Worcester; Treasurer, Edward O. Brown, of Worcester; Register of Deeds of Worcester District, Harvey B. Wilder, of Worcester; Register of Deeds of Northern District, Charles F. Rockwood, of Fitchburg.

County Commissioners: George S. Duell, of Brookfield, term expires December 1, 1888; William O. Brown, of Fitchburg, term expires December 1, 1889; James H. Barker, of Milford, term expires December 1, 1890.

Special Commissioners: Thomas P. Root, of Barre, term expires December 1, 1889; Charles J. Rice, of Winchendon, term expires December 1, 1889.

Commissioners of Insolvency: Rufus B. Dodge, Jr., of Charlton; David H. Merriam, of Fitchburg; Andrew J. Bartholomew, of Southbridge; Daniel B. Hubbard, of Grafton.

Trial Justices: James W. Jenkins, of Barre; George S. Duell, of Brookfield; Chauncey W. Carter

and Hamilton Mayo, of Leominster; Charles E. Jenks, of North Brookfield; Frank B. Spalter, of Winchendon; Luther Hill, of Spencer; Horace W. Bush, of West Brookfield; John W. Tyler, of Warren, and Henry A. Farwell, of Hubbardston.

CHAPTER II.

THE BENCH AND BAR.

BY CHARLES F. ALDRICH.

"It is not they who are oftenest on men's lips, who are clothed with a visible authority, who bear the sword and the ensign of State, that contribute most to the well-being of a community; but he, rather, who sits apart in severe simplicity, and, in the supremacy of intellectual and moral strength, adjusts the relation between man and man; and, with an authority mightier than his who wields a sceptre, silently moulds the State, and interprets and dispenses the laws that govern it."—*Rev. Alonzo Hill, remarks on the life of Pliny Merrick.*

By the act incorporating this county, passed by the General Court of the Province in 1731, provision was made for four annual terms of the Court of General Sessions of the Peace, and of the Inferior Court of Common Pleas, and for an annual session of the Superior Court of Judicature, Court of Assize and General Gaol Delivery.

The jurisdiction of justices of the peace and of judges of Probate supplemented that of these more formal tribunals, and the whole constituted a system of judicial machinery which served the needs of the community, with but little amendment from 1699 until the adoption of the State Constitution. With several changes of title and some amplification to adapt it to the increased business and complexity of interests in the modern highly organized society, its principal features subsist in the system of to-day.

The Superior Court was composed of a chief and four associate justices. Its jurisdiction covered "all matters of a civil and criminal nature, including appeals, reviews and writs of error. . . . as fully and amply to all intents and purposes whatsoever, as the Courts of King's Bench, Common Pleas and Exchequer within his Majesty's Kingdom of England." It also possessed very limited equity powers. The home government had always exhibited a jealous disposition to keep the Provincial courts closely hemmed in by the rules of the common law. Except in cases of the breach of the condition of a bond or a mortgage, when the court might prevent the exaction of the strict forfeiture on payment of proper damages, no part of the great system of equity jurisprudence, which, in England, was then well advanced, was permitted to take root here. This early discouragement has seemed, until very recent years, to prejudice the minds of our law-makers and our courts against the granting or the exercise of jurisdiction in equity.

The judges were appointed by the Governor and his Council, and might, and frequently did, hold various other offices at the same time. Hutchinson, when chief justice, was also Lieutenant-Governor, member of the Council and judge of Probate for Suffolk. The principle of appointment to judicial office thus established has been ever since adhered to in this Commonwealth, and it is to be hoped that no demand for popular elections will cause a seat upon the bench to be set up as a prize of the caucus. By the provision of the State Constitution the good sense of our judges, and the increase in the number of men competent and willing to perform the duties of the various offices, our courts have, in the main, been presided over by men who held no other public office, and gave all their energies to the labors of their judicial station. It has thus most happily been true of the administration of Massachusetts justice, that it has been singularly free even from the suspicion of partisan bias, and has retained the confidence alike of bar and laity. Until the Revolution no resident of Worcester County attained the dignity of justice of the Superior Court.

The Inferior Court of Common Pleas was composed in each county of four justices, three of whom constituted a quorum for transacting business. Its jurisdiction covered civil actions of every nature, according to the course of the common law. From its decision an appeal lay to the Superior Court.

The Court of General Sessions of the Peace was held at the same times with the Common Pleas by the justices of the peace for the county or such a number of them as were designated from time to time. Its jurisdiction as a judicial tribunal covered only criminal matters, and hence was limited to the trial of offenses for which the punishment did not extend to death, loss of member, or banishment. The same tribunal had a supervision and control of the administration of the county finances, the laying out of highways, etc., similar to the present powers of County Commissioners.

Justices of the peace held courts in their various places of residence, and were authorized to hear and decide in a large variety of civil actions where the damage did not exceed forty shillings. When the title to land was concerned, however, the issue was deemed too important for any court of less dignity than the Common Pleas. In criminal matters their jurisdiction extended to minor breaches of the peace and disorderly conduct, and they could inflict penalties of small fines, whipping and sitting in the stocks. For offences beyond their jurisdiction they were authorized to bind over persons accused to the higher tribunals. From their decisions appeals lay to the Court of Common Pleas.

In the Governor and Council was vested jurisdiction over the probate of wills, the settlement of the estates of deceased persons, the appointment of guardians and the like. It was the custom, however, for

them to appoint substitutes in the various counties, who transacted the ordinary business subject to revision on appeal to the Governor and Council. These deputy courts were recognized by several laws of the province, though their establishment was never specially authorized by any act of the General Court.

The history of the bar of this county is practically covered by the professional activity of four of its members. Joseph Dwight, admitted at the first term of the Court of Common Pleas held in the newly-established county, lived until 1765. John Sprague was admitted to the bar in 1768, and died in 1800. Benjamin Adams admitted in 1792, probably tried causes before Judge Sprague, and as he lived in Uxbridge until 1837, it is most probable that the late Peter C. Bacon, who was admitted in 1830, knew him personally.

When JOSEPH DWIGHT, in 1731, took the oaths of an attorney and became the only member of the Worcester County bar, there were in the province but few educated lawyers. Benjamin Lynde was chief and Paul Dudley an associate justice of the Superior Court, both of whom were thorough lawyers. Through the influence and learning, especially of Dudley, the forms of pleading were being brought into intelligible shape, and the principles of law were becoming more clearly understood by bench and bar. It was not at all essential, however, that a judge should be a lawyer. Many of those upon the Superior bench had no legal education, and of fourteen judges of the Court of Common Pleas for Worcester County before the Revolution, only three were members of the bar. Dwight was born in Hatfield in 1703, and received his education at Harvard, where he graduated in 1722. After his admission to the bar for some years he resided in Brookfield, and was repeatedly elected its Representative to the General Court.

For one year during his service he held the position of Speaker of the House. In 1743 he was appointed to the bench of the Common Pleas, and retained his commission until about the time of his removal to Stockbridge, in Hampshire County, in 1751 or 1752. There he was interested in the efforts which were being made, under the direction of Jonathan Edwards, to educate the Indians. Judge Dwight was appointed a trustee of the schools, and for a year or more remained closely associated with the learned divine, for whom he always testified the highest regard. He soon left Stockbridge for Great Barrington, and resumed judicial functions in the Hampshire County Court until Berkshire was set off, in 1761. For the new county he became chief justice, and so continued till his death, in 1765. With his duties as judge he combined the carrying on of a mercantile business and the functions of an active military leader. He held the rank of brigadier-general, and won the commendation of his superior officers for services against the French.

A contemporary of his, both at the bar and on the bench, was NAHUM WARD, a resident of Shrewsbury, and a judge of the Common Pleas from 1745 to 1762. Not much is recorded of him, though he was in active practice for several years. His son and grandson, each bearing the name of Artemas, filled larger places in the public eye, and each became judge of the same court.

The only other lawyer on this bench until after the Revolution was TIMOTHY RUGGLES, who was born in Rochester, in the county of Plymouth, in 1711, and graduated at Harvard in 1732. He was judge from 1757 until the Revolution, and chief justice after 1762. His father, the Rev. Timothy Ruggles, endeavored to turn the future soldier's thoughts to the study of divinity, but it is probable that the combative instincts of the son, so strongly developed later in life, inclined him to a more stirring field of exertion. When only twenty-five he represented Rochester in the Assembly. There he was instrumental in procuring the passage of an act to prohibit sheriffs or their deputies from making writs, a useful provision of the public statutes to this day. As a lawyer he must have been successful, for while still a resident of Plymouth County, he practiced in other courts, and was often engaged in causes in Worcester County before he removed to Hardwick, about 1753.

The fame of the soldier, however, generally obscures whatever other reputation its possessor may earn. In "Brigadier Ruggles" the judge was almost forgotten. Like Dwight, he was actively engaged in several military operations, and fairly won his distinction by hard service. In 1755 he was next in command to General Johnson in the battle in which the French, under Dieskau, were badly defeated. Illustrative of the brigadier's blunt manners, they say that when during the day something was going wrong, he consoled his superior officer with the remark: "General, I hope the damnable blunders you have made this day may be sanctified unto you for your spiritual and everlasting good," an expression rather of hope for future improvement than of confidence in the present abilities of his leader, which a more politic subordinate would probably have confined to his own thoughts.

It was a matter of course that he took an active part in political affairs. Hardwick sent him as its representative to the Assembly for several years, during two of which he was Speaker of the House. He presided over the convention of delegates from eight Colonies, which met in New York, in 1765, to consider the grievances imposed by the home government. His attachment to the old order of things here manifested itself in his refusal to join in the protest of the convention against taxation by Parliament. As his opinions on this subject had been openly expressed, it is a singular evidence of the great respect in which he was held that he should have been chosen as a delegate. But neither the consistency of his course nor his dignified character excused him in the eye of the Provincial

Legislature. In accordance with their vote he was publicly censured by the Speaker, and from that time his separation from the popular cause became more and more apparent. When the discontent finally became a revolution, he abandoned his property, his dignities, and his home, and took up his part with the supporters of the Crown. At this point, of course, his connection with our county affairs ceased. He died in Halifax, in 1798, having lived to see those whom he had called rebels firmly established as citizens of an independent State.

Eleven other judges of the Court of Common Pleas, previous to the Revolution, were taken from various vocations. They were men chosen for general good sense, for the respect in which they were held by their neighbors, and for their integrity of purpose—qualities which, in the scarcity of trained lawyers, certainly entitled them to superintend the administration of justice.

JOHN CHANDLER, of Woodstock, the first chief justice, was also the first judge of Probate. He was a military officer of some distinction, and represented his town in the General Court, and was chosen afterwards a member of the Governor's Council. His son, bearing the same name, was born in Woodstock in 1693, but removed to Worcester in 1731. He was the first clerk of courts, register of probate and register of deeds for the county in those days when one man could discharge the duties of a multiplicity of offices. While still holding those offices he was appointed sheriff of the county, and was for several years elected selectman and a Representative to the General Court. Later on he was appointed judge of the Court of Common Pleas and judge of the Probate Court, thus succeeding to the dignities of his father. He died in 1763.

Another father and son who occupied seats on the bench of the County Court were the two JOSEPH WILDERS, of Lancaster. The elder was influential in securing to Worcester the distinction of being the county-seat, as he objected to the selection of Lancaster, lest the morals of its people should be corrupted by the sessions of the courts therein. He succeeded the first John Chandler as judge of Probate and held both offices till his death, in 1757.

His son succeeded the second Chandler in the Common Pleas, was Representative of Lancaster in the General Court for eleven years, and was actively engaged in business operations, in his native town, until his death, in 1773.

Of most of the other judges little is known. JONAS RICE was, in 1714, the sole inhabitant of Worcester, all others having been driven away by the depredation of the Indians. His firm courage secured to him, in the rebuilt town, the respect of his neighbors and marked him as a man fit for responsibilities.

Practicing before the court thus composed, beside the three who have been mentioned as elevated to the bench, there were but fourteen lawyers from 1731 until the Revolution. JOSHUA EATON was the first of the profession who settled in Worcester. He was a native of that part of Watertown now Waltham, and was educated at Harvard, where he graduated in 1735, in his twenty-first year. He entered upon the study of the law in the office of Edmund Trowbridge, who was then just beginning his professional career, in the course of which, as leader of the bar of the Province and as judge of the Superior Court, he contributed, perhaps more than any one man before the Revolution, to the advancement of legal science. Trained under this excellent master, Mr. Eaton seems to have started upon a successful practice. The early desire of his parents had been that he should adopt the clerical profession, and after about six years at the bar, his own feelings turned him in the same direction. He studied for the ministry, gave up a good and increasing practice and adopted his new calling with such zeal and energy as to subject him to the censure of the church, which approved of more moderate ministerial devotion. He soon, however, by a more quiet walk and conversation, commended himself to the church in that part of Leicester now Spencer, and there was settled, lived for nearly thirty years, and died, in 1772, respected and beloved by his people.

A fellow-townsman of Eaton, in Leicester, was CHRISTOPHER JACOB LAWTON, a lawyer who had been admitted in Hampshire County in 1726. He practiced for some years in Springfield and in Suffield before his removal to Leicester. Except that he had a clientage of only moderate numbers, little is known of his professional attainments.

STEPHEN FESSENDEN was another student of Judge Trowbridge, who opened his office in Worcester about 1743. But he, too, from some unknown cause, does not appear to have long clung to his professional pursuits.

Perhaps the most learned and able lawyer of this bar previous to the Revolution was JAMES PUTNAM, who came here in 1749, fresh from his studies with Judge Trowbridge, of whose encouragement and advice he seems to have profited more than those we have mentioned. He was born in Danvers in 1725, and after graduating at Harvard in 1746, betook himself to the law with a zeal and industry that resulted in placing him with the leaders of the bar in the Province. Dwight was then the only lawyer residing and practicing in the county, but Putnam had to contend with the leaders from other counties, and was proved a worthy opponent. He obtained a large clientage not only at home, but in Hampshire and Middlesex, and rose, by merit, to the position of Attorney-General of the Province. This office he was holding when the Revolution called upon men to choose between King and country. Like most of the other men of prominence and wealth, Putnam stood by the old order, and like them he thereby lost his home. He was rewarded for his loyalty to the Brit-

ish government by an appointment to the bench of the Supreme Court of New Brunswick. There he added to his reputation as a sound lawyer, and acquired such a name for learning and impartial justice that when a friendly biographer described him as "the best lawyer in North America," the praise did not seem unwarrantably extravagant. He lived until after the inauguration of the first President of the United States of America.

One of the judges of the Common Pleas for ten years was Samuel Willard, of Lancaster. His son, ABEL WILLARD, born in that town in 1732, may, from his father's position, have been naturally inclined to the law. After graduating at the university, he studied in Boston, and was admitted to this bar in 1755. In his native town, then a rival of the county-seat for population and business activity, he found ample opportunity for the exercise of his talents. He illustrated the truth, too often forgotten, that modesty, kindliness and aversion to strife are not inconsistent with the successful practice of the law. He performed the true function of the lawyer in allaying rather than fomenting strife, in endeavoring to keep his client out of threatened difficulties—methods which in no degree interfered with asserting and maintaining his just rights when litigation could not properly be avoided. In 1770 he formed with John Sprague the earliest law partnership in this county. During the war he too left the country and died in England in 1781.

EZRA TAYLOR, of Southborough, is to be included in this list of lawyers, though whether he was regularly admitted to the bar is uncertain. He at any rate practiced law in Southborough, from about 1751 until the Revolution, and continued so to do in Maine, where he removed during the progress of the war.

A pupil of James Putnam was JOSHUA ATHERTON, who was born in Harvard in 1737, and graduated at Cambridge in 1762. He began his practice in Petersham, but did not long remain in this county. After several changes of domicile, he settled in Amherst, in New Hampshire. There he became a leader at the bar, and Attorney-General of the State after the Revolution, and died in 1809.

In 1765, the same year with Atherton, two other young men began their professional careers in this county. DANIEL BLISS was a native of Concord, and a graduate of Harvard in 1760, in his twentieth year. Like Eaton, he was urged towards the ministry by his parents, and somewhat by his own inclination. Some influences turned him aside, and he studied law in the office of Abel Willard. He made Rutland, where he found his wife, the field of his early ventures in business. About 1772 he returned to his first home in Concord. He gained a good position at the bar, and an enviable reputation as a thorough gentleman, but he did not sympathize with the cause of the colonists against the Crown. Thus he, too, became an exile from the country that he evidently loved, and the friends who had honored him. After the war he was appointed a judge in New Brunswick, and fulfilled its duties with credit, as he seems to have discharged all other duties until his death, in 1806.

Contemporary with Atherton and Bliss was JOSHUA UPHAM, of Brookfield. Born in 1741; like nearly all the lawyers we have mentioned, he had the advantage of a college education at Harvard. His class-mate and intimate associate was Timothy Pickering, with whom he maintained a friendship that was interrupted, not broken, by the war. After his graduation, in 1765, he completed his professional studies in two years, and was admitted to the bar a few months later than Bliss. In Brookfield he built up an excellent practice, continually increasing until 1776. It then became no longer possible for one who was not heartily with the popular cause to remain, and he removed to Boston, and later to New York. Either from the failure of some business enterprises in which he was engaged, or perhaps, more probably, on account of his Tory predilections, he left the country after the peace and, like Putnam and Bliss, found opportunity for the exercise of his professional acumen on the bench of New Brunswick. In the last year of his life he was occupied in England in perfecting with the home government a reorganization of the judicial system of the British American provinces. This work he lived to complete, but died in London in 1808.

Two sons of the second Judge John Chandler became members of this bar. Rufus was born in 1747, graduated in 1766 and admitted to the bar in 1768. He studied with James Putnam and practiced in Worcester until the laws became silent in the midst of arms. He naturally imbibed the principles of his father and his preceptor, and his name was included with theirs in an act of banishment, passed while the war was still in progress. He had already left the country, and resided till his death, in 1823, in London.

His brother, Nathaniel, born in 1750, followed closely in his footsteps. After graduating at Harvard in 1768, he took the place of Rufus in Putnam's office, where he studied during the next three years. He chose Petersham for his residence and practice, until at the beginning of the war he took service with the British in New York. Though he thus seems to have taken a much more decided stand against the colonies than his brother, or several others whom we have mentioned, he was able to return to Petersham in 1784 and engage in mercantile pursuits. He did not renew the practice of the law, nor long continue in business, but soon came back to Worcester, where he died in 1801.

Of the lawyers heretofore mentioned, not one remained in practice in this county after the Revolution. Nearly all of them cast in their lot with the supporters of the old *régime*, and the new condition of affairs left them no place in their wonted sphere. Some of them, as has been shown, found room for

increased activity and usefulness in the provinces that still remained subject to England. Some found a refuge in the mother country.

JOHN SPRAGUE forms a connecting link between the bar of the province and that of the independent State. He was born in Rochester, Plymouth County, the birth-place of Timothy Ruggles, in 1740. In the year 1765, when Joseph Dwight, the first member of this bar, died, Sprague graduated from Harvard. His first choice was the profession of medicine, but it evidently did not suit his tastes, for after a few months' trial he abandoned it for the law, and commenced studying in James Putnam's office. Like a host of our New England professional men, he taught school while pursuing his studies, a kind of discipline whose benefits appear in the acquired patience and facility in imparting knowledge of those who have tried it successfully. After his admission to this bar in 1768, he removed to Newport, Rhode Island, and thence to Keene, New Hampshire. Finally he made Lancaster his home, and in a business connection with Abel Willard began a most extensive practice. Thus he continued until it became necessary for him and his partner to decide whether they would become rebels with their countrymen, or cleave to their foreign allegiance. Willard, as has been seen, chose for the latter. Sprague hesitated, as many a conscientious and thoughtful man must have done. He went so far as to leave Lancaster for Boston before the actual outbreak of hostilities. There, however, the advice of friends at home, and his own reflection, induced him to espouse what seemed the weaker cause, and he returned to take his chance with the resisters of oppression.

The end of the June term, 1774, brought to a close the sessions of the Provincial Court of Common Pleas for this county. During the interval before the opening of the new court, in December, 1775, it may well be that no one had time or thought for contests so comparatively trivial as those of the forum. But this state of things could not long continue. The everyday affairs of life must receive attention, though the fate of nations is in suspense. The Provincial Government commissioned judges, and before them Sprague resumed his practice.

After the adoption of the Constitution he represented the county in the State Senate for two years, and among his other public services he was one of the few early advocates of the ratification of the Constitution of the United States. Later on he became high sheriff of the county. Two years before his death, which occurred in 1800, he was appointed chief justice of the Court of Common Pleas, the first lawyer on that bench after the Revolution.

Sprague appears to have taken no prominent part in the stirring scenes that were being enacted about him during the war. The name of another judge, whose career helps us to bridge this interval, is most frequently remembered in connection with his military achievements. ARTEMAS WARD was a justice of the Common Pleas both before and after the Revolution. He was born in Shrewsbury and graduated at Harvard in 1748. His father, Nahum Ward, has already been mentioned as one of the earliest in practice in the county. This is the third instance of a son succeeding his father on the bench of the Common Pleas of this county before the Revolution. That judicial honors and the capacity worthily to wear them may often be transmitted to descendants seems to be a well-established fact in the history of this Commonwealth. Whether Judge Nahum Ward continued in office until the appointment of his son is not certain, but it is stated by one authority that he died in 1762, which was the year in which Artemas became a judge. The latter had not adopted the profession of his father, but soon after leaving college was actively engaged in public affairs. He represented his native town in the Legislature, and was a member of the Governor's Council in 1774, when the home government undertook to remove from the electors of the Province the right to choose councillors and to vest their appointment in the Crown. His acceptance of such an appointment by Brigadier Ruggles had been the final act which placed him in a position entirely hostile to the popular cause. The mandamus councilors, as they were called, were among the latest irritants of an exasperated public sentiment. Before this time, however, Ward had served his apprenticeship as a soldier. He was with Abercrombie in the disastrous expedition against Ticonderoga, and in the hardships and defeat of that campaign his firmness and soldierly qualities seem to have been well tested and approved. Soon afterwards we find him a colonel of militia and busily engaged in matters of drill and evolution. All the while, however, he shared in the growing popular discontent and openly avowed his sentiments. So far did he go in publicly stating his opposition to the measures of Parliament that Sir Francis Barnard publicly deprived him of his commission, and when his constituents elected him a member of the Council, did him the honor promptly to veto the choice.

The first Provincial Congress, of which he was a member, elected him the first of three general officers to whom they committed the charge of the motley assemblage of volunteers which then represented the military power about to engage in strife with Great Britain. When General Ward assumed this command it certainly must have seemed that the result most probable for him was defeat and a rebel's death. He continued as general-in-chief until Washington arrived and took command, when Ward for a time assumed a subordinate position. He soon retired from the service, however, on the plea of ill health. His withdrawal resulted in a breach with Washington which was never healed.

When the courts were re-opened, in 1775, he was made chief justice of the Common Pleas, and in this

office he continued until two years before his death, which took place in 1800. Soon after the war the burden of taxes, necessitated by the great debt contracted during the conflict, the depression of business, so long impaired and interrupted, the sudden release from service of a large number of men who had become almost unfitted for peaceful vocations, combined to produce a feeling of discontent among the people, which in Massachusetts culminated in "Shays's Rebellion." A principal ground of their complaints was the machinery of justice, which compelled the payment of debts, and courts and lawyers were the objects of the bitterest hatred. They adopted as one method of remedying their grievances the plan of preventing the sessions of the courts.

In September of 1786, Judge Ward was to preside over the regular session of his court in Worcester. Threats had been freely made that he would not be permitted so to do, and on the morning when, according to custom, the judges and officers of the court proceeded in a body to the court-house, they found the hill on which it was situated filled with a mob, and the court-house itself with armed men. The judge was too old a soldier to run away from bayonets, and he stoutly pressed on through the throng, and up to face the small body of insurgents who were under the command of an officer, and maintained some appearance of discipline. His entrance to the court-house was prevented, and neither by expostulation or threat was he able to convince the insurgents of the folly and danger of their course. It was impossible to accomplish any useful purpose by carrying his persistence further, and when, on the next day, it was evident that the militia sympathized rather with the insurgents than with the Government, the attempt to hold court was abandoned. Somewhat similar scenes were enacted in other counties, though we do not read of other judges who so resolutely met the law-breakers. The insurrection was rather of a nature to fall to pieces by itself than to require a great show of force, and it was not long before its inherent weakness resulted in its entire collapse.

Timothy Ruggles and Thomas Steele, the associates of Judge Ward on the bench of the Common Pleas just before the Revolution, were loyalists, and by the progress of events became expatriated. When, in 1775, the Provisional Government issued its commission to General Ward as chief, Jedediah Foster, Moses Gill and Samuel Baker were named associates. Of the four, not one was a member of the legal profession.

Mr. Foster was born in Andover, and obtained at Harvard a college education. He early made Brookfield his home, and there was associated in mercantile business with Joseph Dwight, who combined with his professional occupation several other activities. Mr. Foster married the daughter of General Dwight, and three of their direct descendants will hereafter require honorable mention as members of this bar, of whom two were promoted to the bench. Although not educated for the bar, it may be supposed that his association with Judge Dwight gave him some insight into legal principles. At any rate he became sufficiently skillful as a conveyancer to command a considerable business. His judgment was greatly relied upon by neighbors and residents of other towns. Before he was on the bench he was often appealed to to decide controversies or to give advice on perplexing questions. For these services he made it a practice to take no fees, a custom by which, perhaps, many a young attorney might speedily build up a tremendous clientage. In Foster's case, however, it was not true that that which costs nothing was worth nothing. His reputation for probity, wisdom and impartiality was wide-spread, and caused his selection for numerous positions of trust and responsibility. He was at the same time judge of the Common Pleas and of the Probate Courts, a delegate to the Provincial Congress at Concord and a colonel of the militia. In 1776 he was promoted to the bench of the Superior Court of Judicature, the first Worcester County resident who had that honor. A funeral sermon, preached in 1779 by his pastor, Nathan Fiske, testifies to his services to the church, the town and the State.

Judge Moses Gill lived on a magnificent estate in Princeton, which was described by President Dwight, of Yale College, as more splendid than any other in the interior of the State. These lands were the inheritance of his wife. His own fortune, accumulated in mercantile pursuits in Charlestown, his native place, had enabled him to improve and maintain an establishment of extensive proportions. He was born in 1733, and lived in the place of his birth until about 1767, when he began to spend a portion of each year amid the beauties of the Princeton hills. That town he represented in the General Court, and was successively State Senator, Councillor and Lieutenant-Governor. From 1775 until his election to the office of Lieutenant-Governor he was an associate justice of the County Court. Both he and his associate, Samuel Baker, of Berlin, were of the original board of trustees of Leicester Academy. To have been instrumental in establishing an institution which has contributed so largely from among its alumni to the service of the State, and especially to the leadership of the bar of this county, must be counted, perhaps, the greatest of Judge Gill's distinctions.

Of Samuel Baker little can be added, save that for twenty years, until his death in 1795, he faithfully discharged his judicial duties. During a portion of this time he represented his town of Berlin, and was several years a State Senator.

When Judge Foster was promoted to the Superior Court, Joseph Dorr took his place in the lower tribunal. His father, bearing the same name, was the pastor of the church in Mendon for many years, a man repected for his public spirit as well as for his faithful discharge of ministerial duties. The son grad-

uated at Harvard in his twenty-second year in the class of 1752. He was never ordained, but he evidently had some intention of adopting his father's profession, for he preached in the pulpit occasionally. He was a most earnest patriot and fully in sympathy with the principles animating the Revolution. He devoted almost the whole of his time for seven years to the public service without any compensation, and was one of those non-combatants who largely aided the success of the cause by efficient moral support at home. In any conflict all cannot be on the field of action. It is the part of some to foster and preserve the prize of the battle,—the institutions whose existence is at stake. Mr. Dorr was the town clerk and treasurer of Mendon for a number of years. On the records the Declaration of Independence is spread at length in his handwriting, so beautifully legible as to suggest at once the thought that he was not a lawyer. On this bench, however, he presided with dignity and acceptance for twenty-five years, and was also judge of Probate from 1782 to 1800. During the last years of his life he removed to Brookfield, where he died in 1808.

The Court of Common Pleas, presided over in this county by the gentlemen of whom we have spoken, survived almost without change the political disturbances of the time. Appointed in 1775 by the *de facto* government, Ward and his associates continued to discharge the same duties after the Declaration of Independence and under the Constitution of the State.

No mention of this court appears in the Constitution, but in 1782 an act was passed "establishing Courts of Common Pleas." This was in effect a statute declaratory of the law as it was then administered. The jurisdiction granted was the same; the right of appeal, the power to make rules and the regulation of the business of the court were the same as under the province charter.

The court was to consist of "Four substantial, discreet and learned persons, each of whom to be an inhabitant of the county wherein he shall be appointed," and these requirements were well fulfilled by those who were upon the bench in this county when the statute passed.

In the same year with the act just referred to were passed statutes establishing "a Supreme Judicial Court" and "Courts of General Sessions of the Peace," both of which tribunals had been exercising their functions before either Constitution or statute were adopted.

In the convention which formed our State Constitution, it was decided to simplify the rather cumbersome title of the Provincial Court of last resort. Accordingly, all through the Constitution reference is made to a Supreme Judicial Court, instead of the Superior Court of Judicature, Court of Assize and General Gaol Delivery. Among the early enactments of the first Legislature under the new order of things was a statute giving jurisdiction to the Supreme Judicial Court of "all such matters as have heretofore happened or that shall hereafter happen, as by particular laws were made cognizable by the late Superior Court of Judicature, etc., etc., unless where the Constitution and frame of Government hath provided otherwise." After this very explicit recognition of its existence, an act establishing a Supreme Judicial Court passed in 1782 seems, to some extent, a work of supererogation. That act provides for one chief and four associate justices, and grants very broadly jurisdiction over all civil actions and all criminal offences. It further authorizes the control and correction of the proceedings of the inferior courts by writ of *certiorari* and *mandamus*. A full bench was to consist of at least three of the judges. From the rulings of one justice at *nisi prius* exception might be taken to the full bench, which alone had the final decisions of questions of law. Before three judges also were to be decided all capital cases, divorce matters, and probate appeals.

Courts of General Sessions of the Peace, with jurisdiction over minor offences and with power to bind over to the proper tribunals persons charged with graver crimes, were provided for by another act of the same year. Of the numerous justices of the peace who exercised jurisdiction in this court it would be impossible to obtain record or to make mention. Some one or more of the Common Pleas Court usually sat with them at the trial of offences. In 1803 the criminal jurisdiction was transferred altogether from the Sessions Court to the Common Pleas Court, leaving to the former the supervision of county finances, the laying out of highways and the like. After several experiments in giving these latter powers also to the Common Pleas, and after the Court of Sessions had been twice abolished and twice revived, in 1827 the act defining the power of county commissioners was passed, and the Sessions Court finally disappeared. Until 1811 the County Court of Common Pleas remained the tribunal in which was carried on the great bulk of ordinary litigation.

Upon the election of Moses Gill to the Lieutenant-Governorship and his consequent resignation of his seat on the bench, the position was offered to Dwight Foster, but was declined. Michael Gill was thereupon appointed. Of him I learn nothing, save that he was probably a nephew of his predecessor; that he resigned in 1798, and that he was living in 1826. ELIJAH BRIGHAM took the place left vacant by Judge Baker's death in 1795. He was born in Northborough in 1751 and graduated at Dartmouth College in 1778. The study of divinity at first engaged his attention, but that was soon abandoned for mercantile pursuits. Senator, councillor and member of Congress successively, he discharged the duties of each station with propriety, though without leaving a great impress upon the times. He held the office of judge until the abolition of the County Court in 1811. In 1816,

while attending the session of Congress at Washington, he very suddenly died.

DWIGHT FOSTER accepted an appointment to this bench in 1801. He was a son of the earlier judge, and was born in Brookfield in 1757. His classical studies were pursued at Brown, where he graduated in 1774. After studying his profession he commenced its practice at home. At that time there was no other lawyer within twenty miles of Brookfield. As a consequence he early gained a very great practice, which his own abilities enabled him to keep and increase. His health was never robust, so that all through life he was obliged to husband his physical resources. Yet by diligence during his working hours, by a systematic arrangement of his time and by powers of application natural and cultivated, he accomplished an enormous amount of labor. As a conveyancer he was noted for accuracy and neatness, —qualities of whose importance he was no doubt impressed by his father, who had been obliged to acquire what knowledge he had of that branch without the aid of such an education as the son had enjoyed. It was noted of the latter that he made it a constant practice to rise and be at work early, invariably by candle-light in winter. This discouraging propensity is the only fault recorded of him.

His father had been chosen as a delegate to the convention for framing the Constitution, but died before the session began. Dwight, then but twenty-two, was chosen to fill the vacancy,—a proof of the confidence which his townsmen already reposed in his sound judgment and discretion. In 1792 he held the office of high sheriff of the county, and was the same year elected to Congress, where he sat for three terms. Later, he was a member of the United States Senate. For ten years he was the Chief Justice of the Common Pleas, succeeding Judge Sprague, and lived until 1823, active until the last. His manners are described as extremely courteous, and he exercised a generous hospitality at his country home.

In the same year with Judge Foster, BENJAMIN HEYWOOD was elevated to a seat on this bench. He was the son of a Shrewsbury farmer, and had learned and practiced in early life the trade of a carpenter. His strong desire for an education overcame the difficulties in his way, and he prepared for college and entered Harvard in 1771. But here hindrances to the pursuit of knowledge still met him. The country was aroused to arms. With the other young men of the institution, he felt the duty of bearing his share in the impending conflict. At the opening of hostilities he laid aside his books, followed the retreating British forces after Concord fight, and was soon after regularly commissioned an officer of the Provincial Army. He rose to the rank of captain, and discharged the difficult and responsible duties of regimental paymaster with scrupulous fidelity and accuracy. When, at the close of the war, the Continental Congress found itself with a great debt, an army whose pay was largely in arrears, and an empty treasury, a most serious danger threatened the stability of the independence which had been won. The soldiery were naturally discontented and conscious of ill treatment, and conscious also of their strength as a united body. Captain Heywood was one of those who at this juncture assisted Washington to allay the growing impatience and to persuade the men to disband peaceably, in the hope of justice from the tardy people who had profited by their sufferings. When, after peace was finally established, he returned to his native town, he found himself called upon to devote much of his time to the public. His neighbors had learned to appreciate his integrity and the soundness of his judgment. Later, he removed to Worcester, where he cultivated a large farm, portions of which remain in the hands of his descendants to this day. In 1801 he succeeded Judge Dorr, and held office so long as the court existed. He is the last judge of any of the higher courts of this county who was not educated for the legal profession.

John Sprague, who succeeded Artemas Ward as chief of the Common Pleas, was, as has been said, the only member of the bar before the Revolution who continued for any length of time to practice in the courts under the new establishment. His first competitor was LEVI LINCOLN, who was admitted to the bar in Hampshire County, and began practice here as soon as the courts were opened in 1775. Joshua Upham had not then abandoned his Brookfield clientage, but remained only a few months longer. Lincoln was the son of Enoch Lincoln, a farmer of Hingham, and had been apprenticed in youth to a trade. In this employment he evidently found he had no pleasure, and he succeeded, with the assistance of friends who were impressed by his manifest desire and aptness for learning and his serious determination to obtain an education, in fitting himself to enter Harvard College. There he graduated in 1772, in his twenty-fourth year, and began the study of the law in Newburyport. Later, he entered the office of Joseph Hawley, of Northampton, who was then of the highest rank in the profession, as well as in the councils of the patriotic party. His studies were interrupted by the call to arms in April, 1775, but he soon returned to his books, and opened his office in Worcester. At once he was made clerk of the courts, and held the office a little over a year. No doubt the duties interfered too seriously with the great opportunity for professional business which lay before him. Those who had been the leaders in every walk in life, judges of the courts, lawyers, men of wealth and cultivation, had in large numbers adhered to the British cause, and were then in self-imposed exile. To a man of Lincoln's superior ability it was inevitable that the people should look for leadership and advice. His powers matured early under the responsibilities which he was thus compelled to assume. He possessed naturally great firmness of purpose and

a sober judgment, and throughout his long career, much of which was passed prominently before the public eye, what he accomplished was largely due to the fact that what, on sufficient reflection, he felt to be his duty, that he unfalteringly strove to do.

He had none of that long period of weary waiting for clients which serves to some extent to winnow out the wheat from the chaff of modern aspirants for legal honors. After the long vacation and the cessation of general business natural to the beginning of so tremendous a struggle as was then inaugurated, with the first breathing space people realized that their affairs at home still must receive attention. Lincoln at once was overwhelmed with business. In 1779 he was "specially designated to prosecute the claims of government to the large estates of the Refugees, confiscated under the Absentee Act." Mr. Willard says of him: "He was without question at the head of the bar from the close of the Revolution till he left our courts, at the commencement of the present century. His professional business far exceeded that of any other member of the bar. He was retained in every case of importance, and for many years constantly attended the courts in Hampshire and Middlesex." His great success shows that he made the best use of his excellent opportunities. He was a most skillful advocate before juries, pleasing in his address, popular from his known public spirit, eloquent and keen. It must have been a task most congenial to his temperament when, as counsel in the celebrated case involving the liberty of a negro, he was called upon to maintain the equal rights of all men under the laws of his native State. The suit was brought by one Jennison against two of the name of Caldwell, for enticing away a negro slave. Sprague was of counsel for the plaintiff. Lincoln's argument, deduced from the laws of God and nature, from the principles for which the Colonies were even then contending, and from the first article of the Massachusetts Bill of Rights the proposition that in this State at least no man could have the right to say that he was the owner of another. So the court decided, and so, from that day, has been the undisputed law.

With public duties and honors Lincoln's life was replete. He sat in the convention to frame the Constitution of the State, and in the Congress of the Confederation. He was State Senator, Councillor, Lieutenant-Governor. In 1800 he was chosen to represent his district in the Congress of the United States, but had hardly taken his seat when President Jefferson called upon him to enter the Cabinet as Attorney-General. The duties of that station he discharged with ability and faithfulness so marked as to cause Jefferson to accept with the utmost reluctance and with every evidence of regret his resignation, after four years of service.

In the more limited sphere of his native town he was active for good. In the support of the freedom of religious worship, of common-school education, of advancement in the arts and sciences, in support of government against faction and misrule, his voice and influence were ever ready. The latter years of his life he spent in a well-earned retirement, enjoying the delights of literature, which his busy life had only permitted him to sip. In 1820 he died, transmitting to a line of descendants, as an especial legacy, which they have never surrendered, his great quality of faithfulness to duty.

In 1776 Mr. Lincoln was appointed judge of the Probate Court for this county, and held the office for six years. It was not until after the adoption of the State Constitution that a law was passed establishing and defining the jurisdiction of this court. As has been said, the judges appointed from time to time had been in theory the deputies of the Governor and Council, in whom the jurisdiction really resided. In 1783 an act passed providing that an "able and learned person" should be appointed in each county for "taking the probate of wills and granting administration on the estates of persons deceased," for the appointment of "guardians to minors, idiots, and distracted persons," "examining and allowing the accounts of executors, administrators, or guardians," and other kindred matters.

One year after Lincoln, WILLIAM STEARNS, of Lunenburg, entered upon a brief career at the bar, which was cut short by his death in 1784. Before he decided upon making the law his profession he had studied divinity and made a beginning in journalism. He was a lovable man, who, even in the short time he lived, made friends of all about him, and left a reputation for kindness of heart, joined with talents, that promised him a successful career. He was associated with Sprague for the plaintiff in the case of Jennison against Caldwell, to which reference has been made.

The next admission was not until 1780. In that year Dwight Foster, DANIEL BIGELOW and Edward Bangs took the oath. Bigelow was a Worcester man, born in 1752. After graduation at Harvard he tried his hand at pedagogy for a few months. Then, with Stearns, he carried on a newspaper, which lived about a year, when both its editors betook them to the law. Bigelow settled in Petersham, and there won the confidence of the community as a counsellor whose advice it was safe to follow, and as a suitable person to be entrusted with legislative functions. For eight years in House and Senate he represented his constituents with fidelity, and until his death, in 1806, retained the respect which he had fairly earned.

EDWARD BANGS, a native of Hardwick, was pursuing his studies at Harvard when the news spread of the British expedition to Concord, on the 19th of April. He was a member of a company recruited from the undergraduates, which had been drilled in anticipation that their services might be needed in some such emergency. In the irregular warfare of that memorable day he bore his part courageously. With true

chivalry he made no war on the defenceless, and saved the life of a wounded enemy whom others were about to put to death. Although the regular course of studies was interrupted by the exciting scenes that followed, he continued to use his books at home, so that when the recitations were resumed he was ready to proceed with his class, and graduated in 1777, at the age of twenty-one. Chief Justice Parsons, then practicing in Newburyport, became his guide through the mazes of the law, his college classmate, Rufus King, being then also his fellow-student. After admission to the bar, in 1780, he formed a partnership with Mr. Stearns for practice in Worcester, but after two years concluded to try his fortunes alone. In this he achieved a moderate success, though a biographer, from whom most of the material for these sketches is drawn, says of him that "In his arguments on questions of law . . . he conceived the matter well, and was methodical in his arrangement, and made strong points, but was not sufficiently lucid in their enunciation."

In 1805 he formed a partnership with WILLIAM E. GREEN, which continued till his elevation to the bench, in 1811.

For several years he held the office of prosecuting attorney for the county. From the asperities and dry detail of his profession he found relief in the study of the classics, in art, in music and in poetry. He was a great admirer of the beauties of nature and a devoted horticulturist. At one time he tried his hand at editing a newspaper, and was one of the eleven members of this bar who, at different periods of its precarious and stormy existence, endeavored to bear up the *Ægis* which Francis Blake had intended should throw its protection about the national policy of Mr. Jefferson.

During the disturbance of 1786 and '87, known as "Shays's Rebellion," he contributed by pen, voice and arm to the upholding of the cause of order and good government. When the rioters gained such numbers and cohesion as to threaten some serious danger to the State, he felt it his duty to enlist. The privations of the campaign in the winter of 1786–87—brief though it was—were a severe strain upon his health, the effects of which were felt through life.

In 1811 the old system of County Courts was abolished, and the State divided into six circuits, for each of which a Court of Common Pleas was established.

The Western Circuit consisted of Worcester, Hampshire and Berkshire Counties. Each court consisted of a chief and two associate justices, any two of whom might hold the court. The jurisdiction was the same as that of the County Courts which were superseded. Mr. Bangs, who was then county attorney, was promoted to a seat on the new tribunal, and retained that position till the time of his death, in 1818.

The predecessor of Judge Bangs, in the office of county attorney, was Nathaniel Paine; born in Worcester; graduated at Harvard, and through life identified with the town of his birth. He studied law with John Sprague, in Lancaster, who was then in himself the bar of the county. That year (1775), however, saw Levi Lincoln's entry upon his professional career, and young Paine had before him most excellent examples in his instructor and his young rival. With the exception of the four years immediately following his admission to the bar, in 1781, when he lived in Groton, Mr. Paine spent his life in Worcester. There, one says of him, he "acquired a practice at one time greater in extent, it is believed, especially in the collection of debts, than was ever enjoyed by any other professional man in the county." For thirty-five years he discharged the delicate duties of judge of the Probate Court for this county, succeeding Judge Dorr, in 1801. In that court, where the widow and the fatherless, the hapless victim of insanity and the reckless prodigal are brought, in order that the rights, which their own weakness is insufficient to maintain, may be secured to them, it is needful that a man of wide sympathies, of patience and of sound judgment should preside. These qualities Judge Paine possessed, and in his long term of service, which has not its equal for duration in this county, and probably not in the state, they were ripened into the character of a model judge. Some one has observed that, broadly speaking, in the course of a generation, less than Judge Paine's official term, all the property of a county passes through the processes of the Court of Probate.

In 1817 an act was passed "to regulate the jurisdiction and proceedings of the Courts of Probate," by which all provisions of previous statutes were codified and the methods of transacting the business of the court established much as they are in vogue at the present time. In 1823 the system of remuneration by fees was abolished, and fixed salaries established for judges and registers. In Worcester County the judge was allowed six hundred dollars, and the register eleven hundred dollars, the latter office, though of less dignity, commanding a greater salary, inasmuch as it occupied more thoroughly the time of the incumbent. Judge Paine was distinguished for courtesy of manner, for a habit of observation, a faculty of retaining in his memory what he saw or heard, and great facility in communicating his stores of anecdote thus treasured up. He was accordingly a most delightful companion—one who could entertain, by his own colloquial power, or who was ready to add to his acquisition by listening to others. He lived several years after resigning his judicial functions, and died in 1840, at the ripe age of eighty-two.

One of Levi Lincoln's students who obtained a good standing at the bar was SETH HASTINGS, of Mendon. He was born in Cambridge in 1762, and graduated at its university twenty years later. After completing his professional studies, he opened an office in Mendon, and made that town his home till the close of a useful life of just three-score years and

ten. He was not a graceful orator, but a well-grounded lawyer, in whom courts and juries recognized a man who understood his subject, and reasoned it out in logical order. He was a member of Congress for three terms and a State Senator later. In 1819 he was made chief justice of the Court of Sessions. Two of his sons adopted his profession, and practiced in this county.

WILLIAM STEDMAN was another Cambridge man who settled in this county. He graduated from Harvard at nineteen in 1784, and entered the office of Chief Justice Dana to fit himself for practice. Admitted in Essex in 1787, he immediately chose Lancaster for his field, and there obtained a considerable practice as a counsellor. He filled the offices successively of member of the Legislature, member of Congress and clerk of the courts. He was well versed in the learning of his profession, and greatly relied upon as a counsellor, but did not obtain eminence as an advocate. In Congress he was a general favorite and one of the wits of the House. His easy, affable manner, cheerful disposition and ready fund of humor made him popular in every circle. He was a strong supporter of Federalist doctrines. At one time, in retaliation for the imprisonment of some British-born subjects who had become naturalized as American citizens, a party of British officers were arrested in this country. Ten of them were brought by the United States marshal to Worcester for lodgment in the county jail. The affair aroused considerable excitement, and earnest protest was made by Francis Blake, Stedman and others against the use of the jail for such a purpose. Lincoln, on the other hand, supported the demand of the marshal, and, after some hot debate, persuaded the sheriff to permit the incarceration of the prisoners. The sympathizers of the latter endeavored to make the confinement as tolerable as possible, and on one occasion gave them an elaborate dinner-party within the jail. Shortly afterwards the prisoners overpowered their guard, and effected an escape, and suspicion was not unnaturally directed to their late hosts as connivers at the deliverance. This charge was many years later refuted by one of the officers themselves, who declared that no assistance was rendered them by any Americans. Mr. Stedman removed to Newburyport in the latter part of his life, and there died in 1831.

PLINY MERRICK, the elder, was the son of a clergyman in Wilbraham, and, after graduation from Harvard, studied divinity, and for some years preached occasional sermons. He had not sufficient health to undertake the constant labors of a settled minister, and felt obliged to try the milder climate of Virginia. There he was employed as a private tutor, and improved his leisure in the study of the law. Whether he thought the exactions of this profession less arduous does not appear; but he returned to Massachusetts, completed his studies, was admitted to the bar in Plymouth County, and announced his readiness to receive clients in his native town. From there he removed to Brookfield in 1788, and continued in practice till his death in 1814. He gave evidence of fine talents as an advocate, and had much of that rhetorical skill for which his son, the late Judge Merrick, was distinguished. It has been remarked that an unsuccessful lawyer often made a good clergyman, but that one who left the pulpit for the forum rarely bettered his condition. Mr. Merrick seems to have been an exception to this general statement; for he gained a reputation as a sound lawyer, while of his clerical efforts we learn little.

A rival of Merrick for the clientage of Brookfield and its vicinity was JABEZ UPHAM. He was born in that town about the year 1764. His father was a Revolutionary officer, holding the rank of captain at the close of the war. The son more easily, if less gloriously, earned the title of major for peaceful service on the staff of a general of militia. He showed his pluck and persistence, however, by earning his way through the collegiate course. His class graduated in 1785, but Upham disagreed with the faculty as to the just rank which should be assigned him at commencement, and left the college without the degree for which he had made such exertions. He had, however, the more important acquisition, a mind well trained and restored, and later received the diploma which testified to the fact. After three years of study in the office of Judge Foster he entered the ranks of the profession, and looked about him for a place in which to make essay of his powers. One or two attempts in other towns convinced him that on his native heath he was strongest, and in Brookfield he passed his life, too early closed in 1811. Some years before his death he met with an accident which necessitated the amputation of a leg, an operation from whose effects he never fully recovered. He was twice chosen to a seat in Congress, succeeding Seth Hastings as the representative of the Worcester South District. Although he died at forty-seven, when a lawyer is supposed to be at his best, he had obtained a high position, and is spoken of with great respect by contemporaries and men who knew his reputation. His strength lay in a most painstaking investigation of his case, and a persistence in bringing out every point of law or fact on which he relied. Nothing that he thought contributed to the strength of his argument was omitted, even though the patience of his auditors was at times severely tested. Not brilliancy, but unflagging effort was the means of his success.

Not all the members of this bar have been high examples of what is best in character and attainments. Perhaps it is as well to remember by way of warning that in the past, as now, men who have set out with hopes as eager, with ambitions as lofty and with opportunities apparently as favorable as the most successful whom we have called to mind, have fallen in the race or lagged very far behind the

winners of the prizes. A very eccentric character was a lawyer in Leominster. Of that town its local historian remarks that it had been most fortunate in the number of members of the bar there resident, and follows this with the inexplicable *non-sequitur* that for the first half-century of its existence there were no lawyers in the place.

Whatever subtle meaning may have lain in the writer's mind, one of the lawyers must have furnished some topic for tea-table gossip in the quiet village. ASA JOHNSON graduated at Harvard in 1787, at an age when most men are established in life. But his career had theretofore been an exciting one. During the Revolution he had served in the navy of the Confederation, and had come out with quite a handsome share of prize money. With this he determined to secure an education, and fitted himself for the bar with credit. At one time he acquired a sufficient practice to lay by a competency, and was apparently on the road to a respectable position as a country counsellor. He was thoroughly honest, a good classical scholar and fond of his books. He possessed an active intellect, and is described as an agreeable conversationalist, quick at repartee when he could be drawn into any social intercourse. But he was one of those men in whom the social instinct seems either never to have existed or to gradually disappear. His religious views separated him widely from the sympathy of his neighbors in that God-fearing community. He was called an Atheist in the days when a man who doubted the least of the generally received dogmas was looked upon as in serious danger of eternal punishment. Becoming more and more a recluse, and permitting no one to become intimate with him, the most fanciful stories were told of his methods of life. It is said that he cooked and ate cats, owls and reptiles in his lonely home. His only intercourse with his fellow-men, at length, was at the gaming table, and there he dissipated the property he had laid by. In 1820, poor, almost friendless and miserable, he died, an illustration, too often repeated, that man cannot fulfill the aim of his being either to his own satisfaction or with worldly success who lives wholly in and for himself.

PRENTICE MELLEN, who practiced law in Sterling from 1789 to 1791, deserves a passing notice in these chronicles, from the fact that in later years he became chief justice of the highest court of the State of Maine, and in that capacity reflected credit on the State where he was educated, and the bar at which his early impulse in the path of success was received.

The professional life of BENJAMIN ADAMS, covering close on to half a century, is one of those level stretches of beautiful meadow which seems to span the interval between our point of departure and our standing-ground, and to bring nearer to us the lofty hills which we have left, and enable us to compare them with the eminences close at hand. When Adams was admitted to the bar, in 1792, John Sprague held the office of high sheriff, but that same year resigned its duties to give his entire attention to his large professional business. A few years later, as chief justice of the Common Pleas, he doubtless inspired the young advocate with admiration for his learning and dignity. Levi Lincoln was in the full tide of a large and increasing practice, and was already known as the man whose arguments had abolished slavery on Massachusetts soil. The rugged honesty of Artemas Ward secured for him the respect on the bench even of the counsel, who appreciated their superiority in knowledge of the law to the old general, whose profession was rather of arms than of briefs and writs.

Born in Mendon in 1764, Mr. Adams received a liberal education at Brown University. He studied law in Uxbridge with Colonel Tyler, who had been a Revolutionary officer and was the first lawyer practicing in the south part of the county. Tyler does not seem to have obtained much eminence, or to have long remained in practice. Soon after Adams was admitted to the bar he succeeded to the business of his preceptor, who then disappears from history. Possessed of fair abilities and a steady purpose to make the most of them, he acquired a substantial practice and, what was better, the confidence of his townsmen. On the death of Judge Brigham he was elected to fill the vacant seat in Congress, and by successive re-elections retained the office until 1823. In that year he was defeated as a candidate by Jonathan Russell, because of a speech made by Adams in favor of the principle of protection. At that time Daniel Webster had not seen the light which afterwards so clearly illuminated his pathway as to cause him to retrace his steps and forswear his logic. The great statesman lent his matchless powers to exposing the fallacies which Adams upheld, in so forcible a manner that neither he nor any one who has come after him has been able to answer the argument, and the result was Adams's defeat. In very truth he was before his time. An ample fortune which he had accumulated he lost by unfortunate investments in manufacturing enterprises, and it may not be an unwarrantable inference that his own ill success caused him to feel more deeply the need of some protection by the State, for business that in itself was profitless.

He is described as a man of peculiarly even temperament, who did not suffer prosperity or adversity to throw him from his balance. An upright Christian gentleman, he did the duties that lay near him, usefully serving his community in whatever way his hand found to do. In a county whose bar boasted before his death of the fame of the second Levi Lincoln, of Charles Allen and of Emory Washburn; his attainments were not of an order to be loudly heralded. None the less they were a distinct contribution to the welfare of his neighborhood. His talents were honestly put to their best use, so that it could be said the

world was better for his life. In 1837, a few years after the late Peter C. Bacon came to the bar, he died in Uxbridge, where his active life had been spent.

Of the fame of an orator only one who has listened to the magic of the living voice, and felt his own enthusiasm aroused beneath the spell of the vivid eloquence, is fitted to speak with authority. FRANCIS BLAKE was pre-eminently a master of the art of speech. His other titles to remembrance have been subordinated to this in the minds of those who have spoken and written in his praise. The late Judge Thomas, a critic qualified by his skill in the same art, has said of him: "In the Court-House . . . he won by his sweetness and commanded by his dignity; where his learning and logic convinced, where his wit and humor convulsed Bench, Bar and Jury; where his passion aroused to indignation or melted into tears; where now his genius, his eloquence and his name even are but a tradition; where the orb has sunk long since below the horizon; and the eye catches only the last lingering, fading hues of twilight. Such is the history and the fate of forensic eloquence."

Mr. Blake was the son of a Revolutionary officer who lived in Rutland until the boy was five years old, when he removed to Hingham. In that town the Reverend Joseph Thaxter, afterwards a distinguished clergyman, taught the pupils of a grammar-school. Under his excellent instruction Blake made such rapid progress in preparation for college that he entered Harvard much the youngest member of his class and graduated in 1789, when only in his sixteenth year. He was considered one of the brightest and most accomplished scholars of his class; nor do his faculties seem to have been unduly stimulated nor his brain turned by his rapid advancement. He soon began the study of the law in Mr. Sprague's office in Lancaster, and at twenty was admitted to the bar, thoroughly equipped for the race for legal distinction. For a few years he tried the quality of his metal in Rutland, his native village, where he obtained a business sufficient to warrant his entering a larger field. In 1802 he came to Worcester, and there practiced until, in the year preceding his death, his failing health compelled him to give up his severe labors and assume the less exacting duties of clerk of the courts. At the time that he came to Worcester the contest of parties which had resulted in the defeat of the Federalists was still exciting the public mind. Mr. Jefferson's policy was fiercely attacked by the opposition, and Blake's ardent temperament impelled him to eagerly support the administration whose success he had desired. The publication of a newspaper called the *National Ægis* was begun, principally as a result of his efforts, and he undertook the editorial duties. Through a large part of President Jefferson's first term Blake's pen and influence were constantly devoted to the promulgation and defence of the doctrines of the Republicans, as they were then called. In 1804 he retired from the field of journalism, leaving the paper to other hands. Under the editorial guidance of several different members of the bar it passed through various experiences of the uncertainties of newspaper life until its mission ended.

For two years Mr. Blake represented the county in the State Senate, but aside from this held no political office. His real triumphs were in the court-room. For his success there it is instructive to learn that he did not depend upon his abundant resources of intellectual gifts.

Mr. Willard says, "It is a wrong impression that Mr. Blake made but slight preparation in his causes. But few could have discovered more investigation, or have given more satisfactory proofs of diligent and thorough study in the management of his causes. . . . His briefs were remarkably full," and showed "that mental effort had been tasked in a degree to which few in full and successful practice are willing or able to submit."

With powers apparently just developed to their highest value, and the brightest prospect of an honorable career, his physical health gave way. In 1817, when only forty-two, he died poor, as is the lot of most great advocates, but rich in friends and reputation.

One of Mr. Blake's law students and ardent admirers was a Worcester boy, SAMUEL BRAZER, born in 1785. At the outset of his career he was placed in the employ of a mercantile house in Boston, where it was intended that he should fit himself to become one of the substantial merchants of that thriving town. He evinced, however, so decided a taste and aptitude for literary pursuits, that he was allowed to enter Leicester Academy to prepare for college. He had that treacherous facility in acquiring knowledge from books which often leads its possessor to rely on hasty and superficial attention to his tasks. His ready wit and spirit of mischief led him into some pranks which resulted in his incurring the displeasure of his instructors and the abandonment of his plans for a college course.

Entering Blake's office, he found himself in the midst of political turmoil, rather than an atmosphere adapted to profound study, such as so volatile a character most required. He entered with zeal into the exciting controversies of the day, contributed to the *Ægis*, and evidently acquired a taste for politics, which overcame every other interest or ambition. He was by no means unfitted for public life. Numerous prose writings and occasional addresses show a considerable ability, and a few ventures in the realms of poetry prove his command of language and active imagination.

After admission to the bar he began practice in New Salem, but its detail soon became distasteful. He could not reconcile himself to the quiet life of the country lawyer, waiting for clients. He moved to Baltimore, and died there in 1823, without having realized the hopes of his friends or the promise of his youth.

One of the justices of the Supreme Court in the first years of the century was Simeon Strong, who had been distinguished as a lawyer before the Revolution, and had continued practice not only in his county of Hampshire, but in our courts after the war. His son, SOLOMON STRONG, adopted his father's profession, and was admitted to the bar in 1800, just before his father was appointed to the bench. He was born in Amherst in 1780, and received his education at Williams College. Somewhat of a rolling-stone, we find him practicing successively in Royalston, Athol, Westminster and Leominster. Notwithstanding his apparent instability, he had acquired a competent knowledge of the law and retained a good clientage for many years. Two terms in Congress, besides several in the State Legislature, showed that he had the confidence and esteem of his constituents, and his qualifications as a lawyer were recognized by his appointment to the bench of the Circuit Court of Common Pleas upon the death of Judge Bangs, in 1818.

By an act of the General Court, which took effect in 1821, the system of Circuit Courts was abolished, and the Court of Common Pleas for the Commonwealth established. By its provisions four justices were to be appointed, any one of whom could hold a session of the court. The terms were to be held at the same times and places as had previously been provided for the Circuit Courts, and the jurisdiction, rules, and methods of procedure of the new court were changed in no essential particular. The act provides "that the chief justice of said Court of Common Pleas shall, during his continuance in office, receive from the treasury of the Commonwealth, in full, for his services, the sum of twenty-one hundred dollars annually," and the associates in like manner the sum of eighteen hundred dollars. All fees theretofore paid to the justices of the Circuit Courts are directed to be paid into the treasury of the Commonwealth. The change seems, on the whole, to have been principally in the interests of economy, for under the new statute four judges at fixed salaries took the place of ten under the circuit system, who received an uncertain rate of compensation, dependent largely on fees.

The first chief justice was Artemas Ward, then of Newton, son of the old general and judge. Judge Strong was appointed the senior associate, and for twenty-two years, until his resignation, continued to discharge his judicial functions with dignity and credit. He died in Leominster in 1850. During the last years of his life, after his retirement from the bench, his patience was tried by disease and suffering. His cheerful courage sustained him through it all, and added another to his titles to our respect.

When in the first year of the present century Levi Lincoln assumed the duties of Attorney-General of the United States he was in command of the most extensive practice in this vicinity, often called into adjoining counties, and in the foremost rank of advocates in the Commonwealth. During his four years service in Washington he could not have retained the same control of his great clientage as formerly. In 1805 he stated as one of his reasons for resisting the urgent request of President Jefferson that he would remain in the Cabinet, that his duties to his family required his presence at home, and it appears not improbable that he may have been thinking of his son just completing his studies and ready to enter upon a professional career, in the outset of which the father's experience and established business connections would be of infinite value. The son taking up the name, the profession, and the position in the community of his father added, as time went on, new dignities to each.

Born in Worcester in 1782, his reputation is the peculiar pride of the city in whose growth and welfare he always took the profoundest interest, and where he made his home.

He graduated from Harvard in 1802, and studied law in his father's office, though without the advantage of the daily presence and advice of the busy Attorney-General. When he began his practice, however, the senior Lincoln had returned from Washington, and for several years thereafter continued to practice in our courts. The young counsellor needed no outside influence to recommend him to those in search of a sound legal adviser and earnest advocate. He very early made his qualifications apparent, and with such rivals as Jabez Upham, Francis Blake and John Davis, the position of leadership at the bar, to which he attained, was not won without many a hard-fought contest. The power of incessant application and a most determined will were his, and by these he overcame obstacles that sometimes seemed too great for him to cope with. He left the practice of the law at forty-two, and survived all of his cotemporaries in the profession, so that we have not the testimony of those who had heard him as an advocate. But he told friends of "the overwhelming labor which his successes cost him; how he would watch the night out in the study of his cases, and then go in the morning into the court-room, with a throbbing brain, and speak for hours." Efforts of such a character could only be sustained by vigorous physical health, which to the last years of his life Governor Lincoln possessed. As a result of his careful preparation, he acquired a complete mastery of his faculties, so that in the vicissitudes of trials he was ready to use to the best advantage all his mental resources. He had a great command of language and of admirably clear statement, which entitled him to be called an eloquent speaker. Certainly he was a most convincing one. His style was not encumbered with rhetorical ornaments, but plain, substantial and direct. When, in the year of his appointment to the bench of the Supreme Court, he gave up business, he had acquired a position at the bar second to none in the Commonwealth, and a

competent fortune, which raised him above the need of anxiety during the years which he devoted to the public service.

His political honors are naturally those which have most prominently been associated with the memory of his name. In 1812 he was a member of the State Senate, and was a strong supporter of the administration in its measures which resulted in the war with Great Britain. The majority in this State were intensely opposed to the war, and here at the outset of his career Lincoln exhibited his independence of judgment and courage in supporting his convictions. He was rewarded by seeing a strong sentiment built up in favor of sustaining the war after we were engaged. In 1814, as a member of the House of Representatives, he protested with vigor against the resolution which resulted in our participation in the famous Hartford Convention. Defeated by a large majority in the General Court, he drew up a protest which was signed by the minority, and widely circulated through the country, bringing its author into national repute. The convention was held, but its action, beyond furnishing a text for secessionists' arguments in later years, had no result, and aroused but short-lived interest.

For several years Mr. Lincoln represented Worcester in the Legislature—always with credit. In 1822 he was elected Speaker of the House, in which a majority were of the opposite political party. This is an evidence of that remarkable freedom from partisan bias which he displayed on all occasions. Many years afterwards, when a member of Congress, he felt it his duty to reply to an attack which a member of his own party had made upon the President, to whom he was politically opposed, and did it with so much dignity and effect that the supporters of the administration published his remarks. He would not win by any but the fairest means and the most direct arguments.

His promotion was rapid. He left the Legislature for the Lieutenant-Governorship, and while in that office was appointed an associate justice of the Supreme Court. On that bench he remained only a year, but brought to the performance of its duties a learning and a dignified urbanity, which gave evidence that there also he would have added to his reputation, and to that of the court, already distinguished for its high character. In 1825 he received the nomination for the office of Governor of Massachusetts from both political parties. He said that, owing to his judicial position, this was the only way in which he should have considered it proper to accept the nomination. For nine years he held the office by successive re-elections, most of them practically uncontested, and no more faithful or efficient officer has filled the chair. Interested in everything that could contribute to the welfare of the Commonwealth, he imparted a stimulus to internal improvements of all kinds. Canals and railroads, the improvement of agriculture, the upbuilding of manufactures, reforms of the prisons and of hospitals for the insane, the establishment of Normal Schools, all received his energetic attention.

Declining to accept a tenth term as Governor, he was persuaded to take the seat in Congress left vacant by the election of John Davis to the gubernatorial office. There he remained during four Congresses, and again sought to retire among his friends and his home enjoyments, free from the constant turmoil of public life.

During the rest of his life this retirement was broken only at intervals. In 1848 Worcester, having received a charter, organized its municipal government, and called upon him, as its first citizen, to occupy the mayoralty. This duty he cheerfully performed for one year. For twenty years thereafter he lived amid its growing population and thriving industries, always interested in every movement of progress, and contributing by his management of his large landed property to rendering it a city of beautiful streets and home-like residences. Much of his time was devoted to the encouragement of agriculture. In his own fine farm and herd of cattle he took infinite delight, and the Worcester Agricultural Society, of which he was president for thirty years, owed much to his constant care. Though eminently a man of affairs rather than of books, he took a deep and rational interest in scientific and literary investigations.

The American Antiquarian Society acknowledges its indebtedness for his contributions to its library, and his own share in its proceedings.

His pastor, the Rev. Alonzo Hill, speaks of him as a deeply religious man, constant in every good word and work for the church and society which his father had been largely instrumental in establishing. Regular in his attendance on public worship, his erect figure was every Sunday to be seen on his way to the church, a mile from his home, until the infirmities of age in the last year of his life prevented.

One who knew him well says that his great characteristic was faithfulness—a thoroughness in whatever matter, large or small, that he undertook. He had an ambition to possess the respect and good-will of the public, but this ambition was subordinate to the determination to deserve that esteem. No considerations of present advantage or of personal friendship were sufficient to deter him from the course which seemed to him the proper one. This was well illustrated when, as Governor, it became necessary for him to appoint a chief justice of the Supreme Court to succeed Judge Parker. Resisting the claims of an intimate friendship, the urgency of influential supporters and a natural desire to gratify long-standing expectations, he selected a man whom his judgment assured him was best qualified for the office. Long afterwards he used to say that the act of his Governorship on which he looked back with the most complete satisfaction was the giving to the judicial history of the Commonwealth the services of Lemuel Shaw, and

every lawyer must sympathize with this self-congratulation.

During the Civil War he was a most earnest supporter of the government by word and act. Too far advanced in years himself to take the field, his eloquent words incited others and his steady courage sustained the drooping faith of those who doubted our ultimate triumph. His last public service was to act as one of the electors-at-large, and to cast a ballot for Abraham Lincoln in 1864. A patriot to the core, with a son and grandson in active service, he never felt that he had done enough for his country while there remained any service which in its hour of need he could perform.

Judge Washburn has well summed up his virtue when he says: "I have little hesitation in saying that I have never known one whose life and character had more of completeness in its composition than his. Among his characteristics were a steadiness of purpose, a quickness in expedients, a judgment cool and well-balanced, discriminating nicely in the selection of agents and the application of means, and withal, a courage that shrunk from no responsibility, and an industry that was alike incessant and unwearied."

Long may such citizens be found among us, long may we recognize and honor them, and God *will* save the Commonwealth of Massachusetts.

In 1868, the year of Governor Lincoln's death, there passed away a life-long friend who had arrived at an equal length of days. REJOICE NEWTON was a native of Greenfield, and a graduate of Dartmouth College in 1807. After studying law for three years he was admitted in Hampshire County, and was so fortunate as to form a partnership with Francis Blake, then at the height of his successful practice in Worcester. This connection continued for four years, which must have been full of instruction and inspiration to the younger man, while the latter's methodical habits and calm judgment must have been of service to the brilliant orator. After the dissolution of the partnership the friendly relations were still maintained, as is evinced by letters written by Mr. Blake in the last year of his life.

For seven years Newton discharged with efficiency the duties of prosecuting attorney for the county. At the end of that time, in 1826, he formed a partnership with Wm. Lincoln, the scholarly historian, a brother of Governor Lincoln. As a lawyer, he was respected as a safe and careful adviser. In the House and Senate of the State he served usefully several terms. In numerous business enterprises of the city he took an active interest, and his services were in request on boards of directors of financial institutions. By attention to business and judicious investments he accumulated a handsome property, and was able to retire from active pursuits and enjoy his books and his farm during the last ten or fifteen years of his life. Like Governor Lincoln, he had a great fondness for

Heath and woodland
Tilth and vineyard, hive and horse, and herd.

His tastes in this respect he was able to gratify, for his broad acres were his only care for many years. One of the beautiful hills which overlooks the city of his adoption still bears his name, and now, annexed to an adjacent park, reminds us that the farms of a few years ago are becoming the city locations of to-day.

It was remarked of Mr. Newton that, winning or losing in the court-room, his imperturbable temper was never disturbed. Such a command over one's self is invaluable to any man, but to none more than to the advocate, when, in the sharp contests of jury trials, a keen opponent is ready to take advantage of every lapse, and the twelve men are observing as carefully the conduct of the counsel as the statements of the witnesses.

At the ripe age of eighty-five Mr. Newton completely withdrew from that world which had become accustomed to his absence by the strictness of his retirement from active life. The papers of the day, in alluding to his death, spoke of him as one not known to their modern generation.

This bar has contributed largely from its numbers to the ranks of historical scholars. In the case of ISAAC GOODWIN the taste for investigation of the records of the past and for literary work was so strong as to make the ordinary business of the lawyer a distasteful drudgery. Born in the town of Plymouth in 1786, and pursuing his studies there until he was admitted to the bar, in 1808, it would have been strange if he had not imbibed a love and reverence for the tradition of olden time. He did not receive a collegiate education, but, after passing through the common schools, entered the office of Joshua Thomas, a distinguished counsellor in his native town. His first office he opened in Boston, but, after a trial of less than a year, sought a less thoroughly occupied field for his unpracticed efforts in the town of Sterling, in this county. There he undertook such business as came to him, and found leisure for his favorite studies. His contributions to legal literature were works of considerable value. The first, a treatise on the duties of town officers, was a much-needed guide for the conduct of country selectmen through difficulties that not infrequently perplex them. In later years it was the foundation of a larger and more complete work on the same subject by Judge Thomas, which for years remained a standard reference book. Whether such compilations do not as often mislead the lay reader who relies on his own interpretation of their language as they assist him may be doubted, but in the hands of the trained student they prove most useful tools. "The New England Sheriff" was his second venture in this field, and till this day that work is a valued part of a lawyer's library.

In 1826 he removed to Worcester, where he had already formed strong literary friendships with William

Lincoln and Christopher Baldwin, the editors of *The Worcester Magazine*, and other gentlemen of like tastes. For this periodical he wrote a general history of Worcester County, which continued through several numbers, and also a history of Sterling. Both these writings gave evidence of painstaking investigation, and the earnest desire of the author for impartial accuracy. His style is not enlivened by many of the graces of diction, but the plain tale is set down with admirably terse exactitude. To state the facts was the aim he set before him, and to do that well is more than half the power of the successful advocate.

He was often called upon to deliver addresses of an historical nature. His oration on the one hundred and fiftieth anniversary of the destruction of Lancaster by the Indians, was one of the most noteworthy of these. His death occurred in 1832, when in his forty-seventh year.

For more than twenty years a most prominent figure at all sessions of the higher courts in this county, adding dignity to every occasion, was that of Sheriff Willard. He was a native of Harvard, born in 1784, and entered the bar in 1809, after a course of study in the office of Richard H. Dana, in Boston. For a short time he practiced in Petersham, but soon removed to Fitchburg.

In 1824 Governor Lincoln, with his usual sagacity, selected him for the office of high sheriff of the county. His manner of discharging the duties of that position was a model for all who should come after him. Courteous and respectful to all, he insisted that the decorum which he observed on public occasions should not be infringed by others. With the instincts of the old-school gentleman, he was most careful in his regard for the etiquette to be maintained in his relations to court and bar. To a greater extent than in our modern haste we are apt to imagine, a respect for forms assists rather than retards the proper dispatch of business, and the dignified sheriff, CALVIN WILLARD, ever entered his earnest protest against any attempt to override the established order, on the plea of a more expeditious result. After resigning his office in 1844, he lived in Millbury and Worcester until his death, in the latter city, in 1867.

For forty years of Worcester's steady growth in all the arts of peace her prosperity was shared by SAMUEL M. BURNSIDE. The contrast between the surroundings of his birthplace and of his mature life is striking. He was born in 1783, in Northumberland, then a frontier town in New Hampshire. There his father, a typical frontiersman, who had fought in the French and Indian Wars, had established a home in the wilderness, and had maintained his foothold despite rude climate and desolating savage. Through the Revolution he served in military expeditions, and in the intervals cultivated the land which he had so hardly secured. From such environments the son went out to the life of a steady lawyer, in a community remarkable for the quiet of its every-day life, where nothing more terrible than the sham battles of training-day disturbed the serenity of the inhabitants. He brought with him to his work the same persistent energy which carried the father over difficulties, and placed the son in possession of fortune and reputation. After graduating from Dartmouth in 1805, and a year or two of pedagogic experience, he entered the office of Artemas Ward, then practicing in Charlestown. Mr. Burnside says that the practice of Judge Ward was then immense, and that he was so much of the time absent from his office that his students were left much to their own discretion in their course of study. He had, however, an opportunity to draw conveyances and pleadings under the supervision of his preceptor, which was of great value in forming habits of accuracy and conciseness of expression. In 1810 he was admitted as an attorney in the Supreme Court without having, as was the usual rule, been previously sworn at the bar of the Common Pleas. In the same year he came to Worcester, and commenced business with an excellent preparation for success.

Those who knew him speak of his great industry and his mastery of fundamental principles as the conspicuous elements of his power. Well read in the learning of his profession, he wisely diversified his pursuits by a continued attention to the classics, and in the latter years of his life, during which he gave up active labors these studies provided a constant source of enjoyment for his well-earned leisure. He died in 1850, but his name is still associated with the business interests of the city, where are the evidences of his prosperous career.

EDWARD D. BANGS was the son of Judge Edward Bangs, who has been mentioned. He was born in Worcester in 1790 and studied in his father's office. Admitted to the bar in 1813, he at once formed a partnership with William E. Green, who had been associated with his father previous to the latter's elevation to the bench. Though esteemed a good lawyer and careful of the interests committed to him, he never acquired a fondness for professional labors. His mind rather turned towards purely literary investigations. and in his position as Secretary of State, to which he was elected in 1824, he found duties much more fitted to his tastes. He always seemed to take pleasure in assisting the inquiries of others in his department, and spent the happiest years of his life in the Boston State-House. He was elected a member of the Constitutional Convention of 1820, and was associated in the representation of Worcester with Levi Lincoln. His youth and modesty prevented his taking an active part in the proceedings of that body or of the House of Representatives, where he sat for several years. He succeeded Rejoice Newton in the office of county attorney, but resigned in a few months to assume the Secretaryship

of State. His health had become so impaired in 1836 as to cause his retirement from office, and he lived but two years longer. He was distinguished for his gentlemanly bearing and invariable courtesy of manners—qualities which he inherited from his father. Like him, also, he was a devoted horticulturist—a taste which seems naturally associated with gentle breeding.

Massachusetts was most fortunate in having in her public service, at the same time, two such men as Levi Lincoln and JOHN DAVIS, and that they were trained to command the applause of listening senates in the forensic contests of the Worcester Court-house will always remain the pride and the incentive of the young aspirant for legal honors at our bar. Born in Northborough in 1788, some six years later than Governor Lincoln, and finding more obstacles to his rapid progress in youth than the son of the Attorney-General, Mr. Davis, through life, pressed close upon the footsteps of his predecessor, and in generous rivalry left it doubtful which should deserve best of the republic. He was descended of a line of sturdy yeomen, the first of whom in this country was Dolor Davis, whose name is found upon the Cambridge records in 1634. His father, Isaac Davis, a respected farmer of Northborough, found it a task sufficiently laborious to force from the reluctant soil a comfortable living for his large family, and he of them who would secure an education must struggle for it himself. Until he was nineteen years old John Davis, by his own account, was employed most of his time upon the farm. He, however, found sufficient time for study by himself and in the district schools to fit himself for Leicester Academy, where he made good use of the short time at his disposal, and entered Yale College in 1808. There he graduated in due course with high honors. Francis Blake was, at that time, in the very zenith of his brilliant power, and his reputation attracted to his office the youth emulous of his fame. After three years of study with Mr. Blake, Davis was admitted to the bar in 1815. For a few months he tried the worth of his acquirements in Spencer, and no doubt was satisfied that he could bear his part in a more crowded forum, for he soon came back to Worcester and there set up his standard.

The next year Mr. Blake's failing health compelled him to withdraw from active practice, and Mr. Davis succeeded to his office and his business. Undertaking the task of wearing such a mantle and called upon at once to contend with antagonists so formidable as Lincoln, Newton, and Burnside, his powers were put to proof and rapidly developed. In the ten years that elapsed before he entered Congress and Lincoln became a judge he had attained a commanding position, and had increased the large clientage which he inherited from Blake. As a lawyer it was said of him that he did not possess a considerable familiarity with reported decisions, but that his well-trained judgment and clear perception of the fundamental principles of law generally brought him to a correct conclusion as to what the law ought to be, and he then proceeded to sustain his position by the arguments which had convinced his own mind, and by precedents illustrative of the principles which he maintained. Courts learned to know that his arguments were based on careful reasoning and might be relied on to contribute something towards the decision of the issue, even though they might fail to carry complete conviction. Before juries his evident candor, his plain statement of the facts as he viewed them, and entire comprehension of the way in which his array of evidence would impress the mind of the unprejudiced auditor, give him a power which pressed strongly towards a favorable verdict. Judge Paine remarked of him that he had more common sense than any three lawyers of his acquaintance, and this saving grace was conspicuous in all his actions and utterances.

For a year previous to Mr. Lincoln's promotion to the Supreme Court he joined forces with Mr. Davis in practice. Afterwards the firms of Davis & Charles Allen and Davis & Emory Washburn transacted a large share of the business of the county, and proved most formidable allies until 1834, when Governor Davis finally retired from the courts to give his attention exclusively to public duties. In the discharge of these, as was most natural, he won his most wide-spread distinction.

His political career began with his election to Congress in 1824. During his first term he was rather an observer than an active participant in debate, but in 1827 he attracted attention by his earnest advocacy of the so-called American system. From that time onward he was an able champion of the protective tariff on every occasion, and whatever may be thought of the soundness of his deductions, it is certain that he handled his facts with skill and presented with utmost vigor the now hackneyed arguments which have prevailed with the majority of New Englanders to the present time. His speech in reply to McDuffie, of South Carolina, the leader of the free trade party in the House, was esteemed his most powerful presentation of the case, and gave him a national reputation.

A declaration made in one of his speeches is remarkable by contrast with what any member of Congress at the present day would be able to say on the same subject. In defending his constituents from the charge of self-seeking in their demand for tariff legislation, he says: "During the seven years I have held a seat on this floor, no one has applied to me to ask any favor of the Executive for him, nor has any one sought my assistance in procuring an appointment of any kind, unless it is to be the deputy of some little village post-office." If our representatives could obtain a like exemption from vexatious importunity, their undistracted attention to purely

Page 8

Charles Allen

legislative duties might bring forth at least some result.

In 1833 Governor Lincoln announced that he should not again be a candidate, and the Whig Convention, with practical unanimity, selected Mr. Davis as their nominee. He accepted with evident reluctance, feeling that his usefulness in Congress was assured, while the new honor brought with it untried responsibilities. His loss to the service of the whole country was deplored outside of Massachusetts, one of the influential journals declaring that he was the right arm of the Massachusetts delegation in Congress.

The Anti-Masonic party, then at the culmination of its strength in this State, had put in nomination John Quincy Adams, and Davis was made to feel it his duty to accept the leadership of his party in a dubious conflict, and such it proved to be. In the popular election there was no choice, but in the Legislature Davis received a majority. The difficult task of acceptably filling the chair which his friend Lincoln had so long adorned he accomplished with credit, and was elected for a second term, but resigned when chosen to fulfill the more congenial duties of United States Senator. In that august body, where he sat from 1835 to 1841, and from 1845 to 1853, he was cotemporary with the triumvirate, Webster, Calhoun and Clay, whose overshadowing greatness tradition continues to magnify. But reading the plain story of the times, it is evident that Senator Davis was a potent factor in moulding legislation, and that his grasp of national questions was in most cases liberal and always strong enough to make itself felt. Not only on the tariff, but on our commercial relations, the fisheries, financial topics and our intercourse with foreign powers, he made his opinion respected by making his knowledge evident.

His two terms of service in the Senate were divided by two years in the State Governorship and two years of private life. He lived but one year after retiring from the Senate, in 1853, to enjoy that contemplation of a life well spent, which he might so deservedly anticipate.

Two years after Mr. Davis' admission to the bar there applied to the examiners for this county a tall, slender youth, whose clear-cut profile, close curling locks and keen glance gave to his countenance an almost classic beauty. As his examination proceeded, the questioners became so interested in the thoroughness of the knowledge he displayed, and the aptness of his replies, that for their own gratification they prolonged their inquiries after they were satisfied of the qualification of the candidate for entrance to the bar.

The young man was CHARLES ALLEN, then in his twenty-first year. His father, Joseph Allen, was clerk of the courts for this county for thirty-three years, succeeding the elder Levi Lincoln in that capacity. He was a fine scholar, and a gentleman of that refined and elegant school of manners often spoken of as old, but by no means obsolete at the present day. Charles Allen was born in Worcester in 1797. Three generations back he counted as his ancestor a sister of Samuel Adams, and the steadfast independence of that old patriot was clearly reflected in his kinsman of the later day. After preparing for college at Leicester Academy he entered Yale when only fourteen. There he remained only a year, severing his connection for reasons that were said by his pastor to reveal "the delicateness of his sensibility, but reflected no dishonor upon him." Immediately he entered the office of Mr. Burnside, then in full practice, and so diligently improved his youthful powers as to meet the examination in 1817 with the result described.

For six years he practiced in New Braintree, and a discriminating eulogist says: "When, some twenty-five or thirty years later, I commenced practice in the same community, the reputation he had won there, in those early years, was still spoken of with admiration and pride by those who had been the clients and friends of the young lawyer, and who had followed him through all his subsequent and more conspicuous public career." In 1824 he removed to Worcester, and became associated with John Davis, who, though ten years his senior, had been but two years longer at the bar. He was not a case lawyer nor a reader of many books. Thoroughly well grounded in leading principles, it was his habit to think out his line of reasoning while pacing his office or walking in the open air. It was said that the definitions of Blackstone were impressed upon his memory almost *verbatim*, and although he gave to every case most careful preparation, it was rather a process of reflection and logical deduction from established premises than a resort to the writings or decisions of jurists who had preceded him. His great power lay in cross-examination. In the use of this most dangerous weapon, more fatal to the unskillful wielder than all the armory of his opponent, he was an adept whose superior, by the testimony of living witnesses, most competent to judge, has not arisen in this Commonwealth from his time to the present. Terrible is the word used by one to describe his treatment of a witness whom he believed to be testifying to an untruth, and with merciless directness question would follow question till the best fabricated story was exposed. He realized, too, the danger of attempting too much with an adverse witness, and never committed the mistake of strengthening the direct testimony of his opponent by permitting its repetition in reply to cross-questioning. His general rule was never to examine an adverse witness; the exception he chose carefully and for sufficient reasons. His intellectual processes were rapid, and all his faculties and stores of knowledge ready at any moment for their best service. With a

remarkable mastery of the rules of evidence, he was able, in the course of trials, as questions arose, to take up his position and defend it by cogent argument upon the instant.

His public services included four years in the lower and three in the upper branch of the State Legislature and four years as a Representative in Congress. In 1848 he was a delegate to the Whig National Convention. The representatives of Massachusetts voted steadily for Daniel Webster, but the leading candidates were Clay and Taylor. Mr. Allen, though up to that time acting with the Whig party, was a stern Abolitionist in faith and word. Hating slavery as a sin, and convinced that the nomination of General Taylor was a truckling to the power of the slaveholders, upon the announcement of the vote, he arose in his place, denounced the act in incisive language, and left the hall and the party, to go home and earnestly engage in the formation of the Free-Soil party.

In 1853 he was a member of the convention called to revise our State Constitution, and there his counsels were sought by the leading lawyers of the State who were found in that body.

But as Judge Allen he was best known and is still remembered in this community. His first judicial appointment was to the Court of Common Pleas in 1842. Two years later he, with most of his associates, resigned, in consequence of a legislative spasm of economy, which reduced their already modest salaries. In 1858 he was appointed chief justice of the Superior Court for Suffolk County, and in the following year was fitly chosen to preside over the newly-commissioned Superior Court of the Commonwealth, which was substituted for the old Court of Common Pleas. On this bench he remained until failing powers induced his resignation in 1867, two years before his death. Twice he was offered promotion to the Supreme Court, and again on the retirement of Chief Justice Shaw, but he preferred to remain where he was. His physical health was not robust, and he hesitated to assume duties that to him might be more laborious. He was admirably fitted to preside at *nisi prius* trials, where the quick grasp of the facts, as they are for the first time presented, the ability readily to conceive and apply the rules of evidence and facility in clear, impromptu statement of the law for the guidance of the jury, are essentials. He was never fond of the patient reading and writing necessary to the preparation of the elaborate opinions of the Supreme Court. One of his friends and admirers says of him that he was an indolent man, never making more than just the absolutely necessary exertion for his purpose, and ever ready to postpone, if possible, the undertaking of new effort. His own explanation of this apparent sloth is found in a remark to Judge Foster: "Few know how much physical weakness I have had to contend with through life, and how much has been attributed to indolence in me, that was caused by the necessity of nursing my health." He possessed, however, an energy of will that roused his latent powers to a height commensurate with any obstacle, as opponents learned to know full well.

Judge Allen was not a scholar. His reading was confined in its scope, yet his mind seemed to broaden and deepen by its own innate law of growth. The concurrent testimony of those who knew him well, with singular unanimity, dwells upon his intellectual strength. "I think . . . for force of intellect he was above any man whom I have known in this commonweath;" "No one who has ever lived in this community was his equal in pure intellectual power;" "He never called any man his intellectual master;" "Among intellectual masters ranked with the very first, not second to Daniel Webster himself," are the expressions of four lawyers, who have had opportunity to form correct opinions of the man.

Though reserved and dignified in manner and little apt to display his feelings, he showed to his chosen friends a kindly nature, ready to share in social intercourse or extend the hospitable hand. Conscientious, independent, reverent of the religious truths in which he firmly believed, fearing his own disapproval and else no mortal man, his was a proud position—as of that

> Promontory of rock
> That, compassed round with turbulent sound,
> In middle-ocean meets the surging shock,
> Tempest buffeted, citadel crowned.

Mr. Allen's most formidable antagonist before the jury for many years was PLINY MERRICK, the son of the gentleman of the same name, of whom we have spoken. He was born in Brookfield in 1794, and graduated from Harvard in the class with the historian Prescott in 1814. He had the advantage of studying his profession in the office of Levi Lincoln, then just entering upon his political career in the State Legislature and in the midst of active practice. After his admission to the bar in 1817, Mr. Merrick made several attempts at settlement before adopting Worcester as his home. For four years he practiced in Taunton, and for a portion of that time was a partner of Governor Morton. In 1824 he returned to Worcester to undertake the duties of prosecuting attorney for the county. In this capacity he acted until the division of the State into districts under an act of 1832. Governor Lincoln thereupon appointed his former pupil attorney for the Middle District, which consisted of Worcester and Norfolk Counties, and he held the office until his promotion to the bench in 1843.

During these nearly twenty years of service in conducting cases for the government in the criminal courts his general practice was continually increasing. He was on several occasions called into the courts of Vermont, New Hampshire and Rhode Island, where his reputation had become known and valued.

His arguments are spoken of as masterpieces of

rhetorical skill. His command of language was unsurpassed by any of his cotemporaries, and his eloquent perorations are still vividly impressed on the recollections of some who have listened to them. With a keen wit and great quickness of apprehension he united an impulsiveness of temperament which sometimes hurried him beyond the positions which he had intended to maintain, but his readiness and his good humor never failed him in these emergencies. Judge Washburn says of him that "it was sometimes difficult for an antagonist to determine whether he was the most effectually subdued by his adroitness or his courtesy."

One of the most conspicuous trials in which he was engaged was that of Professor Webster for the murder of Dr. Parkman. His defence of the prisoner, though somewhat criticised at the time, is now admitted to have been well conducted and a good struggle in a hopeless cause.

In 1843 Mr. Merrick was appointed a judge of the Court of Common Pleas, and held the office until 1848, when he resigned and undertook the presidency of the Worcester and Nashua Railroad. In 1850 he returned to the bench, and after three years was promoted to the Supreme Judicial Court. It was apprehended by many of his associates that the brilliant rhetoric, keen wit and swift mental processes which had formed great part of his strength at the bar would unfit him for the duties of the judge, who must often "halt between two opinions," till he is possessed of all that can be said on either side.

But as a *nisi prius* judge he exibited a most accurate knowledge of the rules of practice and evidence, which facilitated the progress of trials by avoiding the necessity of long arguments as objections were raised. He was quite apt to form a decided opinion on the merits of the case, and in his charge to the jury to make that opinion manifest with a distinctness that the judge of to-day would consider exceptionable.

The present theory is that the presiding judge is to be absolutely without sympathies and without opinions on the right or wrong of the controversy, but to state to the jury the rules of law which shall govern them, in any conceivable aspect of the facts, which may impress them as the true one. To so austere a view of the functions of the judge Mr. Merrick was never able to conform himself. His statements of complicated series of facts were always clear and of assistance to a proper understanding of their relative value, but often of their value in the mind of the judge. In the reports of decisions of the Supreme Court, his opinions, especially upon the criminal law of Massachusetts, are held in high respect. For ten years his services became more and more valuable, and he was recognized as a worthy associate of Lemuel Shaw, our great chief justice. He was an energetic worker and ready to assume even more than his share of the labors of the bench.

In 1856 he removed to Boston, and there resided till his death, in 1867. The last three years of his life were spent in retirement occasioned by disease. Paralysis had suspended the use of some of his limbs. But through it all he sustained his cheerful disposition and powerful will. When his right hand was disabled, he learned to write with his left. Prevented from going abroad, he found in the converse of friends at home the means of keeping his mental faculties in active use.

Mr. Merrick belonged to the political party which was in the minority in this State, and held few elective offices. He served in both branches of the State Legislature at intervals; but, aside from that, his whole attention was devoted to his profession.

JOSEPH THAYER was an example, of which the law does not furnish many, of a lawyer who, without inherited property or remarkable legal attainments, acquired, in the course of an honorable and useful career, a handsome competence. He was born in Douglas in 1792, graduated at Brown University in 1815, and after studying in the offices of Levi Lincoln and of Bezaleel Taft, of Uxbridge, he began practice in that town. Without great learning in the law, he possessed good practical judgment, on which he was accustomed to rely, and which others soon learned to respect. His perception of the real gist of a controversy was seldom at fault, though generally arrived at without the aid of labored reasoning. In financial matters his judgment was remarkably accurate. He became interested in a large number of business enterprises in his community. Both the Blackstone Canal and its successor, the Providence and Worcester Railroad, received, in their inception and progress, his encouragement and assistance.

His townsmen found in him one ready to use his capital in sustaining those under temporary embarrassment, and to risk something rather than see his neighbors go to the wall. He accordingly received and retained their confidence, and was honored by elections to various positions of trust. His political services outside of Uxbridge were in the Constitutional Convention of 1853, to which he was chosen a delegate by general consent, and in the Legislature of the State. He rounded out nearly four-score years of honored and useful life, and died at the residence of Judge Chapin, his son-in-law, in 1872.

It is proper to mention among the prominent men who have been members of this bar, one whose life was spent in other than professional pursuits, but who always felt a pride in his connection with the law, and who so well fulfilled the duties of his station that the bar may well be proud to number him among their honored dead.

STEPHEN SALISBURY, the son of a Worcester merchant bearing the same name, was born in 1798. His father had been successful in establishing in the small town an extensive business and a home where

a refined and generous hospitality was exercised. From the influence of the latter the son went out to Leicester Academy and Harvard College, where he graduated in 1817, carrying with him everywhere the evidence of that home culture in his dignified courtesy and unswerving integrity. He studied law with Samuel Burnside, and was admitted to the bar, though he had no need and probably no intention of making professional labors his life-work. For several years he assisted in the care of his father's property, and in 1829, when he became its sole owner by inheritance, he assumed the duties which he felt that the possession of wealth devolved upon him, with an earnest desire to conscientiously discharge every responsibility. Absolved from the necessity of any labor if he had so chosen, he was one of the most industrious of men. A diligent student, he made himself familiar not only with classic authors, which were perhaps his favorite recreation, but with a great variety of lines of scientific and literary research. For thirty years he presided over the American Antiquarian Society, and frequently contributed from his pen to the publications of that body. His wisdom was sought for in the conduct of financial, charitable and scientific institutions, and to whatever duties he assumed he applied the same conscientious attention. His constant endeavor was to faithfully perform that which he felt it right to undertake. The Polytechnic Institute located in Worcester was a peculiar object of his bounty and his care. As president of its Board of Trustees he was unfailing in his attention to its interests. Till the latest period of his life he was constantly growing in mental breadth, and did not allow age or even later infirmity to repress his eager interest in intellectual pursuits. Elsewhere in these volumes his deeds will more fitly be described, but as he always wished to be counted with the lawyers when they gathered for any occasion of general interest, so we cannot omit to claim some share in his good fame whose training as a law-student must have aided in making him what he was.

For the facts contained in most of the earlier sketches in this chapter the writer is principally indebted to the scholarly address delivered by JOSEPH WILLARD before the bar of the county in 1829. He was then but a little over thirty years of age, but the address is characterized by thorough investigation, by philosophical reflection and by inspiring views of the nobility of the profession which he represented. His father was president of Harvard College, and from a line of ancestors he inherited a scholar's love for the classics and for literary and historical investigation. Born in Cambridge in 1798, he graduated in his nineteenth year, and at once began the study of law in Amherst, New Hampshire. At this time he formed the acquaintance of John Farmer, a zealous antiquarian scholar, whose friendship and advice no doubt gave a bent to the tastes of the young man towards similar studies. After completing his professional studies in the Cambridge Law-School, he began practice first in Waltham, and in 1821 in Lancaster. There for ten years he gave attention to business with considerable success. He could not forego literary work, however, and was one of the writers for the *Worcester Magazine*, a periodical devoted to historical and literary topics, especially those of a local character. His most elaborate work, which appeared in those pages, was a history of the town of Lancaster, which exhibits his habits of careful and minute investigation and his excellent taste and judgment in the selection of his material.

In 1830 he married a Boston lady, and soon afterwards removed to that city, continuing to practice until 1840. In that year he was appointed, by Governor Everett, clerk of the Court of Common Pleas for Suffolk County. This office, through the changes of the style of the court, and after the clerkship became an elective position, he held till a short time before his death. With its duties he made himself thoroughly conversant. On the great multiplicity of questions of practice constantly arising, his opinion came to be regarded as almost equal to a Supreme Court decision. His methodical habits kept the large accumulation of papers and records in perfect order and available for instant reference, and he seems to have transmitted to his son the same capacity for the successful administration of that difficult position.

He found in retirement from practice more leisure for his favorite historical studies. The Proceedings of the American Antiquarian Society and the Massachusetts Historical Society, of both of which learned bodies he was an active member, are enriched by his papers on a variety of topics. A work upon which he was engaged at the time of his death was a life of General Knox. The manuscript materials entrusted to him were in a chaotic state, and the labor of arranging the letters and documents taxed his powers for a long time. He became intensely interested in the work, and after his strength was insufficient for any other exertion he insisted on the attempt to go on with this labor of love. But it was not permitted him to complete the task. In 1865 he died, amid the closing scenes of the conflict of arms which had aroused his fervent patriotism and in which had been sacrificed the life of his eldest son.

Mr. Willard had early connected himself with the Free-Soil party. His conscience deeply felt the sin of slave-holding, and he welcomed the war as the means of deliverance from that burden. A letter which he wrote to an English friend, in reply to some hostile criticisms of the English press, was widely circulated and largely instrumental in informing public opinion in England on the true merits of the Northern position.

Twenty-seven years after Mr. Willard's historical sketch of our bar from its beginning, the tale was taken up and carried on in graceful diction, with admirable skill, by EMORY WASHBURN, a cotemporary

and literary associate of Mr. Willard. From this address are borrowed many of the details that have appeared in these pages. Its author was born in Leicester in 1800, and prepared for college in that admirable school, which has been the chief glory of the town. His father died in the lad's seventh year, leaving him to the care of his mother, to whom, through her life, he manifested a most devoted attachment, and of his pastor, Dr. Moore. This gentleman was called to a professorship in Dartmouth College, and took with him his *protégé*, then only thirteen years old. In 1815 Professor Moore became president of Williams College, and thither Mr. Washburn followed his fortunes, and there graduated in 1817. His experience in small colleges made him a firm believer in the superior advantage of the more intimate association of pupils with instructors there possible. He was always a stanch and useful friend of his *alma mater*. Part of his professional studies were pursued in the office of Judge Dewey in Williamstown, and for a year he attended the Harvard Law School. Soon after his admission, in 1821, he opened an office in Leicester, where he remained for seven years. During this period he served his town as clerk and as Representative in the General Court. Becoming interested with the founders of the *Worcester Magazine* in preserving the memorials of the past life of this vicinity, he wrote with great fidelity and published in various numbers of that periodical a history of Leicester and of its academy. In 1828 his mother died, and the chief tie which bound him to the village having thus been broken, he removed to Worcester. That town then had a population of some four thousand, but among them was Lincoln, the Governor of the State; John Davis, dividing his time between the duties of a member of Congress and a lawyer in active practice; Charles Allen and Samuel Burnside.

Mr. Washburn's clients followed him from Leicester and he soon attracted others. In 1831 he formed a partnership with John Davis, succeeding Mr. Allen in that relation. His faculty of making every man who came to him for advice feel that he had found a personal friend, that his cause was in the hands of one who had not only the ability but the sympathetic interest to make the most of it, secured to Mr. Washburn in a remarkable degree the affectionate adherence of hosts of clients. His industry was incessant and untiring, and his success proportionate. Governor Bullock says of him, "His leading competitors at the bar were clearer in statement, more incisive in their arguments. Governor Washburn was never a rhetorician. I perceived, however, that there was a moral power of confidence behind him which was equal to the power of eloquence." "His great source of influence over juries was the kindliness, the genuineness of his nature." Juries believed in the honesty of the man. He was able so thoroughly to identify himself with his client's view of the facts, as to impress others with the sincerity of his own conviction of its truth.

In 1838 he was again a member of the House of Representatives, and presented and ably supported the first report in favor of a railroad from Boston to Albany. In 1841 and 1842 he was chairman of the Judiciary Committee of the Senate. For three years he assumed the duties of a *nisi prius* judge in the Court of Common Pleas, and for two years more resided in Lowell as the agent of a manufacturing corporation, but the practice of the law in the county where he was best known and best beloved was his real vocation, and to it he returned with added zeal and undiminished success.

One of the large number of tasks in which he found pleasure and recreation, in the midst of his most exacting professional cares, was the preparation of the "Judicial History of Massachusetts" down to Revolutionary times, a work involving a vast amount of research and containing most valuable information for the student of the growth of our modes of legal procedure.

While absent in Europe in 1853 he was nominated by the Whigs for Governor of the State, and was elected by a narrow majority. The next year he was defeated by the "Know-Nothings," and returned to the calling for which he was most fitted.

Whether his success was greater as an advocate or as an instructor in the law, may be open to question. In the year 1856 he became Bussey professor of law in the Dane Law School at Cambridge, and for twenty years lectured before successive classes of students with ever-increasing reputation, and adding to the ranks of his devoted admirers every disciple who had the opportunity to listen to the kindly counsel which he mingled with his instruction. It was said of him that "Few professors have enjoyed in so full a measure the confidence and affection of the students of that renowned seat of learning. None have been more fortunate in the effort to inspire the young men of the bar with lofty ideas and pure purposes. It was not his power as a lecturer upon legal topics, though respectable, by which he exerted the greatest influence on the mind and future course of the student, but his private conversations and advice based on long experience . . . and an earnest, unaffected interest in the welfare and prospects of every young man to whom he stood in the relation of instructor and adviser." During his professorship he published a treatise on the "American Law of Real Property," which has passed through several editions, and is the text-book of students and the reliable reference of the practitioner to-day. Both this work and his volume on "Easements," are marked by the most careful investigation of authorities and the presentation in the fullest manner of every phase of the subject. In the effort to cover the whole ground, the writer sometimes becomes prolix, but whatever of force is lost in repetitions is compensated by the addition of prece-

dents and citations. In 1876 he resigned his professor's chair, but even then did not give up his ambition to be useful. As a Representative in the General Court during the last year of his life, he was actively at work in the chairmanship of the judiciary committee, and as senior member of the House exhibited the same fresh interest in public matters as when one of its youngest members he represented Princeton, half a century before. In 1877 he died with mental powers in full activity, and the affectionate eulogies which were pronounced by his fellows in every relationship of his busy life testified to the deep impression which his genial manners and universal sympathy had made upon the hearts of all who knew him.

When Judge Nathaniel Paine retired from his long and honerable service of thirty-five years in the Probate Court he was succeeded by IRA M. BARTON, a counsellor practicing in Oxford. In that town he was born in 1796. During a portion of his course at Brown University he was a room-mate of Horace Mann, whose friendship he enjoyed in their subsequent careers. After graduating in 1819, he studied law with Sumner Bastow, in Oxford, with Levi Lincoln, and at the Harvard Law School, then recently established. He was one of the first three to graduate from that institution. In 1822 he opened his office in his native town, and there continued practice for fourteen years. As an adviser he was careful and conscientious, desirous rather of avoiding danger for his client than of risking his interests by over-boldness. As an advocate he attained considerable success. Not a brilliant orator, his efforts were characterized by an earnest endeavor to perform his duty to the fullest extent, and his well-known integrity secured to him always respectful consideration by courts and juries. From 1836 to 1844 he presided with impartiality in the Probate Court, and by his kindly sympathy maintained the traditions of that tribunal as the guardian and protector of the helpless and the afflicted. Upon his resignation he formed a partnership with the late Peter C. Bacon, to which Mr. Barton's son was admitted later, and for several years the business of the firm was of extensive proportions, and its name familiar beyond the limits of the county. In 1849 his feeble health compelled his retirement from active practice, but did not prevent his acting as counsel in chambers during many years. In this, perhaps the most agreeable branch of legal practice to one of non-combative instinct, he found his judgment sought and relied upon by a large circle of clients. He took his fair share of the responsibility in matters of public interest. For three years he represented Oxford in the Legislature, and was Senator in 1832 and 1834. In the latter year he was appointed one of the commissioners to revise the statutes of the State, and bring into shape, available for use, the mass of public legislation which had grown to be an almost chaotic tangle of repeals and amendments. The plan of this first revision has been substantially adhered to in subsequent codifications. His addresses on several occasions gave proof of tastes for historical investigation, which were not, however, developed to a considerable extent. He lived until 1867.

ALFRED DWIGHT FOSTER should be included in these sketches as one of a line of lawyers who have been ornaments of this bar. His father and grandfather have received notice as judges of our courts, and his son attained the same title with even greater distinction. Mr. Foster was born in 1800, in Brookfield, the residence of his ancestors. After graduating from Harvard, in 1819, he studied with Mr. Burnside, and was admitted to the bar in 1822. After only two years attention to practice, he withdrew from business, and lived a life of quiet and useful leisure until his death, in 1852. He served in one or two public capacities after his removal to Worcester, in 1828, and acquired and retained the entire respect of the community.

One of Judge Washburn's most intimate friends through a score of years, until death severed the ties, was THOMAS KINNICUTT. Born in Rhode Island in 1800, the same year with Mr. Washburn, he graduated with high honors from Brown University in 1822. His law studies were pursued in the school at Litchfield, in the offices of Francis Baylie, of Taunton, and of Governor Davis. In 1825 he was admitted and began business in Worcester. His physical powers were never of the strongest, and his gentle nature shunned the contests of the court-room and the political arena. He did, however, serve several terms in both branches of the State Legislature, and was twice chosen Speaker of the House. He found his true sphere on the bench of the Probate Court, where he succeeded Judge Thomas in 1848, and presided until a short time before his death, ten years later. His winning presence, gentle manners and affectionate disposition endeared him greatly to all with whom he came in contact. With several of the financial institutions of the city he was connected, and his sagacious judgment in their conduct was constantly approved. His was one of those characters which, courting no publicity, by its sweetness and purity helps to brighten the aspect of a world sometimes too busy to even notice the shadows which overspread it.

ISAAC DAVIS[1] was born in Northborough, an agricultural town in the eastern part of this county, June 2, 1799. His ancestors, for seven generations, had been inhabitants of Massachusetts, and possessed marked family traits; conspicuous among them were rugged honesty, energy, independence of character, industry and public spirit.

His earliest progenitor in New England was Dolor Davis, the precise time of whose arrival on these shores is not known, but he is believed to have been

[1] By J. Evarts Greene.

Jefferson Davis

one of the earlier settlers in the Plymouth colony. He is known to have dwelt in Cambridge in 1634, to have married Margery Willard, sister of Major Simon Willard, formerly of Kent, England, and a distinguished soldier in the Indian wars of this colony, and to have died in Barnstable, in the Plymouth colony, in 1673.

Samuel, the younger of Dolor Davis' two sons, married Mary Meads. Simon, the youngest of Samuel's five sons, was born August 9, 1683, and attained the age of eighty years. Of his sons, the oldest—bearing the same name—was born in 1713, married Hannah Gates, lived in the town of Holden and was the father of eleven children. Isaac, the ninth of these, was born February 27, 1749, married Anna Brigham and lived in Northborough. Phineas, the eldest of his eleven children, was born September 12, 1772, married Martha Eager, October 12, 1793, and, like his father and grandfather, was blessed with a family of eleven children.

Isaac, the subject of this sketch, was the fourth of this numerous progeny. In his boyhood the industry of the inland towns of Massachusetts was almost wholly confined to farming, with some few primitive manufactures. Even Boston, the metropolis of New England, and the seat of a large foreign commerce, had scarcely one-fourth as many inhabitants as Worcester has now. Hampshire County, with its rich farming lands, was by far the most populous county in the State, Worcester and Essex approaching it most nearly. Mr. Davis' father was a tanner and currier, an upright and respected citizen. In his household the homely virtues of piety, industry and frugality were cultivated and flourished. The education of the children, begun and continued at home by the example and conversation of their parents, the reading of a few but good books, and the early study of the Bible, was pursued in the district school. The time not so employed was given to the tasks of the shop and the farm.

The district schools of those days laid a substantial foundation for the building of a serviceable and comely edifice of mental attainment and culture, but they did not carry the acquisition of knowledge very far. A boy of an inquiring and eager mind soon learned what they had to teach. The course of school studies having been early completed, Isaac Davis went to work in his father's shop, and might probably have adopted his trade, but for an injury which disabled him for a time from bodily labor. While recovering from this hurt, conscious of mental powers to which the mechanical occupation of his father would not give full scope, even if he should ever be sound enough in body to resume it, his ambition, stimulated, doubtless, by the example of his uncle, John Davis, then beginning the practice of law, in which, as in politics and statesmanship, he made an illustrious reputation, the young man resolved to prepare himself for professional life. The obstacles in his way would now be thought great, but they were not greater than those which the young men of that day who entered the professions were accustomed to surmount, and Mr. Davis' energy and perseverance were amply adequate to the task which he proposed for himself. His parents, burdened with the support of a large family of young children, could give him little assistance, and he depended largely on his own exertions for support and the cost of his education.

He began his preparation for college at Leicester, and completed it at Lancaster Academy, and entered Brown University in 1818, where he was graduated with credit in 1822. Giving lessons in penmanship and teaching school in winter were among the means by which he paid his way through college. After his graduation he accepted the office of tutor in the university, at the salary of four hundred dollars, and at the same time began the study of law in the office of General Carpenter, then one of the leaders of the Rhode Island bar. After a few months' trial of this divided employment he resolved to give his whole time to the law, and, removing to Worcester, entered as a student the office of Lincoln & Davis. The business of the office was large and varied, and gave the student excellent opportunities for learning the practical details of professional work in all its branches. While pursuing his studies Mr. Davis earned something toward his support by employing the time which a young man, less patient of continuous labor and less eager for independence, might have given—and perhaps wisely—to recreation, in copying deeds in the office of the register.

Soon after he entered the office Mr. Lincoln, the senior partner, was chosen Lieutenant-Governor, and the year after was appointed a justice of the Supreme Judicial Court. This appointment and the distinguished political honors, which soon followed, removed him permanently from practice, and upon Mr. Davis' admission to the bar, in 1825, he proposed to his uncle, then conducting the business alone, to become his partner, receiving as his share of the income one-third of the profits of the business in the Court of Common Pleas. This offer was declined, and the uncle advised his nephew to begin practice in one of the smaller towns of the county, where the competition would be less active, with the purpose of removing to Worcester when he had established a business and reputation. But the young lawyer had no liking for a timid policy. He preferred to face the greatest difficulties at once and had no distrust of his ability to surmount them. He therefore opened an office in Worcester, and it was not long before his talents were discovered and employed by clients in such numbers as amply to justify his confidence in himself.

The Worcester bar at that time was very strong. It is doubtful whether in any county in the United States was there then a group of lawyers more remarkable for native ability, legal attainments and

skill in advocacy than those strenuously competing for the professional business of this little town of six or eight thousand inhabitants. Francis Blake, then near the close of his brilliant professional life, who was said by Governor Lincoln to be the most eloquent man he had ever heard at this bar; Pliny Merrick, Emory Washburn, Charles Allen, John Davis, Ira M. Barton, each one of whom would have stood in the front rank of lawyers anywhere, were in the prime of life and in the full tide of their professional activity. Into this distinguished company Mr. Davis came as a competitor for the prizes and honors of the profession, alert, intrepid, confident, as eager for work as for honor, of exhaustless tenacity and endurance. His office dockets show that, within three years of his admission to the bar, he had been employed in more than two thousand cases. Long before the end of that period his uncle had changed his mind about the partnership, and had offered the successful young lawyer much better terms than he had refused to concede a year before. But Mr. Davis was not then willing to be second in the management of his professional business, even to a man so eminent as his uncle, John Davis, then was.

His success was remarkable, and the labor which his constantly growing practice required was beyond the capacity of most men. As his fortunes improved his interests and cares extended beyond the lines of his profession. He had an intelligent concern for the growth and welfare of the town, and everything which promised to advance its prosperity or its intellectual, moral or religious improvement engaged his attention and received the advantage of his helpful counsel, powerful advocacy and financial support. His surplus earnings were sagaciously invested in real estate and in the shares of many industrial and financial corporations. His mind had that happy mixture of enterprise and prudence which led him to avoid, as if by instinct, though really by acute intelligence, wide knowledge of business and swift computation of the elements of success or failure, undertakings which, though plausible, lacked substantial merit, and to support by his capital and credit others in which, while many prudent men deemed them hazardous, his shrewd insight discovered the germs of sure and productive growth.

His services as trustee and director of moneyed and manufacturing corporations were highly valued. He was for many years president of the Quinsigamond Bank, of the State Mutual Life Insurance Company and of the Merchants' and Farmers' Mutual Fire Insurance Company, a director of the Providence and Worcester Railroad Company, and a large stockholder in other railroads, in the Washburn Iron Company and in many other industrial enterprises. His good fortune gave, and his helpful spirit prompted him to improve, frequent opportunities of aiding at a critical moment men of enterprise and merit, whose business, generally sound, was straitened or threatened with disaster by temporary causes. If his judgment approved the risk, his assistance had no bounds except the limit of his own resources. His confidence in the men whom he trusted or in the reasonableness of their hopes was rarely, if ever, misplaced. There are many prosperous men and valuable industries in Worcester to-day that, but for his liberality, guided by a cool and accurate judgment, would have been wrecked by disaster in their beginnings. Mr. Davis did not in such cases make hard conditions, or regard his advances of money or credit as speculations from which, in the event of success, he had the right to exact extraordinary profits in consideration of unusual risks. He counted with confidence upon success and expected no greater returns than from other prudent investments. He had, however, the further reward, most gratifying to a man of his public spirit, of the consciousness of having given help when it was needed, deserved and efficacious; having promoted the well-being of the community and gained the esteem of his fellow-townsmen.

Mr. Davis, in early manhood, adopted the political principles of the Democratic party. If his conduct had been guided by motives of personal advancement only or chiefly, this would have been an unwise step, for that party has been pretty constantly out of power in the State, and especially in the city and county. His party connection, however, did not prevent Mr. Davis' election to several positions of political importance. He was twice elected to the State Senate, in 1843 and 1854; once to the House of Representatives, in 1852; to the Governor's Council in 1851; to the State Constitutional Convention of 1853 and three times to the mayoralty of Worcester, in 1856, 1858 and 1861. The Democratic party three times made him its candidate for the office of Governor. He was a member of the State Board of Education from 1852 to 1860; was twice appointed a member of the Board of Visitors of the West Point Military Academy and in 1855 was chairman of the board. President Pierce offered him the appointment of Assistant Treasurer of the United States, but he declined the offer.

Mr. Davis was always sincerely religious. Theologically and ecclesiastically he adhered to the doctrines and discipline of the Baptist Church. He was president, for several years, of the State Convention of the denomination, and of the American Baptist Home Mission Society, and gave liberally to the charitable, religious and educational operations of this sect. His benefactions to the Worcester Academy were especially liberal. He was president of its board of trustees for forty years, and was also a trustee and a Fellow of Brown University. He was for many years a member of the Council of the American Antiquarian Society.

Mr. Davis will long be remembered among those who were most influential in making Worcester what it is. As a lawyer, while pre-eminence in learning or eloquence is not claimed for him, he was remarkably

successful in advocacy, and stood in the front rank, in the extent of his business and the deserved confidence of his clients, among the lawyers of his day. He was a great force in the community. His vigorous expression of positive opinions, his wise counsels, his judicious investments and benefactions, made him one of those who give impetus and direction to the activities of town or city, church, State and institutions of learning.

The degree of Doctor of Laws was conferred upon him by Columbia College, Washington, D. C., and by Brown University.

In 1829 he married Mary H. Estabrook, daughter of Joseph Estabrook, of Royalston, Mass. She died in 1875. They had ten children,—four sons and six daughters,—all of whom, with the exception of one son who died in infancy, lived to be married.

Mr. Davis died at his home in Worcester, April 1, 1883, at the age of eighty-three years and ten months.

WILLIAM LINCOLN and CHRISTOPHER C. BALDWIN were two kindred spirits whose tastes for letters led them from the dusty purlieus of the law to more congenial historical studies. The first, born in Worcester in 1801, was of that sturdy stock of which two successive generations have received notice in these pages. While one brother, Levi, was Governor of this Commonwealth, another brother, Enoch, was Governor of Maine, and another, John, was in the State Senate, William was creditably representing his native town in the House of Representatives,—a record of simultaneous public service perhaps never equaled by the members of one family. The subject of this sketch graduated at Harvard in 1822, and after studies with his brother Enoch, with John Davis and Rejoice Newton, was admitted to the bar in 1825. For some years he was in partnership with Mr. Newton in practice, but his real interests were in another line of thought. With Mr. Baldwin, who was admitted to practice in the year after himself, he founded the *Worcester Magazine*, of which mention has more than once been made, and in the editing and writing for that publication each took more delight than in drawing conveyances or preparing briefs.

In 1836 Mr. Lincoln published his "History of Worcester," a work containing a great amount of valuable information relative to the early days of this now prosperous city.

Mr. Baldwin was a native of Templeton, born in 1800, and was educated at Leicester Academy and Harvard College. He practiced in Worcester, Barre and Sutton, but was glad to finally abandon the profession when elected librarian of the American Antiquarian Society in Worcester. Among the books and ancient manuscripts of that learned institution be found his proper sphere of usefulness. He died at thirty-five and his friend Lincoln survived him but eight years. Both were of that modest disposition which loves best the scholar's seclusion, but which in the glow of friendly intercourse, opens out into kindly humor, and brightens with playful wit the hours of social relaxation.

Mr. Baldwin's successor as librarian of the Antiquarian Society was also bred a lawyer. SAMUEL F. HAVEN was born in Dedham in 1806 and attended Phillips Academy in Andover and Phillips, Exeter, before entering Harvard, in 1822. After two years there he removed to Amherst, where he graduated in 1826. For a few years after admission to the bar he practiced in Dedham and Lowell, but his life-work, from 1838 until his death, in 1881, was as a historical scholar and archæologist in the service of the society which chose him for its officer.

By the act incorporating the city of Worcester, passed in 1848, a Police Court within and for the city was established, whose jurisdiction was made exclusive of that of justices of the peace in criminal matters, and concurrent with theirs in civil actions. At that time claims for debt or damage which did not exceed one hundred dollars in value were cognizable by the justices of the peace. A provision was in force for some years by which a jury of six might be demanded and impaneled to try the issue where the value sought to be recovered exceeded twenty dollars. So long as this court was in existence it was presided over by WILLIAM NELSON GREEN, a native of Milford, who had studied with Mr. Burnside, and came to the bar in 1827. He was a son of William E. Green, the partner of Edward Bangs and of Edward D. Bangs, heretofore mentioned. As a justice of the peace he had, before the incorporation of the city, had a considerable experience in hearing and deciding criminal charges, so that his appointment to the bench of the new court was the most natural selection. For twenty years he filled the position, until in 1868 the name of the court was, by statute, altered to Municipal Court, and, with almost identical powers and jurisdiction, continued under the courtly guidance of Judge Williams. Judge Green died two years later.

When, in 1859, a change of name was effected in the long-familiar Court of Common Pleas, for which was substituted the present "Superior Court," Judge EDWARD MELLEN, then in his fifty-seventh year, and for twelve years accustomed to judicial duties, found himself obliged to return to practice. He was a native of Westborough, a graduate of Brown in 1823, and had practiced in Middlesex from 1828 until his accession to the bench in 1847. After the abolition of his court, of which he was chief justice at the time, he found his long inexperience in the advocacy of causes had left his weapons rusty, and dulled the force of his attacks. The State had received the benefit of his best years and left him at an advanced age to begin anew as best he might. Surely there is something of calculating ingratitude in such treatment of faithful public servants, which gives credit to the proverbial charge against republics.

And now, with an affectionate reverence inspired by personal association, and cultivated from boyhoood through the changing years, until the writer was himself launched upon his professional career, it becomes my delicate duty to speak of one who, for more than fifty years of progress in the science of the law, kept ever abreast of change and improvement, and whom death found still faithful to his chosen calling, as when, with youthful ardor, he first essayed its arduous pathway.

PETER CHILD BACON was born in Dudley in 1804. His father, Jeptha Bacon, though not a lawyer by profession, was, in his day, when every town had not its resident attorney, resorted to by his neighbors for advice in their affairs, wherein his judgment and experience were recognized as valuable assistance. Like many other justices of the peace, he was often called upon to draft conveyances and wills, and in the observation of his father's really considerable practice, it is probable that Mr. Bacon acquired his first inclination towards his life-work. After graduating at Brown in 1827, the latter entered the New Haven Law School, and supplemented his studies there by reading in the office of Davis & Allen, in Worcester, Judge Barton, in Oxford, and George A. Tufts, in Dudley.

During these preparatory years it was his practice to devote sixteen hours of the twenty-four to his books. Blackstone he read and re-read with earnest attention, and for years after he had entered the bar he annually reviewed the classic pages. For these commentaries he always entertained the highest opinion as a groundwork for a thorough knowledge of the law, placing it first in the hands of each of his students, commending them to learn its definitions *ipsissimis verbis*, and failing not to test their obedience to the injunction by his questions. For two years he kept his office in his native town and for twelve years more in the adjoining town of Oxford. In 1844 he removed to Worcester and there, till within four days of his death, with an interval of only one year of rest, devoted himself exclusively to the law.

It will be noticed that he came to the bar seven years before the death of Benjamin Adams, of Uxbridge, whose professional life carried us back to the time of Judge Sprague, and thus connected the story with the earliest stages of the county's progress.

Upon coming to Worcester Mr. Bacon formed a partnership with his former instructor, Judge Barton, who had just resigned the probate judgeship. Levi Lincoln was then occupied with the duties of the gubernatorial chair. Pliny Merrick and Emory Washburn had just taken seats on the bench of the Common Pleas. Charles Allen, from the same bench, in that year resumed his practice. Rejoice Newton and Samuel Burnside were still at the bar. Isaac Davis had begun to interest himself more extensively in other than professional employments. Alexander H. Bullock, Henry Chapin and Francis H. Dewey had recently established their offices. Of those now in active practice only Joseph Mason, Esq., was then admitted, and he was then in Templeton. Mr. Bacon preferred to associate with himself in business some brother lawyer to share the responsibilities of the trial of causes, and especially after 1865, on his return from a needed rest in Europe, he left to younger partners the transaction of the business before the courts. After Judge Barton retired from the firm of Barton, Bacon & Barton, in 1849, he was for a short time connected with the late Judge Dwight Foster.

For eighteen years the firm of Bacon & Aldrich carried on business in the most uninterrupted harmony and friendship between the partners, until the junior member accepted his present position in the Superior Court. W. S. B. Hopkins and Mr. Bacon's son made up the firm of Bacon, Hopkins & Bacon, which existed at the time of the veteran lawyer's death.

When he came to the bar the whole number of Massachusetts Reports was but twenty-five. Making himself familiar with these, he read with care each new volume as it was published, and his one hundred and forty volumes are filled with marginal notes and hieroglyphics, showing where his eye had marked an important decision or a questionable dictum. He made it a practice, which he recommended to his students, to read the statement of facts in cases involving vexed questions, work out his own solution by investigation of earlier authorities, and then compare his result with the reasoning of the opinion. No question of law ever was suggested to him that he did not endeavor to solve either at the time or at the next leisure hour. He loved nothing better than to sit with his students posing them with legal conundrums, or listening to the problems which perplexed them and arguing out their moot cases. His office thus became a model law-school, to whose instructions multitudes of lawyers still look back with affectionate gratitude.

During his professional life almost the whole of our system of equity jurisprudence was brought to its present advanced condition. By piecemeal equity powers were conferred by statute on the Supreme Court, but it was not until 1857 that full jurisdiction was granted, according to the usage and practice of Courts of Chancery, and since that time, by the slow process of judicial decisions and supplementary statutes, great advances have been made in this most interesting and valuable method of legal procedure. Mr. Bacon was an equity lawyer, and owned and read a valuable library of text-books on the subject long before there was opportunity in our courts to avail himself of most of its remedial processes.

Three times he saw the statutes of the State codified after growing to unwieldy proportions, and his copies of the Revised, General and Public Statutes each show his careful noting of subsequent amendments. "Always consult the statutes; never give an

opinion without seeing what the statutes say," was his frequent admonition to his students. His learning covered every branch and phase of the wide field of legal doctrine. Perhaps the law of real property in general, and especially the Massachusetts doctrine of the rights of mill-owners in the streams which turn their wheels, and the law of corporations, may be mentioned as having attracted a large share of his attention.

During the operation of the United States Bankrupt Law, from 1867 to 1878, Mr. Bacon was register in bankruptcy for this district. Its complicated duties he thoroughly mastered, and with patient fidelity discharged its functions, which were principally of a judicial character. It was the habit of his mind to cautiously weigh the arguments on each side of a question on which his opinion was sought, and so many were the possible objections which his wide knowledge suggested to either view that his final decision was long in maturing, and generally given with some reservation of a possible modification. Like Lord Eldon, he knew so much law that he knew how little of it was absolutely uncontroverted.

His most valuable services were rendered as counsel in chambers, where the whole wealth of his learning and experience were at the service of his clients. Yet, as an advocate before juries in the first thirty years of his practice, he obtained a large influence by the thoroughness of his preparation, and by that evident sincerity which characterized his every utterance. His arguments on questions of law were sure to bring to the aid of the court all that could, by research and logic, be found to sustain his positions.

Notwithstanding his enthusiastic devotion to his profession, Dr. Bacon, as we loved to call him,—for no man more worthily bore the title of Doctor of Laws,—was interested in all that goes to make up a broad and liberal citizen. His studies in metaphysics, in history, in mathematics were the enjoyment of his leisure hours. With the latest advances in modern thought he kept himself familiar, and the writer remembers listening with some surprise to remarks which showed profound reflection on the latest developments of the theory of evolution.

For public office he was not at all ambitious, and one term in the State Legislature and two years as mayor of the city left him with a desire to do his duty as a private citizen, and this he conscientiously performed. During the war his patriotism was lofty and courageous. Three sons he gave to the service of his country, of whom but one returned. Deeply as his affectionate nature felt the loss, he was never heard to murmur at the sacrifice. His nature was singularly open and kind. It did not seem that the thought of the possibility of adopting any but the straightforward course ever occurred to his mind. Duplicity and cunning were with him simply impossible. His strong emotional tendencies he kept in check by seldom speaking of the topics that aroused them; but when he did have occasion to allude to a friend who was no more, or any of the deep convictions of his heart, it was evident that his feelings were warm and tender as a woman's. In 1883, with only a few hours interval, the Nestor of our law passed from his busy office to the rest that remaineth for such righteous mortals. With firm and rational faith, he had never shrunk from the last great change, and, whatever that change betokens, no man's life gave greater cause for calmness in awaiting it than his whose kindly face in portraiture now lends its silent inspiration among the books he loved.

BENJAMIN FRANKLIN THOMAS.[1]—The subject of this sketch was a grandson of Isaiah Thomas, the patriot-printer of the Revolution, and was born in Boston, February 12, 1813.

He was educated at Brown University, where he graduated in 1830, at the early age of seventeen. He studied law in Worcester, and was admitted to the bar in 1834, acquiring, while still young, a large and excellent practice and growing influence in the county.

In 1842 he represented the town of Worcester in the State Legislature, and from 1844 to 1848 was judge of Probate for Worcester County. Next to Governor Washburn, he attained the largest practice of the Worcester bar, at the time when eminence at that bar was an exceptional distinction. Governor Lincoln and Governor Davis were still among the older members. Pliny Merrick, Charles Allen, Emory Washburn, Henry Chapin, Peter C. Bacon, Ira M. Barton were his contemporaries; while a score of younger lawyers, now achieving high distinction in professional and public life, were just entering into active practice.

Upon the resignation of Mr. Justice Fletcher, in 1853, Judge Thomas was appointed, when barely forty years of age, a justice of the Supreme Judicial Court, holding that position for six years, and gaining a distinguished reputation as an able and learned jurist.

In 1859 he resigned his seat on the bench on account of the great inadequacy of the salary, and removed to Boston, where he practiced and held a position in the front rank at the bar. In 1861–63 he served one term in Congress, and in 1868, upon the retirement of Chief Justice Bigelow, he was nominated, by Governor Bullock, to the Council for chief justice of the Commonwealth, but, after an unpleasant controversy, failed of confirmation.

This is but a slight outline of the relations Judge Thomas held to the public at large.

The greater part of his active life was spent in the discharge of professional duties which have small place in history, and will pass from memory to tradi-

[1] By Delano Goddard.

tion with the generation that knew and trusted and honored him.

He was particularly skilled in the law of wills and trusts, and in this branch of the law had no rival. On the bench he was distinguished for the tenacity with which he defended the constitutional privileges secured by the Declaration of Rights, and especially trial by jury.

His most celebrated opinion is the powerful dissenting judgment delivered in the case of the Commonwealth *vs.* Anthes, 5 Gray, in which he vindicated the right of juries to determine, under the general issue, the law as well as the facts in criminal trials. His view was subsequently sustained by the Legislature, which re-enacted the statute in 1860.

His studies, both in law and government, took a wide range, and he was well read in history and in English literature. With the bar he has ever been very popular.

His associates, and especially those younger than himself, were attracted to him not more by his varied learning and talents than by his pure and amiable character. The greatest regrets were expressed when he left the bench, and no man has ever been more highly respected at the bar.

In the heat of controversy excited by his nomination as chief justice, he was opposed on grounds chiefly political, but also on the ground of a habit of dissenting, which at that time was looked upon as a serious disqualification.

But Governor Bullock, in justifying his nomination to the Council, replied that, of the nineteen hundred cases reported during the six years that Judge Thomas held a seat upon the bench, he dissented in only four, not by pride of opinion, but by the interests of truth and justice. And a member of the Suffolk bar, then and now one of its wisest and most learned members, writing upon the same objection, said:

"It is undoubtedly desirable that the court should stand together. Division is sometimes an indication of weakness. But it is a much greater weakness to insist upon this point to the exclusion of the question of what is right; and when a judge is held up to ridicule merely because he differs from his associates, it will be the saddest sign of all. We have yet to learn that the honest dissent of an able magistrate, although repeatedly exercised, is ever regarded with contempt by honorable associates, by the public, or by the legal profession."

This, however, was but a pretext brought up by zealous opponents to re-enforce the political and personal reasons on which their opposition was mainly grounded.

But it is not worth while to revive the memory of these forgotten strifes. The wounds inflicted then were long ago healed. And among those who followed Judge Thomas to the grave, there were none who did so with more sincere and unaffected sorrow than those who questioned the wisdom of his nomination, and joined in the effort to defeat it.

In politics Judge Thomas was, in early life, a Whig, and when the dissolution of that party came, and the war suddenly presented grave problems of government for immediate solution, it was harder for him, than for most men in public life, to look with patience upon the torture to which the Constitution was exposed.

He was always conservative, with a tendency to the technical side of disputed questions, always restrained and controlled by a quick moral sense and an unfailing love of justice.

His brief term of political service happened to fall upon a period of intense and exciting feeling, when constitutional scruples were looked upon with little patience, and were indulged at much personal peril. But no man ever took the unpopular side of grave public questions under a more commanding sense of public duty than Judge Thomas took his upon the constitutional questions forced upon him by the exigency in which he was placed.

As an orator, Judge Thomas seemed born to high distinction, if his ambition in that direction had been equal to his rare gifts.

His formal addresses on anniversary and other memorial occasions, are of a very high order of excellence; but, besides these, there are many among us who will remember the brilliant and sometimes electric eloquence with which, in his earlier days, he took part in the political and other public interests of the time. His command of language was always pure, rich and abundant; his manner was spirited, fervent and stimulating; and when he finished there was always, among those who listened, regret that one endowed with such gifts was so little inclined to exercise them.

Judge Thomas received the degree of Doctor of Laws from Brown University in 1853, and from Harvard College in 1854. He was, at the time of his death, September 27, 1878, vice-president of the American Antiquarian Society, a member of the Massachusetts Historical Society and of the American Academy of Arts and Sciences.

Our county has been singularly fortunate in the character and ability of the gentlemen who have presided in its Probate Court. In 1858, the year of Judge Kinnicutt's death, the offices of judge of the Court of Probate and of the Court of Insolvency were, by act of the Legislature, united in one person in each county. To this double trust HENRY CHAPIN was appointed, and for twenty years most admirably discharged its functions. He was born in Upton in 1811, and left at fourteen to provide largely for his own support. For some months he was engaged in learning a trade. The necessity for such an occupation of course rendered it difficult for him to procure an education, but he was not driven from the undertaking, and succeeded in fitting for college, and in graduating from Brown in 1835. After gaining some experience and a small financial capital as a teacher in the common schools of Upton, he began his legal

Henry Champion

Alexander H. Bullock

studies with Emory Washburn, and followed them at the Cambridge Law School. On admission to the bar he chose Uxbridge for his opening career, and remained there till his removal to Worcester in 1846, when Rejoice Newton made him a junior partner. As an advocate he obtained a large and profitable practice. He possessed a shrewdness, a homely, kindly method of address, and an entire absence of stiffness or formality which procured him great influence with juries. For the duties of Probate judge he was exceptionally fitted. His fund of patience seemed inexhaustible. In that court no strict rules of procedure are maintained; much of the business is transacted without the aid of counsel, and by persons who come to the judge to learn what they ought to do, and how to do it. For all such he had a kindly reception, listened to their statements (generally involved, and often incoherent), and let them feel that they had found a friend as well as a help out of their difficulties. Towards members of the bar also, and especially the younger element, his manners were courteous, and commanded in turn respect. In the law governing the cases under his consideration he was thoroughly versed, and his decisions stood the test of appeal, with but a small proportion of adverse rulings by the higher court. Although for the last six months of his life he was unable to attend in the court-room, his courage did not permit him to surrender, and up till the very day before his death, in 1878, he continued occasionally, at his house, to attend to matters of routine, hoping constantly that his usefulness was not yet to end, and determined that it should continue with his life. Mr. Chapin was a public-spirited citizen, alive to the importance of the performance by every man of his political duties. He was an early member of the Free Soil party, and an effective speaker during the anti-slavery agitations. For one year he represented Uxbridge in the General Court, and in 1853 he was its delegate to the Constitutional Convention.

Worcester made him its mayor in 1849 and 1850, and would have had him serve again had he not declined the honor. In 1870, when, by the sudden death of Mayor Blake, a vacancy occurred during a term, the City Council turned at once to him as the man most suitable to fill the emergency, and he consented so to do until a successor could be chosen by the usual methods of election. He was not ambitious for political office, and declined to stand as a candidate when nominated by the Republicans for Congress in 1856. As a speaker on public occasions he was frequently in demand, and his quaint humor and well-told stories interested his audiences and impressed his meaning on their minds.

With various business organizations he was actively connected, and, by the exercise of a sagacious judgment in investment, added to his accumulated property. To the religious organization with which he was connected he gave earnest support and valuable assistance in many ways. His religious convictions were deep and sincere, though rarely brought into notice, except with intimate friends; but their fruit was shown in his discriminating and kindly benevolence and readiness to further charitable organizations which commended themselves to his judgment. An exemplary citizen, an upright judge and an honest man.

ALEXANDER HAMILTON BULLOCK.[1] — Governor Bullock stands conspicuous in the list of Massachusetts' chief magistrates; even in the whole list, extending through Colonial, Provincial and Constitutional times; conspicuous in respect to patriotism, ability and conscientious devotion to the public interest. And for the very reason that he occupies so prominent a position in our history, the writer is spared the attempt at any extended delineation in this place, where space is so limited. But with the portrait, in which his features are so faithfully and so artistically presented, it is necessary that something should appear respecting his various characteristics and family connections, with allusions at least to certain passages in his public career.

He was born in Royalston, Worcester County, on the 2d of March, 1816, and was the son of Rufus and Sarah (Davis) Bullock. His father, who was born on the 23d of September, 1779, was a school-teacher in his early manhood, but soon became a country merchant. Quitting that vocation in 1825, he engaged in manufacturing, and in due time amassed a handsome fortune. He was somewhat in public life; was five years a Representative in the General Court, and two years a Senator; was a member of the conventions of 1820 and 1853 for revising the State Constitution; and was Presidential elector in 1852.

Alexander H. Bullock, the subject of this sketch, entered Amherst College in 1832, was a diligent student, and on his graduation, in 1836, delivered the salutatory oration at commencement. In the catalogue of his college contemporaries are found the names of Rev. Richard S. Storrs, Rev. Henry Ward Beecher, Bishop Huntington and others of wide reputation. After graduating he taught a school for a short period, but, partly by the urgency of his father and partly from his own inclination, he applied himself to the study of law, entering Harvard Law School, then under the presidency of Judge Story. After leaving the Law School he spent a year in the law-office of the well-known lawyer, Emory Washburn, of Worcester, where he gained a good knowledge of the various details of legal practice. He was admitted to the bar in 1841, and soon began practice in Worcester. As a pleader he does not seem to have aimed to become conspicuous. Senator Hoar says: "He disliked personal controversy. While he possessed talents which would have rendered him a brilliant and persuasive advocate, the rough contests of the

[1] By Hon. J. R. Newhall.

court-house could never have been congenial to him. He was associated with Judge Thomas as junior counsel in one important capital trial, in which he is said to have made an eloquent opening argument. He had a considerable clientage for a young man, to whom he was a safe and trustworthy adviser. But he very soon established a large business as agent of important insurance companies, and withdrew himself altogether from the practice of law."

In 1844 Governor Bullock married Elvira, daughter of Col. A. G. Hazard, of Enfield, Ct., founder of the Hazard Gunpowder Manufacturing Company. Their children were Augustus George; Isabel, who married Nelson S. Bartlett, of Boston; and Fanny, who married Dr. William H. Workman, of Worcester. The widow and all the children are yet living.

From early manhood Governor Bullock took a decided interest in politics, but did not allow it to absorb an undue portion of his time till the period arrived when he could safely make it a leading object. In constitutional law he was particularly well versed, and that fact, in connection with his decided opinions on all public questions, gave him in debate and in action very great advantage. In party affiliation he was of the old Whig school.

A brief recapitulation of some of his efficient public services may here be given. He was a member of the Massachusetts House of Representatives for eight years: first in 1845, and last in 1865. In 1862, '63, '64 and '65 he was Speaker. And what Governor Hutchinson says, in his history of Speaker Burrill, may well be said of him, namely, that the House were as fond of him "as of their eyes;" the historian adding, in a note, "I have often heard his contemporaries applaud him for his great integrity, his acquaintance with parliamentary forms, the dignity and authority with which he filled the chair, and the order and decorum he maintained in the debates of the House."

Governor Bullock was also, in 1849, a State Senator. He was judge of the Worcester County Court of Insolvency for two years, 1856–58, having, under a previous jurisdiction, served as commissioner of insolvency from 1853. He was mayor of Worcester in 1859. But the most prominent event in his public life was his election to the gubernatorial chair, which he occupied three years—1866, '67 and '68. At the first election he received nearly fifty thousand votes more than the opposing candidate.

He undoubtedly could have held prominent positions in national affairs had he been so disposed; but his ambition seems not to have run in that direction. He never held office under the general Government, and all the incidents of his political life must be looked for in the history of his native State, where a rich store is to be found.

On the 5th of January, 1879, Hon. George F. Hoar was authorized by President Hayes to ask Governor Bullock if he would accept the then vacant English mission. In answer the following letter was received:

WORCESTER, Dec. 8, 1879.

My Dear Sir: I received yesterday your favor of the 5th inst., in which you kindly inquire, in behalf of the President, whether I would undertake the Mission to England. I have felt at liberty to take to myself twenty-four hours to consider this question, and I now apprise you of the conclusion to which my reflection has, with much reluctance brought me. I am compelled, by the situation of my family, to reply that it would be practically impossible for me to accept this appointment.

I particularly desire to express to the President my profound and grateful acknowledgment of the high distinction he has offered to confer upon me, and to assure him of my purpose in every way as a private citizen to uphold him in his wise and patriotic administration of the government.

Your communication has been and will continue to be treated by me as confidential.

I remain with great respect and esteem,

Tru'y and faithfully yours,

ALEXANDER H. BULLOCK.

The Hon. Geo. F. Hoar, U.S.S.

In financial, humane, and all reformatory movements Governor Bullock was active and efficient. He was president of the State Mutual Life Assurance Company, and of the Worcester County Institution for Savings, a director in the Worcester National Bank, chairman of the Finance Committee of the Trustees of Amherst College and a life-member of the New England Historic-Genealogical Society. He was a writer of much more than ordinary ability, and while editor of the *Ægis* newpaper, which position he held for several years, established an enviable reputation as a journalist. The degree of LL.D. was conferred on him by Harvard and by Amherst.

During the Civil War Governor Bullock was an efficient co-laborer with Governor Andrew, so appropriately called the "War Governor of Massachusetts." His eloquent voice was often raised to cheer the gathering crowds of patriots in various places, and Faneuil Hall, too, resounded with his stirring appeals.

He was a great friend of learning; and all institutions of instruction, from the elementary common school to the best endowed college, had his counsel and encouragement.

And there was in him a vein of true democracy, often manifesting itself in anxiety to guard against any attempt by legislative, judicial or any other power to override the soverign right of the people; and hence, as might naturally have been expected, he remained a firm friend to the principle of "Local Option," in law, so far as it could in any way be made expedient. He vetoed, to the surprise of many of his party friends, one or two enactments, considered important, for the simple reason that he viewed them as trenching on some general right of the people.

In 1869 he visited Europe with his family, and on his return the following year the civic authorities and citizens of Worcester gave testimony of their appreciation of his character and his services by a public reception. After his retirement from the Governor-

Francis H. Dewey

ship he held no other public office, and declined to entertain any of the suggestions made to him of further political service, which would involve, to some extent, the abandonment of those studies and employments which were so agreeable to him.

Governor Bullock was an orator of great power, and the volume of his addresses recently published contains many models of pure style and elegant scholarship. Speaking of him in this connection, Senator Hoar says: "Above all, he possessed, beyond any of his living contemporaries, that rare gift of eloquence which always has been and always will be a passport to the favor of the people where speech is free."

He was a lover of scholarship, a citizen of many resources and large usefulness, whose life diffused all around it an influence and charm, which elevated the standard of the domestic and moral life of the community. In January, 1882, with startling suddenness, he died amid the scenes of his activities.

The world owes much of its brightness and beauty to the people whose cheerful disposition and faculty for cordial greetings make others ashamed of melancholy dullness and drive away worry and vexation from their presence.

Such a blessing to his friends was the companionship of the late Judge Dewey.

In 1814 Daniel Dewey was appointed to the bench of the Supreme Judicial Court, and held the office only about one year until his death. In 1837 his son, Charles A. Dewey, received a like distinction, and for nearly thirty years discharged his duties with learning and fidelity. FRANCIS H. DEWEY, with this distinguished legal lineage, was born in Williamstown in 1821. A few years later his father removed to Northampton. In that town and in Amherst his studies preparatory to college were pursued. From Williams College, where his ancestors for three generations had held office as trustees, he graduated in 1840, and proceeded at once to fit himself for his inherited profession in the law schools of Yale and Harvard College. He also gained practical experience in the office of Charles P. Huntington, in Northampton, and of Emory Washburn, in Worcester. With the latter he formed a partnership soon after his admission to the bar, in 1843, a fact which testifies to the elder man's appreciation of Mr. Dewey's abilities even at that early stage. The manner in which he entered upon the work of this established office, and assumed its responsibilities alone upon Judge Washburn's promotion to the bench in the very next year, tested his powers and gave him a high standing at the bar in the earliest years of his practice. During this time his utmost diligence was constantly required to attend to the multitude of causes in which Mr. Washburn had been engaged. It would have been most natural if clients who had sought out so distinguished a counsellor to whom to entrust their important affairs should have desired to place them in other hands than those of an inexperienced young attorney; but Mr. Dewey gave such evidence of fitness for the task and of devotion to business, that he retained almost the whole of the clientage, and increased it as the years went by. In 1850 he associated with himself in practice Hartley Williams, then just admitted to the bar, and continued the connection for thirteen years. From 1866 till 1869 Frank P. Goulding, Esq., was his junior partner. During his whole life, and in all his varied lines of employment, Judge Dewey was incessantly active. No other adverb can describe the nature of his activity. Always brisk, apparently in a hurry, yet with his faculties alert and undisturbed, he went from one task to another, without apparent thought or need of rest. In the trial of causes before juries his manner was restless, almost nervous; but his watchfulness of every movement, his quick seizure of every slight advantage and his thorough familiarity with the facts proved to opposing counsel that there was nothing to be hoped from the inattention of his adversary. Throughout the most heated controversies he preserved his courteous tones, his pleasant smile and his real composure. Some men are able to hide beneath immovable features and thoroughly controlled muscles disturbed feelings and discomfited plans of action. But Mr. Dewey's mental quiet was preserved under what seemed a physical necessity for movement.

His closing argument was always to be dreaded as likely to present some unexpected view of the evidence or some shrewd suggestion which his opponent had left unobserved and unanswered. He seemed to take the jury into his confidence, to talk to them in a friendly, common-sense manner, without attempt at eloquence, but with remarkably convincing effect.

In 1869 Governor Claflin appointed him an associate justice of the Superior Court,—a position which he occupied until 1881. There he became a most useful presiding officer, despatching the business of the courts with the celerity which characterized his private business, treating with courtesy and patience counsel and witnesses, and assisting the jurymen by impartial, lucid statements, summing up the evidence and explaining the legal principles which were to guide them.

Mr. Dewey's energies were by no means confined to professional employments, exacting as those were. The number of business enterprises and charitable institutions in which he was interested as an officer, and to each of which he gave faithful attention, would seem to have furnished sufficient occupation for the whole time of an active man. Yet he did not seem to be oppressed by the burden of responsibilities. He possessed the happy faculty of laying aside all worry over affairs, when he had done the best that his judgment dictated for their proper conduct. He was president of one railroad company and a director in another, and acquired a considerable familiarity with the methods of management of these

modern systems of transportation, while his sagacity as a financier was of the greatest service to his stockholders. After his resignation from the bench, in 1881, he gave the largest share of his time and thought to the service of the Washburn & Moen Manufacturing Company, the largest business establishment of the city.

He invested largely in its stock, was one of its directors, and until his death acted as the general legal adviser of the concern. To the interests of the Episcopal Church, where he was a constant attendant, and of various public charities, he gave willing and faithful service. In him Williams College had a constant friend. From 1869 to his death he was one of its board of trustees, an office to which he was called by heredity as well as individual fitness, and President Carter testifies to the worth of his ever-ready advice, skillful management of the investments of its funds, and loyal support on all occasions.

In social life he was a most delightful companion, overflowing with good humor, entering with zest into the spirit of any gathering for recreation, whether the company were youngsters or those of his own age. His love for children was a conspicuous and charming trait, exhibited not only to those of his own family, but in his fondness for gathering about him, whenever opportunity afforded, the playmates of his grandchildren, and encouraging their sports.

In 1887, while still as deeply engrossed as ever in his multifarious cares, without apparent diminution of his capacity or desire for work, he was suddenly stricken down without a moment's warning. Yet it is difficult to call his death untimely. His life had been a singularly successful one, whether we regard his legal attainments, his acquisition of property, his friendships or his family relations. He left his work well done, and saw his sons ready and able to take it up and carry it forward. Without pain or lingering he passed away. If one could choose his exit from the world's stage, could he choose better?

Judge Dewey's partner for thirteen years was HARTLEY WILLIAMS, whose graceful dignity long adorned the bench of our Municipal Court. He was born in Mercer, Maine, in the year 1820. As one of a large family of children, in a community where every one was diligently at work, wresting from an unwilling soil the means of subsistence for himself and those dependent on him, his time was largely occupied by the duties that usually devolve on a farmer's boy, and his opportunities for education were restricted. At nineteen years, however, he had made such good use of the facilities at his command as to be prepared to undertake the instruction of others, and first in a neighboring town, later in Fall River and Rhode Island, he taught schools with good success. He must have been a most helpful and lovable teacher, with those kindly manners, that unselfish interest in the welfare of those about him, and that long-suffering patience which characterized the mature man whom we knew.

While still engaged in this work he formed the intention of entering the legal profession. In 1843 he came to Worcester, and for several years was engaged in mercantile pursuits, all the while cherishing his resolution to become a lawyer, and giving what time he could to study. In 1848 he gave up business, and entered Mr. Dewey's office as a student. To a share in the burdens of that busy office he was admitted in 1850, directly after he had passed his examinations for the bar. His early habits of industry, cultivated through his varied employments, now served him well. By constant, regular attention to his business, and an ability to so control his mental operations as not to worry over it, he accomplished a very large amount of work with an appearance of little effort, certainly without any evidence of haste. As an advocate, he was one to whom juries were glad to listen, and obtained a good measure of success. His clients found him a wise and safe counsellor, with an intelligent business judgment, enlightened by careful reading and excellent grasp of legal principles.

In matters of public interest Mr. Williams exerted a wholesome influence, unostentatiously performing the duties of a good citizen on the side of morality and progress. His experience as an instructor made him a valuable member of the School Committee, and for many years he gave much of his time and valuable suggestions to this most important department of public usefulness. He served his city as an alderman, and during the Civil War was a member of the State Senate for two years, and of Governor Andrew's Council in 1864 and 1865. In the latter capacity he became a trusted adviser of the Governor, and formed strong ties of friendship, not only with him, but with other members of the Council, which were cemented in an association formed by those who had been Councillors during the war. At the annual meeting of the Andrew Councillor Association he was a regular and most welcome attendant. This only illustrates the nature of the man. He was social in his instincts, loved to meet his friends, to bind them to him by acts of kindness, and disliked to allow change of situation to interfere with friendly relations once formed.

His most important public service was in the court over which he presided. To this position he was appointed in 1868, while holding the office of district attorney, to which he had been elected in 1866. The act abolishing the Police Court, which had been in existence since the incorporation of the city, and establishing with the same jurisdiction the Municipal Court, took effect in July, 1868, and from that time until the beginning of his fatal illness Judge Williams administered the law with impartiality, wisdom, and with a constant urbanity which made the duties of counsel before him a pleasure. His patience was inexhaustible, and, while he maintained the dignity of his position, he was always easily to be approached and ready to listen with kindly sym-

pathy to the oft-recurring tales of misery and suffering which were poured out to him by offenders awaiting his decision.

In 1872 the Municipal Court was abolished by the act creating the Central District Court, which is now in force. The jurisdiction of the new tribunal covered not only the city, but several of the neighboring towns, and formed part of a system of District Courts, which were established to take the place in most of the towns of trial justices. Mr. Williams was immediately commissioned as judge of this court.

In 1882, while presiding at a meeting of an association of natives of Maine, in the formation of which he had taken great interest, he suffered a paralytic shock, from the effects of which he did not recover, and died after a few months' illness.

In 1878 an address was delivered before a social gathering of the bar of the county by Judge DWIGHT FOSTER, in which he supplemented the previous addresses of Mr. Willard and Judge Washburn by adding biographical sketches of some of our lawyers who had passed from the stage since 1856. From each of these sources has been derived much of the material for the present chapter. Mr. Foster was not, at the time mentioned, a resident of this county, but his interest in its bar, where his early associations were formed, continued through his life. He was born in the city of Worcester in 1828. The names of three generations of his ancestors have appeared in these pages, two of them as judges. His father had practiced so short a time as almost to interrupt the chain of legal heredity, but the son possessed the family genius in fullest measure. He was one of those whose ability shows itself in the earliest stages of their development.

In 1848 he graduated from Yale College with the highest honors of his class, and only one year afterwards was admitted to the bar in his native city. For a short time thereafter he was a partner of Mr. Bacon, and, for a few months before the promotion of Judge Thomas to the bench, was associated with him. He thus became early inducted to a considerable practice. For a short time after Judge Kinnicutt's retirement, in 1857, he held the office of judge of Probate.

In 1861 he was elected Attorney-General of the State, and held the office by successive re-elections during the following three years. Here he deservedly acquired a high reputation for his mastery of our criminal law. In the trial of a capital case during the first years of his incumbency, where the evidence was almost entirely circumstantial, he won the admiration of experienced lawyers for his management of what all had looked upon as a difficult and doubtful undertaking. As the adviser of the government in the midst of the novel exigencies arising out of the war, his promptness and clear-sightedness were invaluable. Questions were constantly presented to him by the Governor, by heads of departments and by military officers, which were without precedent in their official experience, and yet which called for speedy solution. Mr. Foster realized that it was more important, in that time of peril, that the various officers should have some rule to guide them immediately than that a laborious examination of authorities should be made while the time for action was slipping by. His opinions were accordingly given without delay, and with clearness and positiveness sufficient to assure a doubting interrogator and inspire him with confidence to proceed with his new duties.

From 1866 to 1869 he was an associate justice of the Supreme Judicial Court. In that short term of service he evinced admirable qualifications for the position, presiding at *nisi prius* with dignity and courtesy, and in his published opinions dealing with questions of law concisely and logically. One reason given by him for his retirement from the bench was the inadequacy of the salary,—a just reproach to the system which endeavors to procure for the State the services of the highest legal talent at lower rates of compensation than are offered by private corporations.

From this time on he made Boston his permanent home, and acquired a very lucrative practice. For several years he delivered lectures on "Equity" in the Boston University. With this branch of the law he was especially familiar, and was accustomed to make use of its methods for obtaining relief whenever practicable, so that his instruction must have been very valuable as containing the results of his own experience in addition to the theory of the books.

One of his distinguished services was as counsel for the United States before the commissioners to whom was referred the question of the rights of our fishermen under the treaty with Great Britain. At the time of his death, in 1884, and for several years previous thereto, he acted as the counsel of the New England Mutual Life Insurance Company, and their business occupied the principal portion of his time. As an advocate he rarely aroused the sympathy of juries by any attempt to enlist their feelings, but rather relied on clear and logical appeals to their reason. His own apprehension of the evidence was distinct, and he was able to present it to the jury forcibly and in the simplest form. He had a just reliance on his own powers, and did not hesitate to assume responsibility or engage any adversary. At the same time he appreciated and gave generous praise to the merits of brother lawyers. In private life he was a genial host and an attractive guest. His mind was well-stored with varied information, and he possessed the faculty of imparting that in an agreeable manner. His mental operations were exceedingly quick and his power of observation ever on the alert, so that all his surroundings contributed to his stock of knowledge and filled his conversation with ever-fresh interest. The honorable line of lawyers, of which he

was the brightest ornament, is not yet extinct. Though the Worcester bar cannot claim his sons as members, they still uphold the ancestral reputation in other scenes.

GEORGE F. VERRY was one of the best illustrations which this bar has furnished of the value to a lawyer of the qualities of self-reliance and perfect imperturbability. His success may be as fairly traced to his possession of these traits as to any other cause. He was born in Mendon in 1826, and had the advantage of his father's care for only two or three years. His education was obtained in the common schools and during a partial course at the Andover Academy. From that preparatory school he had hoped to enter college, but his plans were interrupted, and he left his studies to engage in learning the business of a manufacturer. After a few years' trial, however, he determined to fit himself for the bar, and began his studies in the office of Henry D. Stone in the year 1849. Admitted to the bar after the usual three years of preparation, he was in a short time received as a partner by Mr. Stone, and so continued until 1857. Thus entering upon a business already well-established, he had the opportunity to learn, by actual use, the value of his acquirements. This was largely the process of his attainment to that degree of forensic skill and knowledge of the law which secured his high rank among our advocates. He was not a learned student of books or precedents, but to the questions involved in each case in which he was concerned he gave close attention and consulted the books with reference to those particular topics. With a retentive memory and a clear common-sense judgment, he thus became familiar with the current of decisions upon almost the whole of the great variety of controverted doctrines which have been debated in our courts. After the dissolution of his connection with Mr. Stone, he continued business alone with a rapidly increasing clientage until 1875, when he formed a partnership with Francis A. Gaskill, the present district attorney, and Horace B. Verry, his adopted son, which continued till his death.

A large part of Mr. Verry's reputation was won in the conduct of the defence of criminal causes. In several capital trials which attracted wide attention, his skill in the examination of witnesses, his readiness to meet sudden emergencies, and his thorough grasp of the bearing of evidence were shown in a manner which placed him among the leaders in that department of practice. On the civil side of the court, also, the possession of the same resources brought to him, perhaps, the most lucrative clientage of any of his contemporaries during the ten years before his death. In the progress of the most exciting trial he preserved a most absolute control of all his faculties. Forcible in the presentation of his own views, keen, and often severe in his examination of witnesses, he never allowed any exhibition of temper to weaken his influence with the jury, or obscure his calm watchfulness of every manœuvre. His arguments seldom appealed to the emotional nature, but were admirably lucid in their logical presentation of the facts. From the very outset of his career he boldly confronted every adversary, however more ample his experience, and learned even in defeat to reserve for his client whatever of advantage there remained to him. In social life he was a most genial comrade. Especially towards younger members of the profession were his manners and expressions of friendship cordial at all times. The writer well remembers many words of kind encouragement which helped to make his student-days and first years of practice more hopeful and less irksome. Mr. Verry did not hold many public offices. In 1872 he was mayor of the city of Worcester. The problem of the proper assessment of the expense of a great system of sewers had long been deferred; with characteristic energy he sought a solution. Principally under his direction, a plan was adopted which was finally sustained by the courts, though opposed by leading citizens and able counsel. His acceptance of this responsibility cost him his re-election the next year, but stands as an evidence of his independence and sagacity. He served two terms in the State Senate, the second year as chairman of the Judiciary Committee. As a Democrat during the last ten years of his life, he was most frequently in the minority in the State, and though several times a candidate, held no other elective office.

In 1883 he died, leaving, it is believed, only friends among the members of the bar, and only firm adherents among his host of clients.

The death of Judge ADIN THAYER is still so deeply felt, not only in the community where he lived, but in the councils of the leaders of the State, where his presence had become well-nigh essential, that it seems unnecessary in so brief a sketch as is here possible to rehearse the well-known story of his life. But neither the history of our bar nor that of the Commonwealth for the past forty years can properly be written without the mention of his share in the progress of each. He was the son of Caleb Thayer, a farmer of Mendon, not rich in material possessions, but with a sturdy independence and an innate love of liberty, which evinced itself in the early espousal of the anti-slavery cause when the unpopularity of its adherents amounted to ostracism. His grandfather was a Revolutionary soldier, and the combative tendencies of the descendants seem to have come by right inheritance. Born in 1828, his early life was spent upon the farm, with only the occasional opportunities for education afforded by the district schools. Later on he attended the Worcester Academy, and, with some thought of adopting the profession of a teacher, he took a course in the Normal School at Westfield. After short trial of school-room life, however, he made up his mind that he could not be satisfied with that career, and began the study of the law

George H. Corey

with Henry Chapin, whom he was destined to succeed upon the bench. In 1854 he entered upon his practice in the city of Worcester, and attained a good success as an adviser, especially in the management of business concerns. His judgment was clear and reliable, and marked by the plainest common sense. As an advocate he did not appear with great frequency before the courts, but his management of causes entrusted to him was careful and intelligent, tenacious of his clients' interests and mindful of details.

Though he gave diligent attention to his professional pursuits and acquired a lucrative clientage, it was in political life that he found his greatest usefulness and rose to his greatest eminence. He was an early and influential member of the Free-Soil party, eager in his opposition to the encroachments of the slave-power, and roused to indignation by the proceedings under the Fugitive Slave Law on the soil of his native State. With Charles Sumner and John A. Andrew he formed an intimate friendship, and was their active co-worker and enthusiastic supporter throughout their political contests. In his devotion to the principles which he believed should govern the State and Nation he was unselfish and consistent. Though undoubtedly he would have been gratified by the evidence of the appreciation of his services and abilities, which an election to important office would have afforded, he never faltered in his exertions for the success of his party because others were assigned to more conspicuous stations. He enjoyed the possession of influence over the minds of his fellow-citizens, and to that influence he was justly entitled, since it was always exercised in the cause of what he believed to be the truth. He was the friend and adviser of all the prominent leaders of the Republican party from its formation, and to his powerful assistance the State owes in a large degree the fact that she has been able to retain in her service some of her ablest representatives. In the best sense of the term he was a partisan. Thoroughly convinced of the righteousness of his cause, conscientiously believing that it was the duty of every good citizen to take part in the decision of public questions, he threw himself into a canvass with the spirit of a soldier, determined that failure should not result from any lukewarmness on his part. He was a great believer in the necessity for organization in political work. The campaigns which he directed were marked by the most thorough attention to details and by the seizure of every honorable method of securing victory. He did not often appear as a public speaker, but when he did his language was forcible, clear and charged with his earnest convictions. Some of his addresses upon general political topics are admirable in style and logical completeness.

His offices were few. For several years under Lincoln, and again under Grant, he was collector of internal revenue for this district. For two years he served in the State Senate. Perhaps his most prominent political service was as chairman of the Republican State Committee in 1878, when, with all his power, he successfully combated what he believed to be a great danger to the welfare of the State.

Upon Judge Chapin's death, in 1878, he was appointed to succeed him in the Probate Court. The nomination excited some opposition among those who had become accustomed to regard Mr. Thayer as solely a politician. But by his ten years of impartial, faithful discharge of the duties of the office, he approved the wisdom of the selection, and earned the approbation of the bar and the public.

His natural disposition was genial and sympathetic. A fund of quiet humor made him a most agreeable companion in hours of relaxation. Towards the latter part of his life ill-health from time to time clouded the usual brightness of his temper, and induced periods of depression, through all of which, however, he preserved his kindly interest in others and his affection for his friends. He had interested himself in several of the business enterprises of the city, where his foresight had been of great service. But these cares, added to his other activities, were too great a strain upon his physical and mental powers. He was oppressed by the thought of gradually losing his capacity for usefulness on the stage where he had filled so honorable a part. In the summer of 1888, when his friends were looking forward to his restoration to health as the result of a contemplated season of rest and travel, in a moment of aberration he died by his own hand. Massachusetts has lost no more devoted lover, no more staunch defender.

In several instances to which our attention has been attracted the honors of the profession, together with the mental traits befitting the wearers of those honors, have seemed to be transmitted from father to son as a natural inheritance. Others, from the most unpropitious antecedents, have achieved success and high position. In truth, the pathway is open to all; to all it presents difficulties hard to overcome. Few have had to contend with greater obstacles, or have done it with so good courage, as MATTHEW J. MCCAFFERTY. Born in Ireland in 1829, his parents brought him to this country during his infancy. They were poor, hard-working people, and at an early age the lad must assist in his own support. In 1841 the family moved to Lowell, and Matthew began as an operative in the great mills there. Later on he learned the trade of a machinist. While so employed he was inspired with the ambition to become a lawyer, and devoted his evenings and spare moments to reading such law-books as he could obtain. In 1852, having saved some little capital from his trade, he entered the office of Brown & Alger, in Lowell, and regularly devoted himself to study. After two years he found it necessary to replenish his funds, and betook himself once more to his trade in Worcester. With his determination still unchanged he spent his

evenings reading in Mr. Bacon's office. A fellow-student at that time was Hamilton B. Staples, now an associate justice of the Superior Court.

For a short time Mr. McCafferty tried the *rôle* of an actor, but soon found it neither agreeable nor remunerative, and returned to rely upon his shop to furnish him the means of living until better times. His generous, filial disposition is illustrated by the fact that, after having with some difficulty saved money enough to carry him through college, he gave it all to his mother, whom he visited in Lowell and found lacking some of the comforts to which her age and infirmities entitled her. Soon after this Benjamin F. Butler became interested in the young man's sturdy struggle, and assisted him through a partial course in the College of the Holy Cross at Worcester. In 1857 he was admitted to the bar in Lowell, and soon after opened his office in Worcester. He was a natural orator, warm-hearted, impulsive, sympathetic, and came to be regarded as the special champion of his race in the city of his adoption. When the call for volunteers was issued in 1861, he enlisted as second lieutenant in the Emmet Guards, a company composed of men of Irish descent, in which he had previously served as captain. After its three months' service had expired, he received the commission of major in the Twenty-fifth Massachusetts Regiment. With this command he rendered gallant service in several battles until March, 1862, when he resigned on account of some difference with his colonel which could not be adjusted. Returning home, he continued to support the government by his eloquent speeches on public occasions. He served four terms in the Legislature, and one as alderman of the city. In 1883 his early friend and constant political ally, Governor Butler, appointed him an associate justice of the Municipal Court of Boston. In this capacity his impartiality and his kindness of heart made him an excellent police magistrate. In the short time before his death, in 1885, he had approved himself to the profession in his new sphere of action, where at first there had been a disposition to cavil at the appointment of a judge from another county.

The career of FRANCIS T. BLACKMER compressed within less than twenty years an amount of professional labor which might well have formed the employment of an additional decade, and would then have left him but little of that leisure he so much neglected. He seems to have felt that his time for work was short, and that in the days allotted him he must accomplish what would suffice for the years of a longer pilgrimage. He was born in Worcester in 1844, but passed his boyhood in the towns of Prescott and Hardwick, where his father carried on the occupation of a farmer at successive periods.

In the district schools and at Wilbraham Academy he received all the instruction which he obtained before beginning his legal studies. In later life he keenly appreciated the advantages bestowed by a more extended course of education, and expressed his regret that he was unable to receive a college training. Yet the reflection is inevitable that it is not the schools that make the man. We cannot be sure of the effect of the same discipline upon different minds, and Mr. Blackmer certainly profited admirably by the limited facilities which he enjoyed. When twenty years of age he returned to Worcester, and entered the office of William W. Rice. During his studies, and for some years after his admission to the bar, he was employed by Mr. Rice, on terms continually more advantageous, as he demonstrated his capacity for work and his mastery of the law. Subsequently a partnership was formed under the name of Rice & Blackmer, which continued until after Mr. Rice's Congressional duties called him away from regular attention to professional employments.

Mr. Blackmer had a remarkable facility in forming acquaintances. There was not the slightest formality or diffidence about him. In the same easy, off-hand manner he met every new-comer, and inspired him with confidence in his own ability to conduct his business. His addresses to the jury were marked by the same familiar style. Brought up like many of them, in a farming region, familiar with the habits of thought of our New England country people, he talked to them as a friendly adviser, citing homely incidents of country life to illustrate his meaning, and in language and accent showing clearly that he was one of them. It was here that he achieved his principal success. Day after day during the sessions of the court he appeared on one side or the other, of almost every case, and probably became personally known to more of the inhabitants of the county than any other of the advocates at the bar during his later years.

His arguments did not pursue a logical order; but neither did the usual train of thought of the majority of his hearers in the jury-box. He went over the story of the evidence as it arranged itself in his mind, and when he had finished, there was no point which he had forgotten, no inference which had not been suggested. In his examination of witnesses he showed a remarkable knowledge of human nature and an adroitness which was rarely matched. Never losing his temper, he was prepared to meet any surprising development of testimony with unruffled composure and the best resources at his command. His profession thoroughly interested him. He loved to talk over his cases with students or brother lawyers, and was ever ready to receive new suggestions or to state his own views when they were called for. Before the Supreme Court he argued questions of law with care and skill, thoroughly appreciating the value of the distinctions on which he relied and the effect of earlier decisions upon the point in issue.

In 1875 he was chosen city solicitor, and so continued until 1881, when he resigned, to take the place, as district attorney, of Judge Staples, then

Chas Devens Jr
Bvt Maj Genl U.S.V.

promoted to the bench. In both these capacities, calling for the exercise of quite different talents, he acquitted himself with credit.

His interests outside of his profession were few, for he gave himself little time for other pursuits. In local political contests he took part from time to time. The parish to which he belonged was always an object of his attention. In his brief hours of social relaxation he showed himself an affectionate and sunny-tempered friend. But his constitution was not strong enough to endure the strain to which he subjected it. In 1883 he was obliged to give up work, and seek in absolute rest the reinvigoration of his enfeebled energies. During the fall he returned to his office, and was so far encouraged to believe in his restoration to health as to accept a re-election to the district attorneyship. The apparent improvement was but temporary, however. His tasks were done, as his brethren at the bar sadly noted when he appeared among them at the opening of the December term of court. Again he left his clients, and, hopeful to the last, took his way toward a Southern climate. But his disease had taken too firm a hold while he had refused to leave his post of duty, and in January of 1884 he died in the city of Washington.

He came to the bar the latest of those whom we have mentioned. Many who saw his earliest efforts are still in the full vigor of their usefulness, but as we close these records with his name, let it be said that none among them all more diligently followed the injunction: "Work while the day is, for the night cometh."

In these imperfect sketches an attempt has been made to preserve some memorial of a few of those who have completed their life-work and are to be remembered as representatives of that ability and integrity which has characterized the administration of justice in this county and Commonwealth. Necessarily the names of many who have largely contributed to the establishment of this reputation are omitted. The records of a lawyer's life are too often written in water. The writer has mainly selected those who have seemed to him to leave some lasting impression on their times and to furnish examples for the edification of their successors in the same field of enterprise. To learn that the qualities which secured their successes are still exhibited among us, it needs only to glance over the honored list of names which now adorns the roll of this bar. A Senator of the United States, a justice of the Supreme Court of the State, two justices of its Superior Court and one of the United States District Court, and two recent members of Congress figure in the list. In active practice are advocates as skillful and eloquent, counsel as sagacious and learned as any who have gone before.

LIVING LAWYERS.

CHARLES DEVENS.[1]—Prominently identified with the military and judicial history of the State of Massachusetts is the Hon. Charles Devens, one of the justices of the Supreme Judicial Court. General Devens was born in Charlestown, Mass., April 4, 1820. He graduated at Cambridge in 1838. He studied law at the Harvard Law School, and subsequently with Messrs. Hubbard & Watts, in Boston, and was admitted to the bar in 1840. He first commenced practice at Northfield, where he remained until 1844, when he removed to Greenfield and formed a co-partnership with Hon. George T. Davis, which continued until 1849, when he was appointed by President Taylor United States marshal for the district of Massachusetts. This office he held until his resignation in 1853. While residing at Greenfield he represented Franklin County in the State Senate. Upon resigning the office of marshal, he located in Worcester and resumed the practice of his profession, forming a partnership with Hon. George F. Hoar and J. Henry Hill. Soon after Mr. Hill retired, and the firm of Devens & Hoar continued until 1861. During his residence in Worcester he served as city solicitor in 1856, 1857 and 1858.

Upon the breaking out of the Rebellion, Mr. Devens promptly responded to the President's call for troops, and entered the service as major of the Third Battalion of Infantry. He soon after became colonel of the Fifteenth Massachusetts Regiment, and from this date until the close of the war he was in active service. He received his baptism of fire on the disastrous field of Ball's Bluff, and in 1862 was made a brigadier-general for gallantry on this memorable field of carnage. From the very beginning General Devens saw severe service. In the battle of Fair Oaks he was severely wounded, also at Chancellorsville, in 1863, and at Antietam his horse was shot under him. His distinguished bravery before Richmond was especially commended by General Grant, and he was commissioned major-general for gallantry at the capture of the city. At the close of the war he was appointed military governor of the Eastern District of South Carolina. This position General Devens held until June, 1866, when he was mustered out of the service.

Civil honors seemed to await him upon his return to his native State, and in the following year, 1867, he was appointed a judge of the Supreme Court, and in 1873 became an associate justice of the Supreme Judicial Court, and remained upon the bench until 1877, when he was appointed Attorney-General of the United States by President Hayes. At the expiration of four years he returned to Massachusetts, and in 1881 was re-appointed to the bench of the Supreme Court. Notwithstanding the exacting duties of a judicial life Judge Devens finds time to manifest his interest in military affairs, and has been president of the Society of the Army of the James; president of the Society of the Army of the Potomac, and of the Sixth Army Corps. He has been National Commander of the Grand Army of the Republic, and was

[1] By the Editor.

for nine years Commander of the Military Order of the Loyal Legion for Massachusetts.

Judge Devens is eminently an orator, and his public addresses and eulogies have been many and varied. He is a member of various societies and clubs, and as statesman, judge and general ranks among Massachusetts' most distinguished citizens.

GEORGE FRISBEE HOAR[1] was born in Concord, Mass., August 29, 1826. His ancestors, from the early days of the Massachusetts Bay Colony, were men of action and courage, humane, and always in advance of their times, but not so radical as to be parted in sympathy from their contemporaries, and to lose the influence which their character, talents and public spirit deserved. John Hoar, Senator Hoar's earliest ancestor in Massachusetts, was one of three brothers who came, with their widowed mother, from Gloucestershire, England, among the early colonists.

He was a friend and co-laborer of Eliot, the apostle to the Indians, and after the massacre at Lancaster, in King Philip's War, followed Philip's band into the wilderness with a single Indian guide, and ransomed Mrs. Rolandson, one of the Lancaster captives.

His brother, Leonard Hoar, was one of the early presidents of Harvard College. Senator Hoar's father, Samuel Hoar, was one of the great Massachusetts lawyers, contemporary with Mason, Webster and Choate. His aspect inspired reverence, which was increased by knowledge of his character. He was a Representative in Congress, and was chosen by Massachusetts to protect in the courts of South Carolina her colored citizens unjustly imprisoned there. He was expelled from the State by force, and was not allowed to discharge his mission; but his conduct throughout was marked by dignity, firmness and courage. Senator Hoar's mother was the youngest daughter of Roger Sherman, of Connecticut.

The village of Concord, where Mr. Hoar's boyhood was passed, was full of fine influences. No place could have been better for the forming of character and preparation for a life of public or private usefulness. After his school-days there he entered Harvard College, and was graduated in 1846. Choosing the law for his profession, he studied at the Harvard Law School and in the office of the late Judge Thomas, in Worcester. Upon his admission to the bar in 1849, he began practice in Worcester, and this city has ever since been his home.

He was for a time associated in practice with the late Hon. Emory Washburn, and later with the Hon. Charles Devens and J. Henry Hill, Esq. Mr. Hoar rapidly rose to a very high rank in his profession. The native capacity of his mind, disciplined by education and superbly equipped by study, was supplemented by uncommon industry and assiduous devotion to the business of his clients.

His practice when he entered Congress in 1869, after twenty years at the bar, was probably the largest and most valuable in the State, west of Middlesex County. Mr. Hoar married, in 1853, Miss Mary Louisa Spurr, who died a few years after, leaving a daughter and a son, both of whom are now living. He married, in 1862, Miss Ruth Ann Miller.

Mr. Hoar's first appearance in political life was as chairman of the committee of the Free-Soil party for Worcester County in 1849, which was more efficiently organized here than in any other county of the United States. In 1851, at the age of twenty-five, Mr. Hoar was elected a representative to the General Court. He was the youngest member in that body, but became the leader of the Coalitionists in law matters, and to him was given the task of drawing resolutions, protesting against the compromise measures of the National Government in 1850.

So manifest at this time to the people of this district was Mr. Hoar's fitness for public service that the way was open to him to succeed the late Hon. Charles Allen as the Representative of this district in Congress.

But he put aside all suggestions tending that way, because it seemed to him that to enter Congress then would be to make politics instead of the law his profession. If his decision had been otherwise, his energy, courage, eloquence and firm grasp of constitutional principles would doubtless have placed him in the very front rank of the statesmen of the civil war and reconstruction period. Although refusing Congressional service, he did not decline such duty in the State Legislature as was pressed upon him. In 1857 he was a member of the Senate, and chairman of its Judiciary Committee. In that capacity he drew a masterly report, defining the boundaries of the executive and legislative authority.

He made many political addresses, as varying occasions called for them, and was always ready with service in behalf of enterprises for the public welfare in his own city. He aided in the establishment of the Free Public Library and reading-room, was a member of the board of directors and one of its early presidents. His counsels and efforts were of great value in the founding of the Worcester County Free Institute of Industrial Science, now the Worcester Polytechnic Institute, whose usefulness as a pioneer in a new field and conceded eminence now are due to the wisdom with which its foundations were laid by that group of sagacious and public-spirited men of whom Mr. Hoar was one. His argument for technical education before a committee of the Legislature in 1869 was, if not the first, among the earliest adequate public statements of the claims of this branch of education. He was also an early advocate of woman suffrage, having made an address on that subject in Worcester in 1868 and before a legislative committee in 1869.

In 1868 Mr. Hoar was elected a Representative in Congress, as the successor of the late Hon. John D.

[1] By J. Evarts Greene.

C. W. Hines

Baldwin. In this, the Forty-first Congress, he was a member of the Committee on Education and Labor, and his chief work was the preparation and advocacy of the bill for national education. The bill differed widely in its details from that now pending and known as the Blair Bill, but its purpose—to give national aid to education where illiteracy most prevails and where, through poverty or indifference, the State and local governments inadequately provide for public schools—was the same. The bill did not pass in that Congress, and Mr. Hoar reported it with some changes in the Forty-second and again in the Forty-third Congresses, when it was passed by the House, but failed in the Senate. In his first term in Congress Mr. Hoar, by a timely and convincing speech, saved the Bureau of Education when the Committee on Appropriations had reported it ought to be abolished. In this Congress, too, he vindicated General Howard from the charges preferred by Fernando Wood, supported Sumner in his opposition to President Grant's scheme for the annexation of Santo Domingo, and became known as a formidable antagonist in debate by his prompt and severe treatment of Mr. D. W. Voorhees and Mr. S. S. Cox, of New York, who ventured to "draw" the new member. His retort upon Mr. Cox was much relished by his associates. Mr. Cox, then the triumphant wit of the House, had been carping at Massachusetts and daring Mr. Dawes, already a Congressional veteran, to come to her defence, assuring him that her stoutest champion was needed. "Troy," said Mr. Cox, "was defended by Hector, yet Troy fell." Mr. Hoar's reply was quick and scathing. "Troy," said he, "did not need her Hector to repel an attack led by Thersites."

In the Forty-second Congress Mr. Hoar, as a member of the Committee on Elections, drew the report in the case of Cessna against Myers. Many questions of great interest were discussed and decided in this report, which has been an authority ever since, being frequently cited in election contests both here and in England. In this case the report assigned the seat to Myers, the Democrat. Mr. Hoar's dealing with election cases in this Congress and in the next was recognized by his associates of both parties as judicial and conscientious, and when the charge of undue partisanship was afterwards brought against him, he was defended by Mr. Giddings, a Texas Democrat. In this Congress Mr. Hoar made an eloquent appeal for the rebuilding, at the national expense, of the College of William and Mary in Virginia, which was destroyed by fire while national troops were encamped in its neighborhood during the Civil War.

In the Forty-third Congress Mr. Hoar, besides obtaining the vote of the House for his Education Bill, reported and carried through the House a bill to establish a Bureau of Labor Statistics, and was chairman of a special committee to investigate the political disorders in Louisiana. The fairness of the inquiry and report of this committee was conceded even by the Democratic counsel employed in the case. In this Congress Mr. Hoar delivered his eulogy of Senator Sumner.

By the elections of 1874 the Republicans, who had held undisputed control of the House of Representatives for fifteen years, were outvoted in so many districts that in the Forty-fourth Congress the Democrats were a majority of the House. In this Congress Mr. Hoar made a number of notable speeches. At his suggestion the Eads' Jetty Bill, which was in danger of failure, was put into such form as to win favorable action from the committee and Congress, and thus, as Captain Eads himself testified, it was through Mr. Hoar's efforts that New Orleans was opened to ocean commerce. He was one of the managers of the impeachment of Secretary Belknap, and as such made an argument so convincing and powerful that it not only changed the opinions of several Senators on the question of jurisdiction, but it awoke the conscience of the people and gave the initial impulse to the wave of official and political reform, which has not yet spent its force. But Mr. Hoar's most distinguished service in this Congress was that with which it closed—his work for and as a member of the Electoral Commission. He was a member of the special committee which prepared the bill establishing the commission, was its advocate in the House, and was chosen by the House a member of it, his associates being General Garfield, Judge Abbott, of Massachusetts, General Hunton, of Virginia, and Mr. Payne, of Ohio. In 1872 and again in 1874 Mr. Hoar had given notice to his constituents of his wish to retire from public life, but had yielded to the general and imperative demand for his further service.

In 1876 his resolve not to be a candidate for reelection to the House was announced as final, and the people, accepting it, elected his successor. But in the winter following the Legislature chose him as Mr. Boutwell's successor in the other branch of Congress, and he took his seat in the Senate in March, 1877, at the opening of President Hayes' administration, of which he was one of the few steadfast Senatorial supporters. In the Senate Mr. Hoar has been a member, and for some years chairman of the Committee on Privileges and Elections and a member of the Committee on Claims, on the Judiciary, on the Library, and others of less importance. Besides conducting many inquiries, preparing many reports, involving large pecuniary interests or deciding weighty questions of individual right or public policy, he is the author or was the leading advocate of several measures of first-rate importance. Among them are the bill for distributing the balance of the Geneva award, the Lowell Bankruptcy Bill, the bill for counting the electoral votes for President and Vice-President, the Presidential Succession Bill, the repeal of the Tenure of Office Act and the resolution for amending the Constitution so as to make the Presi-

dential term and the term of each Congress begin with the 30th day of April instead of the 4th day of March. All of these measures passed the Senate, and most of them became laws.

In general Mr. Hoar has occupied himself in Congress with matters of wide scope and of fundamental importance rather than with those measures of narrower range and temporary application, upon which most of the labor of Senators and Representatives is spent. His success in gaining for so many of these larger measures the attention and favorable action of a body somewhat dilatory, apt to be engrossed with the affairs of the moment, and seldom looking farther forward than to the next Presidential campaign, is proof of his powers of convincing and persuading and of the confidence of his associates in his wisdom and the purity of his motives.

Mr. Hoar was re-elected to the Senate by the Legislature in January, 1883, and again in 1889. His election for the third time by the unanimous vote of his party in the Legislature, without a note of dissent or the public suggestion of any competitor, was a distinction not accorded to any man in Massachusetts for many years before, and proof that the people have learned to set a value upon his services not less than that which they assigned in earlier days to those of Webster and Sumner.

Mr. Hoar has four times been chosen to preside over Republican State Conventions. In 1880 he was president of the National Convention at Chicago by which General Garfield was made the Republican candidate for President of the United States. His dignity and courtesy, his prompt and impartial decisions, and the easy mastery by which he held the great convention to its work amid the enthusiasms for rival leaders and the disturbing hopes and fears and other strong excitements of the occasion, commanded general applause, and gave to the public of the United States a better knowledge of his strength and breadth of character.

Besides his political, legislative and professional activity, which has been briefly outlined above, Mr. Hoar has been and is usefully busy in other ways. He has written valuable papers for the magazines; has delivered many addresses on other than political subjects; has been a member of the Board of Overseers of Harvard College; an active member and for some years the president of the American Antiquarian Society; a trustee of the Worcester Polytechnic Institute; a regent of the Smithsonian Institution, and was selected by Mr. Jonas G. Clark as one of the corporators of Clark University. He has received the degree of Doctor of Laws from William and Mary College, Amherst, Yale and Harvard.

P. EMORY ALDRICH,[1] of Worcester, an associate justice of the Superior Court of Massachusetts, is a native of New Salem, Mass. His family is of the early New England stock, he being a lineal descendant of George Aldrich, who emigated from England in 1635 and settled at first in Dorchester, but afterwards became one of the original founders of the town of Mendon. Members of this family in the seventh and eighth generations from the founder are now living in nearly every State of the Union; it has had its Representatives in both Houses of Congress and in all the learned professions; several of the lineage have been judges in the courts of different States. The family, in some of its branches, has been, and is, honorably known in literature and commerce; but a great majority of the race have been farmers. As a race they are distinguished for longevity and vigor of physical constitution and an inflexible will in the pursuit of the objects of their choice.

The subject of this notice attended the district school in his native village until he was sixteen years old, and then became himself a teacher. He received an academical education, and thereafter taught in the schools of this State and Virginia; pursuing at the same time a course of studies, such as were at that day usually found in the curricula of New England colleges. While teaching in Virginia he began the study of law, which he continued at the Harvard Law School in 1843–44, and graduated with the degree of LL.B.

After that, returning to Virginia and resuming there for a definite period his former vocation of teaching, he was admitted to the bar upon examination by the judges of the Court of Appeals at Richmond in 1845. He did not, however, enter upon practice there, but returned the same year to his native State, and after six months' study in the then well-known office of Ashman, Chapman & Norton, of Springfield, he was admitted to the bar at the spring term of the old Common Pleas Court for Hampden County in 1846.

Subsequent to his admission he passed a few months in Petersham in the office of F. A. Brooks, Esq., who had been a fellow-student of his at Cambridge; and in December, 1846, he began practice in the town of Barre, Worcester County, and continued there during the following seven years. For about three years of the seven he was editor and publisher of the *Barre Patriot*. He represented the town of Barre in the Constitutional Convention of 1853. In May, 1853, he was appointed by Governor Clifford district attorney for the Middle District, which office he continued to hold, with an interval of a few months in 1856, until 1865. In the spring of 1854 he removed to Worcester and opened an office in that city, and in January, 1855, he formed a law partnership with the Hon. P. C. Bacon, which partnership continued until he left the bar for the bench in October, 1873. He was mayor of Worcester for the year 1862.

Upon the organization of the State Board of Health, in 1870, Mr. Aldrich was appointed a member of the board by Governor Claflin, and remained a member

[1] By the Editor.

P. Emory Aldrich

W. W. Rice

till his appointment to the bench of the Superior Court. While he was a member of the Board of Health he prepared an historical paper, relating to the use of and the legislative regulation of the sale of intoxicating liquor, which was published in one of the annual reports of the board. He was one of the Representatives from Worcester in the State Legislature in the years 1866 and 1867; he took an active part in the debates and business of the House. In 1866 he was one of the minority dissenting from the decision of the Speaker of the House upon the question of the right of an interested member to vote. Mr. Aldrich prepared at that time an elaborate report upon the subject, which was published under the title of "The Right of Members to Vote on all Questions of Public Policy Vindicated." The principles of parliamentary law and practice contended for in that report were, at a later date, held to be correct, both in the Federal House of Representatives and in the British House of Commons. Judge Aldrich is a member of the American Antiquarian Society and one of the council of that venerable and learned body.

As a member of the society and council he has prepared several papers on historical, legal and literary subjects, which have been published with the proceedings of the society. He has written and delivered addresses before other societies and associations upon various aspects of social science and education, and upon the right of the State to provide not only for the elementary education of its children, but also for their higher education in high schools, etc. For the last few years he has given much time and study to the cause of technical education. He has long been one of the trustees of that admirable institution—the Worcester Polytechnic Institute.

Since he left the bar he has written a work on "Equity Pleading and Practice," which was published in 1885. In 1886 he received the honorary degree of LL.D. from Amherst College. In 1850 he married Sarah, the eldest daughter of Harding P. Wood, Esq., late of Barre.

William W. Rice,[1] son of Rev. Benjamin Rice, a Congregational clergyman, was born in the historical old town of Deerfield, Mass., on the 7th of March, 1826. His collegiate education was acquired at Bowdoin, whence he graduated in 1846. And it may be mentioned, in passing, that his *alma mater* in 1886 conferred on him the degree of LL.D. After graduating he spent four years as preceptor of the far-famed Leicester Academy, and in 1851 commenced the study of law in the office of Emory Washburn, then in full practice in Worcester. After the usual course of three years' study he was admitted to the bar; and from the first year of his professional life to the present time has been a prosperous and highly-esteemed practitioner. His courtesy of manner, his fairness towards opposing parties and uniform deference to the court have marked him as a gentleman as well as advocate.

The career of Mr. Rice as a lawyer, successful as it has been, by no means exhibits his whole character—perhaps not the most useful or conspicuous part. He has been almost constantly called by his fellow-citizens to fill positions of honor, trust and responsibility.

In the municipal administration of Worcester he has served in various capacities, particularly in those connected with the educational interests. In 1860 he was mayor, and administered the duties of that high office with efficiency and universal satisfaction. In the capacity of special justice of the Police Court and as occupant of the bench of the County Court of Insolvency his course met with marked approval.

The duties of the office of district attorney or public prosecutor for the Worcester District, to which he was elected in 1868 and which he held five years, he discharged with signal ability, with fidelity to the State and a manly regard for the rights of those whom it became his duty to prosecute. Few offices are beset by more difficulties and annoyances, the duties being always arduous, often disagreeable and sometimes of doubtful justice; and he who successfully discharges them is worthy of the highest praise.

But perhaps it was as a member of Congress that Mr. Rice has become most widely known. He was for ten years a member of that august body, having been first elected in 1876. In the discussions there his speeches had much influence and his committee work was often of the greatest importance. There, as well as at the bar, he was courteous and forbearing, though never shrinking from the enforcement of his convictions with ardor and eloquence. By his fellow-members of all parties he was regarded with great respect, for every one recognized him as honest and patriotic. He was able in debate and not liable to be taken unawares on any current subject, was intelligent, earnest and persistent as a worker in the interest of his constituents, and exhibiting the same zeal that characterized his efforts for clients at the bar.

But it would savor a little of ostentation and at the same time add nothing to the reputation of Mr. Rice to further pursue this phase of his career.

Some men possess such magnetic power that they, without a particle of self-assertion, draw to themselves the sympathy and confidence of all with whom they are brought in contact. And such have a controlling influence in the common affairs of life. There are others, on the contrary, who seem always surrounded by a chilling atmosphere, impenetrable to any brotherly feeling or confidential nearness. Those who best know Mr. Rice will have no difficulty in which class to place him. Assuredly he does not belong to the latter.

Politically, Mr. Rice is a member of the Republican party, and ranks as the first Republican mayor of

[1] By Hon. J. R. Newhall.

the city. In the War of the Rebellion his voice gave no uncertain sound in urging upon every one the duty of doing their utmost to preserve the integrity of the Union; and it was not by speech alone that he fortified his patriotic sentiments. In his religious sentiments he is a Unitarian.

Mr. Rice was united in marriage November 21, 1855, with Miss Cornelia A. Moen, of Stamford, Conn., by whom he had two sons,—the eldest, William W. Rice, Jr., dying in childhood, and the youngest, Charles Moen Rice, a graduate of Harvard, is now a member of Mr. Rice's law firm. His first wife died June 16, 1862. In September, 1875, he married Miss Alice M. Miller, daughter of Henry W. Miller, Esq., of Worcester.

FRANK PALMER GOULDING.[1]—The subject of this sketch is descended from Peter Goulding, who lived in Boston in 1665, and afterwards in Worcester and Sudbury. Palmer Goulding, son of Peter, had a son John, who was born in Worcester, October 3, 1726, and inherited from his father the business of tanning. He removed early in life to Grafton, and died November 22, 1791. His wife, Lucy Brooks, of Concord, died at the age of thirty-eight, the mother of ten children. Ephraim Goulding, one of the children, was born September 4, 1765, and married, March 6, 1792, Susannah, daughter of William and Sarah (Prentice) Brigham. He was a prominent man in the town, serving as moderator of annual town-meetings eleven years, as selectman six, as assessor one year and as member of the School Committee six years. He died January 14, 1838. Palmer Goulding, son of Ephraim, was born October 11, 1809, and died in Grafton, March 22, 1849. He married, first, Fanny W. Maynard, who died August 9, 1839, having had three children—John C., who was born in 1832, and died in 1839; Susan E., born in 1835, and Frank P., the subject of this sketch, who was born in Grafton, July 2, 1837. By a second wife, Ann Cutting, whom he married June 2, 1842, he had Fanny A., born May 4, 1843.

Frank Palmer Goulding while a boy lived in Grafton, Holden and Worcester, his father having at various times occupation in those places, but on the death of his father, in 1849, returned to Grafton, and at the age of twelve years was apprenticed to learn the business of making shoes. From 1853 to 1857 he worked at his trade in Worcester, and at the latter date, at the age of twenty, entered the academy at Thetford, Vt., and prepared for college. He graduated at Dartmouth in 1863, and at once began the study of law in the office of Hon. George F. Hoar, in Worcester. A year at the Harvard Law School completed his preliminary law studies, and in 1866 he was admitted to the Worcester County bar. In the same year he became a partner with Hon. Francis Henshaw Dewey, then in full practice, and remained with him until Mr. Dewey was appointed a justice of the Superior Court in 1869. Mr. Goulding then formed a partnership with Hon. Hamilton Barclay Staples, which continued until Mr. Staples was appointed a Superior Court justice in 1881. Since that time he has been alone, enjoying a large and increasing practice, to which has been added the performance of the duties of city solicitor, which office since 1881 he has continued to hold.

It is not difficult to form an estimate of the character and intellectual powers of a man who, with slender educational advantages in early life, has reached the professional position enjoyed by Mr. Goulding. At a bar excelled by none in the State beyond the limits of Suffolk County, he at an early day in his career secured a rank which he has not only sustained, but steadily advanced. His appointment as one of the trustees of the new Clark University attests both the confidence of the community in which he lives in his business methods and sound judgment and their respect for his mental attainments and culture.

There are other evidences of the regard in which he is held. He was one of the Presidential electors chosen on the Republican ticket at the last election; he is also one of the trustees of the Worcester County Institution for Savings, a director in the First National Fire Insurance Company, and either a present or retired member of the Worcester School Board. With the pressure of professional business, his political aspirations have been satisfied by two years of service in the House of Representatives.

Mr. Goulding married, March 29, 1870, Abbie B. Miles, of Fitchburg, and has two children of fifteen and ten years of age.

HON. JOHN D. WASHBURN.[2]—John Davis Washburn is a native of Boston, where he was born March 27, 1833, being the eldest son of John Marshall Washburn, who married, in 1832, Harriet Webster, daughter of Rev. Daniel Kimball (Harvard University, 1800).

His parents removed to the grand old town of Lancaster, in Worcester County, when he was five years old, and his early youth was passed amid those beautiful surroundings.

At the age of twenty he graduated in 1853 from Harvard University, and entered the profession of law, studying first with Hon. Emory Washburn and George F. Hoar in 1854, and later receiving a diploma from the Harvard Law School in 1856.

He practiced law in Worcester, in partnership with Hon. H. C. Rice, and, by a development of his professional business and inclinations, made a prominent place, first, as an insurance attorney, and lastly, succeeding the late Hon. Alexander H. Bullock as general agent and attorney of the insurance companies, in 1866.

[1] By W. T. Davis.

[2] By the Editor.

John D. Washburn

Edward L. Davis

By his friendship with Governor Bullock he became associated with his military family as the chief of his staff, from 1866 to 1869, receiving a colonel's commission.

During the period from 1871 to 1881 he was a trustee of the Worcester Lunatic Hospital, and from 1875 to 1885 filled the same relation to the Massachusetts School for the Feeble-minded. He was a member of the House of Representatives from 1876 to 1879, and a Senator from the city of Worcester in 1884, rendering the excellent public service to be expected from his knowledge of affairs and his general sympathies with all matters of care and concern in the Commonwealth.

His association has always been sought in corporate and financial affairs. From 1866 to 1880 he was a director of the Citizens' National Bank.

He has been a member of the Board of Investment of the Worcester County Institution for Savings since 1871, and a trustee and treasurer of the Memorial Hospital since 1872.

He has been a director of the Merchants' and Farmers' Insurance Company since 1862, and succeeded the Hon. Isaac Davis as president in 1883.

His large humanitarian instincts and tastes, taking hold on all matters that have to do with educational and intellectual advancement, have made for him a congenial field where associates have warmly welcomed him in the numerous relations he has sustained to our higher institutions and learned societies. Since 1871 he has been a councilor and secretary of the American Antiquarian Society, and is a councilor of the Massachusetts Historical Society.

He is also an original member of the American Historical Association, and has been, since 1884, a corresponding member of the Georgia Historical Society. It is much to say of one that he stands high with his own *alma mater*. Colonel Washburn is a member of the overseers' committee on the government of Harvard University, and one of the directors of the Alumni Association of the same institution. He is one of the Board of Trustees and secretary of the new Clark University of Worcester.

This is a good record for any man to have won in middle life, and opens a field of service worthy of the best ripened powers, such as promises to give the subject of this sketch many years of useful citizenship.

Colonel Washburn is a man of commanding presence, with a kindly dignity always open to approach.

He married, in 1860, Mary F., daughter of Charles L. Putnam, Esq. (Dartmouth College, 1830), and has one daughter, Edith, who married, in 1884, Richard Ward Greene, Esq., of Worcester.

EDWARD LIVINGSTON DAVIS,[1] son of Isaac and Mary H. E. Davis, was born in Worcester, April 22, 1834. He began his education in the public schools of his native town, completing his course at the High School in 1850 and was graduated at Brown University in 1854. Having studied law in the office of his father and at the Harvard Law School, he became a member of the Worcester County bar in 1857.

He gave up the practice of the law the following year, and associated himself with Nathan Washburn and George W. Gill in the manufacture of railway iron, locomotive tires and car-wheels, a business established in 1857 in Worcester, which soon gave profitable employment to a large capital. In 1864 a corporation was formed, under the name of the Washburn Iron Company, for carrying on the same business. Mr. Davis was the treasurer and one of the chief stockholders in this company, and continued to hold that office until 1882, when, upon the death of his associate, Mr. Gill, he sold his interest and retired from the corporation.

Since that time, as indeed before, he has been much occupied with various business engagements and public and private trusts, which the care of his own property and the confidence of others in his capacity and faithfulness imposed upon him. He has been a director of the Boston and Albany, the Norwich and Worcester, and the Vermont and Massachusetts Railroad Companies, president of the proprietors of the Rural Cemetery, president of the Worcester County Musical Association, member of the Council of the American Antiquarian Society, and director and trustee of many other institutions and companies in his native city, and actively and helpfully concerned in all enterprises designed to promote the welfare of the city and its people.

While not ambitious of official honors or political influence, Mr. Davis has not refused to bear his part when his services were required in responsible positions in the government of the city or State. He was elected a member of the Common Council for 1865 and held the office for three years, for the last year being president of the board. He was mayor of Worcester in 1874. During his administration important public improvements were carried out, notably the construction of a portion of Park Avenue, whose value has since been recognized. While holding this office Mr. Davis saw the growing need of the city for additional parks and play-grounds, which he has since in another official capacity and privately, so efficiently helped to supply.

While he was mayor, the Soldiers' Monument on the Common was publicly accepted by him on behalf of the city, and it was formally dedicated with appropriate ceremony. It is an interesting coincidence that his father, the Hon. Isaac Davis, accepted for the city the monument erected on the Common in memory of Colonel Timothy Bigelow, Worcester's most distinguished soldier of the Revolution. This dedication took place on the 19th of April, 1861, at the moment when other Worcester soldiers, among the first to be in arms in defence of the Union against

[1] By J. Evarts Greene.

foes of its own household, were attacked in the streets of Baltimore, and the first blood was shed in the great Civil War, whose heroes are commemorated by the monument dedicated by the second Mayor Davis thirteen years later. These two monuments in memory of the soldiers of two wars—for independence and for union—are the only memorial structures on the Common.

Mr. Davis was a member of the State Senate in 1876. He has since repeatedly declined to be the candidate of his party for various positions, including that of Representative in Congress, preferring private to political life.

He has not, however, declined employments of a public nature other than political, and has been chairman of the commissioners of the city's sinking funds, an office of financial responsibility, and a member of the Parks Commission. In this latter capacity, as well as by his gift of a portion of the Lake Park and a fund for its improvement, he has contributed materially to devise the present comprehensive scheme of public parks and play-grounds, and to secure its adoption, as well as to remove obstructions from the Common and prevent encroachments upon it, and thus to preserve it for the free use of the people, as a place of recreation and an adornment of the city.

Mr. Davis is a member of the Protestant Episcopal Church and has long been senior warden of the parish of All Saints. When the present church was built, from 1874 to 1877, he was chairman of the building and finance committees, and contributed in time and money more than any other member of the parish. He has repeatedly represented the parish in the Diocesan Convention, has been for several years a member of the standing committee of the diocese, and twice one of the four lay deputies of the diocese to the general convention of the church.

Mr. Davis has been twice married. Hannah Gardner, daughter of Seth Adams, Esq., of Providence, Rhode Island, to whom he was married in 1859, died in 1861, leaving a son, who survived her but a few days. He married, in 1869, Maria Louisa, youngest daughter of the Rev. Chandler Robbins, D.D., of Boston. They have two daughters, Eliza Frothingham and Theresa, and a son, Livingston.

JAMES EDWARD ESTABROOK.[1]—For nearly sixty years the name and title "Colonel Estabrook," descending from father to son, has been familiarly known and respected, both within and beyond the borders of this community.

"Colonel" James Edward Estabrook, the subject of this sketch, may be said to have inherited the title, by courtesy, from his father, Colonel James Estabrook, of the State Militia, the gallant commander of the last Worcester County Regiment of Cavalry, and who had the honor of leading the escort at the reception of Lafayette in 1824.

[1] By John J. Jewett.

The genealogy of the family is easily and clearly traceable as far back as 1413, to the Estebroks in Wales.

The American line begins with the Rev. Joseph Estabrook, born in Enfield, England, who came to Concord, Mass., in 1660, was graduated from Harvard College in 1664, and soon after was settled as a minister in Concord, Mass., where he was a colleague for many years of the famous Rev. Edward Bulkeley, remaining there during a pastorate of forty-four years until his death, in 1711. Shattuck's "History of Concord" refers to him as:

"A man of great worth, and eminently fitted for his office. His appearance carried with it so much patriarchal dignity, that people were induced to love him as a friend and reverence him as a father. These distinguished traits obtained for him, in the latter part of his life, the name of The Apostle."

In an obituary notice, the *Boston News Letter* of September 18, 1711, says: "He was eminent for his skill in the Hebrew language, a most orthodox, learned and worthy divine, of holy life and conversation."

Three of his four sons became ministers, the eldest, Joseph, settling in Lexington, Mass., and reference is made to this branch in Hudson's "History of Lexington," as "the noted ministerial family."

Ebenezer Estabrook, the father of Major James Estabrook, and grandfather of James Edward, of Worcester, removed from Lexington to the neighboring town of Holden about the time of the Revolution and founded the Worcester County branch of the family.

Colonel James Estabrook removed from Holden, his native place, to Rutland and thence to Worcester in 1828, and, with the exception of a few years spent in Bostion, his active business life was closely identified with the rapidly developing town and city of Worcester until his death, in 1874.

During the administration of Governor Boutwell he was appointed sheriff of Worcester County, from which office he was removed, for political reasons only, on the return of the Whig party to power.

Colonel Estabrook was a devoted and distinguished member of the order of Free Masonry, and as early as 1825, on the organization of the Worcester County Commandery of Knights Templar, he was elected the first Eminent Commander of that honorable body. Always a respected citizen, he was entrusted with many local interests, was an honored and influential member of the Old South, and later of the Union Church, and was among the first to take an active and leading part in the early development of the real estate and mechanical interests of the city.

As one of the well-known men whose lives form an important part of the history of their times, we quote the following extract from an extended tribute in the records of that honorable and exclusive organization

known as the Worcester Fire Society, of which he was a member, being the only person selected for this distinction at the annual meeting in 1830:

"Colonel James Estabrook was a man of marked intelligence, who accomplished more by knowledge later acquired than have many men, whose education, begun at college, seems to have been absolutely discontinued then and there."

From the same authority, the Hon. John D. Washburn, we also quote the following paragraph, not only as a faithful description of the founder of the Worcester branch of the family, but also as a remarkably terse and vivid pen-picture of his son, Colonel James E. Estabrook, the present postmaster of Worcester, in whom the type and characteristics are faithfully perpetuated:

"In stature he was below middle height, but made the most of such height as he had by the erection of his figure and military bearing. His complexion was very dark, and in this, as well as his features, he resembled the great Democratic leader, Stephen A. Douglas. His manner was quick, his eye bright and intelligent. Opposed to the party usually dominant here, he held few offices, though counted a politician, but he never adopted the coarser modes of warfare in politics, was courteous to his opponents, refrained from the imputation of unworthy motives, and carried none of the bitterness of party contest into the relations of private life."

This latter trait is especially true of his son, James Edward, who has been a life-long Democrat and a recognized leader and oracle of his party, not only in Worcester County, but also prominent in the party councils of the State and nation for a quarter of a century.

He has been a delegate to every National Convention of his party since the close of the war to the time of his appointment to a Federal office in 1887. He has served as chairman of the State Executive Committee, and of the County, District, Congressional and City Committees through many years of his party's minority in the State, and has ever been held in high esteem as an honest and honorable politician even by his political opponents.

In this connection, his life-long friendship with the late lamented Judge Adin Thayer, one of the acknowledged leaders of the Republican party in the State, will be recalled by their fellow-townsmen, among whom it had been long a matter of common remark that these two natural leaders of opposing forces only suspended their intimate social relations for a few weeks, during the active hostilities of a State or national campaign.

Colonel Estabrook has served his party in every capacity that choice or party exigency imposed upon him, with or without hope or prospect of reward, and his selection by President Cleveland to fill the office of postmaster, to succeed General Josiah Pickett, was received with a very general expression of approbation from his fellow-citizens, without regard to political affiliation, as a well-deserved recognition of his long and faithful devotion to the principles of his party.

As a member of the School Board, president of the Common Council and for two years, 1874 and 1875, as a representative of the city in the General Court of Massachusetts, Colonel Estabrook rendered able and faithful service, and discharged his duties with credit to his constituents and with honor to himself.

He is now one of the directors of the Free Public Library of Worcester, an honor peculiarly in harmony with his tastes and acquirements, and his long familiarity with the good society of books.

Born in Worcester October 29, 1829, he prepared for college in the Worcester High School, and was graduated from Yale in 1851. He then studied law with Judge Benjamin F. Thomas, attended the Harvard Law School, and was admitted to the Worcester bar in the autumn of 1853, at the age of twenty-three. Later he became the law partner of Judge Dwight Foster, of the Supreme Court, and practiced his profession until the breaking out of the War of the Rebellion.

Early in that critical period of the nation's life Colonel Estabrook promptly tendered his services to the government, and was assigned to duty on the staff of General Charles Devens, and later on the staff of General Butler, in the Department of the Gulf.

Compelled to resign from active service, by reason of sickness, in 1862, he returned to Worcester, and has since devoted his time to the care of his valuable estates, the duties of political life, the genial society of his chosen friends and the daily companionship of his library of classic, historical and standard authors.

Few, comparatively, of his many friends and acquaintances know or appreciate the fact that this modest, genial and unassuming gentleman is still, at three-score years, a familiar student of the classics, and is the owner of one of the largest and choicest libraries of rare editions of both ancient and modern literature in the city.

Colonel James Estabrook, the father, married Almira Read, of Rutland, Mass., and to them were born five children—one daughter and four sons. Two of these children are now living—the present postmaster and his brother, Arthur Edgar Estabrook, an esteemed citizen of Worcester, who shares with his brother the care of their joint interest in the family property. Colonel James Edward Estabrook remains a ripe and genial bachelor, having never married.

HON. E. B. STODDARD.[1]—Elijah Brigham Stoddard, the son of Col. Elijah Stoddard, a worthy and esteemed citizen of Upton, Mass., was born in that town on June 5, 1826.

At the age of twenty-one he was graduated from Brown University, and soon after came to Worcester,

[1] By J. H. Jewett.

where he studied law with Hon. John C. B. Davis, and was admitted to the Worcester County bar in June, 1849.

For nearly forty years he has been a widely-recognized factor in the professional, political and social life of Worcester, and has filled many public trusts with distinction.

"Colonel" Stoddard, as the subject of this sketch is familiarly known, was the first commander of the Third Battalion of Worcester County Rifles, organized in 1858, and was later a member of the military staff of Governor N. P. Banks, in 1860, and on the occasion of the reception to the Prince of Wales, during that year, Colonel Stoddard was one of the officers assigned to duty as personal escort to the prince.

On his admission to the bar in 1849 he began the practice of law in partnership with Hon. John C. B. Davis, under the firm of Davis & Stoddard, which continued until 1852.

He then became the law-partner of his father-in-law, Hon. Isaac Davis, a man of great prominence and large estates in the community, which association continued until 1857, when Colonel Stoddard was appointed district attorney for Worcester County, succeeding John H. Matthews, Esq., deceased in office. This position he held for about six months, until the expiration of the term. For nearly twenty years he was engaged in the regular practice of his profession, withdrawing somewhat from active practice in the courts in 1866, to accept the responsible duties of secretary and business manager of the Merchants' and Farmers' Fire Insurance Company, a position which he has ably and faithfully filled for the past twenty-two years and which he still holds.

Colonel Stoddard has, in fact, always been a man of affairs, prominent and helpful in the public concerns of the city, dealing with the affairs of men and property on a large and varied scale, and intrusted by his fellow-citizens with the care of large corporate and individual interests.

Beginning his public duties as the Representative of the city of Worcester in the Legislature of 1856, he has since ably served the city and State in many capacities. He was president of the Common Council in 1858; later, a member of the Board of Aldermen for two years; twice elected to the Massachusetts Senate (1863-64), and served two terms as State Councilor of this district (1871-72).

Elected mayor of Worcester in 1882, his administration was able and dignified, and his judgment in matters of grave importance to the city has been confirmed by subsequent events as both broad and judicious.

Always actively interested in the progress of popular education, he has been a member of the School Board for nine years, and for the past ten years has been a member of the State Board of Education, where he has rendered zealous and lasting service. His native tact and business discretion has been recognized by thirty years of continuous service as a director of the Providence & Worcester Railroad, as a solicitor and trustee for many years of the State Mutual Life Insurance Company, and as the trusted counselor of various public and private enterprises.

In addition to his other duties, he is now the president of the Quinsigamond National Bank, and also president of the Worcester Five Cent Savings Bank.

Personally Colonel Stoddard is a gentleman of pure and upright life, uniting a kindly disposition with a natural dignity of manner.

He has been a life-long Republican, an earnest worker and a faithful friend and ally of moral and political progress.

He married, in 1852, Mary E., the eldest daughter of Hon. Isaac Davis, by whom he has three children now living—two daughters and a son.

EDWIN CONANT.[1]—One of the earliest European lodgments in Massachusetts, as distinguished from Plymouth, was made in the year 1625, at Cape Ann. It was a little planting and fishing station, under the superintendence of the sturdy Roger Conant, who had previously been at Plymouth and Nantasket. He was a native of Budleigh, in Devonshire, England, born in 1593, and came to America in 1623, soon becoming a prominent character among the settlers. He was a remarkable man—remarkable for firmness, for self-reliance, and, it may be added, for utter contempt of the common and smaller hardships and annoyances of life, that so distress some and trouble most of us.

The fishing and planting were not successful, and the station was broken up in the autumn of 1626, and Conant, with most of the company, removed to the territory now forming Salem, and settled on the tongue of land through which Bridge Street now runs. This settlement was permanent, and made before Endicott or Winthrop came.[2]

---

[1] By J. R. Newhall.

[2] The severity of the winter, added to the privations they endured, so discouraged the little band that some of them proposed abandoning the enterprise. Not so with Conant. His mind was fixed, and go he would not. He had suffered hardships in other places and surmounted many difficulties, but here he had set his foot, and was determined to make in this vicinage a permanent stand. He says in a petition to the court, May, 1671: "I was . . . . one of the first, if not the very first, that resolved and made good my settlement in matter of plantation with my family in this colony of Massachusetts Bay, and have bin instrumental both for the founding and carrying on of the same, and when, in the infancy thereof, it was in great hazard of being deserted, I was a means, through grace assisting me, to stop the flight of those few that there were heire with me, and that by my utter deniall to goe away with them who would have gon either for England or mostly for Virginia, but thereupon staid to the hazard of our lives." It is stated, on very good authority, that his son Roger was the first white child born in Salem; but an ancient record says that at a church-meeting, in 1703, the old church Bible was presented to John Massey, a son of Jeffrey Massey, a companion of Conant, as the "first town-born child."

Conant was likewise among the first settlers of Beverly, which is just on the other side of Bass River—Beverly, whose beautiful shores have now for years been the summer resort of the wealthy and refined from far and near, and which, during the last year or two, has so agitated our Legislature on the question of territorial division. Beverly was settled as a part of Salem about 1630, and by 1649 the settlers were sufficiently numerous to ask of the Salem Church "that some course be

Edwin Bonent

Chas. A. Dewey

It is interesting to dwell upon the life of Roger Conant, so grand a type of the primitive and true New England character; to trace along the line of descent from him, the head of one of our largest and best New England families.

Edwin Conant, the subject of this sketch, and many other well-known individuals can trace their lineage directly to him, and well may they be proud of their descent, though better, perhaps, that they should endeavor to emulate his virtues.

Edwin Conant, whose portrait appears in connection with this sketch, was born in Sterling, Worcester County, on the 20th of August, 1810. After pursuing the usual course of preliminary academic training, he entered Harvard College, where he graduated in 1829. Proposing to make the law his life business, he prepared himself for the duties of that honorable though often perplexing profession, under the direction of well-qualified instructors, and in 1832 commenced practice. After continuing in that calling for some ten years, his attention was directed to other pursuits, and he did not return to the law.

In his religious views Mr. Conant has been a consistent Unitarian, thus swerving from the rigid Calvinistic faith of his early ancestors. Politically he was an adherent of the old Whig party, but on the disruption of that he joined the Democratic ranks and still maintains his Jeffersonian principles. He has not been much in public office, though always interested in public affairs; has been something of a military man, though not exposed to the "shocks of war," as he served in peaceful times; has held brigade and staff offices, and been a judge advocate.

Sterling, Mr. Conant's native place, is much indebted to him in various ways, especially for the generous gift of the funds for the erection of the brick edifice for the Free Public Library, and offices for the town authorities. The building was dedicated to the memory of his eldest daughter, Elizabeth Ann Conant.

Mr. Conant has been twice married. His first wife was Maria Estabrook, daughter of Hon. Joseph Estabrook, of Royalston, whom he married in October, 1833, and by whom he had two daughters, neither of whom are living. His second wife was Elizabeth S. Wheeler, granddaughter of Rev. Joseph Wheeler, Unitarian minister and register of probate. She was also a granddaughter of Rev. Dr. Sumner, so long the able minister of the First Church of Shrewsbury.

A genealogy of the Conant family has been published, by which the lines may be traced to the good old settler Roger, and wherein the notable achievements of some of the later members may be found recorded.

HON. CHARLES AUGUSTUS DEWEY.[1]—Judge Dewey is deservedly pre-eminent among Milford's most distinguished, honored and trusted citizens. His pedigree, heredity and education gave him an auspicious introduction to public life, which he has worthily justified by his own exertions. He was born in Northampton, Mass., December 29, 1830. His father was Hon. Charles Augustus Dewey, for nearly thirty years judge of the Supreme Court of Massachusetts, and his mother a sister of Governor De Witt Clinton, the pride of New York's executive chair. He was fitted for college at Williston Seminary, Easthampton, and graduated from Williams College in 1851. He first studied law with his brother, the late Hon. Francis H. Dewey, of Worcester; then a year at the Harvard Law School, and afterward in the city of New York, where he was admitted to the bar in 1854. Having practiced law there till the fall of 1856, he went to Davenport, Iowa, and pursued his practice for two years. He came to Milford in March, 1859, and for the next two years was a professional partner of Hon. Hamilton B. Staples.

In 1861 he was appointed trial justice. In 1864 the Police Court of Milford was established, and he was appointed judge. He held this office till the Third District Court of Southern Worcester was organized, in 1872, when he was appointed judge of said court, and has since discharged the duties of that office down to the present time. Meanwhile he

taken for the means of grace among themselves, because of the tediousness and difficulties over the water, and other inconveniences." The town was incorporated in 1668 by its present name—a name, however, which was not satisfactory to several of the principal settlers, especially to Conant, who, in the petition above referred to, says: "Now my umble suite and request is unto this honourable Court onlie that the name of our town or plantation may be altered or changed from Beverly, and be called Budligh. I have two reasons that have moved me unto this request,—the first is the great dislike and discontent of many of our people for this name of Beverly, because (wee being but a small place) it hath caused on us a constant nickname of *beggarly* being in the mouths of many, and no order was given, or consent by the people to their agent, for any name until they were shure of being a town granted in the first place. Secondly, I being the first that had house in Salem (and neither had any hand in naming either that or any other towne), and myself, with those that were then with me, being all from the western part of England, desire this western name of Budligh, a market town in Devonshire, and neere unto the sea, as we are heere in this place, and where myself was borne."

Roger Conant appears by every one to have been regarded as a very upright man; and the Rev. Mr. White, who took so active an interest in the settlement of Massachusetts, styles him "a pious, sober and prudent gentleman." That he was deeply pious, no one can doubt on reviewing his course. The petition for the change of name from Beverly to Budleigh ends in this strain: "If this, my sute, may find acceptation with your worships I shall rest umbly thankfull, and my praiers shall not cease unto the throne of grace for God's guidance and his blessing to be on all your weightie proceedings, and that iustice and righteousness may be everie where administered, and sound doctrine, truth and holiness everie where taught and practised throughout this wilderness to all posterity, which God grant. Amen." The court, however, did not grant the "umble petition," and Beverly the name is to this day.

It has been claimed that, strictly speaking, Roger Conant was the first colonial Governor of Massachusetts. Probably the Endicotts and Winthrops would not concede that. Yet there is no doubt that he was Governor of the little colony that first made a permanent settlement within our borders.

The picturesque little island in the bay, now generally known as Governor's Island—sometimes as Winthrop's—was first named Conant's Island, in honor of the worthy old Roger. In 1632 it was granted to Governor Winthrop for a garden. Thence it was called Winthrop's or Governor's Island.

[1] By Rev. Adin Ballou.

has served seven years on the School Committee of Milford, and for some time as its chairman. For nearly twenty years he has been a trustee of the town library and of late chairman of the board.

In all these professional and official positions Judge Dewey has discharged his responsible duties not only with admirable ability, fidelity and promptitude, but to such complete satisfaction of all parties concerned as rarely falls to the lot of one obliged to deal with so much conflicting mentality and interest. He has won for himself a remarkable amount of approbation and very little censure even from those whose passions and prejudices he has crossed. He is learned in legal lore, wears an inherited mantle of judicial rectitude, and holds the scales of legal equity with a firm hand of clemency. At his bar the innocent and guilty are alike sure of both justice and kindness. In public and private intercourse he is intelligent, candid, conscientious and courteous, and therefore universally respected. In social life he is urbane, genial, modest and dignified, and so welcome to every reputable circle. In politics he is a stanch Republican, in religion an exemplary Congregationalist, and in literature an amateur of the best. He is simple in his personal habits, temperate, physiologically circumspect and averse to all forms of extravagance. In social and domestic affairs he is unostentatious, prudent and economical, without stinginess, and puts intellectual entertainments far above sensuous luxuries. His health is delicate rather than robust, and he watches over it so as to make the best of it, thereby managing to execute a large amount of business on a small capital of physical strength. He is a man of strong convictions on subjects he deems important, and pronounces his opinions without equivocation when properly necessary, but is not a controversialist from choice, and never puts on airs of dogmatic assumption or offensive severity towards opponents. He evidently desires to be the friend and well-wisher of his race, and, so far as compatible with true moral integrity, to live peaceably with all men. Of the many commendable ways in which he is practically exemplifying this laudable desire, it will hardly be expected that a brief biographical sketch should make detailed mention. Perhaps the few already indicated may suffice.

Judge Dewey was married to Miss Marietta N. Thayer, daughter of Alexander W. and Marietta (Dustan) Thayer, born in Worcester, June 22, 1847; ceremony in Milford, March 12, 1867, by Rev. George G. Jones. She has the ancestral honor of being a descendant of the celebrated Hannah Dustan, of Indian captivity renown. This marriage was one of mutual, intelligent affection, and has been a happy one. Mrs. Dewey has proved herself worthy of her husband, and their connubial house has been a pleasant one. They have one promising daughter,—Maria Thayer Dewey, born in Milford, August 8, 1872. May many divine benedictions rest on this family group.

THOMAS H. DODGE[1] was born September 27, 1823, in the town of Eden, county of Lamoille, State of Vermont, being the fourth son of Malachi F. Dodge and his wife, Jane Hutchins, who were married in Belvidere, Vt., Jan. 9, 1812. His father, Malachi F., was born in New Boston, N. H., Aug. 20, 1789; his grandfather, Enoch Dodge, was born in Beverly, Mass., 1762, and where his great-grandfather, Elisha Dodge, was born May 19, 1723, and who was the fifth and last child of Elisha Dodge, of Beverly, and his wife, Mary Kimball, of Wenham, Mass., who were published Oct. 8, 1709. Young Dodge had the advantages of good district schools, his father being a well-to-do farmer. The family subsequently moved to the town of Lowell, Vt., and resided on a farm there until Thomas was about fourteen years old, when his eldest brother, Malachi F., Jr., having secured a desirable position with the Nashua Manufacturing Co., of Nashua, N. H., a change of residence was made by the family to that place.

At Nashua, Thomas H. attended for a time the public schools, and then entered Gymnasium Institute, at Pembroke, N. H. At this institution he made rapid progress, and ranked among the first in his class.

Returning to Nashua, he secured a position in the spinning and weaving departments of the Nashua Manufacturing Co., which gave him an opportunity to become familiar with those departments, in the art he was desirous of fully understanding. In this position he remained until he gained a full knowledge of the processes while at the same time earning money sufficient to permit him to take a course of study in the Nashua Literary Institute, then under the charge of Prof. David Crosby. In the meantime he had been pursuing a course of study in elementary law, the books being obtained from one of the leading law firms of the place, who encouraged him in his studies. He also continued his studies in Latin under a private tutor.

Diligent and careful investigations and study into the early rise and progress of cotton manufactures in the United States had also engrossed his attention, as being intimately connected with the business in which he was engaged,—he was, in fact, an enthusiast in those early years upon the great good and national prosperity that would result from mechanical and manufacturing industries if properly encouraged, and in the year 1850, he published his "Review of the Rise, Progress and Present Importance of Cotton Manufactures of the United States; together with Statistics, showing the Comparative and Relative Remuneration of English and American Operatives."

When he first became a resident of Nashua, the Nashua *Gazette* was printed in a rear room in which the post-office was located, and young Dodge would

[1] Extracts from extended biography.

Thos. H. Dodge

go in and watch the operation of the hand-press used for printing the paper, and his quick mind at once ran to devising some way to print on a plane surface and yet use a rotary motion, so as to print from a roll of blank paper. The Nashua and Lowell Railroad was something new, and he took an interest in looking at trains as they came in, and one day he noticed that the parallel-rod, which connected the driving-wheels, had the very motion which he wanted, and he drew the plan of a press, and later made one which worked perfectly and attracted much notice. One day, shortly after a description of the press had appeared in the public journals, a gentleman called to see Mr. Dodge, who found him to be a Boston manufacturer by the name of John Bachelder. Mr. Bachelder frankly made known his business and the object of his visit. He was largely engaged in the manufacture of cotton bags for salt, flour and similar materials. He said he had seen the notice of the press and came to see it, since he thought it was just what he wanted. Said he wanted to print the cloth direct from the bale, and should like to see it work. The press worked perfectly, was bought by Mr. Bachelder and patented, and came into very general use.

The publicity of this invention was the beginning of a new era in machinery for printing paper, which resulted in the production of the lightning presses of the present day. Being now in the possession of sufficient funds, he decided to study law.

In 1851 he entered the office of Hon. George Y. Sawyer and Colonel A. F. Stevens, of Nashua, N. H. As an illustration of the quick appreciation and utilization by Mr. Dodge of favorable opportunities, he, while a law student, saw that the prospective city of Nashua must necessarily extend in a short time to the south, and with two other gentlemen purchased a large part of the Jesse Bowers farm, lying on the west of South Main Street, and had it surveyed and platted as an addition to Nashua.

The lots were in demand as soon as offered, and this investment proved very profitable, while, at the same time, adding much to the prosperity of the new city, which was soon after chartered, Mr. Dodge being elected a member of the first City Council. He was admitted to the bar December 5, 1854, and commenced practice in Nashua. Aside from his position as a lawyer, he was extensively and publicly known as a skilled manufacturer, a meritorious inventor and a man of science, and which attainments having attracted the attention of Hon. Charles Mason, then commissioner of patents, he was, in March, 1855, appointed to a position in the examining corps of the United States Patent Office, Washington, D. C. At first he held the position of an assistant examiner, but was soon promoted to the position of examiner-in-chief.

When the famous Hussey Guard patent for mowing and reaping-machines came up for an extension, many of the ablest lawyers in the United States were engaged as counsel, either for or in opposition to the extension. Judge Mason referred the application to Mr. Dodge, who reported the invention both new and novel at the date of the patent, and that, under the law, Hussey was entitled to the extension. This report and decision was confirmed by Judge Mason, and the extension granted. Litigation in the Federal Courts soon followed, to test the validity of such action and the patent, and both were fully confirmed in the Circuit Courts of the United States, and which decisions of the Circuit Courts were subsequently sustained, on appeal, by the Supreme Court of the United States.

While Judge Mason remained at the head of the Patent Office the assistance of Mr. Dodge was constantly required in appeal cases, and upon the appointment of Judge Holt his services were still relied upon by the new commissioner of patents.

Judge Holt, in the administration of the office, reached the conclusion that a permanent court or board of appeals ought to be established to meet the public wants, and he appointed the three chief examiners, viz.: Thomas H. Dodge, DeWitt C. Lawrence and A. B. Little. The establishment of this board was a movement of great importance.

The decisions of the Board of Appeals, under the direction of Mr. Dodge, changed the entire aspect of the business before the Patent Office; order, justice and promptness in its official actions were recognized by applicants throughout the country, while a stimulus was given to the inventive skill and ingenuity of the nation that resulted largely, no doubt, in the production of many of the great and valuable inventions of the past thirty years. He resigned November 2, 1858.

Mr. Dodge was admitted to practice in the Supreme Court of the United States, and for twenty-five years and more, thereafter, he had a very large and profitable law practice in patent causes, and was, during that time, actively engaged in the great suits relating to the sewing machine, mowing and reaping machine, corset, horse hay-rake, wrench, loom, barbed wire, machines for making the same, and numerous other valuable patented inventions involving millions of dollars.

In the early part of 1864, Mr. Dodge located in Worcester, where he had previously had a law-office in the city, and besides was one of the active managers of the Union Mowing Machine Company.

It was while residing in Washington that Mr. Dodge devised the present plan of returning letters uncalled for to the writers thereof, and on the 8th of August, 1856, submitted in writing a detailed statement of his plan to the Postmaster-General, Hon. James Campbell, and in due time it received the sanction of law, and the present generation receives and enjoys advantages resulting from the change.

Mr. Dodge was a strong supporter of the Union cause during the Rebellion, and while he remained

in Washington his house was open to those engaged in relieving the sick, wounded and dying soldiers; Mrs. Dodge, too, also joining with others in visiting the hospitals to distribute food and delicacies sent from the North to Mrs. Harris and Miss Dix, for the sick and wounded. His youngest brother, Capt. Elisha E. Dodge, of the Thirteenth New Hampshire Regiment, fell mortally wounded in the assault on Petersburg, Va., in June, 1864, and died at Fortress Monroe, June 22, 1864.

In 1881 he, in connection with Mr. Charles G. Washburn, organized the Worcester Barb Fence Company, he being president and Mr. Washburn secretary and manager, and for which company the late Stephen Salisbury, Esq., built the large factory at the corner of Market and Union Streets. The plant and patents were subsequently sold to the Washburn & Moen Company.

Mr. Dodge was married, June 29, 1843, to Miss Eliza Daniels, of Brookline, N. H.

In the grounds of Mr. Dodge is the "Ancient Willow." (See illustration and poem by Harriett Prescott Spofford, elsewhere in this work.)

AUGUSTUS GEORGE BULLOCK.[1]—Mr. Bullock is a son of the late Governor Alexander H. Bullock, whose portrait, with a biographical sketch, appears elsewhere in this work. He was born in Enfield, Conn., on the 2d of June, 1847, and was educated in private schools, being fitted for college by the late E. G. Cutler, who was afterwards professor of modern languages in Harvard College. He entered Harvard in 1864 and graduated in 1868.

After traveling a year in Europe he commenced the study of law, pursued the usual course, and in due time was admitted to the bar in Worcester. He soon went into practice, occupying offices with Senator Hoar.

In 1882 his father, Governor Bullock, who had then recently been elected president of the State Mutual Life Assurance Company, died; and during the year it was determined to change the policy of the company, which had been of a somewhat limited character, and make it one of the leading institutions of the kind in the country.

It was in January, 1883, that the affairs and interests of this now widely-known and popular assurance company were submitted to the management of the subject of this sketch, he being elected president and treasurer. He accepted the responsible position, engaged earnestly in the work, arduous as it promised to be, and has been eminently successful. The suggestions for extended usefulness were efficiently and rapidly carried forward, and new life and healthful growth became visible in every department. Since his instalment, which was but about six years ago, the business of the company has been more than quadrupled, and is adding to its assets accumulations of nearly half a million dollars annually. Its operations and reputation are not now by any means limited to Massachusetts or New England, it having attained a large business, especially in the Middle and Western States.

But it is not alone as president and treasurer of the State Mutual Life Assurance Company that Mr. Bullock is well and widely known. He is a director in the Worcester National Bank, in the Worcester Gas Light Company, in the Norwich and Worcester Railroad, in the Worcester County Institution for Savings, and president of the State Safe Deposit Company. He is also a trustee of the State Lunatic Hospital and of the Free Public Library, and a member of the American Antiquarian Society.

For an intelligent appreciation of literary and social observances of the higher order Mr. Bullock is well fitted by education and taste. And few places afford better opportunities for the development of refined sentiment than cultured Worcester. He has many of the genial traits of his honored father, many of his common-sense views and approachable amenities—traits and habits that never fail of leading to high social position. So then we find him, now in middle life, sustaining in the business world a high reputation for financial skill and ability, and in social life a position well worthy of aspiration.

In religious sentiment Mr. Bullock ranks with the Unitarians, having departed somewhat from the chosen faith of his fathers. His grandfather was of the rigid old New England "orthodox" type; but his father, after reaching manhood, embraced the faith of the Protestant Episcopal Church, and to the end of his life delighted in its charming liturgical form of worship. In political sentiment he ranks with the Democratic party.

Mr. Bullock was united in marriage, October 4, 1871, with Mary Chandler, daughter of Dr. George and Josephine Rose Chandler, and four male children have been born to them, one of whom died in infancy.

FRANCIS ALMON GASKILL[2] was born in Blackstone, Worcester County, on the 3d day of January, 1846. Until the year 1860 he lived in that town. In 1860 he moved to Woonsocket, R. I., and in the High School of that town, under the instruction of Howard M. Rice, Esq. (now one of the proprietors of the well-known Mowry and Goff School in Providence), he fitted for college. In the autumn of 1862 he entered Brown University, and was graduated in 1866. He was occupied as private tutor to the sons of Mr. Clement B. Barclay, of Newport, R. I., from October, 1866, till June, 1867, and thus had the advantage of that most excellent mental instruction which comes from teaching others.

In September, 1867, he entered the Law School of Harvard University, and remained there, a close

[2] By Herbert Parker.

A. G. Bullock

F. Wilcox Holt

student, till October, 1868, when, at the request of the late Hon. George F. Verry, he entered his office as clerk, and was duly admitted to the bar of this county March 3, 1869. Later he was associated with Mr. Verry as his partner, and so continued till Mr. Verry's death, in 1883.

Mr. Gaskill was married, October 20, 1869, to Miss Katherine Mortimer Whitaker, of Providence. For a considerable time Mrs. Gaskill was an invalid, and for the last few years of her life suffered almost constantly from a painful illness, which she bore with a truly beautiful fortitude and cheerfulness. She died January 25, 1889, leaving two children.

In 1875–76 Mr. Gaskill served as a member of the Common Council of the city of Worcester. In 1876 he was chosen one of the trustees of the Worcester Academy, and has served in that capacity continuously till the present time. He was elected a trustee of the Free Public Library of Worcester for six years from 1878 to 1884, and in 1886 was elected to fill a vacancy in that board, of which he was president in the year 1888.

In 1884 he was elected one of the trustees of the People's Savings Bank, and still serves on that board. In 1888 he was elected one of the trustees of Brown University. He is also a director of the State Mutual Life Assurance Company of Worcester, an institution whose standing and reputation in the financial world is such as to make a position in its directorate one of great honor and importance.

In 1883, during the illness of the district attorney, Hon. Frank T. Blackmer, Mr. Gaskill filled that office by appointment. In 1886 he was elected district attorney, to serve from January, 1887, to January, 1890, succeeding Col. W. S. B. Hopkins, whose brilliant and distinguished abilities and character had made his administration memorable.

It will thus be seen, from the preceding recital of some of the various positions of importance and responsibility to which Mr. Gaskill has been called, that he has possessed in a large measure the confidence and esteem of those to whom he has been known. In the discharge of the duties of educational, charitable, financial and professional trusts, it is obvious that he has had a training and experience that has fitted him to deal judiciously with the multitudinous interests which may be involved in the discharge of his existing official duties.

He has had personal and continuous acquaintance with and has shared in the direct management of affairs which make up and are essential elements in our complex industrial, social and governmental system. He has had an active and successful professional life.

Mr. Verry, with whom he was long associated, was one of the acknowledged leaders of the bar: his cool judgment, marvelous readiness in the crisis of a case and his brilliant powers as an advocate rendered him almost invincible, in the trial of causes. Mr. Gaskill was far too apt and able a pupil to fail to profit from his close professional and personal intimacy with Mr. Verry. The opportunity for study thus given him in the practice of the law has abundantly equipped him for his arduous and responsible duties as prosecuting officer. While Mr. Gaskill was acting district attorney the now famous case of Commonwealth *vs.* Pierce came before our Criminal Court. The defendant was a so-called physician, and, by reason of treating a patient with baths and poultices of kerosene oil, finally produced her death. He was indicted for manslaughter. It was extremely doubtful whether the defendant Pierce could be convicted, by reason of a much questioned decision of the Supreme Court in an early case. It was, however, of grave moment to bring this vexed question again to the bar of the Supreme Court for revision. The indictment, a remarkably skillful piece of criminal pleading, was drawn by Mr. Gaskill, with the able assistance of C. F. Baker, Esq., then assistant district attorney. Later, after a closely contested trial, Col. Hopkins, then district attorney, managing the government's case, a verdict of guilty was rendered; and after exhaustive arguments of the law questions before the Supreme Court the conviction of the defendant was sustained, largely through the courage and confidence which Mr. Gaskill had in the righteousness of this cause, the original prosecution of which was instituted by him. We now have the decision of the Supreme Court that homicidal medical pretenders shall not escape responsibility for the fatal results of their incompetency on the plea that ignorance and not malice caused the death of their victim.

In a large number of the important legal controversies in our county Mr. Gaskill has been of counsel. His clients, no less than his opponents, know the zeal, the energy and the learning which he displays in the preparation and trial of his cases. To the discharge of the duties of the office of district attorney he has brought all the fidelity and ability which have given him success and honorable reputation at the bar, on the civil side of the court. With unflagging constancy and integrity he has conducted the affairs of the people entrusted to his hands.

In the two years now expired of his current term of office, prosecutions of great interest have been conducted by him, one among many being that of a notorious mal-practitioner, whose victim had made a dying declaration charging the crime upon the accused; but, by reason of the inapt phraseology of the statute, it was held by the court upon the trial that the dying declaration could not be used in evidence upon a trial for abortion; the case was given to the jury without this evidence, and a verdict of guilty followed, which, for insufficiency of evidence, was set aside. Thereupon an indictment was found for manslaughter by negligence, which was a sagacious, but by many lawyers thought a futile, effort to prevent the escape of a guilty person, by reason of an

inefficient statute. Mr. Gaskill brought the accused to trial on the charge of manslaughter, and, though defended with great zeal and ability, the prisoner was convicted; for in this case the dying declaration was unquestionably admissible, and was admitted. After mature consideration by the counsel for the defense, the exceptions were waived, and sentence was imposed upon the defendant.

This successful prosecution is adverted to as demonstrating the vigilance and energy of Mr. Gaskill's methods, manifested as well in his prompt and systematic management at each term of the Criminal Court, where everything upon the docket which can be tried is brought forward and disposed of. In this district at least, there exists no complaint of an accumulation of untried cases.

Sureties, who have pledged themselves to secure the attendance of an accused person for his trial, have learned that a bail bond is a stern and inexorable compact, which they cannot evade; no less have persons who appeal from sentences in the lower courts learned that they must speedily answer on trial in the Superior Court.

It is a noteworthy fact, and one upon which Mr. Gaskill may well look with legitimate pride, that in the two years of his term of office as district attorney no indictment drawn by him has been quashed for any insufficiency in form.

Happily, the time has not yet come for writing a completed biography of the subject of this sketch; his life-work is not yet done, and it may be confidently hoped that many years of usefulness are yet before him; here only brief mention can be made of some of the events (and those chiefly professional) of his past life.

The biographer of one still in active life must carefully observe a due consideration for him whose life and character is under discussion, and so scrupulously avoid anything by way of seeming eulogy, however well deserved and just such eulogy may be.

The mere recital of the events of Mr. Gaskill's life, the positions of honor and trust to which he has been called, the distinguished reputation he has gained in his profession, the respect and esteem in which he is held by his cotemporaries, all make up a more eloquent eulogy than the pen of any biographer could frame.

It is fitting to add, however, what no one can or would wish to gainsay, that Mr. Gaskill has fully maintained the high moral and professional standard established by his most distinguished predecessors in the office. In him the county and the people may see the realization of those rare qualities of mind and character which are required of him, who is at once prosecuting officer of the Commonwealth, but no less, in accordance with the merciful and just consideration of our criminal jurisprudence, "the prisoner's attorney."

THEODORE S. JOHNSON.[1]—Worcester County has been exceptionally fortunate during its history in securing for clerk of the courts men of high character and pronounced ability. It is an office of dignity and of great responsibility, requiring exact legal knowledge, and a ready fund of fertility upon which instant drafts must frequently be made. It is enriched with ample compensation, only slighly below that established for a justice of the Superior Court.

Some of the incumbents of the office have yielded to its attractions after distinguished service in Congress, others after effective labors in other capacities, while still others have relinquished it for a seat in Congress.

The term of service of most has been long. Since the incorporation of the county, in 1731, a period of nearly one hundred and sixty years, there have been but eleven different persons holding the office. No fairer test than this can be applied to determine the measure of satisfaction with which the affairs of the office have been administered.

The incumbent is judged by two standards—one adopted by the judges and lawyers, with whom he is brought into closest relations; the other, proceeding from parties in causes, jurors and the public at large. The former is applied more particularly to his legal capacity and general administration of the office; the latter to his characteristics. The combination of qualities to satisfy both tests is not often found.

The eleventh clerk of the courts for Worcester County is the subject of this sketch.

Theodore S. Johnson was born in Dana, in this county, in 1843. After attendance in the common schools of his native town and at the High School and Wilbraham Academy, he came to Worcester in 1864, and entered as a student the law-office of Dewey & Williams. He was admitted to the bar in 1866, and immediately began the practice of his profession in Blackstone. In 1867 he was appointed trial justice by Governor Bullock, and held the office till 1871.

In the latter year Hon. Hartley Williams, in whose office Mr. Johnson had studied law, was judge of the Municipal Court of Worcester, and a vacancy occurring in the office of clerk of that court, he quickly turned to Mr. Johnson as admirably qualified to fill the position; he was at once appointed and continued as such and as clerk of the Central District Court of Worcester till 1881. The sagacious treatment of the great volume and variety of business in those courts requiring the action and attention of the clerk during those years certainly justified the judgment of his friend and instructor, Judge Williams.

In 1881 Mr. Johnson was elected to his present office as clerk of the courts for Worcester County for the term of five years, and in 1886 was re-elected for a similar term.

Mr. Johnson's activities have not been confined

[1] By F. A. Gaskill.

J. S. Johnson

solely to these duties, though never for an instant neglecting them.

He was captain and judge advocate on the staff of the Third Brigade Massachusetts Volunteer Militia from 1874 to 1876, inclusive. He was selected in 1878 by Governor Talbot as colonel and aide-de-camp upon his Gubernatorial staff.

Mr. Johnson's discriminating political judgment, as well as his prominence as a citizen of Worcester and his earnest belief in the Republican party, led naturally to his selection as Worcester's representative on the Republican State Central Committee from 1881 to 1884, inclusive.

In 1883 he was elected a director of the Quinsigamond National Bank, and has retained the position ever since.

In 1873 he married Miss Amanda M. Allen, of Blackstone.

Valuable as his other services have been, honorable as the other positions are which he has held, identified as he has been with other material and social interests of Worcester and Worcester County, yet his administration of the office of clerk of the courts has been by far his most significant and successful service.

The writer of this sketch can best apply the legal test hitherto spoken of, and Mr. Johnson can securely rest in the confidence and approbation of the bar when that is invoked. His generous courtesy and ready service to his brethren of the bar and to others, and his unimpeachable character never fail to satisfy the other test.

JUDGES OF THE HIGHER COURTS RESIDENT IN WORCESTER COUNTY.

Superior Court.—Jedediah Foster, on the bench 1776–79.

Supreme Judicial Court.—Levi Lincoln, on the bench 1824–25; Benjamin F. Thomas, 1853–59; Pliny Merrick, 1853–64; Dwight Foster, 1866–69; Charles Devens, 1873–77, 1881–.

County Court of Common Pleas.—Artemas Ward, on the bench 1775–99 (C. J.); Jedediah Foster, 1775–76; Moses Gill, 1775–94; Samuel Baker, 1775–95; Joseph Dorr, 1776–1801; Michael Gill, 1794–98; Elijah Brigham, 1795–1811; John Sprague, 1799–1801 (C. J.); Dwight Foster, 1801–11 (C. J.); Benjamin Heywood, 1801–11.

Court of Common Pleas for the Western Circuit.—Edward Bangs, on the bench 1811–18; Solomon Strong, 1818–20.

Court of Common Pleas for Commonwealth.—Solomon Strong, on the bench 1820–42; Charles Allen, 1842–44; Pliny Merrick, 1843–48, '50–53; Emory Washburn, 1844–47; Edward Mellen, 1854–59.

Superior Court for the Commonwealth.—Charles Allen, on the bench 1859–69 (C. J.); Charles Devens, 1867–73; Francis H. Dewey, 1869–81; P. Emory Aldrich, 1873–; Hamilton B. Stapler, 1881–.

Probate Court.—John Chandler, on the bench 1731–40; Joseph Wilder, 1740–56; John Chandler (2d), 1756–62; John Chandler (3d), 1762–75; Jedediah Foster, 1775–76; Artemas Ward, 1776; Levi Lincoln, 1776–82; Joseph Dorr, 1782–1801; Nathaniel Paine, 1801–36; Ira M. Barton, 1836–44; Benjamin F. Thomas, 1844–48; Thomas Kinnicutt, 1848–57; Dwight Foster, 1857–58.

Court of Probate and Insolvency.—Henry Chapin, on the bench 1858–78; Adin Thayer, 1878–88; W. Trowbridge Forbes, 1888–.

List of Members of the Bar.—In the following list it is intended to give the names of all persons who were members of the Worcester County bar January 1, 1889, and of those who had been members of it at any time since the establishment of the county, with the date and place of the birth and graduation of each (if graduated), the date of admission to the bar, and the place or places where they have practised, so far as it has been practicable to obtain the facts.

Explanations.—The [1] indicates that the person was dead January 1, 1889; r., removal from the county. The colleges at which persons named were graduated or attended are indicated by initial letters, thus: H. C., Harvard College; B. U., Brown University; A. C., Amherst College; Y. C., Yale College; W. C., Williams College; D. C., Dartmouth College; M. U., Michigan University; W. U., Wesleyan University; U. V., University of Vermont; U. C., Union College; B. C., Bowdoin College; N. U., Norwich University; U. of C., University of Cal.; H. Cr., Holy Cross College; McG., McGill University; C. U., Colby University; T. C., Tuft's College; St. M., St. Michael's College; N. D., University of Notre Dame.

Thomas Abbott, r., born in Canada; admitted 1849; practised in Millbury and Blackstone.

Benjamin Adams,[1] born in Mendon, 1764; graduated at B. U., 1788; admitted 1792; practised in Uxbridge.

Charles L. Adams, born in Westboro', 1861; admitted 1887; practised in Westboro'.

Henry Adams,[1] graduated at H. C., 1802; practised in Ashburnham.

Zabdiel B. Adams,[1] graduated at H. C., 1791; practised in Lunenburg.

Henry W. Aiken, born in Millbury, 1857; graduated at Y. C., 1880; admitted 1884; practised in Millbury.

Charles F. Aldrich, born in Worcester, 1858; graduated at Y. C., 1879; admitted 1881; practised in Worcester.

P. Emory Aldrich, born in New Salem, 1813; admitted 1846; practised in Barre and Worcester.

Charles Allen,[1] born in Worcester, 1797; admitted 1818; practised in New Braintree and Worcester.

Frederic H. Allen,[1] graduated U. V., 1823; admitted 1818; practised in Athol.

Samuel H. Allen,[1] born in Mendon, 1790; graduated at U. C., 1814; practised in Mendon and Grafton.

Joseph Allen,[1] born in Leicester, 1773; graduated at H. C., 1792; admitted 1795; practised in Worcester, Warren and Charlestown, N. H.

Marvin M. Taylor, born in Jefferson, N. Y., 1860; admitted 1885; practised in Worcester.

Adin Thayer,[1] born in Blackstone, 1828; admitted 1854; practised in Worcester.

Amasa Thayer,[1] graduated at H. C., 1810; practised in Brookfield.

Francis N. Thayer, born in Blackstone; admitted 1876; practised in Blackstone.

John R. Thayer, born in Douglas, 1845; graduated at Y. C., 1869; admitted 1871; practised in Worcester.

Joseph Thayer,[1] born in Douglas, 1792; graduated at B. U., 1815; admitted 1818; practised in Uxbridge.

Webster Thayer, born in Blackstone, 1857; graduated at D. C., 1880; admitted 1882; practised in Worcester.

Levi Thaxter, practised in Worcester.

Benjamin F. Thomas,[1] born in Boston, 1813; graduated at B. U., 1830; admitted 1833; practised in Worcester and Boston.

E. Francis Thompson, born in Worcester, 1859; admitted 1884; practised in Worcester.

Henry F. Thompson, born in Webster, 1859; attended W. C.; admitted 1887; practised in Webster.

Oliver H. Tillotson,[1] born in Orford, N. H.; admitted 1855; practised in Worcester.

Seymour A. Tingier,[1] born in Tolland; graduated at W. C., 1855; admitted 1857; practised in Webster.

Joseph A. Titus, born in Leicester, 1842; graduated at A. C., 1863; admitted 1868; practised in Worcester.

Paul P. Todd, r., born in Atkinson, N. H., 1819; graduated at D. C., 1842; admitted 1847; practised in Blackstone, Boston, St. Louis and New York.

John Todd, r., practised in Westminster and Fitchburg.

Ebenezer Torrey,[1] born in Franklin, 1801; graduated at H. C., 1822; admitted 1825; practised in Fitchburg.

George A. Torrey, r., born in Fitchburg, 1838; graduated at H. C., 1859; admitted 1861; practised in Fitchburg and Boston.

Newton Tourtelot, r., admitted 1853; practised in Webster.

William M. Towne,[1] r., born in Charlton; graduated at A. C., 1825; admitted 1828; practised in Worcester.

Louis K. Travis, r., born in Holliston, 1852; admitted 1875; practised in Westborough.

Joseph Trumbull, r., born in Worcester, 1828; admitted 1849; practised in Worcester.

George A. Tufts,[1] born in Dudley, 1797; graduated at H. C., 1818; admitted 1821; practised in Dudley.

Stephen P. Twiss, r., born in Charlton, 1830; admitted 1853; practised in Worcester and Kansas City.

Benjamin O. Tyler, r., practised in Winchendon.

Nathan Tyler,[1] graduated at H. C., 1779; practised in Uxbridge.

Nathan Tyler, Sr.,[1] practised in Uxbridge.

Adin B. Underwood,[1] born in Milford, 1828; graduated at B. U., 1849; admitted 1853; practised in Milford and Boston.

F. H. Underwood, r., practised in Webster.

Jabez Upham,[1] born in Brookfield; graduated at H. C., 1785; admitted 1788; practised in Sturbridge, Claremont, N. H., and Brookfield.

Joshua Upham,[1] born in Brookfield, 1741; graduated at H. C., 1763; admitted 1765; practised in Brookfield, Boston and New York.

John L. Utley, r., born in Brimfield, 1837; admitted 1874; practised in Blackstone and Worcester.

Samuel Utley, born in Chesterfield, 1843; admitted 1867; practised in Worcester.

Ernest H. Vaughn, born in Greenwich, 1858; admitted 1884; practised in Worcester.

George F. Verry,[1] born in Mendon, 1826; admitted 1851; practised in Worcester.

Horace B. Verry, born in Saco, Me., 1843; admitted 1864; practised in Worcester.

Edward J. Vose,[1] born in Augusta, Me., 1806; graduated at B. C., 1825; admitted 1828; practised in Worcester.

Richard H. Vose,[1] graduated at B. C., 1822; practised in Worcester.

Charles Wadsworth, r., practised in Barre and Worcester.

Lovell Walker,[1] born in Brookfield, 1768; graduated at D. C., 1794; admitted 1801; practised in Templeton and Leominster.

Andrew H. Ward,[1] graduated at H. C., 1808; practised in Shrewsbury.

Nahum Ward, born in Shrewsbury; admitted 1731; practised in Shrewsbury.

J. C. B. Ward, r., practised in Athol.

Charles E. Ware, born in Fitchburg, 1853; graduated at H. C., 1876; admitted 1879; practised in Fitchburg.

Thornton K. Ware, born in Cambridge, 1823; graduated at H. C., 1842; admitted 1846; practised in Fitchburg.

Emory Washburn,[1] born in Leicester, 1800; graduated at W. C., 1817; admitted 1821; practised in Charlemont, Leicester, Worcester and Cambridge.

John D. Washburn, born in Boston, 1833; graduated at H. C., 1853; admitted 1856; practised in Worcester.

Asa H. Waters,[1] born in Millbury, 1808; practised in Millbury.

Paul B. Watson, r., born in Morristown, N. J., 1861; graduated at H. C., 1881; admitted 1885; practised in Boston.

Francis Wayland, Jr., r., born in Providence, R. I., graduated at B. U., 1846; practised in Worcester and New Haven, Conn.

Jared Weed,[1] born in New York, 1783; graduated at H. C., 1807; admitted 1810; practised in Petersham.

Charles K. Wetherell,[1] born in Petersham, 1822; admitted 1844; practised in Petersham, Barre and Worcester.

George A. Wetherell,[1] born in Oxford, 1825; graduated at Y. C., 1848; admitted 1851; practised in Worcester.

John W. Wetherell, born in Oxford, 1820; graduated at Y. C., 1844; admitted 1846; practised in Worcester.

J. Allyn Weston,[1] r., born in Duxbury; graduated at H. C., 1846; admitted 1849; practised in Worcester and Milford.

Charles Wheaton,[1] r, born in Rhode Island, 1828; admitted 1851; practised in Worcester.

George Wheaton,[1] graduated at H. C., 1814; practised in Uxbridge.

Henry S. Wheaton,[1] r., graduated at B. U., 1841; admitted 1844; practised in Dudley.

Otis C. Wheeler,[1] born in Worcester, 1808; admitted 1830; practised in Worcester.

J. C. Fremont Wheelock, born in Mendon, 1856;

attended Y. C.; admitted 1883; practised in Southbridge.

Peter Wheelock,[1] graduated at B. U., 1811; practised in Mendon.

William J. Whipple,[1] graduated at H. C., 1805; practised in Dudley.

William C. White,[1] practised in Grafton, Rutland, Sutton and Worcester.

William E. White, born in Worcester, 1863; admitted 1887; practised in Worcester and Leominster.

Solon Whiting, practised in Lancaster.

Abel Whitney,[1] graduated at W. C., 1810; practised in Harvard.

Giles H. Whitney,[1] born in Boston, 1818; graduated at H. C., 1837; admitted 1842; practised in Westminster, Templeton and Winchendon.

Milton Whitney,[1] r., born in Ashburnham, 1823; admitted 1846; practised in Fitchburg and Baltimore, Md.

Abel Willard,[1] born in Lancaster, 1732; graduated at H. C., 1752; practised in Lancaster.

Calvin Willard,[1] born in Harvard, 1784; graduated at H. C.; admitted 1809; practised in Barnstable, Petersham and Fitchburg.

Jacob Willard,[1] graduated at B. U., 1805; practised in Fitchburg.

Joseph Willard,[1] r., born in Cambridge, 1798; graduated at H. C., 1816; admitted 1819; practised in Waltham and Lancaster.

Levi Willard,[1] graduated at H. C., 1775; practised in Lancaster.

Elijah Williams,[1] graduated at H. C., 1764; practised in Deerfield and Mendon.

Hartley Williams,[1] born in Somerset, Me., 1820; admitted 1850; practised in Worcester.

James O. Williams,[1] born in New Bedford, 1827; graduated at H. C., 1849; admitted 1853; practised in Worcester and St. Louis, Mo.

Lemuel Williams,[1] born in Dartmouth, 1782; graduated at B. U., 1804; admitted 1808; practised in New Bedford and Worcester.

Lemuel S. Williams,[1] born in New Bedford, 1812; graduated at H. C., 1836; practised in Dedham and Westborough.

William A. Williams, born in Hubbardston, 1820; admitted 1848; practised in Worcester.

John Winslow,[1] graduated at B. U., 1795; practised in Northborough.

G. R. M. Withington, born in Boston; graduated at U. V., 1825; admitted 1829; practised in Boston and Lancaster.

Charles W. Wood, born in Worcester, 1844; admitted 1883; practised in Worcester.

Harry Wood,[1] born in Grafton, 1838; practised in Grafton.

Cortland Wood, r., born in Plainfield, Ct., 1850; graduated at Y. C., 1871; admitted 1873; practised in Oxford.

Joseph H. Wood, born in Mendon, 1853; admitted 1877; practised in Milford.

Nathaniel Wood,[1] born in Holden, 1797; graduated at H. C., 1821; practised in Fitchburg.

Samuel F. Woods,[1] born in Barre, 1837; graduated at Y. C., 1856; admitted 1858; practised in Barre.

George M. Woodward, born in Worcester, 1838; admitted 1860; practised in Worcester.

James M. Woodbury, born in Templeton, 1819; admitted 1862; practised in Fitchburg.

HISTORY

OF

WORCESTER COUNTY, MASSACHUSETTS.

TOWN HISTORIES.

CHAPTER I.

LANCASTER.

BY HON. HENRY S. NOURSE.

The Nashaways and their Home—King's Purchase—The Nashaway Planters—The Town Grant—The Covenant—Land Allotments—Death of Showanon.

At the time the Massachusetts Company were laying the foundations of their settlements on the river Charles, there dwelt in the northeastern part of what is now Worcester County a small tribe of red men, generally known as the Nashaways. They were an independent clan, though evidently of the same origin and speaking the same tongue with the natives of the coast, and the Nipmucks, Quabaugs and River Indians south and west of them. A close defensive alliance bound together these Massachusetts tribes, and this bond was their only safeguard against the murderous incursions of the Mohegans and Mohawks, their traditional foes.

Of the Nashaways there were three groups or villages,—one at the eastern base of Mt. Wachusett, another at the Washacum ponds, and a third about the meeting of the two branches of the river which the pioneers called "Penecook," but which is now known as the Nashua. By the custom of the period the location of a native village or planting-field gave name to those there resident, and we find these Indians called, indiscriminately, by the English, Washacums and Wachusetts, as well as Nashaways. They proudly cherished traditions of great former prowess and prosperity, but war and pestilence had greatly reduced their numbers before the coming of the white man, and in 1633 the small-pox swept away hundreds more, leaving but a comparatively enfeebled remnant behind; although they were even yet numerous enough to be styled "a great people" by Daniel Gookin.

The sachem holding mild sway over the Nashaways was Showanon or Nashowanon, also called Sholan, Shaumauw, Shoniow and Nashacowam—for an Indian chief of repute always had sundry aliases, each, perhaps, indicative of some specially memorable deed or personal experience. His home was upon a plateau between the little lakes of Washacum, about which were clustered the wigwams of his central and largest village. He appears not infrequently in early colonial history and always greeting the white man with welcoming words and generous hospitality. Finally the saintly Eliot joyfully proclaims that his personal ministrations have won Sholan and many of his followers to the Christian fold. Before this the chieftain had made many English acquaintances in his visits to the Bay, and among them Thomas King, of Watertown, gained his special favor. He persuaded King to visit his domain, and made him generous offers of a land grant, desiring him to establish a trucking-house, where his people could exchange their peltry for much-coveted iron weapons, kettles, cloths, and the various novelties brought by the strangers from over the seas.

The country of the Nashaways lay among lofty, smoothly-rounded hills, sloping gently down to broad meadows, through which coursed rivulets of pure, cool

water; while numerous little lakes slept in concealment of the forest. It was a famous hunting-ground, prolific of deer, beaver, wild turkeys and small game. Occasionally the swan wandered hither from the Merrimack, and moose, elk, bears, wolves and wild-cats were sometimes met with. Samuel Maverick tells us also that the waters were noted for excellent salmon and trout. For the capture of the migratory shad and salmon on their return towards the ocean, the Indians had built a weir at the shallows in the main river, while the frequent falls and rapids in the branches afforded convenient spots for the successful plying of spear and net, when the fish were ascending in spawning time.

The hunters or traders of Concord and Sudbury, adventurous enough to push fifteen miles westward into the wilderness, found a feeble band of the Natick Indians living at Okommakameset (now Marlborough) and a little beyond could look over the summit of the lofty Wataquadock hills into the paradise of the Nashaways. The widely-extended view with its delicate hues varying with sun and season, which there met their gaze, is the same that attracts so many admirers to-day; for even two hundred and fifty years of civilization cannot avail to mar, or add to, the grand features of so broad and varied a landscape. To the north the horizon is bounded by the picturesque mountain peaks of New Hampshire, blue or violet with distance. The shapely dome of Wachusett at the west dominates the scene, and, near at hand, little valleys creeping out from the shadows of the George and Wataquadock ranges of hills, join to form the broad, fertile intervales, dotted with hickory, sycamore and stately elms, which sweep northward, bearing the rivers towards the sea. All is gentle undulation, charming, restful—nothing awe-inspiring or grand, perhaps, certainly nothing precipitous or even abrupt—nothing suggestive of the ferocities of nature, save the sharp cone of Monadnock, dimly to be seen in the middle distance.

Nor was the landscape then a "howling wilderness," gloomy with primeval forest and impassable coppice, as so generally it has been depicted in story; for in the vicinity of the Indian plantations, twice in the year the woods were purposely fired to free them of the brushwood that could hide a stealthy foe, or obstruct pursuit of game. Therefore, in time, extensive areas came to wear a park-like appearance, resembling the similarly formed "oak-openings" of the West, everywhere passable, even for horsemen. The more fertile meadows, where not too wet, were swept bare of tree and underwood and clad in summer with a rank growth of coarse grasses, "some as high as the shoulders, so that a good mower may cut three loads in a day," as William Wood testified in 1634.

At how early a date the pioneer pale-face first looked down from its southern barrier of hills upon Sholan's beautiful domain is not known. John Winthrop relates that the Watertown people began a settlement at Nashaway in 1643. Before that Thomas King had accepted the invitation of the sachem, and selected a location for a trading post on the sunny slope of George Hill, near the parting of two trails which led from the "wading-place" of Nashaway, westward to Wachusett, and southwesterly by Washacum to the land of the Quabaugs. King was a young man of limited means, and had formed a partnership with Henry Symonds, a freeman, a capitalist, and an enterprising contractor, living near the head of what is now North Street, in Boston. By a little brook that came brawling down the divide over which the western trail ran, the trucking-house was built, probably in 1642, certainly before the summer of 1643. Symonds, the moneyed partner, died in September of 1643, and King survived him little more than a year. In the inventory of King's property there is no hint of any estate at Lancaster. This is confirmation of the statement made by Rev. Timothy Harrington in 1753—doubtless recording a tradition—that a company bought such proprietary rights at Nashaway as King had obtained by his bargain with Sholan. No deed of a sale is found, but the price of the grant, as agreed upon with the Indians, was twelve pounds. The territory acquired was nominally ten miles long from south to north, by eight miles wide. It included a few families of Indians, dwelling about the rivers and ponds, though these, perhaps, joined the Washacum village, when, in 1663 and 1669, the warriors of the tribe were decimated in contest with the bloodthirsty Mohawks. A provision in Sholan's deed, however, restricted the purchasers and their successors from "molesting the Indians in their hunting, fishing, or usual planting places." Joint occupancy was the evident intent of the conveyance.

The Nashaway Company, having signed a compact, at once began the assignment of home lots among themselves, and sought from the authorities legal sanction of their enterprise. Favorable response was made to their petition, May 29, 1644, and the names of the foremost undertakers thereafter appear from time to time in various records. They were chiefly from Boston and Watertown. At the head of the first list of the proposed planters found, stand the names of two graduates of Cambridge University, England—Nathaniel Norcross and Robert Childe. The former had been promised adequate settlement as pastor of the plantation, but growing impatient of delays in the gathering of his parish he soon departed for England, bearing the manuscript of the broken contract with him. Robert Childe was a scholar of varied learning. He had traveled in many lands, was a close observer, pretended to considerable knowledge of chemistry and metallurgy, was ambitious and restlessly energetic. He gave books to the infant college of Harvard, invested largely in the iron works at Lynn and Braintree, shipped from England vines, grafts of plums, and various seeds and plants to his intimate friend John Winthrop, Jr., and to all appearances wholly merited

the commendation of that Puritan unimpeachable, Hugh Peters, who wrote of him in June, 1645: "that honest man who will bee of exceeding great vse if the Country know how to improue him, indeed he is very very vsefull. I pray let us not play tricks with such men by our jelousyes."

But in that age toleration had no home on earth; and why should Massachusetts be specially reproached because she offered no asylum for original thinkers upon religious or political subjects? Jesuits and Quakers, rhapsodists and philosophers, bedlamites and seers were alike crushed by the despotism of dogmas, —a despotism which now seems the more strange because wearing the cloak of liberty. Vane, Vassal and later William Pynchon fled the country in disgust at the intolerance of the majority in power; Coggeshall and Coddington were spurned, to be esteemed a great gain in the colony of Rhode Island, and Childe, despite the warning afforded by the fate of such able but unseasonable reformers, and overestimating his own strength, began a crusade against the theocratic restriction of suffrage to a select few. England was then shaken by the fierce contest for supremacy between Presbyterian and Independent. Childe and his fellow-agitators were probably feared, and perhaps justly, as being secret emissaries of Presbyterianism, and Puritanism rudely and speedily thrust them out of the Commonwealth. Thus the Nashaway Company lost its master of arts.

The third co-partner upon the list was also a noted personage in colonial history. Steven Day, a locksmith by profession, had in 1639 set up at Harvard College the first English printing-press in America, and on it had printed the Book of Psalms in 1640. He was a man of worthy aims and rare energy, but so lavish or improvident that his earnings and the sales of lands granted him by the General Court, in reward for his art, could not keep him out of debt. He was an ardent promoter of the company's interests, often traveling to Nashaway, and entertaining Indians and proposed planters at his Cambridge home. His necessities forced him to sell the lots first assigned to him, but a few years later he acquired another with a dwelling upon it—yet never resided there, and died in January, 1668, a journeyman at the press he had founded. He had long before forfeited his proprietary rights at Nashaway by his inability to improve, or pay tithe for, his allotments.

Besides Day, four other workers in iron were prominent in the company: John Prescott, Harmon Garrett, John Hill and Joseph Jenkes. This fact, joined to the leadership of Childe, whose letters to Winthrop show him to have been enthusiastic in his estimate of the mineral wealth concealed in the New England hills, warrants the supposition that the inspiration of this proposed settlement, so far from tidal waters, was not alone the profitable trade in furs, but the expectation of discovering valuable ores, and especially iron.

Prescott was obviously from the first the soul of the undertaking, and ultimately, after one by one his original associates yielded to discouragements and abandoned him or died, he alone, undismayed and equal to any emergency, with unbending will, hard common sense, and marvelous practical ability, fought the long battle with obstructive men and reluctant nature, and won. Prescott was the founder of Lancaster, and there existed no rival claimant to that honor. Garrett, the blacksmith of Charlestown, though he expended some time and means in the earliest days of the plantation, and clung to his land-title for several years with the avowed intention of becoming a resident, finally drops out of sight. Hill, a Boston smith and a freeman of influence, business associate and neighbor of Henry Symonds, died July 27, 1646. Joseph Jenkes was a prototype of the Yankee mechanical genius. A smith employed at the Lynn Iron Works, he was granted the first patent in America for a water-mill, May 16, 1646, and thenceforward proved himself a bold, ingenious and successful experimenter in the mechanic arts, being selected by the Assistant in 1652 to make dies for the pine-tree coinage of Massachusetts. He became too busy and prosperous to keep up his interest in the Nashaway scheme.

The other co-partners disclosed by various petitions and records were: John Fisher, of Medfield; Sergeant John Davis, a joiner of Boston; John Chandler, of Boston; Isaac Walker, a trader of Boston, who married the widow of Henry Symonds; Thomas Skidmore, of Cambridge; John Cowdall, a trader of Boston, who is found possessing the Symonds and King trucking-house after the death of the original owners; James Cutler, of Watertown, who married the widow of King; Samuel Bitfield, a cooper of Boston; Matthew Barnes, a miller and influential citizen of Braintree; John Shawe, a Boston butcher; Samuel Rayner, of Cambridge; George Adams, a glover of Watertown. With the exception, perhaps, of Cowdall, Adams and Rayner, we have no proof that one of these men ever became actual residents at Nashaway, or took active steps to further its settlement after 1645. Chandler, Walker and Davis for some reason became actively hostile to the company's interests in 1647, as shown by the records of court, and Cowdall sold his land and improvements to Prescott the same year. Adams had his home-lot assigned him upon George Hill, but occupied it briefly, if at all.

The first two years after the General Court's sanction of the plantation saw little advance in the preparations for settlement. The first step taken by the associates was to send out fit pioneers to build houses, store provender for wintering cattle, enclose with paling a "night pasture," and prepare fields for grain. Richard Linton and his son-in-law, Lawrence Waters, a carpenter, and John Ball, all of Watertown, were employed and given house-lots. Linton and Waters built themselves houses upon lands assigned them

near the wading-place in the North River, which were the first erected after the trucking-house. The covenant entered into by the proprietors with their minister contemplated the occupation of the valley during the summer of 1645.

Prescott, who had a considerable estate in Watertown, sold it, and packing his household goods upon horses, set out with his family through the woods for their new home. At the very outset of the journey he met with serious misfortune. "He lost a horse and his lading in Sudbury River, and a week after, his wife and children being upon another horse, were hardly saved from drowning." This sad experience Governor Winthrop seriously records as a special providence—divine punishment of the brave pioneer for his sympathy with that dangerous schismatic, Robert Childe! The other proprietors seem to have been completely dismayed by this disaster to their leader, and forthwith—June 12, 1645—petitioned the authorities to order this yawning chasm in their path to be bridged. There is no reason to think that they exaggerated the formidable nature of the crossing, for more than one hundred years later the bridge and causeway at the same place were complained of as dangerous and in time of freshets impassable, and lotteries were granted, the proceeds of which, amounting to over twelve hundred pounds, were expended upon them. The petitioners in 1645 declared it "an vtter Impossibilitye to proceede forwards to plante at the place aboue sayd [Nashaway] except we haue a conuenient way made for the transportation of our cattell and goods ouer Sudbery River and Marsh." Two years before, a cart-bridge had been begun by the town's people, but left incomplete, and the swamp remained unimproved. The court contributed twenty pounds towards finishing the bridge and causeway, stipulating that they should be completed within a year.

Whatever was done to render the way less perilous was done too late or too ineffectually to encourage Norcross or his parishioners, other than the indomitable Prescott, to venture across it with their cattle and household goods, during either 1645 or 1646; and by that time their patience or pluck was exhausted, the surviving Boston members of the company were trying to have the grant rescinded to relieve themselves of any responsibility incurred by their covenant, and the minister had abandoned his parish. To the difficult task of obtaining planters to make good so wholesale a defection, Prescott and Day seem to have devoted much time and energy with very moderate success.

The plan of settlement contemplated two groups or double ranges of house-lots, in sight of each other, but about a mile apart, the North River and its intervales lying between. The trucking-house formed the starting-point of the western range; the eastern lay along the plateau, then (as now) called the Neck, between the main or Penecook River and the North Branch. Prescott, who had chosen his first home-lot in the eastern range, covering the site of the present Lancaster House, sold it to Ralph Houghton and made his home at the trucking-house. Philip Knight, of Charlestown, built a house on the lot which he bought of Steven Day, adjoining Prescott's on the north, and upon the next two lots were John and Solomon Johnson, of Sudbury, a roadway separating their dwellings. Upon the south corner of Solomon Johnson's lot now stands the George Hill Schoolhouse. Thomas Sawyer, a blacksmith of Rowley, married Mary, the daughter of Prescott, in 1647 or 1648, and set up a home near his father-in-law, in a range of lots parallel to and south of those above named. Mrs. Sally Case's residence is nearly upon the site of the Sawyer house. These were probably the first five dwellings south of the North River. William Kerley perhaps moved upon his house-lot in the upper range not much later, and Daniel Hudson, a brickmaker from Watertown, occupied John Moore's lot certainly as early as the spring of 1651.

On the Neck side, Lawrence Waters sold his house to John Hall, whose wife Elizabeth occupied it, her husband going to England. Waters built himself a second house nearer the shallows in the river, a few rods west of the one sold. Ralph Houghton soon came up from Watertown and set up his roof-tree on the Neck. A petition of the inhabitants to the General Court of May, 1652, asking township rights, states that there were already living at Nashaway "about nine familyes." They must be selected from those already named. Before this date there had probably been ten white children born in the settlement: two to Prescott, five to Lawrence Waters, two to Sawyer, and one to Daniel Hudson. The answer to the petition is the so-called Act of Incorporation of the Town of Lancaster. The first draft of the answer was passed upon by the deputies in May, 1652, and in this the name given to the town was Prescott, as had been requested by the petitioners, paying deserved honor to their generous, spirited and able leader.

The naming of a town for its founder had then no precedent in New England. Not even a magistrate or Governor had been so greatly honored. Probably the assistants or executive refused thus to exalt a blacksmith who was no freeman, and had but recently taken the oath of fidelity. They may have recalled also his sympathy with the agitation by Childe. The name Prescott was promptly refused, and after further consideration the name West Towne was inserted in the answer. This title, entirely wanting appropriateness and euphony, satisfied no one, and further discussion carried the matter over another year. Prescott's force of character and liberality had won not only the admiration of his neighbors, but friendly interest in many and high quarters. He had proved very useful to Rev. John Eliot in his visits to the Indian tribes about and west of Nashaway. He had in 1648 been the pioneer of a "new way to Connecti-

cut by Nashaway, which avoided much of the hilly way," and which Governor Hopkins, of Connecticut, as well as the leading ministers interested in the work of converting the Indians, esteemed a public benefaction. When, therefore, the inhabitants, disappointed of their first choice, petitioned asking to borrow a title for the new town from the English shire in which Prescott was born, the suggestion was adopted, and Lancaster began its legal existence May 18, 1653. It was the forty-fourth town chartered in the Commonwealth, and the tenth in Middlesex County.

Three copies of the "Court's Grant" exist—one forming the first page of the town records, one an official copy by Secretary Rawson in Massachusetts Archives cxii. 54–55, and the original record of the court. They differ somewhat in orthography. That of the town records is as follows:

COPPIE OF THE COURT'S GRANT.

At a Genrll Court of Election held at Boston the 18th of May 1653.

1. In answer to the Peticon of the Inhabitants of Nashaway the Court finds according to a former order of the Genrll Court in Anno 1647 no 6: 95: That the ordering and disposeing of the Plantation at Nashaway is wholly in the Courts power.

2. Considering that there is allredy at Nashaway about nine ffamilies and that severall both freemen and others intend to goe and setle there some whereof are named in this Petition the Court doth Grant them the libertie of a Towneshipp and others that hensforth it shall be called Lancaster.

3. That the Bounds thereof shall be sett out according to a deede of the Indian Sagamore, viz. Nashaway Riuer at the passing ouer to be the Center, fiue miles North fiue miles south fiue miles east and three miles west by such Comissioners as the Courte shall appoint to see their Lines extended and their bounds limitted.

4. That Edward Breck, Nathaniell Hadlocke, William Kerley, Thomas Sayer, John Prescot and Ralph Houghton, or any foure of them, whereof the maior Parte to be freemen to be for present the prudentiall men of the said Towne both to see all allottments to be laid out to the Planters in due proportion to theire estates and allso to order other Prudentiall afaires vntill it shall Appeare to this Court that the Place be so farr seated with able men as the Court may Judg meet, to give them full liberties of a Townshipp according to Lawe.

5. That all such Persons whoe haue possessed and Continued Inhabitants of Nashaway shall haue their Lotts formerly Laid out confirmed to them provided they take the oath of fidellitie

6. That Sudbery and Lancaster Lay out highwaies betwixt Towne and Towne according to order of Court for the Countries vse and then repaire them as neede shalbe

7. The Court Orders That Lancaster shall be rated wthin the County of Midlesex and the Towne hath Liberty to choose a Constable.

8. That the Inhabitants of Lancaster doe take care that a godly minester may be maintained amongst them and that no evill persons Enemies to the Lawes of this Comonwealth in Judgment or Practize be Admitted as Inhabitants amongst them and none to haue Lotts Confirmed but such as take the oathe of fidellitie

9. That allthough the first Undertakers and partners in the Plantacon of Nashaway are wholy Evacuated of theire Claimes in Lotts there by order of this Courte yet that such persons of them whoe haue Expended either Charge or Labor for the Benefitt of the place and haue helpped on the Publike workes there from time to time either in Contributing to the minestrie or in the Purchase from the Indians or any other Publike worke, that such persons are to be Considered by the Towne either in proportion of Land or some other way of satisfaction as may be Just and meete. Provided such Persons do make such theire expences Cleerly Appeare within Twelue monethes after the end of this Sessions for such demandes and that the Interest of Harmon Garrett and such others as were first vndertakers or haue bin at Great Charges there shalbe made good to him them his or theire heires in all Allottments as to other the Inhabitants in proportion to the Charges expended by him and such others aforesaid. Provided they make Improuemt of such Allotmts by building and Planting wthin three yeares after they are or shalbe Laid out to them, otherwise theire Interest hereby Provided for to bee voyde, And all such Lands soe hereby Reserved to be thenciforth at the Townes Dispose: In further Answer to this Peticon the Court Judgeth it meete to Confirm the aboue mentioned Nine perticulers to the Inhabitants of Lancaster, and order that the bounds thereof be Laid out in proportion to eight miles square.

Of the six prudential men, the first three only were freemen, and the death of Hadlocke, in Charlestown, very soon deprived them of a legal quorum, according to strict construction of the fifth article. In October, 1653, however, they agreed upon a "covenant of laws and orders," which all who were accepted as citizens of the town were required to sign. As of the signatures to this, ten were dated a year before, it was undoubtedly an obligation entered into by the earlier comers adopted by the new officials. This covenant served as a Constitution by which the internal economies of the town were administered for very many years, and is therefore worthy to be given here in full, with the signatures, as found in the town records:

1653 18: 8 mo. *The bond to binde all comers.* Memorandum, That wee whose Names are subscribed, vppon the Receiueing and acceptanc of our severall Lands, and Allottments wth all Appurtinances thereof, from those men who are Chosen by the Generall Court to Lay out and dispose of the Lands within the Towne of Lanchaster heertofore Called by the name of Nashaway doe hereby Covenant & binde ourselues our heires Executrs & Assignes to the observing and keepeing of these orders and Agreements hereafter mentioned and Expressed.

Church Lands. ffirst ffor the maintainanc of the ministree of Gods holy word wee doe Allowe Covenant and Agree that there be laid out Stated and established, and we doe hereby estate and establish as Church Land with all the priuilledges and Appurtinances therevnto belonging for ever, thirty acors of vppland and fortie acors of Entervale Land and twelue acors of meddowe with free Libertie of Commons for Pasture and fire wood, The said Lands to be improved by the Plantation or otherwise in such order as shalbe best Advised and Concluded by the Plantation without Rent paying for the same, vntil the Labours of the Planters or those that doe improue the same, be ffully sattisfied. And wee doe agree that the Plantation or Sellect men shall determine the time, how Longe every man shall hold and Improue the said Lands for the proffit thereof. And then to be Rented according to the yearly vallue thereof and paid in to such persons as the Plantation or Sellectmen shall Appoynt to and for the vse of and towards the maintainanc of the minester Pastor or Teacher for the time being, or whomesoever may bee stated to preach the word of God among vs: or it may be in the Choyce of the minester to improue the said Lands himselfe.

Meeting house. And ffurther wee doe Covenant and Agree to build a Conuenient meeting house for the Publique Assembling of the Church and People of God, to worshipp God according to his holy ordinances in the most eaquall and Convenient place that may be Advized and Concluded by the Plantation.

Ministers house. And to Build a house for the Minester vppon the said Church Land.

house lotts to pay 10s *p ann to the minester.* And ffurther we doe Engage and Covenant every one for himselfe his heires Executors & Assignes to pay to and for the vse of the minestree abouesaid the sume of ten shillings a yeare as for and in Consideracon of or home Lotts yearly for ever, our home Lotts to staud Engaged for the payment thereof, and what all this shall fall short of a Competent maintainanc we Covenant to make vpp by an equall Rate vppon or Goods, and other improved Lands (not home lots) in such way and order as the Country rate is Raised. And in case of vacansy of a minester the maintainanc Ariseing from the Church Land and home Lotts abouementioned, shalbe paid to such as shalbe Appoynted for the use of a scoole to be as a stock: or as stock towards the maintainanc of the minester, as the Plantation or Sellect men shall think meetest.

To build Inhabit &c in a year or loose all and pay 5: *lb* And for the better Promoteing and seting forward of the Plantation wee Covenant and Agree, That such person or persons of vs who haue not inhabited this Plantation heretofore and are yett to come to build Improue and Inhabitt That we will (by the will of God) come vpp to build to Plant land and Inhabit at or before one whole yeare be passed next after or accept-

ance of o^{r} Allottments, or elc to Loose all our Charges about it, and our Lotts to Return to the Plantation, and to pay fiue pounds for the vse of the Plantation.

What Inhabitants not to be Admited. And for the Better preserveing of the puritie of Religion and ourselues from infection of Error we Covenant not to distribute Allottments and to Receiue into the Plantation as Inhabitants any excominicat or otherwise prophane and scandalus (known so to bee) nor any notoriously erring against the Docktrin and Discipline of the Churches and the state and Governm^{t} of this Com onweale.

to end all difrenc by Arbitracon. And for the better preserveing of peace and love, and yet to keepe the Rules of Justice and Equitie amonge ourselues, we Covenant not to goe to Lawe one with an other in Actions of Debt or Damages one towards an other either in name or state but to end all such Controversies among ourselues by arbitration or otherwise except in cases Cappitall or Criminall that sinn may not goe vnpunished or that the mater be aboue our abillities to Judge of, and that it bee with the Consent of the Plantation or Sellect men thereof.

To pay 10^{s} *p Lott.* And for the Laying out measureing and bounding of our Allottments of this first Diuision and for and towards the Satisfieing of our Engagem^{ts} to the Generall Court, to make payment for purchase of the Indians we Covenant to pay ten shillings every one of vs for our severall Allottm^{ts}, to the Sellect men or whome they may Appoynt to Receive it.

Equall Lotts first Diuition, in 2nd *Diuitions acord to Estates :* And. whereas Lotts are Now Laid out for the the most part Equally to Rich and poore, Partly to keepe the Towne from Scatering to farr. and partly out of Charitie and Respect to men of meaner estate, yet that Equallitie (which is the Rule of God) may be observed, we Covenant and Agree, That in a second Devition and so through all other Devitions of Land the mater shall be drawne as neere to equallitie according to mens estates as wee are able to doe, That he which hath now more then his estate Deserveth in home Lotts and entervale Lotts shall haue so much Less: and he that hath now Less then his estate Deserveth shall haue so much more. And that wee may the better keepe due proportion we Covenant and agree thus to account of mens estates (viz) ten pounds a head for every person and all other goods by due vallue, and to proportion to every ten pounds three acors of Land two of vpland and one of Entervale and we giue a years Libertie to Euery man to bringe in his estate.

Gifts free. Yet Nevertheless it is to be vnderstood That we doe not heereby preiudice or Barr the Plantation from Accomodateing any man by Gifft of Land (which proply are not Allottm^{ts}:) but wee doe reserve that in the free Power of the Plantation as occation may hereafter be offered: And in Case The Planters estate be Lowe that he can claime Nothing in other diuitions yet it is to be vnderstood that he shall enioy all the Land of the first Devition.

in 2nd *Deuition.* And further we Covenant That if any Planter do desire to haue his proportion in the second devition it shalbe Granted.

Rules for Proporcon of Meddows. And ffurther wee Covenant to lay out Meddow Lands according to the preasent estates of the Planters, with respect to be had to Remoteness or Neereness, of that which is remote to giue the more and of that wch is neere to giue the Less.

And Concerning the 30 acors of vppland and 40 acors of Entervale aboue Granted as Church Land. It is agreed and concluded to Lye bounded by John Prescotts Ditch vppon the South and the North Riuer over an ends [*anenst*] Lawrenc Waters vppon the North and so Rangeing allong westward.

And for the Preventing of Inconveniences and the more peaceable Isuing of the business about building of a meeting house it is Considered and Concluded as the most equall place that the meeting house be builded as neere to the Church Land and to the Neck of Land as It can bee without any notable inconveniencie.

And it is allso agreed That in all partes and Quarters of the Towne where Sundry Lotts do Lie together they shalbe ffenced by a Common ffenc according to proportion of acors by every planter, And yett not to barr any man from perticuler and priuat Inclosure at his pleasure.

This is a true Coppie of the Lawes and orders ffirst Enacted and made by those Appoynted and Impowered by the Genrall Court as it is found in the old book.

Twelve of these fifty-five signers—Twitchell, Newton, Deane, Draper, Whiting, Mansfield, Towers,

Dwelly, Ward, Peirce, Billings and Sutton—never became residents, and were not recognized in land allotments. Steven Day and Robert Breck received house-lots, but never occupied them. Kibbie was probably a resident for a brief time, but received no lands. Philip Knight, though one of the earliest householders, seems not to have signed, and removed. Elizabeth Hall went to her husband in England, selling his house and lot to Richard Smith. Cowdall and Solomon Johnson had sold out to Prescott and Day, and Ball returned to Watertown.

The organization of the corporation being thus complete, the townsmen diligently applied themselves to securing the most obvious necessities for comfortable living as a Christian community. Cowdall's deed of 1647 informs us that Linton and Waters had raised corn upon the fifty-acre intervale lot lying southerly from the present Atherton Bridge before that year, and the deep, rich soil guaranteed a sufficient yield of grain for the planters and their cattle; but there was no mill nearer than that at Sudbury. Prescott had already been taking some steps to supply this prime need of the town. He had at least chosen the site and bargained with a millwright, as is shown by the formal contract made between him and the town November 20, 1653. Six months later his grist-mill was at work.

The assignment of home and intervale lots also engaged the attention of the prudential men in November. The allotments which had been made by Prescott, Day and others in the infancy of the plantation, and subsequent purchases based upon them, were confirmed. Actual settlers were given in the established ranges of lots twenty acres each of upland for a dwelling-place and twenty acres of intervale for planting.

Lancaster has often been called a Watertown colony because John Winthrop so styled it in 1643. But of the fifty-five who signed the covenant, twelve were from Dorchester, six were of Sudbury, six of Hingham and five each from Roxbury and Watertown. The others came from eight or ten different localities. The most prominent of the Dorchester colonists was the first prudential man named in the incorporating act, Edward Breck. He had been one of the selectmen of Dorchester for several years, and upon his ability and experience great dependence was placed by the Lancaster men. He built a house near the wading-place of Penecook, and retained his land, but lived here only for a brief period. His continued absence and the death of Hadlocke seriously obstructed the conduct of the town's prudential affairs, and early in 1654, there being about twenty families in the town, the majority petitioned that they might be relieved from their probationary condition, and allowed full liberties of a town according to law, electing their officers and transacting business by legal town-meetings. There were then but four resident freemen: William Kerly, Thomas Rowlandson, Thomas Sawyer and William Lewis; but the petition was granted, and Lieutenant Edward Goodnow, of Sudbury, and Thomas Danforth, of Cambridge, were at the same time deputed to lay out the bounds of the town's grant, a duty they never found time to perform.

For the needs of the pioneer the meadows, as natural grass lands were called, came next in value to the house-lot and planting-field, and a first division of these open tracts wherever found in the town limits was agreed upon—four acres to be set to each one hundred pounds of estate. During the year 1654 the first legal town-meetings were held. At the earliest "the plantacion upon legall warning assembled;" formally confirmed the recorded acts of the prudential men appointed by the General Court the year before, some of these, as has been noted, not being strictly in conformity with requirements of law. At another town-meeting it was voted "that there should not be taken into the Towne above the number of thirty-five families." The greed of land was strong, but this short-sighted restriction had but a brief life. In the same territory over three thousand families now find "ample room and verge enough."

During the autumn of this year the Christian Sagamore Showanon died. Reverends John Eliot and Increase Nowell were at once sent to Washacum by the court, to prevail if possible, with the Indians, to elect Matthew, nephew of the dead sachem, as his successor. They were successful. There seems to have been some reason to fear that the choice might fall upon another chief, also in the line of succession, whose drunken habits and dislike of the colonists made his accession to power much dreaded. Thus far the friendly relations between the Englishmen and the Nashaways seem to have been in no way strained. The very rare mention of the tribe in the town annals goes to prove that no quarrels or grave jealousies interrupted friendly feeling. Moreover, Eliot gratefully records Showanon's loving hospitality, and the generous care he showed in protecting him with a body-guard on his journeying to the interior. He once complains that the Indian wizards or "powows" had not been wholly silenced; but all Christendom then believed in the reality of demoniacal possession, and little more than a year had passed since Margaret Jones, the witch, had been silenced by hanging in Charlestown. The unregenerate, credulous children of the forest feared sorcery, just as did their enlightened neighbors, only they had not learned the refinements of the English methods of dealing with sorcerers. When they found that drugs were far more efficacious to relieve pain and sickness than charms and juggling tricks, powowing lost its hold upon their credulity.

Standing off at this historic distance, the position

of Sholan and his people living on terms of friendly intimacy with the adventurous pioneers whom they had invited to share the beautiful land of their inheritance, glows with only pleasing and romantic hues.

CHAPTER II.

LANCASTER—(*Continued*).

The First Minister—Arbitration—Commissioners Appointed to Direct Town Affairs—The First Highways—Noyes' Survey—Disaffection of the Indians—Monoco's Raid—James Quanapaug's Fidelity—The Destruction of Lancaster.

THE years 1653 and 1654 saw the addition of seven families to the town, those of Thomas and Nathaniel Joslin, John Rugg, John Rigby, John Moore, Sr., Stephen Gates and Thomas Rowlandson. The year 1654 was also graced by the coming of their chosen pastor, Master Joseph Rowlandson, of Ipswich. His signature to the covenant is dated February 12, 1654, and he, perhaps, did not begin preaching before that time, although he had been listed among the townsmen the March previous. Other ministers had doubtless been solicited to the charge after the disappearance of Norcross, but a church in the wilderness, with its little group of poor immigrants, had small attractions for men of education, unless they were largely endowed with the missionary spirit. We find, therefore, the first clergyman called to Lancaster a youth of twenty-two years, fresh from Harvard College, the lone graduate of 1652; one, moreover, but recently escaped from a whipping-post and penance for a collegiate prank—the penning and posting upon Ipswich Meeting-House of a doggerel satire, which the civil authorities dignified as a "scandalous libell." Master Rowlandson seems at once to have won the respect and love of those among whom he had cast his lot, and to have asserted his own dignity and that of the church; for the saucy maiden, Mary Gates, who contradicted him in public assembly, and the aged reprobate, Edmund Parker, who wouldn't sit under the droppings of the sanctuary, were alike speedily humbled and subjected to ecclesiastical and civil discipline. His father and mother came to Lancaster with him, but before two years had passed he was married to Mary, the daughter of John White, then the richest of his parishioners. A parsonage had been built in a central position between the two villages. The meeting-house was not yet raised, but the site had been already chosen, about twenty rods southeast of the parsonage, on the highest ground in the present Middle Cemetery. A long narrow knoll, a little to the east of the meeting-house site, was set apart for a burial-place.

The prudential men elect soon found the ordering of the town's affairs to be neither an easy nor a pleasant task. Although the divisions of land were governed so far as possible by casting lots, they gave rise to some bickering, and various questions arose about which the managers themselves seriously differed. The Kerly family began to display their characteristic firmness in their own opinions. The salary of Master Rowlandson became a knotty subject of debate. Plainly there was occasion to make trial of the arbitration provided for in the covenant. Major Simon Willard, of Concord, Captain Edward Johnson, of Woburn, and Edmund Rice, of Sudbury, being summoned as arbitrators in April, 1656, by their "determinacions" settled twenty-four mooted points. The minister's salary was fixed at fifty pounds a year, and as in a rural community without money, church tithes must be paid chiefly in products of the land, wheat as a commercial standard was to be reckoned at sixpence per bushel less than the price at the Bay, and other grain in the same proportion.

Stephen Gates had been chosen the first constable, an office of larger dignity and more varied duties than now appertain to it. He neglected to notify the four freemen at the proper time to send in their votes for nomination of the magistrates, was fined, and his black staff of office passed to Prescott.

Ralph Houghton was nominated the first clerk of the writs, and confirmed by the County Court in October, 1656. He was an able penman, and thenceforward methodical records of the town's transactions were faithfully kept by him during twenty years. John Roper, a much esteemed addition, was accepted a townsman this year, and given the home-lot originally Solomon Johnson's. In 1656 also the first county road, that to Concord, was laid out.

Another petition from Lancaster this year demanded the attention of the court. Out of the thirty heads of families there were but five freemen in all, and two of these were disabled by years. The law requiring that in any action by selectmen the "major part" should be freemen, it followed that Kerly, Lewis and Sawyer by necessity could control all such action. Two of these, at least, being men of stubborn character, their opinions doubtless sometimes traversed those of more able and wiser citizens, or denied the just demands of the majority. The only remedies were, to transact all business details by formal town-meetings—which, "by reason of many inconveniences and incumbrances," was not to be thought of—to obtain more freemen, or to petition to be relegated to the care of commissioners. The town "by a general vote" petitioned for the last, and May 6, 1657, Major Simon Willard, Captain Edward Johnson and Thomas Danforth, three of the ablest men in the commonwealth, were appointed commissioners, and empowered "to order the afaires of the said Lancaster, and to heare and determine their seurall diffrences and grieuances which obstruct the present and future good of the towne, standing in power till they bee able to make returne to the Genrall

Court that the towne is sufisiantly able to order its owne affaires according to Law."

The first meeting of this august board of advisers was held at the house of John Prescott, in September, and found abundant matter requiring their adjudication. By this date Lancaster had won a valuable accession in the person of Master John Tinker, who had purchased of Richard Smith the house originally built by Waters, and also the Knight house upon George Hill. Tinker, who had been a resident of Groton for a short time before coming to Lancaster, was a freeman of education and clerkly ability. He had bought the monopoly of the fur trade of Lancaster and Groton for the year 1657, paying eight pounds for it. A gift of land called Gibson's Hill—upon the east end of which now stands the mansion of the late Nathaniel Thayer—was made to Master Tinker by the town at this time, and indicates that there was material reason for his change of residence. The commissioners appointed John Tinker, William Kerly, John Prescott, Ralph Houghton and Thomas Sawyer selectmen, and instructed them in part as follows:

2. *Encuragt master Rowlandson.* That the said Selecttmen take Care, for the due encuragment of master Rowlandson who now Laboureth amongst them in the ministrie of gods holy word, And alsoe that they take care for erecting a meeting house, pound and stokes. And that they see to the Laying out of towne and Countrie high waies and the towne bounds, and the making and executing of all such orders and by Lawes as may be for the Comon good of the plac (i e) respecting Corne feilds, medowes, Comon pasturag Land, fences, herding of Catell and restraint of damage by swine and for the recouring of thos fines and forfitures that are due to the towne from such psones as haue taken vp land and not fullfilled the Condicions of theire respectiue grants wherby the Comon good of the Plantacion hath beene and yett is much obstructed.

3. *Paymt. of towne debts.* That they take Care for the payment of all towne debts and for that end they are herby impowred to make such Levies or rats from time to time, as they shall see needfull for the discharge of the Comon Charges of the towne, And in Case any of the inhabitance shall refuse or neglect to mak due payment both for quality and quantitie upon resonable demand, they may then Levie the same by distresse, And are impowered alsoe to take 2^{s} mor and aboue such fine or Rate as is due to bee paid for the satisfacion vnto your oficer that taketh the distress for his paines theirin.

4. *manor of asesments.* That in all their asesments, all Lands apropriated, (Land giuen for addittions excepted) shall bee valued in manor following (i e) home Lotts the vnbroken att 20^{s} p accor and the broken vp at thirtie shillings by the accor the entervaile the broken at fowertie shillings the accor and the vnbroken at thirtie shillings the accor, and medow Land att thirtie shillings, and in all rates to the ministrie The home Lotts to pay tenn shillings p ann. according to the towne order. And this order to Continue for fiue yeares next ensuing. Alsoe that the selectmen tak spesiall Care for the preseruing and safe keeping the townes Records. And if they see it need full, that they pcure the same to bee writen out fairly into a new booke, to be keept for the good of posterity, the charge wherof to bee borne by the pprietors of the said Lands respectiuely.

5. *none freed from Rats vnless they relinquish vnder hand.* That noe man be freed from the Rates of any Land granted him in pprietie eccept he mak a release and full resignation theirof vnder his hand, And doe alsoe relinquish and surender vp to the vse of the towne, his home Lott Intervaile and medow, all or none.

6. *accomodacons for* 5 *or* 6: *be Left before* 2 *diuision.* That their be accomodacions of Land reserued for the meet encuragment of fiue or six able men to com and inhabit in the said place (i e) as may bee helpfull to the encuragment of the worke of god their, and the Comon good of the place. And that no second deuision be Laid out vnto any man vntil those Lotts bee sett apte for that vse; by the selectmen, that is to say home Lotts entervaile and medow.

7. *master Rowlandsons deed of gift.* The Comisioners doe Judg meet to Confirme the deed of gift made by the towne vnto master Rowlandson (i e) of a house and Land which was sett a part for the vse of the ministrie bering date 1th 6th mon 1657 vpon Condicion that master Rowlandson remoue not his habitacion from the said place for the space of three yeare next ensuing, vnlesse the said inhabitance shall consent theirto, And the Comisioners aproue theirof.

* * * * * * * * * *

finally agst inmates. That none be entertained into the towne as inmates, tenants, or otherwise to inhabit within the bounds of the said towne, without the Consent of the selectmen or the maior pte of them, first had and obtained, and entered in the record of the towne as their act, vpon penalty of twenty shillings p month both to the pson that shall soe offend by intruding himselfe, And alsoe to the pson that shall ofend in receiuing or entertaining such pson into the towne.

Priualedges & voats. And that noe other pson or psones whatsoeuer shalbe admited to the Inioyment of the priualedges of the place and towneshipp, Either in accomodaccions vots elections or disposalles of any of the Comon priualedges and interests theirof, saue only such as haue beene first orderly admited and accepted (as aforesaid) to the enioyment theirof.

The order against entertaining strangers is, of course, an echo of Governor Winthrop's order of court passed in 1637, which was so unpopular at the time that its author felt called upon to publish an elaborate defence of so obvious an infringement of the people's rights. John Tinker inaugurated a more systematic method of recording the town's business, first copying into a new book the contents of the "Old Town Book." The selectmen during 1657 and 1658 ordered that all highways, whether town or county, should be amply recorded for the information of posterity, and the waymarks be annually repaired. All lands granted with butts or bounds were ordered recorded by the town clerk, for which special fees were to be paid him. The valuable registry of lands in four large volumes, beginning in 1657 and ending with the last division of common land in 1836, is the fruit of this order. Mordecai McLeod, a Scotchman, was admitted to citizenship. A letter was sent to Major Willard inviting him to make his residence in Lancaster, with certain proposals "concerning accomodacions," which proved sufficiently attractive to be promptly accepted. The selectmen ordered that the inhabitants on the Neck should build a cart-bridge over the North River near Goodman Waters' house, and that those living south of that river should build a similar bridge over the Nashaway at the wading-place. These bridges were completed that year, and stood, the first a few rods above the present Sprague bridge, the other at or near the site of the present Atherton bridge. The existing highways were duly recorded as follows:

Cuntrie way. One way for the Cuntrie Lyeth: from the entranc in to the towne on the east pte from Wataquadocke hill, downe to the Swann Swampe, and ouer the wading place through Penicooke riuer: that is by the indian warre [weir] and soe along by master Rowlandsons ground and the riuer and againe vp to goodman Waters his barne betweene old goodman Breckes lott and that which was Richard Smithes now in the possession of John Tinker. To bee as it is staked out, att the Least fiue Rods wide, on the neck, and to be as wide as can be on the east side of the riuer vnder tenn Rods and aboue fiue, and soe from goodman Waterses ouer the north riuer, vp by master Rowlandsons the breadth as is Laid out and fenced and marked and staked up to goodman Prescotts Ry feild and soe betweene that and John mores lott and Crosse the brook and vpp betweene John Johnsons and John Ropers Lotts fiue Rods wide; And soe beyond all the Lotts into the woods.

Way to quasaponikin medow. one way: from goodman Waterses barne

to quasaponikin medowes before the houses of goodman gates and both goodman Josllins &c : as it is laid out and marked : fiue rods wide and in the enteruaille 2 rods wide.

To quasaponikin hill. one way : from goodman Breckes house through the end of his ground, and Ralph Houghtons James Athertons goodman Whites and goodman Leweises &c, to quasaponikin hill fiue Rods wide.

To the mill. one way to the mill att the heads of the Lotts of John Prescott Thomas Sawyer Jacob ffarer &c fiue Rods wide from the Cuntrie highway to the mill.

Street in ye south end of ye towne. one way Called the Street or Cross way : from goodman Kerleyes entervaile and the rest of the entervaile Lotts : And soe south beetweene the double rang of Lotts : fiue Rods wide and soetowards washacome when it is past Jacob ffarers Lott : And alsoe Itt runes the same widuess betweene the house Lotts and entervaile lotts northward to the wallnut swampe :

from the Cuntrie highway to ye entervaile of Jo : Prescott soe to Wataquadoke. one way from the mill way att the end of goodman Prescotts Ry feeild, to the Entrance of his entervaile fiue Rods wide, And through the entervailes ouer Nashaway Riuer and the Still riuers, to the outsid fenc, of Jacob ffarers Lott, two Rods and half wide.

Way to the plumtrees & groten. One way : from that entervaile way downe along all the entervailes to the Still riuer and towards groten on the east side of the riuer two rods wide.

With the exception of the last, which was removed to higher land, these ways are all in use to-day, with a few local alterations of line and a general contraction in width.

The minister's maintenance was no small burden upon his little flock, so few and so poor, and there was evidently much dilatoriness and uncertainty in the payment of the stipend. Suddenly, in 1658, it was noised about through the settlement that Master Rowlandson was about to accept an invitation to the church in Billerica. The selectmen at once visited him to learn if the report were true, and became convinced of his determination to go. Twelve days later the messengers from Billerica came "to fetch Master Rowlandson away." The people assembled, and unanimously voted to invite him "to abide and settle amongst them in the worke of the ministrie," and to allow him "fiftie pounds a yeare, one halfe in wheat, sixpence in the bushell vnder the Curant prises at Boston and Charlstowne, and the rest in other good curant pay in like proporcion, or otherwise fiftie and fiue pounds a yeare, taking his pay att such rats as the prises of Corne are sett eurie yeare by the Court." The meeting also confirmed the deed of house and land which had been made in his favor the preceding August. Mr. Rowlandson accepted the invitation upon the terms proposed. The first house for public worship was completed this year, if not earlier. All previous meetings of the selectmen had been at private dwellings, but that of June 22, 1658, was "at the meeting-house."

Thus far in the town's history houses must have been constructed of logs or hewn timber, stone and clay. Prescott's saw-mill was in operation early in 1659, after which more commodious framed structures doubtless began to appear. It having been found impossible to obtain the services of either of the surveyors designated by the court to lay out the bounds of the town, consent was given for the employment of Ensign Thomas Noyes, of Sudbury, a return of whose survey is as follows :

April 7th, 1659 In obedience to the order of the honoured generall Court to the now inhabitants of lancaster layd out ye bounds of lancaster accordinge to the sayd grants, wee begane at the wading place of nassua riuer and rune a lline three mille vpon a west north west poynt one degree westerly, and from the end of ye three mill we rune two perpendicular lines beinge fiue mills in length each line, the one line runing north north est one degree northerly, the other line running south south west one degree southerly wee made right angls at the ends of the ten mille line, runing two perpendicular lines, runninge both of them vpon an east south east poynt on degree esterly, one of the sayd lines beinge the north line wee did rune it eight mill in length the other being the south line, wee did rune it six mill and a halfe in length and ther meeting wth the midell of the line, which is the line of the plantation granted to the petitionrs of Sudbury whos plantation is called Whipsuffrage and so runinge their line four mill wanting thre score perches to the end of their line at the nor west Angle of Whipsuffrage plantation and from the sayd angle of Whipsufrage runing six mille and three quarters ther meeting with ye fore sayd east end of the eight mile line and soe period all the sayd lines and bounds of lancaster which sayd grants rune eighty square milles of land

this by me THOMAS NOYES

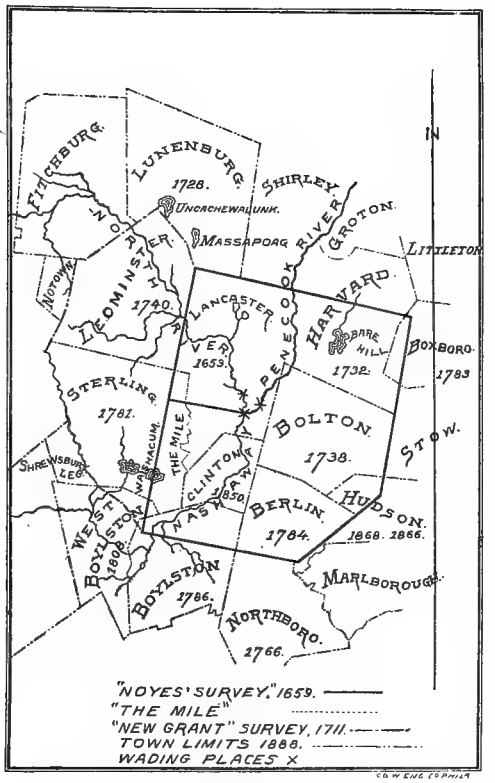
The deputyes approue of this returne. our Honord Magists consenting hereto. 14 October 1672. WILLIAM TORREY, *Cleric.*

The magists consent thereto prouided a farme of a mile square 640 acres, be layd out wthin this bounds for the countrys vse in such place as is not already Appropriated to any—their brethren the deputyes hereto consenting. And that Major Willard, Ralph Houghton & Jno Prescot see it donne.

Consented to by ye deputies EDWD RAWSON *Secretary*
18 . 8 . 72 WILLIAM TORREY, *Cleric.*

Why the report was not approved until thirteen years after the actual survey, and six years after the death of the surveyor, does not appear in records. Neither is there further allusion anywhere found to the mile appropriated for the State, and the provision was perhaps disregarded at first and finally overlooked. The measurements of the survey were made with the liberal allowance usual at that time in laying out town grants, and can hardly be explained by the allowance for swag of chain and irregularity of ground, that being customarily only about one rod in thirty. The ten-mile line of Noyes was, by modern methods of survey, over eleven miles in length, and the other dimensions were proportionably generous. The method of defining the limits of a purchase from the Indians, by distances and courses from a central point, was not unique. Major Simon Willard, in bargaining for Concord in 1636, "poynting to the four quarters of the world, declared that they had bought three miles from that place east, west, north and south, and the sd Indians manifested their free consent thereto." So Sholan and the white men probably stood, in 1642, at the wading-place of the Nashaway, which was very near the bridge known as Atherton's, and agreed upon the transfer of a tract of land five miles northerly, five miles southerly, five miles easterly and three miles to the westward. John Prescott, who was perhaps present at the time of purchase, and certainly the only one of the first proprietors now resident in the town, and acquainted with the exact terms of the compact, accompanied Noyes to see that the mutual intention of grantor and grantees was satisfied. It is to be presumed that the three-mile base-line was run twenty-three and one-half degrees north of a true east and west course, to accord with Prescott's knowledge

of that intent. In running the southern boundary Noyes came upon the north line of the Whipsufferage plantation, which had been settled by court grant and laid out the year before. He could not therefore complete the rectangle called for by Sholan's deed, but added a sufficient triangle on the east to make up for that cut off by this Marlborough grant. The original



territory of Lancaster was therefore an irregular pentagon containing, by Noyes' record of survey, eighty and two-tenths square miles, but actually embracing not far from one hundred.

The extent of their magnificent realm and its capacity for human support seems to have dawned upon the town after the viewing of their boundaries, for this year the restriction of families to thirty-five was rescinded, and a new policy declared that "soe many inhabitants bee admitted as may be meetly accommodated, provided they are such as are acceptable."

From his letters it may fairly be inferred that Master Tinker was neither by physical constitution nor tastes well adapted to the rough life of the pioneers, and this, added to the fact that his ambition and abilities naturally demanded a larger sphere for their exercise, deprived Lancaster of his services. In June, 1659, he had removed to New London, Ct., and died three years later, when on the high road to wealth and political preferment. There were accepted as citizens during the year before, Major Simon Willard, Jonas Fairbanks, Roger Sumner, Gamaliel Beman, Thomas Wilder and Daniel Gaiens. Wilder was at once appointed selectman in place of John Tinker, bought the lot next north of the trucking-house and there resided for the rest of his life. He came from Charlestown. Roger Sumner was of Dorchester, and was, like Wilder, a freeman. He had, in 1656, married Mary, the daughter of Thomas Joslin. He seems to have been the first deacon in the Lancaster Church, although but twenty-eight years of age; being dismissed from the Dorchester congregation August 26, 1660, "that with other Christians at Lancaster a Church might be begun there." At this date doubtless Mr. Rowlandson was ordained—though no record of such fact is found—and the church thus formally organized. Beman also came from Dorchester, bringing a large family. Both he and Sumner were assigned home-lots upon the Neck. Jonas Fairbanks, of Dedham, and Lydia Prescott, the youngest daughter of John, were the first couple whose marriage was solemnized within the limits of Lancaster, the ceremony being performed by John Tinker by authority of special license. They set up their roof-tree upon the next lot south of Prescott's on George Hill, now owned by Jonas Goss. Daniel Gaiens, so far as is known, brought no family with him. He was assigned a house-lot between Rugg and Kerly in the George Hill range.

Major Willard succeeded to the greater portion of Tinker's Lancaster land rights, and occupied the house before often mentioned as the first built in the town. Its site is in the garden of Caleb T. Symmes. Whether the major rebuilt or enlarged the dwelling which had been occupied successively by Waters, Hall, Smith and Tinker is not told, but the Willard home must have been of ample proportions to fill the needs of his natural and enforced hospitality as a magistrate, and also furnish the suitable accommodations for a garrison and military headquarters. That it was a substantial structure, largely of brick or stone, we know from the fact that at its abandonment in 1676 it was partially blown up, which means would not have been used if fire alone could have effected its destruction. It was probably surrounded by a stockade, being the chief garrison. Here Major Willard lived for about thirteen years, often called from home for public duty, now in Council, now in "Keeping County Courts," now in exercise of his military office.

The three commissioners continued to appoint selectmen until, in March, 1664, the town legally assembled confirmed all that had been done and recorded in past years, and elected Major Willard, John Prescott, Thomas Wilder, John Roper and Ralph Houghton selectmen, empowering them "to order all the prudencial afairs of the towne only they are not to dispose of lands." This action of the people was accompanied with a request to the commissioners to ratify their doings and allow them thereafter the full liberty of a town, to which they gladly consented. The General Court did not formally discharge the commissioners, however, until May 7, 1672.

For several years the town's affairs apparently moved on in very quiet fashion. Lancaster had become a vigorous, healthful community, with as much individuality as the jealously paternal nature of the colonial government would permit. The few scant records of town-meetings tell only of the harmonious and commonplace, for under the discreet leadership of Major Willard and Prescott the contentious and the busybodies were soon silenced. That a minority existed who led unedifying lives in the midst of the children of grace is now and then disclosed by the Middlesex County Court records, but seldom were the sins of these such as would call for any court's attention nowadays.

A sermon-scorner, Edmund Parker, who lived squalidly in a hovel, was arraigned, convicted and admonished "for neglect of God's public worship;" Daniel James was presented before the grand jury "for living from under family government;" John Adams was summoned to answer "for lying and false dealing;" William Lincorne "for forcing of himselfe into the towne as an Inhabitant," contrary to law, was warned out and had his goods attached to secure the fine. Nothing more criminal than these examples appears. It may be deemed rather complimentary than otherwise that the town was once presented for not having stocks; it had no use for them.

January 2, 1671, Cyprian Stevens married Mary, the daughter of Simon Willard, and the next year is found in possession of the "Houseings, Barns, Stables, Orchards, Lands, Entervales, meadow lying and being in Lancaster," lately the property of his father-in-law, who had removed to his Nonaicoiacus Farm, then within the bounds of Groton.

No record of the town's doings between 1671 and 1717 are found, save in the register of the proprietors' divisions of common land. This lamentable gap in the manuscript annals of the town is by tradition attributed to the loss of a volume of records by fire. Whatever church records may have existed prior to the pastorate of Rev. John Prentice, in 1708, have likewise disappeared. The facts of the town's history for this period of forty-six years must be chiefly gleaned from county and State archives.

Daniel Gookin, writing the year previous to the breaking out of war with the Wampanoags, says the Nashaways had become reduced by disease and battle with the Mohawks to fifteen or sixteen families; that is, to less than two hundred men, women and children. Matthew, the Englishmen's friend, was dead, and his nephew, the treacherous Sam, alias Shoshanim, alias Upchattuck, reigned in his place. The tribe was not only few in numbers, but sadly degenerate. In fact, the average savage was always a dirty loafer, often besotted, who would not work so long as he could beg or live upon the toil of the women of his wigwam. The tidy English housewife shuddered whenever she saw one entering her kitchen. His habits were repulsive, his presence unsavory, his appetite insatiate. He was quick to take offence, and never forgot an injury or slight.

The Nashaways at first stood in great awe of the white men as superior beings; feared their far-reaching muskets; hoped for their protection against the predatory Mohawks, and craved the hatchets, knives and other skilled handiwork of the smiths, and the cloths, kettles, fish-hooks and gewgaws of their traders. In Sholan's day the strangers were few and gracious, brought with them valued arts, and were much to be desired as neighbors. But familiarity cast out awe and was fatal to mutual respect. The younger warriors, after a time, began to look askance at the increasing power, encroachments and meddlesomeness of the English, and the planters made little concealment of their contempt for the communists of the forest. When, in 1663, the Mohawks made a sanguinary raid into Central Massachusetts, the white men stood aloof, offering no aid to the children of the soil against the marauders. When again, in 1669, the Nashaways, Nipmucks and other Massachusetts tribes combined in an expedition to wreak vengeance upon their life-long foes, the English proffered no assistance. This species of neighborliness was not likely to be forgotten by the defeated warriors. Most of the braves now possessed guns and had learned to use them with more or less skill.

So early as 1653, George Adams, who lived at Watertown, but claimed proprietorship in Lancaster, was convicted of selling guns and strong waters to Indians, and, having nothing to satisfy the law, was ordered to be severely whipped the next lecture day at Boston. When a valuable otter or beaver skin could be got in exchange for two or three quarts of cheap rum, the temptation was too great for Adams, and he was perhaps neither poorer nor less honest than other traders. Even John Tinker broke the law, by his own confession. The red men had not learned the white man's art of transmuting grain into intoxicating drink, but they had quickly acquired the taste for rum, and like wilful children indulged their appetites without restraint when opportunity offered.

Then, as now, there were stringent laws restrictive and prohibitory respecting the sale of strong drink. Then, as now, these laws were evaded everywhere and constantly. Then two sure roads to financial prosperity were the keeping of a dram-shop and buying furs of Indians. What with the refusal to aid against the Mohawks, the peddling of rum, the greed of the peltry-buyers, and the nagging of proselyting preachers and laymen—very few of whom possessed a tithe of the prudence and willingness to make haste slowly which characterized the Apostle Eliot—it is hardly to be accounted strange that degenerate sagamores, succeeding the generous Sholan and Matthew, followed their savage instincts; and that a harvest of blood followed where folly had planted.

Early in June, 1675, before the actual breaking out of hostilities between the colonists and the Wampa-

noags, it was suspected that Philip had solicited the assistance of the Nipmucks, and agents were sent to discover their intentions. The Nashaways were apparently not distrusted. The agents were deceived, and returned with renewed pledges of friendship from the older chiefs. A shrewder messenger, Ephraim Curtis, familiar with Indian wiles, in July came from a similar mission, bringing news that startled the Governor and Council from their fancied security. The inland clans were already mustering for war, and with them were Shoshanim and Monoco, leading the Nashaways. The Council promptly sent a mounted troop to treat with the savages, or if needful to "endeavor to reduce them by force of arms." Counting, in their foolish self-confidence, one trooper equal to ten Indians, this platoon, which should have been a battalion, invited ambush and met disastrous defeat at Menameset, August 2d. Major Willard, at the head of less than fifty men, set out from Lancaster on the morning of August 4th, under instructions from the Council "to look after some Indians to the westward of Lancaster," probably the Nashaways. While on the march, news came to him that Brookfield was beleaguered, and he hastened to the rescue, re-enforcing the besieged garrison the same night. In that quarter he remained until September 8th, five or six companies arriving from the Bay to join his command. Lancaster and Groton were thus stripped of their natural defenders, and wily foes recognized the opportunity.

The Nashaways, led by their two bloodthirsty and cunning sachems, Sam and One-eyed John—who was also known as Monoco and Apequinash—had been conspicuous in the Brookfield fight. On the 15th of August, in the evening, Captain Mosley with a company of sixty dragoons arrived at Lancaster, having been sent thither by Major Willard to pursue a band of savages, reported to be skulking in the woods about the frontier settlements. On the 16th Mosley started out in search of the enemy, but their chief, Monoco, intimately acquainted with all the region around, warily avoided the troopers, got into their rear, and on August 22d made a bloody raid upon Lancaster. Daniel Gookin says that twenty of Philip's warriors were with Monoco, and this is plausible, for Philip, who came into the camp of the Quabaugs with the small remnant of his tribe the day after the siege of Brookfield was raised by Major Willard, there met the one-eyed sachem and gave him a generous present of wampum. From that time Philip seems to have been no more seen in battle, and if his men fought at all, it must have been under other leaders.

Monoco gave no quarter. The foray was made in the afternoon of Sunday. The house of Mordecai McLeod, which was the northernmost in the town situated somewhere near the North Village Cemetery, was burned, and McLeod with his wife and two children were murdered. The same day three other men were slain, and a day or two after a fourth, all of whom were mangled in a barbarous manner. Two of these victims, George Bennett and Jacob Farrar, Jr., were heads of Lancaster families; the others, William Flagg and Joseph Wheeler, were probably soldiers detailed for service here from Watertown and Concord. This massacre was but the prelude to a more terrible tragedy, the most sanguinary episode in Lancaster history.

Over thirty years had passed since the building of the first dwelling in the Nashua Valley. There had been one hundred and eighty-one recorded births in the town, and, including the recent murders by the savages, there had been but fifty-eight deaths. Ten of the oldest planters had died in Lancaster and five elsewhere: Thomas Rowlandson, Thomas James, Thomas Joslin, John Whitcomb, Stephen Gates, John Tinker, Edward Breck, Richard Linton, Thomas Wilder, Steven Day, Philip Knight, John Smith, William Kerly, William Lewis, John White. The sons, as they reached manhood, had usually sought wives among their neighbors' daughters, built homes on the paternal acres, and their families grew apace. John Prescott could number thirty-five grandchildren, nearly all living in sight of the old trucking, house. With its two mills, its skilled mechanics, its spinning-wheels buzzing in every cottage, the town was independent of the world. Its nearest neighbors were Groton and Marlborough, ten miles away. Numerous barns and granaries attested the farmers' prosperity. Cattle, horses, sheep, swine and poultry had multiplied exceedingly. Time and thrift had increased domestic comforts. Frame houses, in which the windows, though small, were glazed, had succeeded the gloomy log-cabins. Orchards had come into bearing and yielded bountifully. All kinds of grain flourished. Wheat was received for taxes at six shillings the bushel, corn at three shillings six pence, and apples were sold at a shilling per bushel. Potatoes were unknown until fifty years later, but of most other vegetables, and especially of peas, beans and turnips, large crops were raised.

The dwellings, as at first, were mainly in two scattered groups of about equal numbers, one occupying the Neck, the other extending along the slope of George Hill. But Prescott with two of his sons now lived near his grist and saw-mills, a mile to the south, the "mill-path" leading thither. John Moore and James Butler had built upon Wataquadock. Several of the houses were more or less fortified, being furnished with flankers or surrounded with a stockade. Of those known were: Prescott's, at the mills; Richard Wheeler's, in South Lancaster; Thomas Sawyer's, not far north from the house of Sally Case, his descendant; Rev. Joseph Rowlandson's and Cyprian Stevens'. It is supposed that a few soldiers from the older towns were distributed among these garrisons.

The Christian Indians, despite the flagrant abuse with which they were treated after the breaking out

of war, generally proved faithful to the English, and their services as scouts were invaluable. Among these none deserves better to be honored in Lancaster story than James Wiser, alias Quanapaug or Quanapohit, whose courage and fidelity would have saved the town from the massacre of 1676, had not his timely warning been unwisely discredited by the apparently lethargic Governor and his slumberous Council.

Quanapaug was a Nashaway, for he owned lands at Washacum in 1670. He was so noted for his brave conduct in the contests between the English and the Wampanoags, when he served as captain of the Christian Indians, that Philip had given orders to his lieutenants that he must be shown no mercy if captured. Governor Leveret having ordered that scouts should be sent out to ascertain something of the numbers, condition and plans of the foe, Major Gookin selected James Quanapaug and Job Kattenanit for this perilous enterprise, and these two men, carrying a little "parcht meal" for sustenance and armed only with knives and hatchets, made the terrible journey of eighty miles upon snow-shoes to the Indians' camp at Menameset, setting out from Cambridge December 30th. They were greatly mistrusted and their lives threatened by some of the Indians; but fortunately James found a powerful friend in Monoco, who respected him as a brave comrade in the Mohawk War, and took him into his own wigwam. But James knew that his every motion was watched by suspicious enemies, and that even Monoco's protection might be powerless in the presence of Philip, who was expected soon. Finding that a meeting with that dangerous personage was inevitable if he delayed longer, and having effected the main purpose of his errand, he escaped by stratagem, and on the 24th of January, 1676, brought to the Massachusetts authorities full information respecting the hostile camp, and especially the intentions of the sagamores; Monoco declaring that "they would fall upon Lancaster, Groton, Marlborough, Sudbury and Medfield, and that the first thing they would do should be to cut down Lancaster bridge, so to hinder their flight and assistance coming to them, and that they intended to fall upon them in about twenty days from Wednesday last."

It can scarcely be believed, but the result proves that no heed was paid to this seasonable warning; no steps were taken to ward off the coming blow. A body of troops, who had been in pursuit of the fleeing Narragansetts not far from Marlborough, had, less than a week before, because of a lack of provisions, been withdrawn to Boston instead of being used to garrison the threatened towns. Even the chief military officer of the State, Daniel Gookin, afterwards confessed that the report of Quanapaug "was not then credited as it should have been, and consequently no so good means used to prevent it, or at least to have lain in ambushments for the enemy." The fact is, little energy or skill of generalship was shown then or afterwards, and the savages wreaked their vengeance in due time upon all the towns named according to Monoco's programme.

Meanwhile some premonition of the approaching tempest reached the valley of the Nashua, and in fear and discouragement the people wrought at such defences as were possible. The outlying houses were abandoned or visited only by day. The chief military officer, Henry Kerly, the minister and perhaps some of the other prominent citizens finally went to Boston to beg for additional soldiers. In their absence the storm burst upon the devoted town. About ten o'clock at night of the 9th of February, Job Kattenanit reached the door of Major Gookin in Cambridge, half dead with fatigue. He had left his wife and children in the hostile camp at New Braintree, and traveled night and day to notify his English friends of their imminent peril. He confirmed every word that his fellow-spy, Quanapaug, had told. On the morrow Lancaster was to be assaulted, and Job had seen the war-party of "about 400" start out upon their bloody errand.

Shortly after the attack upon the Narragansett fort, December 19th, the remnant of that tribe, of which about five hundred were reputed "stout warriors," abandoned their homes. Late in January they joined the Quabaugs and Nashaways in their winter-quarters. The snow lay deep in the woods and the weather had been of unwonted severity, but before the close of the month a thaw suddenly swept away the snow, and the country became again passable. Philip, with his feeble following, seems to have lost that importance as a military leader which tradition has persisted in attributing to him, and had become at best only an artful political general; maliciously instigating animosities, but never appearing in the fight, and often overruled in council. Quanapaug reported the fighting men at Menameset to be "the Nipmuk Indians, the Quabaug Indians, the Pacachooge Indians, the Weshakum and Nashaway Indians." The accession of the Narragansetts more than doubled the force, and a part of them participated in the raid upon Lancaster, which was led by Shoshanim and Monoco, of Nashaway, Muttaump, of Quabaug, Quinnapin, a Narragansett sachem, brother-in-law of Philip, and probably Pakashoag and Matoonas, of the Nipmucks. The unqualified statement made by Rev. Timothy Harrington, in his Century Sermon, that Philip was present at the burning of Lancaster with fifteen hundred men, it must be said, wholly lacks the support of any contemporary authority. Sewall in his diary speaks of Maliompe (alias of Muttaump) as "the general at Lancaster;" and some slight deference may have been paid to that sachem by the others to ensure concert of action; but Sagamore Sam and Monoco doubtless planned the attack. From his prominence in the subsequent correspondence with the authorities

and the price set upon his head, it is evident that in popular estimation, Shoshanim was at least second devil, Philip being first.

Awakened to the emergency, Major Gookin hastened to consult with his neighbor, Thomas Danforth, a member of the Council, and a post-rider was at once despatched to order what soldiers there were stationed at Concord and Marlborough to the aid of Lancaster. About forty men, the company of Captain Wadsworth, were on duty at the latter place. Upon the arrival of the messenger at break of day, Thursday, February 10th, this little force, under their gallant commander, marched immediately for Lancaster Bridge, ten miles distant. They reached it to find the planks removed so as effectually to prevent the passage of horsemen—the river being unfordable at that season; but the troopers did not arrive to be of assistance. Captain Wadsworth forced his way over, and, avoiding an ambush laid on the main road, safely marched by another route to the garrison-house of Cyprian Stevens, near the North Bridge, and only a rifle-shot distant from the minister's.

The assault of the savages was made at sunrise, and simultaneously in five places. The people were nearly all in shelter of the feebly fortified garrison-houses. John Ball, who had for some reason remained in his own dwelling, was butchered together with his wife and an infant; and two older children were carried away captive. Though the position of Ball's house is not exactly known, it was probably on the George Hill range. At John Prescott's, his grandson, Ephraim Sawyer, was killed. Of the garrison of Richard Wheeler, which was in South Lancaster, five were slain: Richard Wheeler, Jonas Fairbanks, Joshua Fairbanks, Henry Farrar and another unknown. The first three were shot by Indians, who climbed upon the roof of the barn and could thence fire down over the palisades. The other two were waylaid while out of the garrison upon some errand.

But the chief slaughter was at the central garrison, that of the minister. For about two hours the savages beset this house in overwhelming numbers, pouring bullets upon it "like hail," and wounding several of its defenders, among whom was the commander, Ensign John Divoll. Unfortunately there was no stockade about the house and its rear flanker was unfinished and useless. The besiegers were therefore able, without much exposure, to push a cart loaded with flax and hemp from the barn, up against a lean-to in the rear, and fire it. One heroic man rushed out and extinguished the kindling flames; but a renewal of the attempt succeeded, and soon the inmates of the burning house had to choose between death by fire and the merciless rage of the yelling demons that stood in wait for them without. There were forty-two persons in the dwelling according to the best contemporary authorities, of whom twelve were men. By some marvel of daring or speed or strategy, Ephraim Roper burst through the horde of savages and escaped. Eleven men were killed, and the women and children that survived this day of horrors were dragged away captive.

We gather our knowledge of the incidents of the massacre and captivity mostly from the pious narrative of Mrs. Rowlandson, first printed in 1682. No literary work of its period in America can boast equal evidence of enduring popular favor with this of a comparatively uneducated Lancaster woman; and very few books in any age or tongue have been honored with more editions, if we except the imaginative masterpieces of inspired genius. Mrs. Rowlandson states that there were thirty-seven in the house, and that twenty-four were carried captive, twelve were slain and one escaped. It is probable that she omits five soldiers casually stationed in the garrison. She gives no names and a full list of the victims cannot now be made. The following includes all that are known:

Killed in Rowlandson Garrison.

Ensign John Divoll.
Josiah Divoll, son of John, aged 7.
Daniel Gains.
Abraham Joslin, aged 26.
John MacLoud.
Thomas Rowlandson, nephew of the minister, aged 19.
John Kettle, aged 36.
John Kettle, Jr.
Joseph Kettle, son of John, aged 10.
Mrs Elizabeth Kerley, wife of Lieut. Henry.
William Kerley, son of Lieut. Henry, aged 17.
Joseph Kerley, do., aged 7.
Mrs Priscilla Roper, wife of Ephraim.
Priscilla, child of Ephraim, aged 3.

14

Carried Captive from Rowlandson Garrison.

Mrs Mary Rowlandson, wife of the minister, ransomed.
Mary Rowlandson, daughter of the minister, aged 10, ransomed.
Sarah Rowlandson, do., aged 6, wounded & died Feb. 18.
Joseph Rowlandson, son of the minister, aged 13, ransomed.
Mrs Hannah Divoll, wife of Ensign John, ransomed.
John Divoll, son of Ensign John, aged 12, died captive?
William Divoll, do., aged 4, ransomed.
Hannah Divoll, daughter of do., aged 9, died captive?
Mrs Ann Joslin, wife of Abraham, killed in captivity.
Beatrice Joslin, daughter of Abraham, do.
Joseph Joslin, brother of Abraham, aged 16.
Henry Kerley, son of Lieut. Henry, aged 18.
Hannah Kerley, daughter of do., aged 13.
Mary Kerley, do., aged 10.
Martha Kerley, do., aged 4.
A child Kerley, name & age unknown.
Mrs Elizabeth Kettle, wife of John, ransomed.
Sarah Kettle, daughter of John, aged 14, escaped.
Jonathan Kettle, son of John, aged 5.
A child Kettle, daughter do. 20
Ephraim Roper alone escaped during the assault. 1

35

One of Wadworth's soldiers, George Harrington, was slain near Prescott's Mills, a few days later, and John Roper fell on the day the town was abandoned. As the total casualties by reliable authorities were fifty-five, the names of seven sufferers remain unknown. The other garrisons made successful resistance, and the Indians, after plundering and burning most of the abandoned houses, withdrew with their terror-stricken prisoners to the summit of

George Hill, and passed that night in triumphal orgies, cooking and feasting on the spoils of the farm-yards and storehouses. "This," writes Mrs. Rowlandson, "was the dolefullest night that ever my eyes saw. Oh, the roaring and singing, and dancing and yelling of those black creatures in the night, which made the place a lively resemblance of hell." By Saturday afternoon most of the blood-stained crew were again in their camps at Menameset.

The mounted companies arrived the next day, and drove away the skulkers engaged in plunder. The minister and Captain Kerly returned in time to assist in burying the mangled and charred relics of their dead relatives and neighbors. Those of the inhabitants who had a place of retreat in the seaward towns and means to remove, soon fled, and those who were forced to remain behind crowded into the strong garrisons of Thomas Sawyer and Cyprian Stevens. With them were eighteen soldiers. Thence they sent forth, March 11th, an eloquently pitiful appeal to the Governor and Council for help to remove to a place of safety.

On March 26th, Major Willard sent a troop of forty horsemen, with carts, who carried the survivors and some portion of their goods and provisions to Concord. The buildings not before destroyed were soon after burned by the Indians, two only being left standing in the town—presumably those of Butler and Moore, upon Wataquadock.

The valley of the Nashua, blood-stained and disfigured by fire-blackened ruins, lay desolate, and so remained during four years. The quick succeeding raids of the stealthy foe spread dismay even to the sea-coast throughout the English plantations. No outlying town but experienced their barbarity, and several were abandoned. The contest, one of racial antipathy, was now mutually recognized as for existence. In the knowledge of the horrors of defeat, the white men fought with the courage of desperation, and soon learned to meet the cunning tactics of the savages with superior wiles. The Indians, unable to procure a regular supply of food, and often nearly starved, were gathered into villages on both sides of the Connecticut a few miles above Northfield. Early in April the head sachem of the Narragansetts, Canonchet, whose controlling genius held together the incongruous alliance of rival tribes, was fortunately captured and put to death. Distrust and jealousy soon began their work, and a few days later Philip was on his way with the Nashaways to their hunting-grounds about Wachusett. Quinnapin accompanied him, with a portion of the Narragansetts, and with him was Mrs. Rowlandson, his prisoner, the servant of Weetamoo, one of his three wives. A majority of the Nipmucks and Quabaugs soon joined them.

Messengers were sent to Wachusett by the authorities at Boston to negotiate for the redemption of the captives and especially Mrs. Rowlandson. Philip fiercely opposed any bargaining with the English, but his blood-thirsty counsels no longer found listening ears. Some of the prisoners had fallen under the tomahawk, and others had succumbed to exposure and starvation. Most of the survivors were freed during May, for a stipulated ransom. The Nashaway sagamore, though yet far from humble, was evidently tired of hostilities. If we may believe his own letter to the Governor, he even journeyed to the villages of the river Indians to recover certain captives there. In his absence, Captain Henchman, under the guidance of Tom Dublet, an Indian scout, surprised a party of thirty-six Indians fishing at Washacum, of whom he killed seven and captured the others. The prisoners were mostly women and children, and among them were the wives and sons of Shoshanim and Muttaump. After this stroke of ill fortune, the proud boasting of the sagamores was turned to servile supplication. Philip and Quinnapin, fearing treachery, fled to their own land.

Early in September, the harassed and repentant chiefs, Shoshanim, Monoco and Muttaump, worn out with privation and trusting to some alleged promise of pardon from the Council, surrendered themselves and their men at Cocheco. September 26th, the three sagamores with others were hanged at Boston. Their wives and children, with other undistinguished captives, were sold as slaves and shipped to the Bermudas. The score or two of the Nashaways that may have escaped or were allowed to go free joined the Pennacooks. The Indian who captured Hannah Dustin, in 1697, and was killed by her, was one who had lived in Lancaster. A few who had embraced Christianity, like Quanapaug and George Tahanto, probably dwelt at Natick. The tribal history of the Nashaways had reached its finis.

CHAPTER III.

LANCASTER—(*Continued.*)

The Resettlement—French and Indian Raids—The Garrisons—New Meeting-house—The Additional Grant—Early School-masters—Lovewell's War—Worcester County Formed—Birth of Harvard, Bolton and Leominster—Sieges of Carthagena and Louisbourg—The Conquest of Canada.

THE Lancaster exiles were widely scattered as they sought refuge with relatives and friends in the Bay towns. Many of them, so soon as bullet and gallows had avenged their slain kindred and made return possible, looked with longing towards their farms, orchards and gardens, purchased so dearly with years of toil and anxiety, and final blood sacrifice. But first shelter had to be built and leave of court obtained; for the re-occupation of a deserted town, by an order of General Court, was placed in the same class with new plantations, requiring preliminary petition and the appointment of a fatherly committee

to view, and hear, and consider, and order, and enjoin obedience to, a form and manner of resettlement. Probably some buildings were erected and some of the proprietors were upon their lands when John Prescott, with two of his sons, his two sons-in-law, Thomas Sawyer and John Rugg, his grandson, Thomas Sawyer, Jr., and Thomas Wilder, John Moore and Josiah White, sent to the court their petition, in 1679, asking for a committee that they might, together with others, speedily "proceed to settle the place with comfort and encouragement." The committee were appointed and, although no record of their conclusions is known to exist, births in Lancaster were recorded during 1679 and 1680. In 1681 seventeen or eighteen families had returned and petitioned for exemption from "country rates" successfully.

Their minister was not with them. In April, 1677, Mr. Rowlandson had accepted liberal offers from Wethersfield, and was settled as colleague to Rev. Gershom Bulkeley. In that office he died, aged forty-seven years, November 24, 1678, "much lamented." In December, 1681, John Prescott, the founder and the oldest inhabitant of the town, died. The meeting-house having been burned during or after the destruction of the town, a new one was built upon the same site, probably in 1684. Among the newcomers was Samuel Carter, a graduate of Harvard College in 1660, who bought the Kerly homestead on George Hill, and probably served the people as teacher and minister for a time, but accepted a call to Groton in 1692. His sons continued in Lancaster, and the family so multiplied that the Carters soon rivaled the Wilders and Willards in the town census. William Woodrop and Edward Oakes also temporarily preached here, but there was no regular pastor until December 3, 1690, when John Whiting, a Harvard graduate of 1685, was ordained, after preaching on probation for nine months.

Upon the revolutionary deposition of Andros by the people, in 1689, the magistrates and other prominent gentlemen of the colony recommended the towns to send instructed delegates to form an Assembly and assume the responsibility of reorganizing the government until orders should be received from England. Lancaster's action in response was the election of Ralph Houghton as representative, instructed to favor the re-assumption of government by the Governor and assistants elected in 1686. This seems to have been the last public service of Ralph Houghton for the town. He spent the declining years of life with a son in Milton, where he died in 1705. At his departure the most able man of affairs in the town was John Houghton, second of the name, and upon him the duties of town clerk devolved.

Soon the horrors of Indian warfare again menaced the frontier, and a general retreat of the inhabitants was imminent, when a special act was passed forbidding removal from outlying towns under severe penalty. One of the towns named in the act was Lancaster. Some hunters, in April, 1692, reported seeing about three hundred Indians in the neighborhood of Wachusett, and they were suspected of hostile designs. By day or night mothers grew pale at every half-heard cry of bird or beast, imagining it the death-shriek of a dear one, or the dread war-whoop of the savage. The able-bodied men and boys had to delve all day in the planting season, or expect to starve the next winter, and their unintermitting toil ill fitted them to watch every second night, as they were obliged to do in garrison. If they remained in their unfortified houses they were exposed to worse than death in case of an attack. But they could hope for little help from the Bay towns.

There were now eight garrisons in Lancaster:—Josiah White's, of ten men, upon the east side of the Neck; Philip Goss', nine men, near the North River bridge; Thomas Sawyer's, eleven men, in central South Lancaster; Nathaniel Wilder's, eight men, at the old trucking-house site on George Hill; Ephraim Roper's, seven men, a little to the north of Wilder's; Lieut. Thomas Wilder's, thirteen men, on the Old Common; Ensign John Moore's, eight men, on Wataquadock; Henry Willard's, eight men, at Still River. These embraced fifty families, and indicate a population of about two hundred and seventy-five.

July 18, 1692, a small band of Indians surprised the family of Peter Joslin, on the west side of the Neck, while he was absent in the field, killed Mrs. Sarah Joslin, Mrs. Hannah Whitcomb and three young children, and took away as prisoners Elizabeth Howe, the sister of Mrs. Joslin, and Peter Joslin, aged about six years. The boy was butchered in the wilderness. Elizabeth, a girl of sixteen years, when the Indians approached the house, was singing at the spinning-wheel, and tradition says escaped the fate of her sister because of her captors' admiration for her song. She was ransomed from Canada after four years of captivity.

For several years the townspeople lived in a state of continual "watch and ward," plowing, sowing and reaping in fear of the skulking, relentless foe. There were occasional alarms, the garrisons were strengthened at great expense of labor, and in them the whole community huddled together for defence at every rumor of danger. The town became very much impoverished, and the General Court allowed them twenty pounds "for encouragement," October 20, 1694. One Sabbath, in the autumn of 1695, Abraham Wheeler, when on his way from Sawyer's garrison to his own house near the river, was mortally wounded by an Indian lying in wait for him. September 11, 1697, in the forenoon, when the men were many of them in their fields or at their own houses, and the garrison gates were open, a band of savages who had been lurking in the woodland watching for a favorable opportunity, made a sudden dash upon the western portion of the settlement. Their plan had been to

first carry by assault the garrison of Thomas Sawyer, but as they were preparing to rush upon it, Jabez Fairbank galloped at full speed into the gate coming from his own house, and the Indians, supposing that they were discovered—though such was not the fact—turned their attack upon those in the fields and defenceless houses. They surprised the families of Ephraim Roper, the widow John Rugg, Jonathan Fairbank, John Scate and Daniel Hudson, murdering capturing or wounding nearly every member of them, and burning their houses and barns. Meeting the minister, Rev. John Whiting, at a distance from the garrison, they attempted to take him captive, but "he chose rather to fight to the last," and was slain and scalped. Ephraim Roper's was a strongly garrisoned house, and that of Daniel Hudson was fortified. The killed numbered nineteen, the captives eight, five of whom ultimately returned; two others wounded, recovered. Capt. Thomas Brown with fifty men pursued the enemy for two days, during which they came upon the mangled corpse of one of the captured women, probably Joanna or Elizabeth Hudson, whom the retreating savages had slain.

Utterly disheartened, the people in their new distress appealed for exemption from taxes, aid to procure a minister and the help of soldiers in their garrisons. They were given only twenty pounds. As temporary preachers, John Robinson, Samuel Whitman and John Jones served them in the pulpit, and in May, 1701, Mr. Andrew Gardner, a Harvard graduate of 1696, was invited to preach. The following September he accepted an invitation to become their settled pastor. Before this the minister's salary had been in part paid by an annual assessment of ten shillings upon each original home-lot. As these lots were many of them abandoned, and the rule in other respects bore unequally upon the proprietors, the Legislature, upon petition, ordered the levying of their church rate upon all inhabitants in the same way as other taxes.

The regular garrisons in 1704 were eleven in number, and their location and the number of their families mark a very important change in the growth of the town. As one bloody raid after another strewed the slope of George Hill with ruins, the fact that in a military sense the east side of the rivers was much the more secure from surprise, and the most defensible, became obvious;, and thither the increase in population tended. The garrisons on the Neck were: Sergeant Josiah White's, seven men; Ensign Peter Joslin's, nine men. Those on the west side were: Rev. Andrew Gardner's, nine men; Lieut. Nathaniel Wilder's, on George Hill, seven men; and John Prescott's, four men, at the corn-mill. East of the rivers were: At Bride Cake Plain (now the Old Common), Capt. Thomas Wilder's, fifteen men. Upon Wataquadock and eastward: John Moore's, nine men; Josiah Whetcomb's, eight men; Gamaliel Beman's, eight men. At Still River: Simon Willard's, twelve men. At Bare Hill: John Priest's, ten men. There were seventy-six families, indicating a population of about four hundred and twenty-five, of which two-thirds lived on the east side of the rivers. The only innkeeper was Nathaniel Wilder, who had for twenty years been "licensed to sell beer, ale, cider, rum, etc."

In the summer of 1704 a large force of French and Indians, under "Monsieur Boocore," who had designed the destruction of Northampton, finding that place prepared, became disorganized. A portion returned to Canada, but about four hundred determined upon a raid eastward. On Monday, July 31st, early in the morning, this force made a furious onslaught upon Lancaster, and first, as usual, upon the George Hill garrisons. The brave Lieutenant Nathaniel Wilder was here mortally wounded. Re-inforcements from Marlborough and other towns, under Captains William Tyng and Thomas Howe, promptly came, and the enemy were finally driven off with considerable loss. Besides Lieut. Wilder, three soldiers—Abraham Howe, Benjamin Hutchins and John Spaulding—were killed. A French officer of note among the assailants was also slain, "which so exasperated their spirits that in revenge they fired the Meeting-house, killed several cattle and burned many out-houses." Four dwellings at least were destroyed—those of Ephraim Wilder, Samuel Carter and Thomas Ross upon George Hill, and that of Philip Goss near the meeting-house and upon the same site as the Rowlandson garrison destroyed in 1676.

Hostile bands continued to prowl about the frontier towns during the summer and autumn, occasionally scalping some unfortunate victim. During the alarm after one of these murders a pitiful accident deprived Lancaster of her third minister. On Thursday, October 26th, in the night, Samuel Prescott—being the sentinel on duty at the garrisoned house of Rev. Andrew Gardner, walking his beat within the stockade—suddenly saw a man "coming down out of the upper flanker," and having challenged him twice and receiving no reply, he fired upon him, in his surprise supposing him to be "an Indian enemy." To his own grief and horror, as well as that of the whole community, it was found that he had mortally wounded the minister, who had gone up into the watch-tower over the flanker to keep guard by himself, probably in distrust of the wakefulness of the sentinels, who had been scouting in the woods all day. The following May, Rev. John Prentice began his ministry in Lancaster, and on December 4, 1705, married the widow of his predecessor. He was not ordained until March 29, 1708. For nearly two years the Sabbath exercises were held at the parsonage, there being no meeting-house.

October 15, 1705, the savages again invaded the town. There were at this date two saw-mills in Lancaster, Thomas Sawyer, Jr., having, in 1698 or 1699, built one upon Dean's—now called Goodridge's—Brook, at the existing dam near the Deer's-horn's

School-house. At this mill the Indians captured Thomas Sawyer, Jr., his son Elias, a youth of sixteen, and John Bigelow, a carpenter of Marlborough. The three were taken to Canada, where Sawyer was rescued from torture and death at the hands of his captors by the intervention of the Governor, on condition that he and his companions would build a saw-mill upon Chambly River. The mill was built, being the first in all Canada, and the captives returned in safety.

Forty pounds had been granted by the General Court, after the burning of the meeting-house in 1704, towards the building of a new one, to be paid upon the erection of the frame. A large majority of the inhabitants now living upon the east side of the rivers, it was voted in town-meeting to place the building upon Bride Cake Plain, a mile eastward of the old site, and there a frame was set up in 1706. The new location roused a tempest in the community. A committee of four from other towns was appointed to settle the dispute, and being equally divided in opinion made the quarrel worse. Then the Council and the Deputies took opposite sides. Finally, as winter drew near, the majority were given their way. John Houghton donated the land for the building site, Thomas Wilder gave a lot for the burial-ground on the opposite side of the highway, Robert Houghton with his assistants covered in the summer-seasoned frame, and peace reigned once more in the parish.

In 1707 Jonathan White, a youth of fifteen years, was killed by Indians, and August 16th a band killed a woman and captured two men near Marlborough, one of whom escaped. The other, Jonathan Wilder —whose father, Lieut. Nathaniel, had fallen three years before—was murdered when his captors were overtaken by a force which hastily pursued them. In the fight that ensued, Ephraim Wilder, brother of the captive, was severely wounded, Ensign John Farrar, a native of Lancaster, but resident of Marlborough, was killed. Two others of Marlborough suffered, Richard Singletary losing his life and Samuel Stevens being badly wounded. The fight took place in the northwest corner of the "Additional Grant" of Lancaster. For a year or two soldiers were quartered in the town to aid in its protection. The last to be killed by the enemy was an Indian servant of the Wilders, August 5, 1710. He was at work in the field upon George Hill with Nathaniel Wilder, who was wounded at the same time.

In 1711 there were eighty-three families and four hundred and fifty-eight inhabitants in Lancaster, divided among twenty-seven garrisons; and twenty-one soldiers were stationed in the town. Ten years before the proprietors had purchased of George Tahanto, "in consideration of what money, namely, twelve pounds, was formerly paid to Sholan (my uncle), sometime sagamore of Nashuah, for the purchase of said Township, and also six shillings formerly paid by Insigne John Moore and John Houghton of said Nashuah to James Wiser, alias Quenepenett (Quanapaug), now deceased, but especially for and in consideration of eighteen pounds, paid part and the rest secured to be paid by John Houghton and Nathaniel Wilder, their heirs, executors and assigns forever, a certain tract of land on the west side of the westward line of Nashuah Township. . . ." At that time petition was made to the Legislature for sanction of the purchase, which was given, and a committee appointed to view and report. The matter lay dormant until February 15, 1711, when a new committee was authorized and the land surveyed. June 8, 1713, the grant was duly confirmed to the town. Certain parties laying out new townships to the westward in 1720, alleged that the committee surveying this grant had given more generous measure than the terms of purchase warranted, but after a year's wrangling the bounds were again confirmed as conforming to the marks by which the Indian grantors had designated them. Out of this added territory have since been shaped the two towns of Leominster and Sterling, besides a considerable tract given to the Boylstons.

During 1713 and 1714 the growth of enterprise in the town was marked by the erection of two saw-mills—one by Samuel Bennett up the North Branch, and the other by Jonathan Moore on Wataquadock Brook by the Marlborough road. The town was advancing more rapidly than ever before. In December, 1715, the selectmen appeared before the County Court to answer for not having a grammar school according to law. This proves that there were one hundred families within the town limits. For several years the versatile John Houghton, conveyancer, inn-keeper, justice, selectman, representative to General Court, etc.—who served the town as clerk from 1684 to 1724 —had also acted as schoolmaster, and is the first named, although the ministers, during earlier days, served in that capacity. Now the town procured the services of a college graduate, Mr. Pierpont, of Roxbury, as master of their grammar school, and no notice of another is found until 1718, when Samuel Stow, probably of Marlborough, a Harvard graduate of 1715, was elected master at a salary of forty pounds per annum. The minister's salary was then raised from seventy to eighty-five pounds per year.

In 1717 Lancaster was presented "for neglecting to repair ye great bridge," and a special town-meeting, March 10, 1718, considered the rebuilding of the "neck bridge." This is the first mention found of any crossing of the Penecook save by wading-place or canoes. The accounts of the destruction of the town in 1676 point plainly to the existence of two bridges only, one upon each branch. In the discussion of 1705 relative to the location of a new meeting-house, the wording of a petition implies the same condition as existing. Some cheap structure, within the means of the impoverished town, probably was thrown across the main river after the building of the church upon the east side. The bridge of 1718 was ordered to have five trestles and to be thirteen feet

wide. Thirty-five pounds were appropriated for its erection; the townspeople were all, however, expected to assist at the raising, which doubtless was a season of extraordinary jollification.

During Lovewell's War, as it is called, from 1722 to 1726, Lancaster was at no time entered by any considerable force of Indians, but her young men were forward in carrying the war into the enemy's country. An act of 1722 offered one hundred pounds for the scalp of a male Indian over twelve years of age, and half that sum for a woman or child, dead or alive. This proved a sufficient inducement to enlist in the terrible perils and hardships of the scouting parties many bold spirits under popular leaders. Of these, Capt. John White, an associate of Lovewell, won great repute as a successful Indian fighter. Dying in the service, he was eulogized by a contemporary as "a man of religion, probity, courage and conduct, and hearty in the service of his country against the Indian enemy." Capt. Samuel Willard here began a military career that reflected honor upon the town, leading what he dignified in his journals as an "army"—two companies of about ninety men each—to and from the head-waters of the Saco and Pemigewasset, a march of five hundred miles through a pathless wilderness. The numerous bands of rangers not only carried desolation into the strongholds of the savage, but discovered the fertile, sheltered valleys beside the beautiful rivers and lakes of New Hampshire, and the log-cabins of venturesome pioneers soon rising here and there proved that the partisans had well noted the advantages of the land.

Lancaster was no longer a border town, but the mother of new frontier settlements. In a single decade its population had doubled. In 1726 the meeting-house had to be greatly enlarged, and two years later the minister's salary was raised to one hundred pounds. There were now four licensed inn-holders: Capt. Samuel Willard, who had moved to the Neck and probably built the house still standing near the railway crossing; John Wright, at Still River; Oliver Wilder, upon George Hill, and Thomas Carter, where H. B. Stratton until lately resided. Among the chattels of the latter was "one old Indian slave," valued at twenty-five pounds, who lived until 1737. The orchards of the town had become famous, and much of the fruit was converted into cider. What was not "drunk upon the premises" had a ready sale both at Boston and in the new towns. Even the minister in 1728 was credited with a product of sixty-one barrels at the cider-mill of Judge Joseph Wilder.

About the more important garrisons little villages had grown, where the cottagers, with their household industries and simple wants, were almost independent of other communities, except that all gathered at one common meeting-house on the Sabbath to listen to the fervid exhortation of Rev. John Prentice, and all sought Prescott's mill with their grist. In cases of a broken limb or alarming illness, Jonathan Prescott, with his saddle-bags full of drastic drugs, galloped up from Concord when summoned, and for an astonishingly small fee. If the need of medical skill was less pressing, the local herbalist, Doctress Mary Whitcomb, sufficed. Edward Broughton was school-master, graduating the length of his terms according to the taxes contributed, now teaching on the Neck, now at Still River or Bare Hill, or on Wataquadock, until 1727, after which, apparently, the custom came into vogue of employing young Harvard graduates as teachers for short terms. From fifty to sixty pounds per annum were appropriated for the town's schools.

In 1728 a movement began looking to the formation of a new county from certain towns of Suffolk and Middlesex. The town was deeply interested in this project and voted to favor it, provided the superior courts should be held at Marlborough and two inferior courts at Lancaster annually. The next year, on February 3d, the vote was reconsidered, a new plan being then under consideration, "for erecting a new county in ye westerly part of ye County of Middlesex." The meeting favored petitioning for the new county and chose James Wilder and Jonathan Houghton to act for the town in the matter. It is traditional that the Lancaster people fully expected that two shire-towns would be designated, and that Lancaster would be one. No hint of this, however, appears in the recorded action of the town-meetings. Lancaster was not only the oldest, but the wealthiest and the most populous of the fourteen towns set off April 2, 1731, to form the county of Worcester. It remained so until the Revolution was over, save that Sutton for a brief time had a few more inhabitants. Jonathan Houghton, of Lancaster, was chosen the first county treasurer and Joseph Wilder was made judge of the Court of Common Pleas.

In 1731 the first public library of Lancaster was established. It comprised but a single volume, though that was a bulky quarto of nine hundred pages. Rev. Samuel Willard's "Complete Body of Divinity," by vote of the town, was purchased and kept "in the meeting-house for the town's use so that any person may come there and read therein, as often as they shall see cause, and said Book is not to be carried out of the meeting-house at any time by any person except by order of the selectmen."

A petition from a majority of those living in the northerly part of the town in May, 1630, engaged the attention of a special town-meeting. The proposition at first was to cut off about one-third of the original township on the north, which, with additions from Groton and Stowe, should form the new town. After two years' discussion at town-meetings and in the Legislature, the town of Harvard was created by an act published July 1, 1732. This took from Lancaster an area of about eighteen square miles, and included the villages which had sprung up about Bare Hill and Still River.

About ten years before this some of the proprietors

of the "Additional Grant," Gamaliel Beman heading the movement, had set up new homes among the hills of Woonksechocksett, as the Indians called the region north of Washacum. Emboldened by the successful secession of the people in the northeast corner, these residents of the southwest corner of Lancaster, to the number of about a dozen householders, petitioned for separate town organization in May, 1733. The same day there appeared a demand for another precinct or township from some of the residents of Wataquadock and vicinity, proposing to divorce from the old town all the territory east of the rivers not taken by Harvard. Both requests received repulse, and attempts were made to appease disaffection by the introduction of proposals to build three new meeting-houses, so situated as better to accommodate the scattered population. For several years discussion and precinct strategy made town-meetings frequent and lively, and annually some plan for the dismemberment of the town went before the Legislature. The act erecting the new town of Bolton was published June 27, 1738, its western boundary being parallel with the western boundary of the original township and four miles from it. Out of the area thus taken,—about thirty-five square miles,—Berlin and a part of Hudson have since been carved.

Meanwhile the attractions of the valley of the North Nashua in the Additional Grant had drawn thither many Houghtons, Wilders, Carters, Sawyers and others, chiefly the grandsons of the early proprietors. Being more incommoded because of their greater distance from the meeting-house, and soon becoming more numerous than those living at Woonksechocksett, they had a better reason for seeking independence, and complicated the situation by presenting, in February, 1737, their petition for separation. They moreover shrewdly joined with the old town to defeat the aims of other petitioners, in order to gain consent to their own scheme, and July 16, 1740, the act was published which severed about twenty-six square miles more from Lancaster under the title of Leominster. This area was wholly from the Additional Grant, excepting the farm of Thomas Houghton, exsected from the northwest corner of the old township. The Chocksett people were not disheartened. They grew more numerous year by year, and Gamaliel Beman did not recognize defeat. The town finally consented to allow them their wish, provided they would assume perpetual support of the river bridge, now known as Atherton's. This proposition did not please, and, after another year's wrangle, in January, 1742, the "Chocksett War" was interrupted by a truce, the town voting to build two meeting-houses.

The house of worship for the Second or Chocksett Precinct, "near Ridge Hill," was completed so that the first service was held in it November 28, 1742. That for the First Precinct was delayed by the difficulty of agreeing upon its location. The aid of a legislative committee had at last to be invoked for the settlement of the question, and School-house Hill was selected as the most central site. Two hundred pounds were appropriated to build the Second Precinct house, and four hundred for that of the First Precinct, which stood nearly in front of the present residence of Solon Wilder. The meeting-house upon the Old Common was torn down, and the materials divided between the two parishes to aid in the building of school-houses. These, three in number, were placed: one on the Neck, not far from the meeting-house, but on the opposite side of the road; one nearly opposite the present Deershorn's School-house, and the third near the Chocksett meeting-house. Each of them was twenty-four by eighteen feet, with seven foot studding.

The new First Church building was nearly square in plan, being about fifty-five by forty-five feet, with entrance doors in the middle of the north, east and south sides. Across the same three sides were galleries to which stairs led from the side-aisles. One of these was assigned to men exclusively, the opposite one to women. Special seats apart were for "negroes." Directly before, and forming a part of the pulpit, was a deacon's seat. On a part of the floor the wealthier families were permitted to build family pews at their own cost. These were square, mostly about six feet by five, ranged along the walls from the pulpit, while in the centre of the floor, on either side of a central aisle were long seats, the female part of the congregation occupying one side, the male the other. The pews were "dignified," the size and position of each marking pretty well the wealth and social rank of its owner in the community. The sequence of the first families in 1644 appears nearly this: Rev. John Prentice, Deacon Josiah White, Colonel Samuel Willard, Captain John Bennett, Hon. Joseph Wilder, John Carter, Thomas Wilder, etc.

In 1742 the north part of Shrewsbury was set off as a precinct, and Lancaster surrendered to it about five square miles from the most southerly part of its domain. This was the foreshadowing of a new town, which, with slightly altered bounds, was created in 1786, under the name of Boylston.

Although three towns and two precincts had been peopled from the Lancaster hive, attempts at further swarming were not over. In December, 1747, fourteen residents of Lancaster, under leadership of Henry Haskell, covenanted with citizens of Harvard, Groton and Stow, with the intent to be incorporated into a township. This attempt, which signally failed, proposed taking two or three square miles from the northeast corner of the town. When the district of Shirley was finally authorized, in 1753, Lancaster's bounds were not disturbed.

The avocations of peace had been unharassed by war alarms for fifteen years, when, in 1740, a recruiting officer drummed for volunteers in Lancaster, and

succeeded in persuading eighteen or nineteen of her young men to wear the cockade. Captain John Prescott, of Concord, a lineal descendant of the father of Lancaster, was the senior officer of a battalion of five hundred men raised by Massachusetts to join the expedition of Vice-Admiral Vernon against Carthagena, and Jonathan Houghton, of Lancaster, was one of his lieutenants. Those who enlisted with Houghton from this town, so far as known, were: Daniel Albert, David Farrar, Nathan Farrar, Ephraim Fletcher, Benjamin Fry, John Hastings, Thaddeus Houghton, Ezekiel Kendall, Peter Kendall, Joshua Pierce, Benjamin Pollard, Gideon Powers, Timothy Powers, Oliver Spaulding, Darius Wheeler, William Whitcomb, Jacob Wilder. Few, if any of them, ever saw their homes again, giving their lives for the King in a quarrel of doubtful justice, not in the front of victorious battle, but slain by virulent disease after defeat.

Upon the breaking out of the war for the Austrian Succession it was not to be hoped that the New England colonies could remain at peace with their French neighbors. Governor Shirley was gifted with sufficient sagacity to see that only by the capture of Louisbourg could Massachusetts retain her valuable cod fisheries, or expect exemption from invasion. Against that fortress, upon which had been lavished all the resources of military art, he skilfully organized an expedition, which accomplished his desperate behest by sheer audacity, the sublime pluck of the New England rank and file and happy fortune, rather than by any prescience or rare judgment of plan.

February 17, 1745, Colonel Samuel Willard received orders to take command of the Fourth Massachusetts Infantry, enlisted for this expedition. The regiment numbered about five hundred men in ten companies, and, as the fleet sailed from Boston, March 24th, was recruited within thirty days. This speaks well for the popularity and energy of its leader, but the enterprise itself took on much of the nature of a crusade. Thomas Chandler, of Worcester, was lieutenant-colonel and Seth Pomeroy major of the regiment. Colonel Willard's own company had for its officers: Captain-lieutenant, Joshua Pierce; Lieutenant, Abijah Willard; Ensign, John Trumbull. Abijah Willard, the colonel's second son, was soon promoted a step, and another son, Levi, became ensign. In this company doubtless were many men of Lancaster and vicinity, but the majority of Lancaster soldiers were probably in the Fourth Company, the officers of which were: Captain, John Warner; Lieutenant, Joseph Whetcomb; and Ensign, William Hutchins. Unfortunately, the muster-rolls of this expedition are not known to exist, and the names of the soldiers are mostly unknown. Captain Warner died in hospital and Thomas Littlejohn fell in action. Many of their townsmen probably succumbed to the rigors of the climate and the toils of the siege, for the victims of disease were counted by hundreds.

January 6, 1748, Rev. John Prentice died. For forty-three years he had preached, and during forty was the ordained pastor of the town. He was the son of Thomas and Sarah (Stanton) Prentice, born in Newton, 1682, and a graduate of Harvard in the class of 1700. By his two wives—Mrs. Mary Gardner and Mrs. Prudence (Foster) Swan—he had ten children. His contemporaries prized him for his learning, his humility and his steadfastness. His juniors tell of his sturdy dignity and Puritan manners. His four printed sermons suggest that as a preacher he was orthodox, clear in his convictions, earnest and explicit in his exhortations. He was selected to deliver the Election Sermon at Boston, May 28, 1735. Reverends Benjamin Stevens, William Lawrence, Stephen Frost and Cotton Brown temporarily supplied the vacant pulpit, but in February the last named was invited to become pastor of the parish. He declined, and August 8th the church made choice of Timothy Harrington to be their minister. November 16th of that year he was installed. He had been pastor of a church at Lower Ashuelot, a town abandoned during the Indian raids of 1747.

November 19, 1752, Colonel Samuel Willard was seized with apoplexy and died the next day. He was the wealthiest citizen of Lancaster, and, Judge Joseph Wilder perhaps excepted, the most prominent socially and politically. For twenty-five years he had been the highest military officer of the district, and for nearly ten judge of the Court of Common Pleas. He was a grandson of Major Simon and son of Henry Willard, born in Lancaster, 1690. Judge Joseph Wilder died March 27, 1757, aged seventy-four. His contemporaries unite in lavish praise of his virtues and abilities. Rev. Timothy Harrington in a funeral sermon speaks of him as furnished "with a penetrating judgment, strong reason and a tenacious memory, and all, so far as we can judge, were consecrated to the honour of the Most High." Appointed judge at the organization of Worcester County, he was chief justice of the Court of Common Pleas at his death. He was a son of the second Thomas Wilder.

The one hundredth birthday of Lancaster, May 28, 1753, was appropriately celebrated by a "century sermon" in the First Parish meeting-house. This discourse was printed, forming a pamphlet of twenty-nine pages, and contains the early annals of the town in sadly condensed form. Unfortunately, the author, Rev. Timothy Harrington, bound by the mode of his times, was more anxious to preserve the pulpit dignity of his rhetoric than to gather and embalm for posterity the reminiscences of the gray-headed veterans among whom he daily walked. He devotes half his pages to the history of the Jews and primitive Christians, and accords but half a dozen lines to the hospitable Sholan and the Nashaways. He gives details of the various sieges of Jerusalem, but omits all mention of the deeds of Colonel Willard's regi-

ment at Louisbourg, and the pitiful sacrifice of Lancaster youth at Carthagena.

The town entered upon its second century prosperous and free from internal dissension. The Second Precinct, temporarily content with its gain of semi-autonomy, had, December 19, 1744, secured Rev. John Mellen for their pastor, a Harvard graduate of 1741. He had married Rebecca, the daughter of Rev. John Prentice, the year after her father's decease, and had given token of abilities that soon placed him in the very front rank of the ablest clergymen of his day. The repayment by England to Massachusetts, in 1749, of its expenditures in the late war, made possible the redemption of the paper currency, which had greatly depreciated, and specie again appeared in the channels of trade. But life in Lancaster was with most a struggle for shelter, food and raiment. The only measure of wealth was the ownership of acres and cattle. Few things better illustrate the simplicity or luxury of a community than its conveniences for travel. In 1753 Lancaster paid tax to the Province upon three chaises; in 1754 upon one chaise; in 1755 upon two chaises and three chairs; in 1756 upon two chaises and two chairs—while most of the younger towns, until recently Lancaster soil, had neither chair nor chaise. The heavy carts and wagons of the farm were the only wheeled vehicles.

No census of the town was taken until ten years later, but the population of its centennial year can be fairly estimated from an existing tax-list of 1751, practically a census of the heads of families at that time. Although by the dowering of Harvard, Bolton, Berlin and Leominster it had lost more than half its area, its gain by births, and by immigration from other towns, had fully made up the loss of inhabitants. The rate list of 1751 contains two hundred and eighty-five names, representing three hundred and fifty-five polls. The population at that date did not, therefore, fall far short of fifteen hundred souls. That of the towns excised from Lancaster amounted to nearly as many. Provision, generous for the times, was annually made for educating the young. Rev. Josiah Swan was generally the teacher of the Neck School from 1747 to 1760, and Rev. Josiah Brown was schoolmaster at Chocksett for as many years. For the third school the teachers were successively: Stephen Frost, Edward Bass, Joseph Palmer, Moses Hemmenway and Samuel Locke—all Harvard graduates—the last named a resident of the town, afterwards president of Harvard College.

Seven years of pretended peace between Canadian Jesuit and New England Puritan passed, and again the British colonies were hurrying preparations for a decisive struggle with their alert and aggressive foes. During the autumn of 1754 several mechanics of Lancaster, under Capt. Gershom Flagg, were engaged in the construction of Fort Halifax. Others of her citizens were serving on the eastern frontier in the regiment of Col. John Winslow, and Ensign John May led thirteen soldiers to join Col. Israel Williams at the western frontier.

Of the four great expeditions planned in 1755 to break through the cordon of French occupation that extended from the Ohio to the mouth of the St. Lawrence, Lancaster was represented in two—that against Crown Point, and the Acadian campaign. In the former Samuel Willard, the eldest son of the deceased colonel of the same name, was commissioned to raise a regiment of eight hundred men. John Whitcomb, of Bolton, was second in command; but Col. Willard died at Lake George shortly after joining the army, and Whitcomb was promoted to the vacancy. In the regiment were seven men of Lancaster, including two lieutenants, Hezekiah Whitcomb and William Richardson, Jr. Lieut. Benjamin Wilder led a mounted troop of thirty-three volunteers from Lancaster and its neighborhood, serving in the regiment of Col. Josiah Brown. But the majority of the Lancaster men, fifty-one in number, fought in the regiment of Col. Timothy Ruggles, under three Lancaster captains—twenty-four with Capt. Joseph Whitcomb, sixteen with Capt. Asa Whitcomb, and eleven with Capt. Benjamin Ballard. All three companies were in the bloody melée of August 8th, known as "the morning fight," when the valor of the New England rustics snatched victory from what at first seemed defeat. On that day ten of the fifty-one were killed or mortally wounded: Ithamar Bennett, Samuel Fairbanks, William Fairbanks, Isaac Kendall, Peter Kendall, Oliver Osgood, Josiah Pratt, Jr., Phineas Randall, Joseph Robbins, Jr., John Rugg. Others, enfeebled by camp fevers, in the late autumn dragged themselves homeward, or were brought thither by short stages through the wilderness upon horseback. The campaign, a barren one save for the experience and confidence in themselves gained by the colonial officers and soldiers, ended with the year.

The Acadian expedition, though even more inglorious than that against Crown Point, is far more famous in story, and Lancaster's part in it was a more prominent one than has ever been given it in history. Of the force of two thousand men embarking from Boston May 20, 1755, under Col. John Winslow, for the purpose of dislodging the French from the regions bordering on the Bay of Fundy, one company of one hundred and five men, allotted to the Second Battalion, was organized at Lancaster and officered by men of that town. These were: Capt. Abijah Willard, Lieut. Joshua Willard, Second Lieut. Moses Haskell, Ensign Caleb Willard. Thirty-six of the rank and file were credited to Lancaster, of whom William Hudson was killed in the attack made by the Acadians upon the force engaged in burning the "Mass House" at Peticodiac. The company took part in the capture of Beau Sejour. Capt. Willard was selected by Lieut.-Col. Monkton, the King's officer in command, to lead a detachment to Tatmagouche.

There, opening his sealed orders, to his great surprise and pain he found assigned to him the ungracious task of laying waste that whole fair district to the Bay of Verts, and removing the residents to Fort Cumberland. Amid the wailing of women and children, and the smoke of blazing cottages, barns and storehouses, Capt. Willard marched from hamlet to hamlet, leaving desolation behind, in accordance with the letter of his orders, but tempering them with such mercy as he could; his kindly heart, as his journal testifies, bleeding for the distress he was compelled to inflict.

Leaving their families among the smoking ruins of their homes, the Acadian men were marched to Fort Cumberland, and Capt. Willard received the gracious commendation of the British officer. During the rigors of a Canadian winter the Lancaster men, ill provided with food and clothing, remained in barracks at the fort, but were allowed to return home the following April. Massachusetts was ordered to care for one thousand of the "French neutrals," and apportioned three families—twenty persons—to Lancaster. There these exiles lived in the wretchedness of squalid poverty, disease and homesickness for ten years, housed, fed and cared for by the town authorities. The last of them were finally shipped to France.

The general plan of the campaign of 1756 was almost identical with that of the previous year, but Shirley was superseded by pompous and loitering officers of high rank in the British army. Their conceit and inactivity gave the daring Montcalm an opportunity to win some glory, and neutralized the enthusiasm and costly preparations of New England. The Lancaster soldiers were in the field as early as the opening of spring would permit military operations, building roads and bridges and transporting stores up the Hudson to Fort Edward, and thence to Fort William Henry. Col. John Whitcomb was one of the Committee of War for Massachusetts. William Richardson and Hezekiah Gates were efficient agents of the committee for procuring and forwarding military supplies. Twenty soldiers from Lancaster were in the regiment of Col. Jonathan Bagley, mustered in the company of Capt. Benjamin Ballard, and eight or ten others are found serving in other regiments and among the artillerymen of Fort William Henry.

The year 1757 saw a new plan of operations, but the campaign under the same haughty and inefficient generals ended as before in discomfiture. Several Lancaster men served in the regiment of Col. Fry, who, with most of his command, were in the massacre which followed the surrender of Ft. William Henry to Montcalm, and escaped with the loss of everything but life. Nine others were in the regiment of Col. Israel Williams. The fall of Ft. William Henry spread consternation through the colonies, for it was expected that the French would follow up their success by an invasion of the English settlements. The militia were hurriedly sent towards Albany. Capt. John Carter with a mounted troop, and Capt. Nathaniel Sawyer with an infantry company—one hundred men in all—marched as far as Springfield whence they were recalled, Montcalm having returned to Canada with his easily-won spoils.

With the year 1758 the inspiration of a new war policy, that of William Pitt, was felt throughout the colonies. They obtained payment for their military expenses and were promised relief from the extortion and insolence they had constantly experienced from Crown officials. The impetuous Wolfe and the chivalrous Lord Howe were sent with some of the best troops in England, to infuse energy into the campaign, and the slothful Loudoun retired. The ministerial orders required vigorous assault along the whole frontier. The enthusiasm awakened in Massachusetts is apparent in the zeal which Lancaster evinced in the contest.

Col. Jonathan Bagley's regiment in Abercrombie's advance upon Ticonderoga was in the van of the right division, and charged upon the French at the time Lord Howe lost his life. It was also engaged in the assault upon Ticonderoga and met with some loss. Of this regiment John Whitcomb was lieutenant-colonel, and his brother, Capt. Asa Whitcomb, served in it with forty of his Lancaster neighbors. Six of them laid down their lives in the service: William Brabrook, Eben Bigelow, Jonathan Geary, Philip Geno, John Larkin, Jacob Smith. In Colonel Timothy Ruggles' regiment, under Capt. Joseph Whitcomb, of Lancaster, and Capt. James Reed, of Lunenburg, were twenty-one more Lancaster men, of whom one, Simon Kendall, lost his life; eleven others served in other organizations, making at least seventy-three known to have enlisted in the campaign. Capt. Aaron Willard, who led a light infantry company in the regiment of Col. Oliver Partridge, was shot through the body in the murderous assault upon Ticonderoga, but survived to take part in the war for independence. After the untimely death of Lord Howe the imbecility of Abercrombie had again nullified the sacrifice and bravery of the provincials. The veterans who had fought at Louisbourg in 1745 under Pepperell, and conquered under Lyman at Lake George in 1755 were fast learning to despise as well as hate the supercilious British regular officers, who contemptuously spurned the counsels of soldiers like Pomeroy, and always were defeated by inferior forces of the enemy.

The campaign of 1759, under Amherst, directed towards the same strategic points as those of two years before, brought to the front once more Capts. Aaron Willard and James Reed, and with them were forty-five Lancaster men, three of whom—George Bush, Stephen Kendall and Reuben Walker—died during the campaign. These two officers' companies served in Col. Timothy Ruggles' regiment. Abijah Willard also appears again, now as colonel of a regiment of eighteen companies; Cyrus Fairbanks was his adjutant

and Manasseh Divol his quartermaster. Capt. Thomas Beman, with twenty-two other men of Lancaster, served in Willard's command, and five more were in other companies.

Amherst did nothing to add to his own reputation, and, in disregard of Pitt's positive orders, displayed no energy in the movement to assist Wolfe. The younger general's fame shone the brighter, and all New England mourned him as their preserver. Col. Willard and his fellow-townsmen marched home before the snows fell and rested by their own firesides through the winter, preparing for the final struggle.

With the spring Col. Willard again led his regiment to the frontier. In his staff were most of the old members, but Samuel Ward, of Worcester, afterwards to become one of Lancaster's most valued citizens, was made his adjutant. Capt. Beman again accompanied him, with Sherebiah Hunt for his lieutenant, and thirty enlisted men of Lancaster formed a part of his company. Rufus Putnam, who in Revolutionary days became chief engineer and brigadier-general in the patriot army, was his ensign. Six Lancaster volunteers served in other companies of Willard's regiment. In Col. Ruggles' regiment were Captains Aaron Willard and James Reed, with eighteen Lancaster soldiers.

Col. John Whitcomb also served in the campaign of 1760, and with him were Lieuts. Ephraim Sawyer and Henry Haskell, with eighteen others of Lancaster. Sergt. Josiah Prentice died and Joseph Stewart was drowned during the year. Under Col. William Haviland, these two regiments leisurely rowed down Lake Champlain in batteaux about the middle of August. Arriving at Isle au Noix, Col. Whitcomb was ordered to throw up defences while the rest of the army moved to attack the fortified post; but the enemy did not await assault, and Haviland moved on towards Montreal. September 8th, orders were read announcing to the troops the closing act in the conquest of Canada, the capitulation of the Marquis Vaudreuil. On the 10th the Massachusetts regiments began the march back to Crown Point, where for two months they were engaged in the construction of earthworks and barracks. In November Cols. Whitcomb and Willard led their commands through the wilderness across Vermont to Charlestown, N. H., and by the forest paths to Lancaster, where they were disbanded about December 1st.

For six years the town had, with the coming of each spring, sent forth to the blood-stained frontiers scores of her stalwart sons under their chosen leaders. About seventy-five of her citizens annually were, for at least eight or nine months, in the army. At least thirty-three of these are known to have perished by bullet, tomahawk or disease while on duty. Of the wounded no record was kept.

CHAPTER IV.

LANCASTER—(*Continued*).

The First Census—Organization for Revolution—Lexington Alarm—Bunker Hill and the Siege of Boston—War Annals—Separation of Chocksett—Shays' Rebellion—Bridge Lotteries.

THE long war between alien races and religions was hardly ended before the domestic "Chocksett War" again broke out. But the town-meeting vote of 1762 proved that the Second Precinct was not yet strong enough to carry its point. It persisted in its endeavors year after year, but whenever the proposition to divide the town gained a favoring vote, it was always upon condition that the support of some bridge of vagrant habits should be perpetually borne by the seceders. To this they refused consent, and the contest was prolonged until all local questions were forgotten in the turmoil of the struggle for national existence. The two parishes were nearly equal in population. The town-meetings were sometimes held in the Second Precinct meeting-house, and the grammar-school was kept alternately at Ridge Hill and on the Neck—the proportion of the two terms being decided in town-meeting.

The first colonial census, that of 1764, gives Lancaster 1999 inhabitants, living in three hundred and twenty-eight families and three hundred and one houses, classified as follows:

	Males.	Females.
Under 16 years of age	514	421
Over 16 years of age	505	532
Colored	12	14
Indians	1	

How many of the twenty-six colored were slaves is not told. Ten years before this there were but five "servants for life" in the town. Seven years later than this five slaves were reported between the ages of fourteen and forty-five. At least ten slaves are known to have died between the two dates. The total population of the four towns included in the original Lancaster grants was four thousand eight hundred and one. Notwithstanding the great waste of human life in the war, the town's growth had been steady and healthy, and so continued. It will be seen that the average family then numbered over six individuals. In the latest census, omitting the State school, the average family is less than four and four-tenths persons.

The direct descendants of the first proprietors were yet largely in the majority, gave character to the town, and almost monopolized the management of its affairs. But into the procession of the town's life had come several prolific families, and some men of political weight and large social influence. John Warner, of Woburn, appeared about 1700; the Osgood family, always prominent in the church, first came in 1710, Hooker Osgood, a saddler from Andover, purchasing the Rowlandson estate of Philip Goss. About the same date, and from the same source, came Edward

Phelps, the weaver, and bought lands not far from Lane's Crossing. Soon followed John Fletcher, from Chelmsford, progenitor of a sturdy race that peopled a portion of George Hill. Thomas Whitney, of Stow, and his sons John and Jonathan, about 1720 built upon Wataquadock Brook. From Woburn, William Richardson came in 1721, found a wife in Captain Ephraim Wilder's daughter, became a prominent justice and represented the town several years in the Legislature. Samuel Locke, also of Woburn, and connected by marriage with the Richardsons, came to Lancaster in 1742, and kept a famous tavern where Wm. A. Kilbourn now lives. Nathaniel and Abijah Wyman, from Woburn also, about the same time bought homes upon the Neck. Benjamin Ballard, from Andover, a little earlier founded a new home upon the northern portion of the George Hill range and gave his family name to that section of the town. The Dunsmoors appeared first about 1740 and furnished the town two physicians, father and son. The last, Dr. William Dunsmoor, in whose veins flowed mingled Sawyer and Prescott blood, developed political abilities that soon placed him in leadership of the revolutionary spirits of the neighborhood, and gave him prominence even in colonial councils. The Thurstons, Peter and Samuel, second cousins (the first from Exeter, the second from Rowley), appeared about the middle of the century.

In 1768 Lancaster received an addition to its territory—a tract of land at its southwestern corner about three miles long by one and one-half wide, known as "Shrewsbury Leg." It included the site of the present village of Oakdale, but then contained less than a dozen families. The same year a trader came from Groton to form a mercantile partnership with Levi Willard. The store of the firm was at the cross-roads of South Lancaster, and became the widest known and best patronized of any in the region. The senior partner sometimes made a journey to England to buy goods. He lived in a house which stood near the well on the lawn of E. V. R. Thayer's residence. The junior partner, Captain Samuel Ward, already mentioned as holding a commission in the French and Indian War, purchased an ancient house and lot upon the opposite corner, being a part of the Locke farm, and the eastern end of the original home-lot assigned to John Moore in 1653. Captain Ward was not only a man of unusual business ability, but his rare intellectual powers, quick and accurate judgment of character, prudence and shrewd management of men would have given him exalted political place had he not resolutely shunned all official position. He soon became a conservative leader in the town.

It was apparently a season of calm and prosperity. War had left few visible scars. The British government had re-imbursed to the colony the sums contributed in aid of the expulsion of the Bourbons from America, and plenteous harvests had gladdened the farmers. But a jealousy of all authority not delegated by popular suffrage everywhere began to appear, pervading church as well as state politics. The pulpits about Lancaster were all jarred, and some severely shaken, by a revolt against clerical councils; and the orators proclaimed the divine right of an anointed king subject to the divine right of the majority. The veteran soldiers had not forgotten the insults they had borne, year after year, from the King's officers, nor the needless campaigning and bloodshed chargeable to the incompetency of the generals set over them. The nagging encroachments of the British ministry upon charter rights found the majority of the colonists already on the verge of rebellion, for which seven years of war had been a practical school of arms.

The first town-meeting record in Lancaster for 1773 anticipates by three and one-half years the liberty-breathing sentiments of the Declaration of National Independence. The action of that meeting took form in written instructions for the guidance of the town's representative, Capt. Asa Whitcomb, and a series of resolutions drawn up by a "Committee for Grievances," as follows:

* * * * * * * * * *

1. *Resolved*, That this and every Town in this Province have an undoubted Right to meet together and consult upon all Matters interesting to them when and so often as they shall judge fit: and it is more especially their Duty so to do when any Infringement is made upon their Civil or Religious Liberties.

2. *Resolved*, That the raising a Revenue in the Colonies without their Consent, either by themselves or their Representatives, is an Infringement of that Right which every Freeman has to dispose of his own Property.

3. *Resolved*, That the granting a Salary to his Excellency, the Governor of this Province, out of the Revenue unconstitutionally raised from us, is an Innovation of a very alarming Tendancy.

4. *Resolved*, That it is of the highest Importance to the security of Liberty, Life and Property, that the publick Administration of Justice should be pure and impartial, and that the judge should be free from every Bias, either in Favour of the Crown or the Subject.

5. *Resolved*, That the absolute Dependency of the Judges of the Superior Court of this Province upon the Crown for their Support would, if it should ever take Place, have the strongest Tendancy to bias the Minds of the Judges, and would weaken our Confidence in them.

6. *Resolved*, That the Extension of the Power of the Court of Vice-Admiralty to its present enormous Degree is a great Grievance, and deprives the Subject in many Instances of that noble Privilege of Englishmen, Trials by Juries.

7. *Resolved*, That the Proceedings of this Town be transmitted to the Town of Boston.

These resolutions were signed by the committee: Dr. William Dunsmoor, John Prescott, Josiah Kendall, Ebenezer Allen, Nathaniel Wyman, Joseph White and Aaron Sawyer. The instructions to the town's delegate breathe the same spirit, and enjoin him to use his "utmost efforts . . . to obtain a Radical Redress of our Grievances."

The organization of revolution began the next year, with the plan of establishing permanent Committees of Correspondence in the towns throughout Massachusetts. The members of the first Lancaster Committee, chosen September 5, 1774, were Dr. William Dunsmoor, Dea. David Wilder, Aaron Sawyer, Capt. Asa Whitcomb, Capt. Hezekiah Gates, John Prescott, Ephraim Sawyer. The chairman

was the youngest of the number. The next day the patriots of the town marched to Worcester, where an armed convention of the people gathered on the green, prepared to give a warm reception to the force of British troops which Governor Gage had proposed to send for the protection of the court. As the regulars did not appear, attention was turned towards the royalists. The justices, who recently had sent a loyal address to the Governor, were compelled to sign a recantation, and appear before the assemblage to acknowledge it. Of these justices were Joseph Wilder, Abel Willard and Ezra Houghton, of Lancaster.

During the same month the town voted "That there be one hundred men raised as Volunteers, to be ready at a minute's warning to turn out upon any Emergency, and that they be formed into two Companies, and choose their own officers," and that these volunteers should be "reasonably paid by the Town for any services they may do us in defending our Liberties and Privileges." One company was enlisted in each precinct. The Committee of Correspondence was also authorized to purchase two field-pieces, and two four-pounders were at once obtained from Brookline, for which eight pounds were paid. One of these was stationed in each parish, with a supply of powder, ball and grape-shot. Capt. Asa Whitcomb and Dr. William Dunsmoor were chosen to represent the town in the First Provincial Convention. The constables were instructed to pay over the taxes, when collected, to a special committee—Aaron Sawyer, Ephraim Sawyer and Dr. Josiah Wilder—who were to account for the same to the patriot receiver-general. The same committee were ordered "to Post up all such Persons as continue to buy, sell or consume any East India Teas, in some Public Place in Town." In the town-meeting of January 2, 1775, a committee was chosen to receive donations "for the suffering poor of the Town of Boston, occationed by the late Boston Port Bill." It was also then voted "to adopt and abide by the spirit and sense of the Association of the late Continental Congress, held at Philadelphia," and a committee of fifteen were selected "to see that the said Association be kept and observed by all."

The whole male population was now training for the conflict seen to be inevitable. The re-organization of the militia began in 1774, by a popular demand for the resignation of all military commissions. The Second Worcester was known as the Lancaster Regiment, and consisted of ten companies and a mounted troop, four companies and the troop being of Lancaster, including all the able-bodied males between sixteen and fifty years of age, save a few by law exempts. With the division of the training-bands into minute-men and militia, new company officers were chosen, young men aglow with the hot temper of the times. These line officers elected the brothers John and Asa Whitcomb, two veterans of the French War, as their colonels—the former of the minute-men, the latter of the militia. Abijah Willard was perhaps the most gifted and experienced officer in the town, but unfortunately favored the side of the King. Dr. William Dunsmoor and Ephraim Sawyer were the majors of the minute-men, and David Osgood the quartermaster. Col. John Whitcomb was chosen a major-general in February, by the Second Provincial Congress.

Every soldier was expected to furnish himself with arms and equipments, and if too poor to do so, he was supplied by the town, or by contributions from the more wealthy. No attempt was made to secure uniformity in dress; each wore his own home garb, and as there was a much greater variety in the color and form of men's wear then than now, the ranks always presented a motley appearance.

There were at this period but seventeen towns in Massachusetts which could boast a larger population than Lancaster. It had a greater proportion of mechanics and traders than other inland towns—fulling-mills, tanneries, potash boilers, a slate quarry and even a little furnace for casting hollow-ware. But its farmers raised nearly ten bushels of grain for every man, woman and child in the town, and four times as many cattle, sheep and swine per inhabitant as were credited to the town in the census of 1885. There was, therefore, a large surplus above the needs for home consumption. Pork was sold at six pence, salt beef at three pence, mutton at two pence, cheese at four pence and butter at eight pence, per pound; corn meal at three shillings, beans at six shillings, potatoes at one shilling four pence per bushel; cider at seven shillings eight pence per barrel. There was no public conveyance for travelers, no post-office nearer than Cambridge. Silent Wilde, the news-carrier, rode out from Boston on Mondays, with the papers for regular subscribers, and jogged through Lancaster on his way to the Connecticut River towns and back once a week. His trips were soon to cease, and the day fast approached which was to test anew Lancaster's patriotism.

On the morning of April 19, 1775, a post-rider came galloping in hot haste through the town shouting to every one he saw that the "red coats" had come out from Boston. The tidings, long expected, were spread by mounted messengers and the firing of cannon; the minute-men were soon hurrying down the Bay road, and the militia followed not far behind. Two hundred and fifty-seven men marched from the town to Cambridge that day. General John Whitcomb reached the scene of action before the running fight ended and took part in directing it; but it is hardly probable that any great number of his regiment, save the mounted troop, perhaps, kept pace with him. The six Lancaster companies were: two troops of thirty-two men each under Captains John Prescott, Jr., and Thomas Gates; two companies of minute-men, with Captains Samuel Sawyer

and Benjamin Houghton; and two companies of militia led by Captains Joseph White and Daniel Robbins. They remained at Cambridge about two weeks.

The Provincial Congress immediately resolved upon the enlistment of an army of thirteen thousand men for eight months. Col. Asa Whitcomb was one of those authorized to raise a regiment, and, on May 25th, reported his command containing eleven companies, five hundred and sixty men—one company above the complement. Ephraim Sawyer was major, and Dr. William Dunsmoor surgeon of the regiment. The Lancaster men were mostly in the companies of Captains Andrew Haskell and Ephraim Richardson. There is a tradition in old families that on the day of the battle of Bunker Hill the Lancaster regiment was stationed at Cambridge, but was ordered to furnish reinforcements to Prescott, and some of its companies reached the hill and fought in the final struggle, while others were coming up when the retreat began. The historian Bancroft says: "From the regiment of Whitcomb, of Lancaster, there appeared at least fifty privates, but with no higher officers than captains." If he had written thrice fifty he would have been more nearly just. By official returns the regiment lost five killed, eight wounded and two missing, which was a larger list of casualties than was credited to eight others of the sixteen regiments in which casualties of battle occurred. Daniel Robbins was killed upon the hill and Sergt. Robert Phelps was mortally wounded and died a prisoner in Boston. Both were in Haskell's company. Sergt. Israel Willard and Joseph Wilder were probably wounded, the former mortally, as special allowance was made for them by the Legislature at the same time as to the heirs of Robbins and Phelps. Evidence is found in petitions for aid, showing that Burt's Harvard and Hastings' Bolton company were also in the fight, and the historian Frothingham supposes Wilder's Leominster company to have been engaged. Capt. Andrew Haskell so commended himself by his conduct at Bunker Hill, that he would have been promoted but for certain unofficer-like traits which he seemed unable to overcome.

During the siege of Boston the Lancaster regiment was brigaded with the Rhode Island troops under Gen. Greene and stationed on Prospect Hill. Col. Whitcomb was one of the wealthiest farmers of the town, a deacon in the Second Parish, a sterling patriot, and evidently, from his enduring popularity, gifted with noble qualities of heart. He was also a brave and experienced soldier, but too amiable to preserve proper discipline in his command. Upon the consolidation of the Provincial regiments to bring them to the Continental model, sundry supernumerary officers were discharged, and Washington, with the concurrence of Greene, selected Whitcomb as one whose services should be spared. His men resented this, and refused to re-enlist under another commander, when Col. Whitcomb reproached them for their lack of patriotism, and offered to enlist as a private with them. Washington, hearing of this, reinstated him and complimented him in special orders for his unselfish zeal. The worthy colonel's military service ended April 1, 1777, however, and he returned to his farm. Impoverished by his sacrifices for country, he was compelled to part with his lands, removed to Princeton, and there died, March 16, 1804, aged eighty-four years.

In the closing scenes of the siege, March 9, 1776, Dr. Enoch Dole, of Lancaster, was killed on Dorchester Heights by a cannon-ball. The town had several soldiers with Arnold and Montgomery at the gates of Quebec, and two or three were there wounded and captured.

About five thousand refugees from Boston during the siege were scattered through the inland towns, and to these were added the people of Charlestown after the burning of that place. One hundred and thirty of the homeless were assigned by the Provincial Congress to the charity of Lancaster, but the actual number seeking refuge here was much greater, for the proposed formal distribution of the exiles had speedily to be abandoned as impossible. Many sought Lancaster who added to its social force; such were Daniel Waldo, Edmund Quincy, Esq., and Nathaniel Balch. A few became permanent residents of the town; for example, Josiah Flagg and John Newman.

In August, 1776, the Court of General Sessions, in authorizing five hospitals for inoculation for smallpox, appointed Doctors William Dunsmoor and Josiah Wilder directors of one at Lancaster. There is no record of the location of this hospital, but fourteen years later, when this scourge of humanity became again virulent, Dr. Israel Atherton established one for the same purpose upon Pine Hill, where it was kept during four years.

After the departure of the American army for New York, the defences of Boston Harbor were entrusted to the militia, and during 1776 about fifty men of Lancaster served in two regiments stationed at Hull, with Capt. Andrew Haskell and Lieuts. John Hewitt and Jonathan Sawyer for their officers. A requisition upon the State for five thousand militia to temporarily re-enforce the army at New York came from Congress in June, and Lancaster's quota for four months' service was seventy-two men. They served under Capt. Samuel Sawyer and Lieuts. Salmon Godfrey and Nathaniel Sawyer, in the regiment of Col. Jonathan Smith. The whole command was a hurried levy of rustic youth, wholly undisciplined. September 15th, at Kip's Bay, they met the splendidly-drilled Hessian corps, and came off with scant honor. Four Lancaster men were then missing—probably killed—and several were wounded.

Capt. Aaron Willard, who still suffered from his terrible wound received at Ticonderoga in 1758, un-

like his more noted cousins and neighbors—Abijah, Abel and Levi Willard—was earnest in the patriot cause. He was one of the two commissioners appointed by Washington to visit the Acadians, in order to ascertain the strength of their alleged sympathy with the revolutionists. The mission was found so hazardous that the commissioners made their report from information gained without entering the province. Willard received a commission as colonel of a regiment drafted to strengthen the northern army under Schuyler, but was prevented from service by a painful accident. Capt. Manasseh Sawyer, August 18th, marched to join the regiment of Col. Nicholas Dike at Dorchester, with a company of ninety-two men, enlisted for eight months. Thirty-two of these were of Lancaster. Henry Haskell, who had distinguished himself in the battle of Bunker Hill as captain of a Shirley company, was lieutenant-colonel of the regiment. Capt. Daniel Goss and Lieut. Jabez Fairbank, with a company of militia, chiefly Lancaster men, served at Dobbs' Ferry, in a regiment of which their townsman, Ephraim Sawyer, was lieutenant-colonel.

October 7, 1776, the town voted to empower the House of Representatives "to draw up a Form of Government" for the State, stipulating that it should be sent to the people for ratification. Dr. William Dunsmoor was at the same date elected representative.

The popular colonial system of short enlistments forbade the growth of a well-disciplined national army and menaced the success of any complex campaign. A complete re-organization was resolved upon by the formation of eighty-eight three-years' regiments of six hundred and eighty men each. Fifteen of these were demanded from Massachusetts, and it required one man in every seven to fill the call. A bounty of twenty dollars and one hundred acres of land was promised volunteers, and the monthly pay of privates was fixed at six and two-thirds dollars. December 9, 1776, the male inhabitants of Lancaster over sixteen years of age numbered six hundred and seventy-two, including thirteen negroes. Her quota was, therefore, ninety-six men, and that number volunteered in due time. Three more levies for three years were made during the war. Ten soldiers were sent by the town to the Continental army in the spring of 1780, thirty-five in the spring of 1781, and seven in March, 1782, the sum of the quotas being one hundred and forty-eight. These men were all volunteers, the draft being resorted to only for short-service calls. Large bounties had to be paid at last, and a few non-resident substitutes were hired. The men were scattered through the Massachusetts regiments, the town being represented in every one but the First and Ninth. The largest numbers were in the Tenth, Fourteenth and Fifteenth. Most of them participated in the battles which compelled the surrender of Burgoyne. Those holding commissions were:

Henry Haskell, lieut.-col. 15th.
Ephraim Sawyer, capt. 16th.
William Harris, paymaster 16th.
Jonathan Sawyer, lieut. 14th, *killed*.
John Hewitt, lieut. 10th.
John Whiting, lieut. 12th.
Philip Corey, lieut. 10th.
Joseph House, lieut. 2d.
Winslow Phelps, ensign 13th.
Jonathan Wheelock, drum-major 14th.

The year 1777 was marked in Lancaster for a persecution of suspected loyalists by the extremists of the patriot party. A resolve of the Legislature concerning "the danger from internal enemies" gave reason for the creation of a committee to search for and obtain evidence against such suspects, and Col. Asa Whitcomb was selected. A black-list was presented by him in September, bearing the names of Moses Gerrish, Daniel Allen, Ezra Houghton, Joseph Moore, Solomon Houghton, Thomas Grant, James Carter and Rev. Timothy Harrington. Abijah and Abel Willard and Joseph House had fled with the British upon the evacuation of Boston, and their estates had been confiscated. Levi Willard and Joseph Wilder were dead. Of those in Whitcomb's black-list, Gerrish, Moore and Ezra Houghton were imprisoned, Solomon Houghton escaped from the country, Carter's and Allen's names were stricken from the list in town-meeting, and Grant is found serving in the patriot ranks. The attempted proscription of Harrington was apparently the more bitter because of his connection with the troubles in the Bolton parish. He made a shrewd and spirited defence, when called into town-meeting to face his accusers, signally triumphed over them, and was held in increased respect thenceforward.

The loss of Ticonderoga and the victorious advance of Burgoyne southward spread dismay throughout New England. One-half of the alarm list were hurriedly marched from Lancaster to Bennington in August, mostly embraced in companies led by Captains John White and Solomon Stuart. During the autumn months of 1777 about thirty men of the town participated in the Rhode Island expedition of General Spencer.

February 5, 1778, it was voted "to accept the Articles of Confederation and Perpetual Union between the United States of America," and May 18th the town voted upon the acceptance of the new State Constitution, when one hundred and eleven were found in favor of and forty-one against it. It was, however, rejected by the people. Four thousand and forty-nine pounds were appropriated to pay the soldiers hired to serve for eight and nine months' service in the Continental Army. These men were thirty-two in number and joined the forces stationed along the Hudson. Captain Manasseh Sawyer and over fifty Lancaster men were engaged in the unsuccessful attempt to drive the British from Newport and fought at Quaker's Hill under General Sullivan. There were also constant details for guard duty. Frequently twenty or more of the town's youth were at Cambridge or Rutland in charge of prisoners.

The paper currency had steadily depreciated and

counterfeit money was so abundant that the most reputable persons innocently received and paid it out. Trade was fast becoming a system of barter. Foolish attempts were made to fix the prices of common necessities by law, and annually committees were chosen by the town to make up a schedule of these prices. June 28, 1779, the town solemnly voted "that the price of the Comodityes of the farmer and any other article do not rise any higher than at this time."

Eighteen men of the town were mustered June 25, 1779, for nine months, to re-enforce the Continental Army, and a company of militia were serving at Claverack with Captain Luke Wilder, Andrew Haskell being his lieutenant.

The State Constitution was voted upon May 13th, and one hundred and three favored it, while only seven declared against it. Dr. William Dunsmoor, Captain Ephraim Wilder and Captain William Putnam were Lancaster's delegates in the convention which formed it. In June, 1780, the town was called upon to furnish forty men for six months' service. Certain of the radical leaders, and especially Josiah Kendall, who had been vociferously patriotic in the earlier days of the war, avowed their belief that the men could not be obtained, and counseled non-compliance with the demand of the government. Captain Samuel Ward, who had narrowly escaped proscription for his conservative views, saw his opportunity and promptly advocated in an eloquent harangue immediate obedience to the requisition, at whatever cost. He was made chairman of a committee of twelve empowered to hire the soldiers "on any terms they think proper." The forty men within twelve days were on their way to the camps, each having been promised "£1400 lawful money, or £13 6*s.* 8*d.* in Corn, Beef and Live Stock or any Produce as it formerly used to be sold." From this the silver dollar would seem to have been worth one hundred and five paper dollars at that date.

During both 1780 and 1781 a full company of militia served in Rhode Island for from three to five months, and others were stationed for similar terms of service on the Hudson. The rolls found indicate that fully one-quarter of the whole male population of Lancaster above the age of sixteen, were kept constantly in the army during the most eventful years of the struggle for freedom. Over six hundred names of Lancaster soldiers in the Revolution are already listed. Almost no records of casualties are discovered in muster-rolls, but they disclose the names of thirty men of Lancaster who died of wounds or disease between the battle of Lexington and 1779. Those who for any cause were exempted from military service lived lives of toil and sacrifice. Money was annually appropriated for the care of soldiers' families, and the widows and orphans received systematic aid after the war, the town's expenditure being finally refunded by the State. Lancaster is credited with having paid for such purposes from 1781 to 1785 the sum of £1852 1*s.* 4*d.*

Twenty-three residents of the extreme southerly portion of the town, May 15, 1780, presented a petition to be set off to Shrewsbury. To this public consent was given in June, and an act of Legislature consummated the division February 2, 1781. The area thus parted with was about six square miles, and was incorporated with Boylston in 1786. The Second Precinct had by 1780 so grown as to outvote the older portion of Lancaster, and the autonomy it had long sought could no longer be denied. April 25, 1781, Chocksett was incorporated under the name of Sterling, in honor of General William Alexander, Earl of Sterling. By this change Lancaster lost over half of its population and but thirty-six and one-half square miles of its territory remained.

The noise and smoke of rejoicing over honorable victory and independence won soon passed, and there was time for the town to reckon up its sacrifices and take account of domestic resources and necessities. The outlook was not encouraging. The paper currency had become worthless and disappeared. Farmers and mechanics were crushed with debt, and half maddened by burdensome taxation, while lawyers and merchants were reaping a golden harvest. Bankrupt sales were advertised on every hand. Soon a spirit of anarchy was born of the general discontent, which culminated in Shays' Insurrection. No citizen of Lancaster is known to have joined the armed force of malcontents, and very few sympathized with the appeal to violence. The town sent delegates to the county conventions, voted in favor of enactment of laws to alleviate the distress of the people, and recommended relieving the farming interest by excise and import duties.

But when, January 16, 1787, the two militia companies were called out by Col. William Greenleaf, the sheriff, the men were found almost unanimously in favor of supporting the law, and upon his calling for twenty-eight volunteers to march to the defence of the courts at Worcester on January 23d, thirty-one offered themselves. Lancaster was the rendezvous of the troops from the eastern part of the county, and Captains Nathaniel Beaman and John Whiting led companies in the regiments which, under General Benjamin Lincoln, pursued Shays and scattered his "regulators." The service was not long nor attended with bloodshed, but it was arduous in the extreme. Those who participated in it often grew eloquent in reminiscence of the terrible night march from Hadley to Petersham, February 3, 1787, facing a furious snowstorm in a temperature far below zero. Among those serving as privates was Captain Andrew Haskell. Three years later this veteran soldier was slain in battle with the Indians at the defeat of General Arthur St. Clair. Hon. John Sprague accompanied the expedition against Shays upon the staff of General Lincoln, as his legal adviser.

Authority had been obtained by an act dated February 15, 1783, for lotteries to meet the extraordinary cost of rebuilding and repairing bridges and causeways. Twelve classes of the Lancaster Bridge Lottery were drawn—the net proceeds of which amounted to only £3286; and the results in other respects did not encourage the continuance of the scheme.

By this time there were ten bridges over the Nashua rivers, and eight of them were a public charge. They were all built with one or more trestles in the bed of the stream, and an ice jam or unusually high freshet often tore several of these from their anchorage. A September flood in 1787 swept away the Ponikin saw-mill, and damaged or demolished half the bridges in town. The Sprague, Ponikin and Atherton bridges were rebuilt in 1788. The Sawyer bridge, so-called, on the site of the present Carter's Mills bridge—whither it had been moved from the discontinued Scar road in 1742—was rebuilt in 1789.

The majority in Lancaster were opposed to the ratification of the National Constitution, and elected Hon. John Sprague their delegate to the State convention of January, 1788, with the usual instructions as to their wishes. Mr. Sprague, however, finally favored the ratification, although but six of his Worcester County associates voted with him. This use of his discretion did not seriously offend his constituency for at the first meeting for choice of a Presidential elector, December 18, 1788, he received thirty-one of the sixty-two votes cast in Lancaster.

Rev. Timothy Harrington became physically unable to attend to the duties of his pastorate in 1790, and on October 9, 1793, Rev. Nathaniel Thayer was ordained as his colleague, receiving as a settlement two hundred pounds, with a yearly salary of ninety pounds. Mr. Harrington was born at Waltham, February 10, 1716, was graduated at Harvard College in 1737, and died at Lancaster, December 18, 1795, having been pastor over the church here forty-seven years. By a first wife, Anna Harrington, he had two sons and four daughters. He married Ann, the widow of Rev. Matthew Bridge, April 11, 1780. He was a lovable man, attracting young and old by his gentleness, affability and simplicity of manners. He was especially remarkable for his day, because of his liberality of sentiment, shown in speech and conduct—a broad charity toward all humanity. Three of his sermons were published, and his century discourse was reprinted in 1806 and 1853.

In 1791, February 7th, the proprietors voted "to relinquish to the several towns in the bounds of Old Lancaster all their right to roads in the respective towns."

An increased interest in the subject of education began to be visible in 1788. Some of the leading citizens organized a central grammar school, and Timothy Whiting and Jonathan Wilder were elected a town visiting committee—the first recorded—to serve with the minister and two others chosen by the supporters of the school. The following year, under a new State law, the town was divided into districts, thirteen in number. In 1790 a new building for the grammar school was erected on common ground "opposite General Greenleaf's garden." The next year one hundred and fifty pounds were appropriated for education, one-third of which was devoted to the grammar school, one hundred being divided among the districts. From 1792 Rev. Nathaniel Thayer became chairman of the school committee annually elected by the town, which at first consisted of seven, but was increased to eleven in 1796.

Numerous landed estates passed from the ownership of the older families shortly after the Revolution, in all sections of the town, and many new names began to appear in the tax-lists. The ruling spirits in the town management were Hon. John Sprague, Capt. Samuel Ward, General John and Judge Timothy Whiting, Sheriff William Greenleaf, Michael Newhall, Col. Edmund Heard, Ebenezer Torrey, Joseph Wales, Merrick Rice, William Stedman, Jonas Lane, John Maynard, Jacob Fisher, Eli Stearns and John Thurston, not one of whom was a lineal descendant of the early settlers. At the north part of the town many of the old residents became converts of Mother Ann Lee, and joined the Shaker community. A little colony of Reading families succeeded to their farms. At the south end, as the nineteenth century opened, the Burditts, Lowes, Rices and Harrises, mostly from Leominster and Boylston, came, bringing with them the horn-comb industry. For a few years, besides the saw and grist-mills of Col. Greenleaf, at Ponikin, a trip-hammer and nail-cutting machine were in operation. The quarry in the northern end of the town sent annually to Boston a large quantity of roofing-slate; but these industries were short-lived. The first post-office was established in Lancaster, April 1, 1795, with Joseph Wales as postmaster. Jonathan Whitcomb carried the mails and passengers daily to and from the city, by the "Boston, Concord and Lancaster mail line" stages, when the century closed.

CHAPTER V.

LANCASTER—(*Continued*).

Hon. John Sprague— Cotton and Woollen Mills—The Academy—War of 1812— The Whitings— The Brick Meeting-house— Lafayette— The Printing Enterprise— Dr. Nathaniel Thayer— New Churches— Clinton Set Off—Bi-Centennial—Schools—Libraries—Cemeteries.

SEPTEMBER 21, 1800, Lancaster lost her leading citizen by the death of Hon. John Sprague. He had been for thirty years resident of the town, coming from Keene, N. H., in 1770, to form a law partnership with Abel Willard. He was a son of Noah and Sarah Sprague, of Rochester, Mass., born June 21, 1740, and was graduated at Harvard College in 1765. He served the town ten years as Representative and

two as Senator, was sheriff for three years, and for two years was chief justice of the Court of Common Pleas. He was widely respected as a peacemaker, a safe adviser. a learned lawyer and an impartial judge.

In 1805, Moses Sawyer and Abel Wilder built the dam and first mill, at the bridge over the Nashua in the village then called New Boston. This water-power soon came into possession of Elias Bennett, and a fulling-mill was started in addition to the saw and grist-mills. The clothiers and wool-carders successively here were Ezekiel Knowlton, Asa Buttrick and Ephraim Fuller. Asahel Tower, Jr., also operated a nail-cutting machine in connection with the saw-mill. Samuel Carter purchased the property, and, about 1844, built a cotton factory, which was leased to the Pitts Brothers and others. This was burned July 7, 1856, and the present factory built upon the same site.

In 1809 Poignand & Plant founded the first cotton factory in Lancaster on the site of Prescott's mills, and James Pitts, in 1815, built the second, upon the Nashua. The details of these important enterprises will be found in the history of Clinton.

Burrill Carnes, Sir Francis Searles and Capt. Benjamin Lee, three Englishmen of wealth, during about ten years successively owned and lived upon the Wilder farm, on the Old Common, now occupied by the State Industrial School, and by lavish expenditure gave it the semblance of an old-world baronial estate. In 1804 the place was bought by Maj. Joseph Hiller, of Salem, who resided here until his death, in 1814. He was an officer of the Revolution, had been appointed by Washington the first collector of Salem, and was an ardent Federalist, a Christian gentleman and a very valuable accession to Lancaster. His two highly accomplished daughters became the wives of their cousins, Capt. Richard J. and William Cleveland, who also came to reside here, and won prominence in town councils. As children came and grew to boyhood Capt. Cleveland and his wife felt the need of a higher education for them than the town's grammar school could give, and persuaded several gentlemen to join in establishing the Lancaster Latin Grammar School in 1815.

This classical school was kept for about eleven years upon the Old Common. The teachers' names best tell the quality of the education there afforded: Silas Holman, 1815; Jared Sparks, 1816; John W. Proctor, 1817; George B. Emerson, 1818-19; Solomon P. Miles, 1820–21; Nathaniel Wood, 1822–23; Levi Fletcher, 1824; Nathaniel Kingsbury, 1825. These scholarly young men, together with Warren Colburn and James G. Carter, at the most enthusiastic period of life's work, sitting at the hospitable board of the Clevelands, discussed with the cultured host and brilliant hostess the need of a new education which should develop the reasoning powers of youth; and here they formed the opinions upon which some of them, as the most influential factors, remodeled the common-school system of the State.

September 15, 1808, Maj. Hiller, Hon. William Stedman and Capt. Samuel Ward were chosen by the town to draft a petition to President Jefferson for a suspension of the embargo, which it was alleged had closed the chief sources of the nation's wealth and destroyed the customary incentives to enterprise and virtuous industry. The friends of the French party, as the Jeffersonians were nicknamed, were but few in Lancaster. At a special town-meeting, June 24, 1812, resolutions remonstrating against declaring war with England as suicidal and unnecessary were passed by a vote of one hundred and fifteen to fifteen. August 20th, Rev. Nathaniel Thayer, it being a fast day, preached a sermon denouncing what he termed the iniquitous policy of the President. But when, in September, 1814, the British fleet appeared off the coast, and Boston was fearing an attack, there was no lack of belligerency. Among the first military companies to report to the Governor, in answer to his summons, were the light artillery and an infantry company of Lancaster, who, after a service at the meeting-house, on Sunday, September 14th, proceeded to Cambridge. Capt. Ezra Sawyer marched his infantry command back the same week, having been ordered out by mistake. The artillery, forty men all told, remained on duty until November 5, 1814. Capt. John Lyon, who led the company from Lancaster, was superseded by Capt. Silas Parker. Henry, Levi and Fabius Whiting served with distinction in the regular army, attaining the rank of first lieutenant during the war. Henry Moore was killed at Brownstown, Josiah Rugg died in the army, and Nathan Puffer served in the United States artillery.

September 3, 1810, John Whiting died at Washington, aged fifty years. He had been commissioned lieutenant-colonel of the Fourth United States Infantry in 1808. Both he and his brother Timothy, Jr., served throughout the War of the Revolution, during which their father came from Billerica to Lancaster. Both became associate justices of the Court of Sessions, and were more than once candidates of the Jeffersonian party for Congress. An indication of John Whiting's ability, probity and lovable character is found in the fact that when two Lancaster men were candidates for Congressional honor, in 1804, he received eighty-four votes, while William Stedman, the regular Federalist nominee, had but seventy-six, although it was a fevered period in partisan politics and the town's voters were usually more than three-fourths Federalists. Tradition still recalls Whiting's suave dignity when presiding over a town-meeting and his courtly grace in social assemblies. He was deacon in the church and brigadier-general in the militia. His daughter, Caroline Lee, as Mrs. Hentz, became a very popular writer of verse and fiction. His son, Henry, Brevet Brigadier-General, U. S. A., published two volumes of poetry, and contributed articles to the *North American Review*.

The corner-stone of the brick meeting-house was

laid with appropriate ceremony July 9, 1816. Two acres for the site were purchased for $633.33, being part of a farm belonging to Capt. Benjamin Lee. The designer of the building was Charles Bulfinch, the earliest professional architect in New England, who also designed the State House in Boston and that at Augusta. Thomas Hersey was the master-builder. The cupola has been pronounced by competent critics to be almost faultless in its proportions. On Wednesday, January 1, 1817, the building was dedicated. The final cost of the structure complete was $20,428.99, and it was proposed to pay for it by sale of the pews. They were accordingly appraised, eighteen being given the highest valuation, $230, the lowest being priced at $30. At the auction sale Capt. Ward paid the highest sum, $275, for pew No. 4; Capt. Cleveland paid $255 for pew No. 57. A bell weighing thirteen hundred pounds was presented to the parish by several gentlemen. It was cracked within a few years, had to be recast, and now weighs eleven hundred pounds. The old meeting-house stood until 1823, and was used as a town-house. In that year a new town-house was built largely from the material obtained in tearing down the old one.

In the year 1823 the town dared a temporary departure from the old style of bridge construction. For twenty years the subject had been anxiously discussed by special committees and town-meetings. One committee had presented and advocated a plan for a double arch stone bridge, but the cost was great and there was a well-founded fear that the central pier would seriously obstruct the passage of ice. The town also seriously considered a curiously unscientific wooden structure, in which the planking was to be laid upon the top of seven timber arches, unbraced and without chords. Almost yearly one or more of the trestle bridges yielded to ice or freshet, and was whirled down stream. Daniel Farnham Plummer, a wheelwright of South Lancaster, exhibited for several years a model of a wooden arch bridge, which he claimed to have invented. This model, three or four feet in length, made of hickory sticks about as thick as one's finger, readily bore the weight of a man; and the town, when the Atherton and Centre bridges next went seaward, voted to adopt Plummer's principle. The new bridge was out of the reach of flood, but had in itself sufficient elements of instability, and the wonder is that it stood ten years. The town returned to the stereotype trestle form again, except at the Centre, Ponikin and North Village, where covered lattice girders were built, which did good service for from thirty-five to forty years. The river bridges were all finally replaced between 1870 and 1875 with iron structures, for which, including the thorough rebuilding of most of the stone abutments, the total expenditure was thirty-five thousand eight hundred and fifty dollars.

Friday, September 3, 1824, is a date famous in the annals of Lancaster, because of the visit of Lafayette, the nation's guest. The general had passed the night at the mansion of S. V. S. Wilder in Bolton, and at half-past six in the morning, escorted by cavalry, proceeded to Lancaster by the turnpike. He was received at the toll-gate with a national salute from the artillery, and upon arrival near the meeting-house was met under an elaborately decorated arch by the town's committee and conducted to a platform upon the green. There, in the presence of an immense concourse from all the country around, he was welcomed in an address by Dr. Thayer, to which he made brief response, evidently deeply affected by the eloquent words to which he had listened, and by the spontaneous homage of a grateful people. After a brief stay, during which the surviving soldiers of the Revolution were presented to him, amid the booming of cannon and the tearful acclamations of the multitude, the cavalcade moved on towards Worcester.

To this time and for a decade later the martial spirit of the people was kept bright by the militia laws. At least once a year the peaceful highways of the town were wont to bristle with bayonets; and the rattle of drum, the squeak of fife and the odor of burnt cartridges overpowered all the sweet sounds and smells of Nature. This was the "May training." The "muster-fields" are historic, and old citizens continue to recount the humors of the parades and sham-fights. The original territory of Lancaster had sixteen military companies, which, with half a dozen from adjoining towns, made up the Lancaster regiment. The town kept up a mounted troop until 1825, and also had a light artillery company and one of light infantry, besides the ununiformed militia.

The one hundred and fiftieth anniversary of the destruction of the town by the Indians was celebrated February 21, 1826, when an oration was delivered by Isaac Goodwin and a poem read by William Lincoln. The former was printed.

So early as 1792 public attention was called to the desirability of a canal from the seaboard to the Connecticut, through Lancaster and Worcester, and preliminary examination of a route was made. This project was again brought forward in 1826, and Lancaster was earnest in its promotion. Loammi Baldwin made a survey through Bolton and Lancaster, his line crossing the Nashua at Carter's Mills; but capital failed to forward the enterprise. The traffic, as before, continued to be conducted by heavy wagons drawn by teams of horses. Forty such wagons daily passed through the town to and from Boston, bearing as many tons of merchandise or farm products. At intervals of a mile or two stood taverns, which entertained many wayfarers, and nightly attracted to their sanded-floored bar-rooms a jovial company, which grew hilarious as the hours sped, under the inspiration of unlimited flip. The most direct route for the Boston and Fitchburg Railway lay through Lancas-

ter and Bolton, but the blind selfishness of inn-keepers and stage proprietors was able to create sufficient hostility to the road to carry it by a more tortuous line through towns then less populous. Repentance soon followed, and upon the inception of the Worcester and Nashua road its projectors were met in liberal spirit. Hopes of a more direct connection with Boston have been often raised, and, finally, April 30, 1870, the Lancaster Railroad Company was incorporated. Its road was built by George A. Parker, who became president of the company, but has never been used owing to a controversy between the Fitchburg and Worcester and Nashua Railway corporations.

Capt. Samuel Ward died August 14, 1826, aged eighty-seven. He had for fifty-nine years been resident in Lancaster, an active and liberal citizen. Born in Worcester, September 25, 1739, he was for a time a pupil of John Adams, but entered the army when a boy of sixteen. His career to the date of his coming to Lancaster has been outlined in a previous page. He was devoted to mercantile pursuits until the last twenty years of his life, which he spent in the care of his ample landed estate. His generous hospitality brought many guests to his board, and the charm of his bright presence and richly-fraught speech glows for us in the grateful reminiscences of those who were blessed by his friendly interest. He left a legacy of five hundred dollars, the income of which he desired should be annually distributed "to those who are unfortunate and in indigent circumstances" in Lancaster. This sum has been increased by sundry similar legacies, and forms the Lancaster Charitable Fund. Capt. Ward had outlived wife and children many years, and willed his estate to his niece, Mrs. Dolly Greene, wife of Nathaniel Chandler. Squire Chandler, as he was always called, thenceforward resided in Lancaster. He was a man of culture, bright wit and quaint individuality; born in Petersham, October 6, 1773, graduate at Harvard College in 1792, died June 4, 1852. Madame Chandler survived her husband seventeen years, living to the age of eighty-five. Their daughter, Mrs. Mary G. Ware, remains in possession of the homestead.

During 1826 a brick, two-storied structure was built a little south of the meeting-house, and the Latin Grammar School was removed thither from the Old Common. Hitherto a school for boys only, from this time both sexes were admitted. The building was paid for by subscription, and the ground for it was the gift of George and Horatio Carter. An act of incorporation was obtained February 11, 1828, by the subscribers, under the title of the Lancaster Academy. April 7, 1847, a second corporation with the same title took possession of the building by purchase, and, in 1879, the town having bought it, tore it down to make room for the present grammar-school house. The first teacher of the academy in this locality was Nathaniel Kingsbury. He had numerous successors; among those who served for several years were Isaac F. Woods, Henry C. Kimball, A.M., and William A. Kilbourn, A.M.

The year 1826 was also memorable for the publication of the first systematic history of the town, under the title of "Topographical and Historical Sketches of the Town of Lancaster," occupying ninety pages of the *Worcester Magazine*. Its able and painstaking author, Joseph Willard, Esq., was descended from a Lancaster family, and practiced law here from 1821 to 1831. He proposed publishing a more comprehensive history of Lancaster, and made valuable collections of material for it, but it was postponed for other literary work, and at his death, in 1865, was found too incomplete for print.

During 1827 the brothers, Joseph and Ferdinand Andrews, wood and copper engravers, came to Lancaster from Hingham. The latter had been editor of the *Salem Gazette*. George and Horatio Carter built the brick house nearly opposite the hotel, in Lancaster Centre, for a book-store and printing office, and thence, March 4, 1828, the first number of the *Lancaster Gazette* was issued. It was a sheet of five columns to the page, edited by Ferdinand Andrews, and printed every Tuesday. One of its standing advertisements was: "Wood, corn and oats received in pay for the Lancaster Gazette." The last number was printed April 13, 1830, and Lancaster had no newspaper again until the birth of the *Lancaster Courant*, in 1846.

Maps had been printed and colored here as early as 1825 by the Carters, who were copper-plate printers. Although the newspaper enterprise did not prosper, the firm of Carter & Andrews did an extensive business in book publishing, engraving on wood, copper and steel, map printing and coloring, book-binding, etc., employing nearly one hundred persons. A type foundry was established by Charles Carter, and a lithographic press was set up by Henry Wilder in connection with the firm. In 1834 the business passed under control of Andrews, Shephard & Hastings, and, in 1835, Marsh, Capen, Lyon & Webb took possession, using for their publication title "The Education Press." The enterprise was abandoned in 1840. Among many books printed in Lancaster were: "Peter Parley's Works," "Farmer's General Register of the First Letters of New England," "The Comprehensive Commentary," "The Common School Journal," various standard school books, "The Girl's Own Book," by Lydia M. Child, a series called "The School Library," etc. The wood engraving was superior to any work of the kind before that date in the United States.

The Lancaster Bank was incorporated in the name of Davis Whitman, Jacob Fisher, Jr., Stephen P. Gardner and associates, April 9, 1836, with a capital of one hundred thousand dollars. This was increased by twenty-five thousand dollars in 1847, again by twenty-five thousand in 1851, and by fifty thousand in

Nath'l Thayer.

1854. In 1876 the capital was reduced to the original amount, and in 1881 the bank was removed to Clinton. The first president was James G. Carter, who was succeeded in 1840 by Jacob Fisher, Jr. He resigned in 1874 and George W. Howe was chosen president. Caleb T. Symmes, who had been cashier for thirty years, retired in 1874 to be succeeded by Wm. H. McNeil. Closely connected with this was the Lancaster Savings Bank, incorporated in 1845, which, after an exceptionally prosperous career, was ruined by a series of unfortunate investments and placed in the hands of receivers. The deposits amounted to about one million dollars, of which the depositors have received fifty-three and one-third per cent., and a small balance awaits the settlement of the Lancaster Bank affairs.

The dam and mills at Ponikin, from the first saw-mill built there in 1713 to the existing cotton factory, have seen many changes in ownership, location and production. The chief proprietors have been Samuel Bennett, Joseph Sawyer, Col. Joseph Wilder, Col. William Greenleaf, Major Gardner Wilder, Charles E. Knight, Charles L. Wilder, etc. When the last-named built the present dam, only traces of the older ones, lower upon the stream, were visible, but about a mile up the river stood a prosperous saw and grist-mill, owned by the Shakers, but built by Sewall Carter about 1828, near the site of a saw-mill founded by David Whitcomb as early as 1721. This mill was bought by the American Shoe Shank Company, and for several years leather board, patent shanks, etc., were manufactured there. The works were burned in December, 1883.

While journeying for health and recreation Nathaniel Thayer, D.D., died very suddenly at Rochester, N. Y., June 23, 1840. There had been for nearly two centuries but one meeting-house, one religious society in Lancaster. Sectarian differences there were, but they seldom disturbed the harmony of social relations. The revered pastor was always the prominent central figure of the community, the father of the parish. Nathaniel Thayer was twenty-four years of age when he began his ministerial labors as the colleague of Rev. Timothy Harrington, having been born at Hampton, N. H., July 11, 1769. He was the son of Rev. Ebenezer and Martha (Cotton) Thayer. His mother was a lineal descendant of John Cotton, the first minister of Boston, and through her he is said to have inherited certain mental and moral features which had distinguished her ancestors,—"an uninterrupted succession of clergymen for nearly two hundred and thirty years." He was fitted for college in the first class at Phillips Exeter Academy and graduated at Harvard in 1789. Two years after his coming to Lancaster, on October 22, 1795, he was married to Sarah Toppan, of Hampton, and made his home at first in the old house now generally known as Mrs. Nancy Carleton's, removing, after the death of his venerable colleague, to the parsonage which stood a few feet south of the well in front of Mrs. Nathaniel Thayer's present residence. He received the degree of S.T.D. in 1817.

Dr. Thayer was in person not over medium height, nor was he otherwise of rare mould, but his dignified mien and a melodious voice of great compass and flexibility gave impressiveness to his oratory. Twenty-three occasional sermons of his have been printed. Though always appropriate and sometimes rich in thought happily expressed, the effectiveness traditional of his discourses was largely due to the thrilling tones and skilful emphasis of the orator. He was conscientiously averse to repeating an old sermon even when his time was overtasked. Because of his power in the pulpit and wisdom in church polity he was frequently summoned even from great distances to aid in ordination and council.

But not alone nor chiefly for his public teachings was he prized by his people. His benignant presence was sought as a blessing in times of joy, a comfort in great sorrow. The prayer from his lips was the never-omitted prelude to business at the town-meeting. The young bashfully, the old unreservedly confided their hopes, soul experiences and troubles to him, assured of hearty sympathy and wise counsel. He was the depositary of family secrets; the composer of neighborhood disputes; the ultimate referee in mooted points of opinion or taste. To a gravity which might have graced the Puritan clergymen, his maternal ancestors, he joined an affability that showed no discrimination in persons, and made him beloved of children.

The day was never too long for his activity. In the summer mornings by five o'clock the early travellers saw him tilling his garden by the roadside. In the after part of the day he rode about his extended parish, stopping to greet every one he met with kindly inquiry, carrying consolation to the sick and sorrowful, help to the destitute, the refreshment of hope to the despondent, cheerfulness and peace to all. The charm of his fireside, with its hearty hospitality, freely and unostentatiously open to every chance guest, its frugal comforts made sweeter by abounding Christian graces, was never forgotten by those who came under its influence. The wife and mother, who presided with simple dignity over the household, survived her husband exactly seventeen years, falling asleep at the ripe age of eighty-two. In 1881–82 an apse was added to the brick meeting-house, called the Thayer Memorial Chapel, in honor of Dr. Thayer and his wife. In it, besides the spacious chapel, are an elegantly appointed church parlor, a kitchen with closets, etc., a Sunday-school library room, basement and entrance hall. Its cost, amounting to about fifteen thousand dollars, was defrayed by a popular subscription among the friends of the church, and its memorial character is indicated by portraits and a suitably inscribed wall-tablet.

Rev. Edmund Hamilton Sears, of Sandisfield, graduate of Union College, 1834, was installed as Dr. Thayer's successor December 23, 1840. Failing health compelled him to obtain rest from the cares of so

large a parish, and his pastoral connection with the First Church closed April 1, 1847, to the great grief of his people, and the regret of all citizens of the town; for his presence had ever been a quickening influence to true and earnest living. His subsequent life was largely devoted to literary labors, and of his writings, both prose and poetry, some have won a wide reputation, and that not confined to the so-called religious circles. In 1871 Mr. Sears was honored by Harvard College with the degree of S.T.D. He died at Weston, January 16, 1876. Before him no minister of the First Church had asked or received dismission.

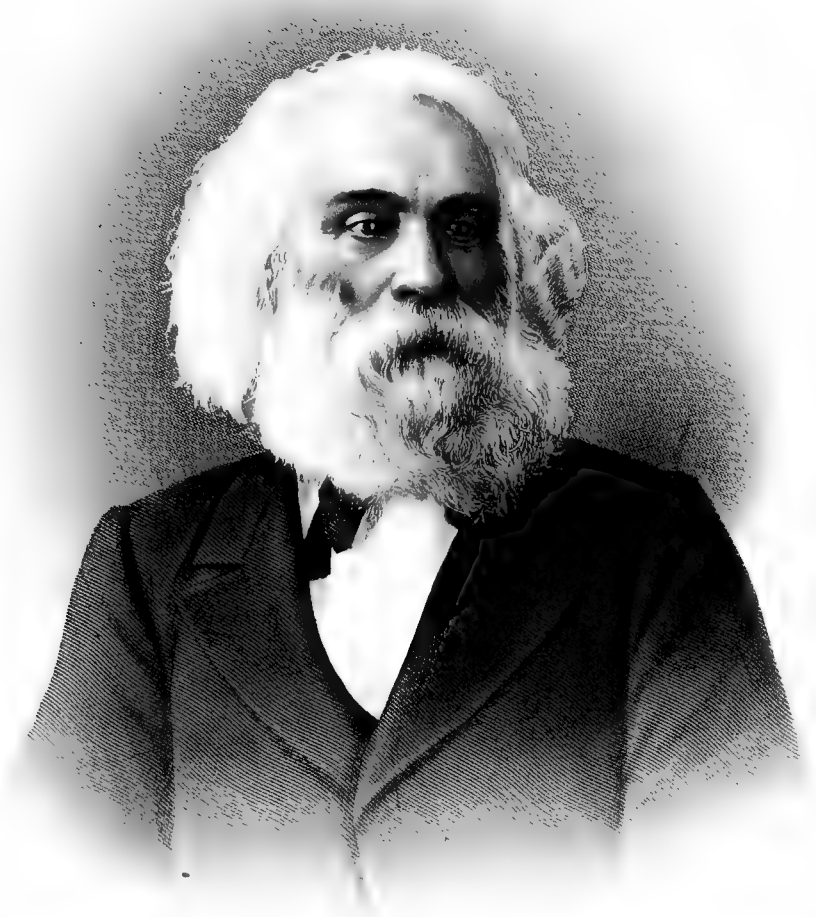
It is now two hundred and thirty-five years since Master Joseph Rowlandson began his ministrations in the Nashua Valley, and there have been but eight incumbents of the pulpit in the church he founded, two of whom were slain when their joint service amounted to but twelve years. The present pastor, George Murillo Bartol, was unanimously called to his office a few months after the loss of Mr. Sears, and the fortieth anniversary of his ordination was feelingly celebrated by his parishioners on August 4, 1887. He was born at Freeport, Me., September, 18, 1820, fitted for college at Phillips Exeter Academy, was graduated at Brown University in 1842, and from the Cambridge Divinity School in 1845. His power for good has not been limited by parish confines, nor restricted to the stated religious teachings of his order. The clergy in Lancaster had ever been held the proper supervisors of the schools, and upon his coming Mr. Bartol was at once placed in the School Board, and was annually rechosen, until, having given faithful service, usually as chairman of the board, during twenty-one years, he felt constrained to ask relief from this onerous duty. From the establishment of the public library he has always stood at the head of the town's committee, entrusted with its management, and in its inception and increase his refined taste, rare knowledge of books and sound literary judgment have been invaluable. With talents and scholarship that invited him to a much wider field of service, he has clung lovingly to his quiet country parish, making it the centre of his efforts and aspirations. He is an enthusiastic lover of Nature in all her moods, a discriminating admirer of beauty in art, earnest in his soul convictions, although averse to sectarian controversy —and so tender of heart as to seem charitable to all human weakness, save that he is intolerant of intolerance.

The Universalist Society was organized April 3, 1838, and held its meetings for several years in the academy building. Rufus S. Pope, James S. Palmer, Lucius R. Paige, S.T.D., and John Harriman successively supplied the pulpit until 1843. A meeting-house was built in South Lancaster, and dedicated April 26, 1848, but seven years later was closed, in 1858 was sold to the State, and now stands in the grounds of the Industrial School. Rev. Benjamin Whittemore, born in Lancaster, May 3, 1801, son of Nathaniel, was pastor of the society from 1843 to 1854. He received the degree of S.T.D. from Tufts' College in 1867, and died in Boston, April 26, 1881, having been totally blind for the last ten years of his life.

The First Evangelical Congregational Church was organized at the house of Rev. Asa Packard, a retired clergyman resident in Lancaster, February 22, 1839. Mr. Packard was a fifer in the Continental Army, was seriously wounded at Haerlem Heights, entered Harvard College and was graduated in 1783. He was for many years a noteworthy figure in the town, by reason of his old-school manners and dress. He wore knee-breeches and silver buckles, the last seen in Lancaster. March 20, 1843, he was found dead in his chair, being then eighty-five years of age. He preached here but a few times. Rev. Charles Packard was ordained January 1, 1840, resigned his pastorate here in 1854, and died at Biddeford, Me., February 17, 1864. He was the son of Rev. Hezekiah Packard, born in Chelmsford, April 12, 1801, and was graduated at Bowdoin College, 1817. During his valuable ministry in Lancaster, Mr. Packard was familiarly known and greatly esteemed by all classes. Firm in opinion, outspoken where a principle was involved, he was, nevertheless, genial, respectful to the convictions of others, and always a preserver of peace. The meeting-house was dedicated December 1, 1841, was enlarged in 1868, and its accommodations increased in 1852 and 1884, by the addition of a chapel, church parlor, etc.

The successors of Mr. Packard have been: Franklin B. Doe, graduate of Amherst, 1851, ordained October 19, 1854, resigned September 4, 1858; Amos E. Lawrence, graduate of Yale, 1840, installed October 10, 1860, resigned March 6, 1864; George R. Leavitt, graduate of Williams, 1860, ordained March 29, 1865, resigned 1870; Abijah P. Marvin, graduate of Trinity, 1839, begun preaching here 1870, was installed May 1, 1872, and asked dismission September 12, 1875, but remains a resident of Lancaster, and an actively useful factor in its affairs; Henry C. Fay, graduate of Amherst, employed 1876; Marcus Ames, acting pastor, 1877; William De Loss Love, Jr., graduate of Hamilton, 1873, ordained September 18, 1878, dismissed July, 1881; Darius A. Newton, graduate of Amherst, 1879, ordained September 21, 1882, dismissed 1885; Lewis W. Morey, graduate of Dartmouth, 1876, is now acting pastor.

The New Jerusalem Church of Lancaster was not legally organized until January 29, 1876, but neighberhood meetings had been held by believers of Swedenborg's doctrines so early as 1830, and for many years Reverends James Reed, Abiel Silver and Joseph Pettee at intervals visited the town and held services, usually in an ante-room of the town hall. Richard Ward was called as the first pastor in 1880, and was installed on the same day with the dedication of the



chapel, December 1, 1880. Besides the tasteful chapel, the society owns the parsonage and a small fund, due to the beneficence of Henry Wilder, who was for about twenty years the reader at meetings of the New Church believers. At his death his property was found to be willed for the establishment of this church.

The Catholic chapel was consecrated July 12, 1873. The parish is in charge of Rev. Richard J. Patterson, of Clinton.

The Seventh-Day Adventist Church in South Lancaster was organized in 1864, and its meeting-house was dedicated May 5, 1878. Stephen N. Haskell was ordained its elder in August, 1870.

The old town-house being inadequate to the public needs, in April, 1847, it was voted to erect a new one of brick "between the Academy and the brick meeting-house," if land could be obtained, in accordance with plans furnished by John C. Hoadley, a noted civil engineer then living in Lancaster. The building was completed in 1848, costing about seven thousand dollars. It had only a single story at first, but the hall proved almost useless as an auditorium because of echoes, and in 1852 a second story was added at an expense of twenty-five hundred dollars. This has been used ever since as a school-room. The annex at the rear was built in 1881.

Under the stimulus of the comb manufacture and the temporary prosperity of the cotton factories of Poignand & Plant and James Pitts, the southerly portion of Lancaster had slowly grown in population to nearly fifty families by 1830, and became known as the Factory Village. The valuable water-power of the locality was not half developed for lack of enterprise and capital. In due time these came, and combined with them came rare inventive genius. The Clinton Company began its prosperous career in the manufacture of the Bigelow coach-lace in 1838. In 1841 the Bigelow quilt-looms were started. In 1844 the foundations of the great gingham-mills on the Nashua were laid. Soon after the Bigelow power-looms revolutionized the making of Brussels carpeting. Lancaster suddenly awoke to find, built upon Prescott's mill-site, the bustling, ambitious village of Clintonville, embracing within a single square mile more people than dwelt in all its borders elsewhere. Another division of the old town was seen to be inevitable, and Lancaster, on the 15th of February, 1850, granted to her daughter, Clinton, 4907 acres of land and independence, which grant the Governor and Legislature confirmed on March 14th.

June 15, 1853, a great multitude from near and afar assembled in Lancaster to commemorate the two hundredth anniversary of the incorporation of the town. After exercises at the meeting-house, which included an oration by Joseph Willard, the historian, a procession was formed and marched to the elm-shaded lawn at South Lancaster, where three of the town's ministers, Whiting, Gardner and Prentice, had lived and died. There hosts and guests found tables loaded with food, and the usual social exercises ended the festivities. The proceedings of the day were published, forming a volume of two hundred and thirty octavo pages, containing much local history.

The eminent educator, Professor William Russell, established the New England Normal Institute in Lancaster, May 11, 1853. It had but a brief life, though a very useful one, ceasing to be in the autumn of 1855. Dependent for support upon the fees received of students, it could not longer compete with the free normal schools of the State. Professor Russell thenceforward made Lancaster his home, and here died August 16, 1873, "universally beloved and respected for his many virtues, Christian graces and scholarly attainments." He was a native of Glasgow, Scotland, born April 28, 1798, and a graduate of Glasgow University.

Lancaster began the printing of its annual school reports with that of Rev. Edmund H. Sears for the school year 1842–43. The first free high school was established in 1849, but was discontinued after the separation of Clinton in 1850, although the town from time to time voted to pay the tuition at the academy of scholars qualified for a high school course. In 1873 the free high school was re-established and located in the upper rooms of the town hall, and the academy ceased to exist. In 1851 the town, by authority of a recent enactment, abolished the school districts, since which year four of the original eleven district schools have been abandoned, and all schools of suitable size have been graded into primary and grammar departments. New school buildings, with modern furniture and appointments, also have replaced the time-worn structures owned by the districts. The town has nearly always stood first in rank in the county, and among the first twenty-five of the State in its expenditure for education. The appropriation for 1888 is six thousand eight hundred dollars, the children of school age numbering three hundred and twenty-four.

It is now one hundred years since the first recorded election in Lancaster of a school visiting committee. Dr. Thayer became chairman of the board in place of Rev. Timothy Harrington in 1794, and held the position forty-six years, until his decease. Silas Thurston, a veteran schoolmaster, was first elected in 1820 and served for thirty-seven years. He also died in office, October 25, 1868. Capt. Samuel Ward served about twenty-five years between 1788 and 1816. Rev. George M. Bartol was of the school committee during twenty-one years between 1848 and 1872. Solon Whiting served sixteen years between 1820 and 1843. Fifteen others have been members of the School Board ten years or more each.

After the destruction of Lancaster in 1676, Master Rowlandson's books are spoken of by Mather as though a considerable part of his loss. Mention is often found in early inventories and elsewhere of

respectable literary collections in the possession of Lancaster scholars. But the first considerable library of a public character here was established by an association of citizens in 1790, and known as the Lancaster Library. This society was reorganized in 1800 as the Social Library Association. In 1850 the books were sold at auction to the number of a little over a thousand. The Library Club was organized the next year, and in 1862 its collection, numbering over six hundred volumes, together with one hundred and thirty volumes of the Agricultural Library Association, were offered in aid of a free public library, provided the town would assume its support and increase as authorized by statute. The town accepted the gift, added the little school libraries which had been purchased in 1844, and opened the collection to the public October 4, 1862, in an upper room of the town hall.

January 22, 1866, Mr. Nathaniel Thayer proffered the town a permanent fund of eight thousand dollars, the income of five thousand to be expended in the purchase of books for the library, and that of the remainder for the care of the public burial-grounds. The trust was accepted at the next town-meeting with grateful acknowledgments. At this date there had been some discussion about the erection of a monument to those men of Lancaster who had given their lives for their country during the Rebellion. It was wisely decided at the town-meeting of April, 1866, that the memorial should take the form of a useful public building, with suitable tablets and inscriptions upon its inner walls. The town voted the sum of five thousand dollars for the erection of a library room, to be known as Memorial Hall, provided an equal amount should be obtained by private subscription The building was completed and dedicated June 17, 1868, Rev. Christopher T. Thayer being the orator of the day, and Nathaniel Thayer presiding. The cost of this memorial was nearly thirty thousand dollars, of which Nathaniel Thayer defrayed nearly two-thirds.

Hon. Francis B. Fay subscribed one thousand dollars, and afterwards gave one hundred dollars more for a clock. Colonel Fay had been a resident of the town for about ten years, having built a mansion in 1859 upon the site now covered by the country-house of E. V. R. Thayer. He was born in Southborough June 12, 1793, had served in both branches of the Legislature for Chelsea, of which city he was the first mayor, and for a brief time was Representative in Congress, being appointed by Governor Boutwell to fill the unexpired term of Hon. Robert Rantoul, deceased. He died in 1876.

George A. Parker presented the library with a large collection of costly works relating to the fine arts, selected by himself and valued at over five hundred dollars, and gave seven hundred dollars for the purchase of books of similar character. This enlightened benefaction of Mr. Parker claims the gratitude of the community not only, nor chiefly, for its munificence, but because it richly endowed a department which must otherwise have been meagrely furnished,—affords the means for gratifying the love of beauty, innate in all humanity,—combats utilitarianism and teaches refinement—exerts a humanizing and exalting influence by appeals to hope and imagination from beyond the dry line of knowledge. The nature of the gift discloses something of the character of the donor, who was a man of broad intellect, keen powers of observation and comprehensive views upon measures of public utility. Extensive travel had developed in him cosmopolitan tastes, he had acquired a wide acquaintance with English literature, and his private collection of books was of choice selection and the largest in the town.

George Alanson Parker was born May 9, 1822, at Concord, N. H., one of thirteen children. Being early thrown upon his own resources, he was forced reluctantly to abandon cherished hopes of a classical education, although fitted for entrance to Harvard College, and began his life's work in the office of the noted civil engineer, Loammi Baldwin. In 1842 he opened an engineering office in Charlestown, Mass., associated with Samuel M. Felton, whose youngest sister became his wife. Among other public works in which he was engaged during this part of his career were the surveys of the Fitchburg, Peterboro' and Shirley and Sullivan roads, and the building of the Sugar River and Bellows Falls bridges. In the spring of 1857 he came to Lancaster to reside. He became the chief engineer for the Philadelphia, Wilmington and Baltimore Railway, and during a long illness of President Felton was acting president of the corporation. The building of the Susquehanna Bridge at Havre de Grace, Md., was his most celebrated professional success, and one which gave him a national reputation. In the earlier stages of its construction he patiently overcame almost insuperable natural difficulties, and when the superstructure was well advanced a tornado destroyed, in a few moments, the labors of months. This terrible misfortune he bore with cheerful fortitude, displaying great fertility of expedient and fresh energy in the reconstruction. During the Rebellion he was agent of the government for supplying rolling-stock to the roads used by the War Department. His latest work was the building of the Zanesville and Ohio River Railway. He was for many years consulting engineer of the Baltimore and Ohio Railroad corporation. He freely gave his townsmen the benefit of his large experience and skill for the permanent improvement of the public ways and bridges, and served them faithfully for three years in the Legislature.

Throughout a life of unusual activity and grave responsibility never did his home in Lancaster fail to give him peace, rest and inspiration for new work. For Lancaster he always had a devoted affection, and for her people a sincere regard, which displayed

Geo. A. Parker

itself in earnest and ready sympathy in time of need. Though too busy a man to be greatly given to social recreation, his hospitality was unbounded, and he was one of the most entertaining and genial of hosts, the most kindly and helpful of neighbors. He lived in closest sympathy with Nature, having the tenderest appreciation of every beauty in her realms of field, forest and stream. In the marvelous order of the seasons, in the development of animate and inanimate creation, he recognized the law and beneficence of the Almighty and found confirmation of his strong and abiding religious faith. By the roadsides and within the borders of his own estate remain the ever-growing evidence of his love for trees and his thought for his children's children and the townspeople. In the graceful outline and the grateful shade of a stately tree he felt truly that to them who should live after him he had left a kindly memory.

He died very suddenly April 20, 1887, before any waning of bodily or mental vigor was discernible in him, and before he had reached the span of life allotted to man; but he had done a full life-time's work. Death came as he would have had it—in his own home and when his earthly labors had found successful conclusion.

Hon. George Bancroft, September 20, 1878, in memory of kindness received in boyhood of Capt. Samuel Ward, asked the town to receive one thousand dollars in trust, the income "to be expended year by year for the purchase of books in the department of history, leaving the word to be interpreted in the very largest sense." The trust was accepted with proper expression of thanks, and is entitled the Bancroft Library Fund, in memory of Capt. Samuel Ward. The income of two thousand dollars, the bequest of Rev. Christopher T. Thayer, who died in 1880, is also available for the purchase of books. Special bequests have been received from Mary Whitney, Deborah Stearns, Sally Flagg, Mrs. Catherine (Stearns) Ballard and Martha R. Whitney. Henry Wilder and Dr. J. L. S. Thompson, by their intelligent interest and zeal, secured valuable archæological and natural history collections, which are constantly increasing by donations.

The library is more generously endowed with expensive and beautiful works on the natural sciences and art than most public libraries of twice its size and age. It is also rich in local history and bibliography, as such a collection should be. The town appropriates for its care and increase one thousand dollars annually, besides the dog-tax, fines and sales of duplicates—amounting to four or five hundred dollars more.

The memorial hall, occupying the larger part of the edifice, serves as a reading-room, contains shelving for twenty thousand volumes, and a tablet upon which are cut the names of the town's soldiers who died in the war. A fire-proof room is used by town officers, and contains the town records. The natural history collections are displayed in an upper hall. The number of bound books is now twenty thousand; of pamphlets, over ten thousand. About thirteen thousand volumes were loaned during 1887 for home use, or an average of twenty-nine for each family in town. The management of the library and cemeteries is vested in a committee of seven. Rev. George M. Bartol has been chairman of this board from the first. Dr. J. L. S. Thompson served as librarian, with the exception of one year, until 1878, and Miss Alice G. Chandler has held the office since that date. The original building being already crowded by the growth of the collections, extensive additions are in progress which will more than quadruple the shelf capacity. The cost of these improvements is assumed by the four sons of Nathaniel Thayer, honoring their father's generous interest in this noble institution, the pride of the town.

There are six public burial-grounds in Lancaster, all save one thickly set with the narrow homes of the town's majority. The oldest is mentioned in 1658 as "burying-place hill," and probably was set apart for its purpose in 1653, being close by the site of the first meeting-house. The oldest date legible is that upon a stone marking the grave of the first John Houghton —April 29, 1684. There are older memorial stones, however, but undated. Among them are that of the first John Prescott, 1683, and that of Dorothy, the first wife of Jonathan Prescott, who died a year or two before the massacre. The earliest stones are rude slabs of slate, and the brief inscriptions, now almost illegible, seem to have been incised by an ordinary blacksmith's chisel in unskilled hands. The graves of four of the earlier ministers—Whiting, Gardner, Prentice and Harrington—are grouped together in this yard.

The second burying-ground is that upon the Old Common, opposite the site of the third church. The land for this was given by the second Thomas Wilder, probably in 1705. The third, called the North Cemetery, as a town institution dates from 1800, but the field had been used for burial purposes several years earlier.

The Middle Cemetery contains about two acres, and was purchased of Dr. Thayer and Hon. John Sprague in 1798. The North Village Cemetery covers about four acres, and was bought in 1855. Eastwood embraces forty-six acres, was purchased in 1871, accepted as a cemetery in April, 1874, and dedicated October 12, 1876. The grounds are forest-clad and naturally beautiful, the highest elevations commanding extensive views. They are laid out with winding drives according to a plan made by H. W. S. Cleveland, landscape architect, a native of Lancaster. All the public burial-places are cared for by a special committee. The town's appropriation for this purpose is usually three hundred dollars, and the income of seven special funds amounts to two hundred dollars more.

CHAPTER VI.

LANCASTER—(*Continued*).

The Rebellion—The Town's History Printed—The Town's Poor—Death of Nathaniel Thayer—General Statistics, Etc.

AT the Presidential election of 1856 the vote of Lancaster was: For John C. Fremont, 232; James Buchanan, 35; Millard Fillmore, 10. The vote of 1860 stood: For Abraham Lincoln, 183; Stephen A. Douglas, 42; John Bell, 41. The men who thus voted, when traitors appealed from the ballot-box to the sword, were not tardy in defence of their convictions. One of Lancaster's sons served in the Sixth Regiment, in which was shed the first blood of the Rebellion, in 1861, on the anniversary of the battle of Lexington. The news of that bloodshed told every village of the North that the bitterness of civil war had begun. Monday evening, April 22d, a mass-meeting of the citizens in Lancaster town-hall, Dr. J. L. S. Thompson chairman, deliberated upon the grave dangers threatening the republic. Enthusiastic patriotism ruled the assembly; nor was it content with flamboyant resolutions only, but began then and there the organization of a company for the defence of the government.

This company, seventy-eight men, chiefly of Lancaster and Bolton, was called the Fay Light Guard, in honor of Hon. Francis B. Fay, of Lancaster. It was soon drilling under command of Thomas Sherwin, captain-elect, and three weeks later joined the Fifteenth Regiment, in camp at Worcester. Without any sufficient reason, alleged or apparent, the Governor arbitrarily refused to commission the company's chosen commander as captain, and the men, in response, encouraged by the sympathy of the whole camp, refused to be sworn in under the stranger from another county set over them. The company was therefore disbanded, when the rank and file, almost without exception, enlisted in other companies of the Fifteenth and Twenty-first Regiments. They had received an outfit, and been paid one dollar per day for all time spent in drill, at an expense to the town of nearly one thousand dollars. Before the end of August, 1861, forty volunteers represented Lancaster in the Union Army, and before October closed, four of these slept their last sleep on the banks of the Potomac, victims in the defeat at Ball's Bluff.

Meetings for drill were held in the town-hall on Monday evenings, in which many a volunteer who afterwards did good service in the field received his first lessons in the school of the soldier. Donations of money, underclothing, etc., were solicited by a citizens' committee, and, during the first winter of the war, forwarded for distribution among the town's soldiers. In July, 1862, systematic measures were adopted for affording relief to the sick and wounded. Frequent public meetings kept enthusiasm from flagging. Seventeen three-years' men were demanded of the town, and were soon marching with the Thirty-fourth Regiment. It was voted, July 23d, to pay each recruit sworn in the sum of one hundred dollars. Twenty-one nine-months' men were called for in August, and entered the camp of the Fifty-third, under Lieut. Edward R. Washburn.

The Soldiers' Relief Association was formed August 27, 1862, with Mrs. Harriet W. Washburn, president, and Miss Elizabeth P. Russell, secretary and treasurer. It soon became a branch of the Sanitary Commission, held weekly meetings, which were uniformly well attended, and quietly accomplished a vast amount of beneficent work.

In the calls of 1863 the town again offered one hundred dollars bounty in addition to that promised by State and national government, and her quota was quickly filled, most of the recruits being assigned to the Thirty-fourth and Thirty-sixth Regiments. In 1864 the premium was raised to one hundred and twenty-five dollars, the maximum allowed by law, and sundry substitutes were hired. As news came from the great battle-fields one by one, Lancaster learned that her sons were doing their duty everywhere, and family after family mourned their unreturning brave. Capt. George L. Thurston came from the battle-ground of Shiloh, his constitution undermined by fatigue and exposure, to die among his kindred. Capt. Edward R. Washburn was brought from the bloody charge at Port Hudson with a shattered thigh, to die at home within a year. In the very last days of the struggle Col. Frank Washburn fell mortally wounded, while leading a desperate cavalry charge against an overwhelming force of the enemy at High Bridge.

The following is a complete roster of those who served for Lancaster:

Albee, John G., 53d (nine months), I; 18; Oct. 18, '62; taken prisoner at Thibodeaux, La.; mustered out Sept. 2, '63.

Alexander, Nathaniel, 15th, C; 40; Dec. 17, '61; discharged for disability Oct. 15, '62.

Atchinson, William, 28th, A; 22; Aug. 10, '63; mustered out June 30, '65; a substitute for C. L. Wilder, Jr.

Ayers, John Curtis, 53d (nine months), I; 25; Oct. 18, '62, as sergeant; 2d lieut. May 22, '63; 1st lieut. July 2, '63; mustered out Sept. 2, 1863.

Balcom, Charles H., 15th, C; 33; Dec. 14, '61; transferred to V. R. C. April 15, '64; re-enlisted; mustered out Nov. 14, '65.

Ball, Henry F., 4th Cav., C; 24; Dec. 31, '63; hospital steward Sept., '64; mustered out Nov. 14, '65; credited to Clinton.

Bancroft, Frank Carter, *alias* Henry T. Colter, 8th New Hampshire, A; 17; Oct. 25, '61; drummer; wounded in ankle at Maryville, La., May, '63; re-enlisted; mustered out Oct. 28, '65.

Barnes, Frank W., U. S. Navy; enlisted Sept. 15, '62, on frigate "Minnesota;" discharged Sept., '63.

Barnes, George A., 16th, C; 18; corporal July 2, '61; shot through foot and taken prisoner at second battle of Bull's Run, Va., Aug. 20, '62; discharged for wound Oct. 10, '62.

Beard, Jonas H., 25th, C; 25; Sept. 28, '61; re-enlisted; wounded in hip at Cold Harbor, Va., June 3, '64; mustered out July 13, '65.

Bell, John, 2d Cav.; 25; May 7, '64; unassigned recruit; a non-resident substitute.

Bigelow, William W., 25th, D; 21; Sept. 27, '61; taken prisoner in N. C.; discharged for disability March 18, '63.

Bergman, Albert, 3d Cav.; 26; July 2, '64; a non-resident substitute.

Blood, Charles E., 34th, H; 21; Dec. 19, '63; transferred June 14, '65, to 21th, G; sergeant; mustered out Jan. 20, '66.

Bridge, James A., 34th, H; Dec. 19, '63; shot in forehead at Newmarket, Va., May 15, '64, and died of wound.

Brooks, Walter A., 53d (nine months), I; 25; Oct. 18, '62; corporal; died at Memphis, Tenn., Aug. 22, '63.

Brown, Jonas H., 34th, H; 41; July 31, '62; mustered out June 16, '65.

Burbank, Levi B., 34th, H; 43; July 31, '62; discharged for disability Feb. 27, '64.

Burditt, Charles F., 36th; 43; Dec. 26, '63; unassigned and rejected recruit; a veteran of the Florida war.

Burditt, Thomas E., 20th, D; 22; Sept. 4, '61; mustered out Sept. 14, 1864.

Burke, James E., 21st, E; 26; Aug. 23, '61; killed at Chantilly, Sept. 1, 1862.

Carr, William D., 13th New Hampshire, G; 40; Sept. 19, '62; corporal; wounded by shell May 13, '64, and died of wound June 20, '64.

Chafee, George E., 53d (nine months), I; 35; Oct. 18, '62; taken prisoner at Brashear City, La, June 20, '63; mustered out Sept. 2, '63.

Chandler, Frank W., 53d (nine months), I; 18; Oct. 18, '62; mustered out Sept. 2, '63.

Chaplin, Solon W., 34th, H; 38; July 31, '62; color corporal; killed at Piedmont, Va., June 5, '64, by shell.

Clinton, Joseph, 2d, I; 22; May 7, '64; mustered out July 14, '65; a non-resident substitute.

Cobb, William L., 34th, H; 22; 2d lieut. July 18, '62; 1st lieut. Aug. 23, '62; wounded in forehead at Ripon, Va., Oct. 18, '63; taken prisoner at Cedar Creek, Va, Oct. 13, '64; capt. Feb. 18, '65; mustered out May 15, '65, as 1st lieut.

Coburn, George B., 34th, H; 18; July 31, '62; shot through foot, accidentally, before Petersburg, and discharged therefor May 16, '65.

Coburn, Cyrus E., 5th (one hundred days), I; 21; July 19, '64; mustered out Nov. 16, '64.

Copeland, Joseph, 15th, D; 21; April 29, '64; transferred to 20th, E, July 27, '64; died a prisoner at Salisbury, N. C., Dec. 21, '64; a substitute.

Coyle, John, 2d Cav., H; 22; May 7, '64; a non-resident substitute.

Cutler, George W., 15th, C; 22; July 12, '61; shot through head at Ball's Bluff, Va., Oct. 21, '61.

Cutler, Isaac N., 15th, C; 20; July 12, '61; severely wounded in left ankle at Antietam, Md., Sept. 17, '62, and discharged therefor March 20, '63.

Cutler, Henry A., 53d (nine months), I; 18; Oct. 18, '62; died at Baton Rouge, La., July 9, '63.

Dailey, James, 34th, H; 18; July 31, '62; mustered out June 16, '65.

Damon, Daniel M., 34th, H; 25; July 31, '62; 1st sergt.; taken prisoner at Winchester Sept. 19, '64; 2d lieut. May 15, '65; mustered out June 16, '65, as 1st sergt.

Davidson, Thomas H., 15th, A; 25; July 12, '61; discharged for disability April 25, '62.

Davis, George W., 13th Battery L. A.; 23; April 6, '64; mustered out July 28, '65; a non-resident substitute.

Day, Joseph N., 34th, H; 22; Jan. 4, '64; wounded in head at Winchester, Va., Sept. 19, '64; transferred to 24th, G, June 14, '65, and to V. R. C. May 2, '65; discharged July 25, '65.

Dillon, James, 34th, H; 26; July 31, '62; discharged for disability April 7, '63, and died at home May 10, '63, of consumption.

Divoll, George W., 7th Battery L. A.; 37; Jan. 5, '64; died at New Orleans, La., Sept. 21, '64; credited to Leominster.

Dupee, John, 33d, E; 36; July 2, '64; transferred to 2d, A, June 1, '65; mustered out July 14, '65; a non-resident substitute.

Elden, Henry H., U. S. Signal Corps; 23; Dec. 2, '64; a non-resident substitute.

Ellis, Warren, 15th, F; 20; July 12, '61; wounded at Antietam, Md., Sept. 17, '62; transferred to U. S. Signal Corps Oct. 27, '63.

Fahay, Bartholet, 15th Unattached Co. (one hundred days); 21; July 29, '64; mustered out Nov. 15, '64.

Fairbanks, Francis H., 15th, C; 25; July 12, '61; discharged for disability April 10, '62; re-enlisted in 34th, H, July 31, '62; taken prisoner at Cedar Creek, Va., Oct., '64, and died at Salisbury, N. C., Jan. 4, '65.

Fairbanks, Charles T., 1st New Hampshire Inf. (three months), F; 23; May 2, '61; mustered out Aug. 9, '61; re-enlisted in N. H. Batt. of N. E. Cav. Sept. 15, '62; shot through body June 18, '63, and died the next day.

Farnsworth, John A., 34th, H; 18; July 31, '62; corporal; wounded in arm at Piedmont June 5, '64; discharged for disability May 18, 1865.

Farnsworth, Franklin H., 15th, C; 19; July 12, '61; killed at Fair Oaks, Va., May 31, '62.

Farnsworth, George W., 34th, H; 18; Jan. 4, '62; wounded in head at Piedmont, June 5, '64; discharged for disability June 8, '65.

Farnsworth, John E., 34th, H; 18; July 31, '62; corporal; wounded in leg at Newmarket May 15, '64; in arm and hip at Winchester Sept. 19, '64; mustered out June 16, '65.

Farnsworth, William H., 7th, B; June 15, '61.

Field, Edwin F., 21st, E; 29; Aug. 23, '61; sergt.; 2d lieut. Dec. 18, '62; resigned May 8, '63.

Finnesey, James, 42d New York, K; 21; corporal; Aug. 9, '61; sergt., transferred to 59th N. Y.; mustered out August 5, '64; died at Indianapolis Oct. 10, '64.

Fisher, William H., 53d (nine months), I; 18; Oct. 18, '62; mustered out Sept. 2, '63.

Flagg, Albert, 53d, K; 18; Oct. 17, '62; mustered out Sept. 2, '63.

Flagg, Charles B., 34th, A; 23; June 23, '62; mustered out June 16, 1865.

Fox, William L., 21st, E; 19; August 23, '61; corporal; wounded in arm at Chantilly Sept. 1, '62; re-enlisted Jan. 2, '64; sergt.; discharged as supernumerary Sept. 24, '64.

Fox, Thomas, 11th Battery L. A.; 18; Dec. 23, '64; mustered out June 16, '65; a substitute.

Frary, Oscar, 53d (nine months), I; 30; Oct. 18, '62; died at Baton Rouge, La., July 28; '63.

Fuller, Edward M., 34th, F; 20; corporal; Aug. 9, '62; appointed capt. in 39th U. S. C. T. March 21, '64; maj. U. S. C. T. June 1, '65; mustered out Dec., '65; wounded in head at Petersburg July 30, '64.

Fury, Michael, 34th, H; 26; July 31, '62; wounded in leg at Piedmont June 5, '64; mustered out August 6, '65.

Goodwin, John, 2d Cavalry, L; 18; Sept. 13, '64; a non-resident substitute.

Gould, John, U. S. Navy; enlisted August, '62, on supply steamer "Rhode Island."

Gray, Stephen W., 34th, H; 30; July 31, '62; died at Martinsburg, Va., April 2, '64.

Gray, James M., 15th, C; 23; July 12, '61; discharged for disability Feb. 16, '63.

Hardy, George H., 21st, D; 21; Aug. 23, '61; corporal; wounded in leg at Roanoke Island Feb. 7, '62; re-enlisted Jan. 2, '64, and transferred to 36th, I; wounded in body at Petersburg, Va., June 1, '64; transferred to 56th June 8, '65; mustered out July 12, '65; credited to Harvard and Leominster.

Harriman, Harris C., 53d (nine months), I; 33; Oct. 18, '62; wounded by shell in leg at Port Hudson, La., June 14, '62; mustered out Sept. 2, '63.

Haynes, John C., 36th, G; 29; Jan. 2, '64; died at Camp Nelson, Ky., March 19, '64.

Hills, Thomas Augustus, 53d (nine months), C; 21; Nov. 6, '62; mustered out Sept. 2, '63; enlisted in 5th (one hundred days) July 22, '64; mustered out Nov. 16, '64, as sergt; credited to Leominster.

Hodgman, Oren, 34th, C; 19; July 31, '62; taken prisoner at Newmarket, Va., May 15, '64, and died at Charleston, S. C., Sept. 30, 1864.

Horan, Fordyce, 15th, A; 20; Dec. '24, '61; transferred to 1st U. S. Artillery, Co. I, Nov. 17, '62; died at Washington Nov. 3, '64.

Hosley, Henry H., 15th, C; 18; July 12, '61; transferred Nov. 12, '62, to 1st U. S. Artillery, I; mustered out July 12, '64; credited to Townsend.

Hunting, Albert G., 16th, B; 19; July 2, '61; killed at Fair Oaks June 25, '64; credited to Holliston.

Hunting, Joseph W., 16th, B; 22; July 2, '61; mustered out July 27, '64; credited to Holliston.

Hunting, Thomas A. G., 34th, H; 45; July 31, '62; shot through the body and taken prisoner at Piedmont, Va., June 5, '64; discharged for disability May 23, '65.

Jackson, David W., 53d (nine months), I; 33; Oct. 18, '62; mustered out Sept. 2, '63.

James, John, 53d (nine months), I; 21; Oct. 18, '62; mustered out Sept. 2, '63.

Johnson, Adelbert W., 15th, C; 23; July 12, '61; discharged for disability May, '62; enlisted in 53d, Nov. 6, '62, from Leominster; wounded in knee at Port Hudson, La., and died at Baton Rouge July 11, '63.

Joslyn, Edward R., 13th Illinois, B; 21; enlisted at Sterling, Ill., May 24, '61; taken prisoner May 17, '64, and died at St. Louis, Mo., April 13, '65.

Kelly, Martin, 60th New York, H; 20; enlisted at Ogdensburg, N. Y., Oct. 17, '61; corporal; re-enlisted Dec. 14, '63; mustered out July 17, '65.

Kern, John, 2d Heavy Artillery; 22; July 2, '64; a non-resident substitute.

Keyes, Sumner W., 5th (one hundred days), I; 21; July 19, '64; mustered out Nov. 16, '64.

Keyes, Stephen A., 53d (nine months), K; 18; Oct. 17, '62; died and buried at sea off Florida Aug. 10, '63.

Kilburn, Sumner R., 15th, C; 18; July 12, '61; re-enlisted Feb. 18, '64; wounded in Wilderness, Va., May 6, '64, and died at Fredericksburg May 16, '64.

Kingsbury, Joseph W., 15th, A; 18; Aug. 1, '61; taken prisoner and discharged for disability Nov. 27, '62.

Kittredge, Solomon, 15th, C; 42; Dec. 17, '61; transferred May 1, '62, to V. R. C.; re-enlisted July 1, '64; mustered out Nov. 14, '65.

Krum, John, 35th, K; 24; June 29, '64; transferred to 29th, K, June 9, '65; a non-resident substitute.

Langley, James, 2d Cavalry; 22; May 7, '64; a non-resident substitute.

Lawrence, Sewell T., 23d, H; 31; Oct. 5, '61; discharged for disability Aug. 11, '62; credited to Clinton.

Lawrence, Willard R., 15th, C; 28; July 12, '61; shot through body and killed at Ball's Bluff, Va., Oct. 21, '61.

Leroy, Frank B., 57th, C; 18; Feb. 18, '64; mustered out June 22, '65; a non-resident substitute.

McCarron, William, 3d Heavy Artillery, L; 23; May 30, '64; discharged for disability Sept. 30, '64; a non-resident substitute.

McKay, William S., 3d Cavalry, A; 24; April 8, '64; sergt.; sergt.-major July 26, '65; mustered out Sept. 28, '65; a non-resident substitute.

McQuillan, Charles E., 21st, E; 20; Aug. 23, '61; corporal; wounded at Antietam, Sept., '62; transferred to 2d U. S. Cavalry, K, Oct. 30, '62 re-enlisted in Hancock's U. S. Vet. Vols. Dec. 9, '64; mustered out Dec. 9, '65.

McRell, Ephraim, U. S. Navy; 18; enlisted Aug. 26, '63; served one year, chiefly on gunboat "Nipsic" in Charleston blockade.

McRell, William J., U. S. Navy; 21; enlisted Aug. 12, '62; wounded by concussion of shell Feb. 1, '63, at Stone Inlet, S. C.; taken prisoner.

Mahar, Dennis, 21st, B; 21; Aug. 23, '61; discharged for disability Jan. 16, '63; claimed also by Clinton.

Mann, George C., 15th, F; 21; July 12, '61; taken prisoner at Ball's Bluff, Va., Oct. 21, '61; wounded in right leg at Gettysburg, July 2, '63; mustered out July 28, '64.

Matthews, David W., 34th, H; 20; Sept. 19, '63; transferred to 24th June 14, '65; mustered out to date from Jan. 20, '66.

Matthews, George W., 34th, H; 18; Sept. 19, '63; wounded in leg at Newmarket, Va., May 15, '64; taken prisoner at Liberty, W. Va., June 17, '64, and in Andersonville prison; discharged for disability June 1, '65.

Mayo, John, 2d, G; 24; July 2, '64; a non-resident substitute.

Mellor, William H., 34th, H; 18; July 31, '62; transferred to V. R. C. Jan. 19, '65.

Miller, Frank, 2d Heavy Artillery, A; 27; July 2, '64; died at New Berne, N. C., May 12, '65; a non-resident substitute.

Moeglen, John Louis, 20th, A; over 50; discharged for disability April 29, '62; enlisted in 2d Cavalry, M, Feb. 2, '64; died Sept. 28, '64, of a bullet wound in Shenandoah Valley.

Monyer, John, 2d Cavalry; 35; Dec. 27, '64; a non-resident substitute.

Moore, Joseph B., 53d (nine months), I; 38; Oct. 18, '62; wounded in head May 27, '63, at Port Hudson, La.; mustered out Sept. 2, '63.

Moore, Oliver W., V. R. C.; 20; July 21, '64, on re-enlistment; mustered out Nov. 17, '65; a non-resident substitute.

Moses, Robert R., 15th, C; 24; Dec. 17, '61; shot through lungs at Antietam Sept. 17, and died Oct. 3, '62.

Murphy, William F., 32d, D; Sept. 7, '63; transferred to U. S. Navy May 3, '64; a non-resident substitute for E. W. Hosmer.

Neu, Louis, 2d Heavy Artillery, A; 22; July 2, '64; died Nov. 22, '64, at Plymouth, N. C.; a non-resident substitute.

Nourse, Byron H., 53d (nine months), I; 24; Oct. 18, '62, as sergt; 1st sergt. Jan. 22, '63; mustered out Sept. 2, '63.

Nourse, Roscoe H., 53d (nine months), I; 22; Oct. 18, '62; drummer; mustered out Sept. 2, '63; enlisted in 5th (one hundred days), E, July 22, '64; mustered out Nov. 16, '64.

Nourse, Henry S., 55th Illinois; 30; enlisted in Chicago Oct. 23, '61; commissioned adjutant March 1, '62; capt. Co. H, Dec. 19, '62; commissary of musters 17th A. C. Oct. 24, '64; mustered out March 29, '65.

Nourse, Frank E., 51st (nine months), C; 21; Sept. 25, '62; mustered out July 27, '63.

Nourse, Fred. F., 5th (one hundred days), E; 21; July 22, '64, died at New Brunswick, N. J., Sept. 13, '64.

O'Brien, Michael, 28th, 23; May 7, '64; a non-resident substitute.

Ollis, John, 1st Heavy Artillery; 18; corporal; Dec. 3, '63; wounded in foot by shell at Petersburg, Va., June 22, '64; mustered out July 31, '65.

Ollis, Luke, 21st, E; 19; Aug. 23, '61; transferred to 2d U. S. Cav., Co. K, Oct. 23, '62; re-enlisted and died of wound in Shenandoah Valley Oct. 13, '64.

Otis, Edwin A., 51st (nine months), C; 19; Sept. 25, '62; mustered out July 27, '63.

Parker, Leonard H., 36th; 21; Dec. 29, '63; mustered out June 8, '65.

Parker, Henry J., 6th (three months), B; 25; June 19, '61; enlisted in 33d, E, August 5, '62; 1st sergt.; sergt.-maj. Feb. 18, '63; 2d lieut. March 29, '63; 1st lieut. July 16, '63; killed at Resaca, Ga., May 15, '64; credited to Townsend.

Patrick, George H., 53d (nine months), I; 19; Oct. 18, '62; mustered out Sept. 2, '63; enlisted in 36th, G, Oct. 14, '64; transferred to 56th, E, June 8, '65; mustered out Aug. 7, '65.

Plaisted, Simon M., 51st (nine months), E; 24; Sept. 25, '62; mustered out July 27, '63; enlisted in 1st Heavy Artillery, F, Aug. 15, '64, corporal; mustered out June 28, '65.

Pierce, William D., 5th (nine months), I; 23; Sept. 16, '62; mustered out July 2, '63; credited to Bolton.

Pierce, Frank E., 21st, E; 20; Aug. 23, '61; transferred to 2d U. S. Cavalry, K, Oct. 23, '62; re-enlisted Feb. 29, '64.

Pierce, Edward, 35th, B; 21; June 29, '64; transferred to 29th, B, June 9, '65; a non-resident substitute.

Priest, Henry S., 7th Battery L. A.; 25; Jan. 4, '64; discharged.

Puffer, Charles, 26th, E; 41; Aug. 9, '64; mustered out Aug. 26, '65.

Putney, Henry M., 45th (nine months), F; Sept. 26, '62; shot through head at Dover Cross-Roads, N. C., April 28, '63.

Rice, Walter C., 53d (nine months), I; 45; Oct. 18, '62; mustered out Sept. 2, '63.

Richards, Ebenezer W., 21st, E; 35; Aug. 23, '61; killed at Fredericksburg, Va., Dec. 13, '62, by a shell.

Richards, George K., 16th, C; 39; Nov. 25, '61; transferred to V. R. C. Aug. 11, '63; re-enlisted Nov. 30, '64; mustered out Nov. 14, '65.

Robbins, William H., 21st, A; 39; in band and mustered out Aug. 11, 1862.

Ross, William, 2d Cavalry, H; 27; May 7, '64; a non-resident substitute.

Rugg, James, 53d (nine months), K; 42; Oct. 17, '62; mustered out Sept. 2, '63.

Rugg, Henry H., 15th, C; 21; July 12, '61; wounded in shoulder at Ball's Bluff, Va., Oct. 21, '61, and discharged therefor May 1, '62; enlisted in 53d (nine months) Oct. 17, '62, and in 42d (one hundred days) July 22, '64; mustered out June 16, '65.

Sawtelle, Edwin, 53d (nine months), I; 24; Oct. 18, '62; mustered out Sept. 2, '63.

Sawyer, Oliver B., 21st, E; 21; Aug. 23, '61; discharged for disability June 30, '62; enlisted in 40th, B, Aug. 22, '62; mustered out June 16, 1865.

Schumaker, William, 4th Cavalry, E; 21; Jan. 27, '64; died a prisoner at Andersonville, Ga., Sept. 13, '64.

Sheary, Patrick, 34th, H; 28; Jan. 5, '64; transferred to 24th, Co. G, June 14, '65; mustered out Jan. 20, '66.

Sinclair, Charles H., 21st, E; 21; Aug. 23, '61; Killed at New Berne, N. C., March 14, '62; credited to Leominster.

Smith, John, 28th, D; 23; May 7, '64; mustered out June 15, '65; a non-resident substitute.

Smith, William, 28th; 25; May 7, '64; a non-resident substitute.

Smith, William, 13th Battery L. A.; 22; April 8, '64; mustered out July 28, '65.

Sweet, Caleb W., 23d, H; 23; Sept. 28, '61; re-enlisted Dec. 3, '63; wounded and taken prisoner at Drewry's Bluff, Va., May 16, '64, and died at Richmond Aug. 3, '64.

FRANCIS WASHBURN.

In the month of April, 1838, John M. Washburn, then a merchant on the eve of retiring from business, removed from Boston to Lancaster, and in the July following his third son, Francis, was born. Bringing into his life and character, as an inheritance from his Puritan ancestors, an integrity of purpose and an indomitable will, it seemed from his childhood that he was born to be a leader of men. Of a nature somewhat reserved, though deeply imbued with the spirit of tenderness for a few, his boyhood was not one of numerous friendships, nor was he in manhood a seeker for popular favor. From the academy of his native town he went, at the age of sixteen years, to serve a regular term in the Lawrence Machine Shop, that he might know his work from the beginning and become a master of the details of practical engineering. From Lawrence he went to the Scientific School at Cambridge, and in 1859 to the famous school of mining and engineering at Freiburg, in Saxony. He became an accomplished student in these subjects, determined to fully equip himself for the important positions which were already awaiting his acceptance on his return. Jesse Boult, of San Francisco, who was one of his fellow-students at Freiburg, says of him that he was regarded then as a young man of the highest intellectual powers, and sure of a very brilliant future.

When, in 1860–61, the storm that now seems so far from us, began to blacken in our civil sky, he wrote "I must hasten my return. If the war comes I shall sail at once." When the storm broke upon the country he said, "I will take a commission if it is offered; I will go as a private soldier at all events." He came home to find a commission already promised, but also to find that his father was languishing in fatal disease, which was rapidly hastening towards its termination. Restrained, therefore, by filial solicitude and duty, from immediately proceeding to the field, he now studied the arts of war with the same fidelity with which he had devoted himself to those of peace.

In December, 1861, his commission came, and with it orders to proceed at once to duty. His only regret in receiving it was that it came one day too late to receive his father's sanction. Waiting only to pay the last tribute of honor and affection, he reported for duty and was mustered as a second lieutenant in the First Regiment of Massachusetts Cavalry, then in camp at Reedville. The history of this distinguished regiment is part of that of the war and need not be dwelt upon here.

He was successively captain in the Second, and lieutenant-colonel in the Fourth Cavalry, and, on the resignation of Colonel Rand, was, in February, 1865, commissioned as colonel, which position he held until and at the time of his death.

Though constantly in the service, and often employed in difficult and dangerous cavalry service, Colonel Washburn escaped any injury till his last engagement, and was seldom, if ever, off duty by reason of sickness. After the death of his brother, Captain Edward Richmond Washburn, who died of wounds received at the first assault on Port Hudson, La., he made two brief visits to his home. He was always considerate in asking leave of absence, feeling that such privileges were more valuable and more due to brother officers who had left wives and children behind them. Nor was he less considerate of the men under his command. At the time of his last visit he said earnestly and with a strong sense of justice: "If I die on the field, you must leave me there. The men in my regiment have just as much to live for as I have: their death will bring equal sorrow to their homes; the officer is no more than his men. Buried where they fell, so let it be with me."

He was mortally wounded in the brilliant and chivalrous engagement at High Bridge, Va., the last in the war, on April 6, 1865. This was one of those forlorn hopes, in which it became the duty of a small, well-disciplined and gallant band to make a stand against the flower of the Confederate Army, in its retreat from Richmond. The orders were not wholly clear; but the purport of them was to hold back the retreating army to the last possible moment.

Whether these orders were wisely and judiciously given may not now properly be inquired; but history tells that they were executed with a firmness and valor unsurpassed in the annals of ancient or modern times. The odds were too great to be computed. Colonel Washburn charged the enemy with an intrepidity and effectiveness which called out their expressed admiration on the field and in their subsequent accounts of the engagement. The orders were literally and fearlessly obeyed, and the enemy was held back till every officer of the command had been killed, wounded or made a prisoner. The courage and gallantry displayed in this action were noted by the highest officers of the army, and Colonel Washburn was, at the request of Lieutenant-General Grant, commissioned as a brevet brigadier-general for gallant and meritorious services.

The actual hand-to-hand encounters of sabre with sabre, as well as the actual crossing of hostile bayonets, were rare in our Civil War, as in most of the wars of history. But in this action men fought hand-to-hand. An accomplished swordsman, this brave officer had already disarmed one antagonist, and was engaged with another, when he received a pistol-shot from the first. After this he received the blow of the sabre which proved fatal, fracturing the skull. And thus, by bullet and sabre-stroke, his magnificent physique, but not his dauntless spirit, was conquered.

The untiring devotion of one[1] who had with equal faithfulness performed the same loving service for his brother Edward, brought Col. Washburn from the field of battle to the house of his brother, Hon. John D. Washburn, of Worcester. He had hoped to reach the home of his childhood, and this was all the hope that could be counted as reasonable, since from the first the complication of his wounds rendered recovery almost impossible. His strength proved, however, unequal to the full journey. Not on the field, nor in the hospital and among strangers, but in the presence of those he loved, and in his brother's home, he died at the early age of twenty-six, on the 22d of April, 1865. So gave himself a willing sacrifice in his country's cause, this young and noble citizen, whose name has been and will ever be honored at home, and to whom, for his known purity of character and brave and chivalrous deeds, has been accorded from abroad the well-merited appellation, "The White Knight of Modern Chivalry."

The following tribute to that heroic battalion of the Fourth Massachusetts Cavalry and their gallant leader appeared in the *New York Evening Post* fifteen years after their desperate charge on the memorable 6th of April, 1865. Its repetition here may serve as a fitting close to this sketch of one of many modest heroes, who bravely dared, patiently endured and nobly died in defense of their country's life and honor.

God give us and our children's children grace
To own the debt, and prize the heritage
Thus nobly sealed in blood.

THE CHARGE OF "THE FOURTH CAVALRY."

DEDICATED TO THOSE WHO FELL ON THE SIXTH OF APRIL, 1865.

[The fourth Massachusetts Cavalry, or rather a small portion of its rank and file, but with most of its field and staff officers, and led by its Colonel, Francis Washburn, formed part of the advance which, to use General Grant's words in his last general report of the war, "heroically attacked and detained the head of Lee's column near Farmville, Va., until its commanding general was killed and his small force overpowered." Less than a thousand men, all told, without any artillery, held in check for a considerable time, when every moment almost was worth an empire, a rebel force outnumbering them ten to one. Of the twelve Fourth Cavalry officers who went into the fight eight were killed and wounded, including their gallent leader. He lived to reach his home, and died in his mother's arms.]

Onward they dash:
It mattered not the toilsome march,
The foeman's cannon crash;
Their souls were in their swords,
Their steed beneath one throb:
Onward they charge,
The grave's disdain to rob!

Many or few?
"Six hundred?" nay; that were a host
Besides this band so true.
Four score of trusty arms
Against an army lined.
Ah! weep with us
The comrades left behind!

I see them still:
Down deep ravine, then up "to form"
On battle-shaken hill;
One word is all enough,
One waving blade their light
Into the hordes
Of rebel-raging fight.

He at their head
A knight, a paladin of old,
A hero—honor led,
And fibered with the faith
Of ages won to God—
O what to him
The soaked and waiting sod!

O sweet is it
For love of land to do and die;
The heart-strings heaven-knit,
Relaxed from tensest strain
Upon his arm to rest
In whom alone
Is earthly conflict blest!

And shall not we—
Survivors of the martyred brave,
By tears and blood made free—
Give what they gladly gave?
Yes! by the loved and lost,
Most sacred hold
Our country's priceless cost.

A. Z. G.

[1] The late Dr. Henry H. Fuller.

GEN^L FRANCIS WASHBURN.

Souveur, Charles L., 26th, 21; May 7, '64; a non-resident substitute.
Sykes, Edwin, 57th, C; 29; Feb. 18, '64; a non-resident substitute.
Taylor, Henry T., 15th, A; 27; July 12, '61; discharged for disability April 25, '62.
Thompson, William, 16th, B; 18; July 2, '61; wounded in head May, '64, at Spottsylvania, Va.; mustered out July 27, '64.
Thompson, George, 53d (nine months), C; 21; Nov. 6, '62; died at Brashear City, La., May 30, '63; credited to Leominster.
Thurston, George Lee, 55th Illinois; 30; enlisted in Chicago Oct. 23, '61; commissioned adjt. Oct. 31, '61; capt. B March 1, '62; died Dec. 15, '62, at Lancaster.
Tisdale, Charles E, 34th, H; 20; July 31, '62; corporal; discharged for disability Jan. 8, '63.
Toole, John, 11th Battery L. A.; 18; Dec. 23, '64: mustered out June 16, '65; a non-resident substitute.
Tracy, David H., 2d; 29; July 2, '64; a non-resident substitute.
True, George H., 28th, A; 21; band Oct 8, '61; discharged Aug. 17, '62.
True, James G., 28th, A; 25; band Oct. 8, '61; discharged Aug. 17, '62.
Turner, Luther G., 15th, C; 23; July 12, '61; wounded in arm at Ball's Bluff, Va., Oct. 21, '61, and died Nov. 1, '61.
Turner, Horatio E., 34th, F; 18; Aug. 2, '62; died a prisoner at Andersonville, Ga., Sept. 8, '64.
Turner, Walter S. H., 53d (nine months), I; 18; Oct. 18, '62; mustered out Sept. 2, '63.
Valdez, Joseph, 11th Battery L. A.; 30; Dec. 23, '64; mustered out June 16, '65; a non-resident substitute.
Veret, John, 4th Cavalry, F; 28; Jan. 5, '64; mustered out Nov. 14, '65.
Warner, James G., 15th, C; 31; July 12, '61; killed by bullet or drowned at Ball's Bluff, Va., Oct. 21, '61.
Washburn, Edward R., 53d (nine months), I; 26; 1st lieut. Oct. 18, '62; capt. Nov. 8, '62; thigh shattered at Port Hudson, La., June 14, '63; died of wound Sept. 5, '64.
Washburn, Francis, 1st Cavalry; 24; 2d lieut. Dec. 26, '61; 1st lieut. March 7, '62; capt. 2d Cavalry Jan. 26, '63; lieut.-col. 4th Cavalry Feb. 1, '64; col. Feb. 4, '65; wounded in head April 6, '65, at High Bridge, Va., and died at Worcester April 22, '65; brevet brig.-gen.
Watson, George, 2d; 32; July 2, '64; a non-resident substitute.
Weld, George D., 47th (nine months), K; 44; Oct. 31, '62; mustered out Sept. 1, '63.
Wheeler, Abner, 11th, C; 25; June 13, '61.
Whitney, Edmund C., 53d (nine months), I; 26; as corp. Oct, 18, '62; wounded in arm June 14, '63; sergt. July 14, '63; mustered out Sept. 2, '63.
Whittemore, Woodbury, 21st, E; 33; 2d lieut. Aug. 21, '61; 1st lieut. March 3, '62; capt. July 27, '62; resigned Oct. 29, '62.
Wilder, Charles H., 53d (nine months), I; 42; Oct. 18, '62; mustered out Sept. 2, '63.
Wilder, J. Prescott, 7th Battery L. A.; 31; Jan. 4, '64; mustered out June 8, '65.
Wilder, Sanford B., 2d Heavy Artillery, M; 24; Dec. 24, '63; mustered out Sept. 3, '65; credited to Clinton.
Wiley, Charles T., 11th Rhode Island (nine months), D; Oct. 1, '62; mustered out July 13, '63.
Wiley, George E., 34th, H; 22; Jan. 1, '64; transferred to 24th, G, June 14, '65; wounded in arm at Fisher's Hill, Va., Sept. 22, '64; discharged for disability June 26, '65.
Wilkinson, Charles, 20th; 30; July 18, '63; mustered out June, '65; a non-resident substitute for George E. P. Dodge.
Willard, Edwin H., 15th, C; 23; July 12, '61; mustered out July 28, 1864.
Willard, Henry W., 34th, C; 21; Aug. 2, '62; discharged for disability Feb. 26, '63; credited to Leominster.
Wise, John Patrick, 34th, A; 21; July 31, '62; died at home March 15, '64.
Worcester, Horace, 42d (one hundred days), K; 20; July 18, '64; mustered out Nov. 11, '64.
Wyman, Benjamin F., 5th (nine months), E; 23; Sept. 16, '62; mustered out July 2, '63.
Zahn, Peter, 2d; 24; May 7, '64; a non-resident substitute.

The following were born and lived until manhood in Lancaster, but were resident elsewhere when the war began:

Atherton, Roswell, 33d, E; 30; served for Groton; discharged for disability Nov. 30, '62.
Bancroft, Charles L., 11th Illinois Cavalry, B; 34; 2d lieut. Dec. 20, '61; 1st lieut. July 6, '62; mustered out Dec. 19, '64; wounded at Meridian, Miss.
Bowman, Henry, colonel. (See Clinton.)
Bowman, Samuel M., lieutenant. (See Clinton.)
Bradley, Jerome, 3d Iowa Battery L. A., etc.; 28; 2d lieut. Sept., '61; 1st lieut. and q.m. 9th Iowa Infantry March 16, '62; capt. and a.-q.m. U. S. Vols. Feb. 19, '63; resigned Jan. 9, '65.
Cleveland, Richard J., 9th Iowa, B; 40: Oct. 9, '61; discharged April 1, '63.
Cutler, Francis B., 35th New York, A; 25; killed at Fredericksburg Dec. 13, '62.
Dudley, John Edwin, 1st. Cal. and 30th Mass.; 35; 1st sergt.; 2d lieut. Dec. 7, '64; 1st lieut. Dec. 8, '64; capt. April 21, '65.
Fletcher, James T., 11th Rhode Island, G; Oct. 1, '62; mustered out July 13, '63.
Fuller, Andrew L., lieut. 15th. (See Clinton.)
Green, Asa W., 19th, F; 22; enlisted in Haverhill; wounded at Fredericksburg, Va., in leg Dec. 13, '62, and transferred to V. R. C.
Green, Franklin W., 19th, F. (See Clinton.)
Jones, David W., 20th Connecticut, F; 46; killed at Chancellorsville May 3, '65.
Newman, James Homer, 1st Connecticut H. A., F; 27; served May 23, '61, to Sept. 25, '65.
Robinson, Charles A., 1st Cavalry, G; 21; Oct. 5, '61; discharged for disability, Feb. 6, '63; credited to Lowell.
Rugg, Daniel W., 21st, D; 32; served for Fitchburg July 19, '61, to Dec. 20, '62.
Sawyer, Frank O., 9th Vermont; 30; 1st lieut. and q.m. June 10, '62; capt. and a.-q.m. U. S. Vols. Aug. 15, '64; mustered out May 31, '66.
Warren, Thomas H., 12th Vermont, C; 35; served Oct. 4, '62, to July 14, '63.

Lancaster's quota under all calls was one hundred and seventy-one men for three years, and there were credited to her one hundred and eighty-one. The preceding list proves this to be an underestimate of the town's contribution of men for the suppression of the great treason. The veteran re-enlistments numbered fifteen. Ten citizens were drafted and paid each three hundred dollars commutation. Thirty-seven non-resident substitutes were hired. Twenty of Lancaster's sons won commissions; twenty-seven were killed or mortally wounded in action, and twenty-three died of disease during the war. On Independence Day, 1865, the town celebrated the victory of free institutions in the grove at the "Meeting of the Waters;" Rev. George M. Bartol delivered a thoughtful address to the great throng of people there assembled, and Professor William Russell read the Emancipation Proclamation.

Early in 1879 a comprehensive, illustrated history of Lancaster was published, forming an octavo volume of seven hundred and ninety-eight pages. For several years previous the desirability of such a publication had been privately and publicly discussed, it being supposed that among the papers of Joseph Willard, Esq., deceased in 1865, would be found a history of the town partially prepared for the press. Disappointed in this hope, at a town-meeting in April, 1876, the subject was referred to a committee, consisting of Rev. George M. Bartol, Rev. Abijah P. Marvin, Jonas M. Damon, Charles T. Fletcher and Charles L. Wilder, with power to take such action as they might deem expedient. Mr. Marvin was employed to write the history, and in March, 1877, the town sanctioned the doings of the committee and appropriated fifteen

The college graduates known are: Samuel Willard, 1659, Harvard, acting president; Josiah Swan, 1733, Harvard; Abel Willard, 1752, Harvard; Samuel Locke, 1755, Harvard, S.T.D. and president; Peter Green, 1766, Harvard, M.M.S.S.; Josiah Wilder, 1767, Yale; Israel Houghton, 1767, Yale; Samuel Stearns, M.D., LL.D., probably in Scotland; John Mellen, 1770, Harvard, A.A. et S.H.S.; Levi Willard, 1775, Harvard; Timothy Harrington, 1776, Harvard; Joseph Kilburn, 1777, Harvard; Isaac Bayley, 1781, Harvard; Henry Mellen, 1784, Harvard; Prentiss Mellen, 1784, Harvard, LL.D., U. S. Senator; John Wilder, 1784, Dartmouth; Pearson Thurston, 1787, Dartmouth; Artemas Sawyer, 1798, Harvard; Samuel J. Sprague, 1799, Harvard; Benjamin Apthorp Gould, 1814, Harvard, A.A.S.; Hasket Derby Pickman, 1815, Harvard; Sewall Carter, 1817, Harvard; Moses K. Emerson, 1817, Harvard; Paul Willard, 1817, Harvard; Leonard Fletcher, ——, Columbia; Jonas Henry Lane, 1821, Harvard, M.M.S.S.; Samuel Manning, 1822, Harvard; Ebenezer Torrey, 1822, Harvard; Levi Fletcher, 1823, Harvard; Christopher T. Thayer, 1824, Harvard; Frederick Wilder, 1825, Harvard; Stephen Minot Weld, 1826, Harvard; Richard J. Cleveland, 1827, Harvard; Henry Russell Cleveland, 1827, Harvard; Nathaniel B. Shaler, 1827, Harvard; William Hunt White, 1827, Brown; George Ide Chace, 1830, Brown, LL.D., acting president; Christopher Minot Weld, 1833, Harvard, M.M.S.S.; Francis Minot Weld, 1835, Harvard; George Harris, 1837, Brown; Richard C. S. Stilwell, 1839, Harvard, M.M.S.S.; Frederick Warren Harris, 1845, Harvard; Alfred Plant, 1847, Yale; James Coolidge Carter, 1850, Harvard, LL.B.; Sidney Willard, 1852, Harvard; John Davis Washburn, 1853, Harvard, LL.B.; Henry Stedman Nourse, 1853, Harvard; Sylvanus Chickering Priest, 1858, Amherst; Enos Wilder, 1865, Harvard; Stephen Van Rensselaer Thayer, 1870, Harvard; Albert Mallard Barnes, 1871, Harvard; Francis Newhall Lincoln, 1871, Harvard; Nathaniel Thayer, 1871, Harvard; John Emory Wilder, 1882, Agricultural; Samuel Chester Damon, 1882, Agricultural; Edward E. Bancroft, 1883, Amherst, M.D.; Josiah H. Quincy, 1884, Dartmouth, LL.B.; John Eliot Thayer, 1885, Harvard; William J. Sullivan, M.D., 1886, Bellevue; John M. W. Bartol, 1887, Harvard; Azuba Julia Latham, 1888, Boston University.

The physicians have been: Mary Whitcomb; Daniel Greenleaf, died 1785, aged 82; John Dunsmoor, died 1747, aged 45; Stanton Prentice, died 1769, aged 58; Phinehas Phelps, died 1770, aged 37; Enoch Dole, killed 1776, aged 27; William Dunsmoor, died 1784, aged 50; Josiah Wilder, died 1788, aged 45; Josiah Leavitt, ——; Israel Atherton, M.M.S.S., died 1822, aged 82; Cephas Prentice, died 1798; James Carter, died 1817, aged 63; Samuel Manning, M.M.S.S., died 1822, aged 42; Nathaniel Peabody, M.M.S.S.; Calvin Carter, died 1859, aged 75; George Baker, M.M.S.S.; Right Cummings, died 1881, aged 94; Edward T. Tremaine, M.M.S.S.; Henry Lincoln, M.M.S.S., died 1860, aged 55; J. L. S. Thompson, M.M.S.S., died 1885, aged 75; George W. Symonds, M.M.S.S., died 1873, aged 62; George W. Burdett, M.M.S.S.; George M. Morse, M.M.S.S.; S. S. Lyon; Reuben Barron; Henry H. Fuller, M.M.S.S.; Joseph C. Stevens, died 1871, aged 39; Frederick H. Thompson, M.M.S.S.; A. D. Edgecomb, died 1883; Horace M. Nash; Walter P. Bowers, M.M.S.S.; George L. Tobey, M.M.S.S.

The lawyers have been: Abel Willard, John Sprague, Levi Willard, Peleg Sprague, William Stedman, Merrick Rice, Solomon Strong, Moses Smith, Samuel J. Sprague, John Stuart, John Davis, Jr., Joseph Willard, Solon Whiting, George R. M. Withington, Joseph W. Huntington, Charles Mason, John T. Dame, Charles G. Stevens, Daniel H. Bemis, Herbert Parker.

The following have served as representatives for the town:—Thomas Brattle, 1671–72; Ralph Houghton, 1673–89; John Moore, Jr., 1689; John Moore, Sr., 1690–92; John Houghton, 1690, '92, '93, '97, 1705–06, '08, '11, '12, '15–17, '21, '24; Thomas Sawyer, 1707; Josiah Whetcomb, 1710; Jabez Fairbank, 1714, '21–23, 37–38; John Houghton, Jr., 1718–19; Joseph Wilder, 1720, '25–26; Col. Samuel Willard, 1727, '40, '42–43, '49; Dea. Josiah White, 1728–30; James Wilder, 1731; Jonathan Houghton, 1732; James Keyes, 1733; Capt. Ephraim Wilder, 1734–36, '44; Ebenezer Wilder, 1739; Capt. William Richardson, 1741, '45, '50, '54, '56, '58–61; Joseph Wilder, Jr., 1746–47, '51–53; David Wilder, 1755, '57, '62–65, '67; Col. Asa Whitcomb, 1766, '68–74; Ebenezer Allen, 1775; Hezekiah Gates, 1775; Dr. William Dunsmoor, 1776–78, '81; Samuel Thurston, 1778; Joseph Reed, 1779; Capt. William Putnam, 1780; John Sprague, 1782–85, '94–99; Capt. Ephraim Carter, Jr., 1786, '90–92; Michael Newhall, 1787–89; John Whiting, 1793; Samuel Ward, 1800–01; William Stedman, 1802; Jonathan Wilder, 1803–06; Eli Stearns, 1806–10; Col. Jonas Lane, 1808–12; Major Jacob Fisher, 1811–13, '21, '23; Capt. William Cleveland, 1813–15; Capt. John Thurston, 1814–17, '26; Capt. Edward Goodwin, 1816; Capt. Benjamin Wyman, 1817–19; Maj. Solomon Carter, 1818; Joseph Willard, 1827–28; Davis Whitman, 1827, '31; Solon Whiting, 1829–30; John G. Thurston, 1832, '38, '52–53, '55; Ferdinand Andrews, 1832; Dr. George Baker, 1833; Levi Lewis, 1833; James G. Carter, 1834–36; Dea. Joel Wilder, 1834–35; Silas Thurston, Jr., 1837–39; John Thurston, 1839–40; Jacob Fisher, Jr., 1841, '44, '68; John M. Washburn, 1842–43, '58; Joel Wilder (2d), 1845–46; Ezra Sawyer, 1847–48; Anthony Lane, 1850–51; Francis F. Hussey, 1854; James Childs, 1856; Dr. J. L. S. Thompson, 1860, '62; George A. Parker, 1869–71; Sam'l R. Damon, 1878; Henry S. Nourse, 1882.

The following have been State Senators:—John Sprague, 1785–86; Moses Smith, 1814–15; James G. Carter, 1837–38; John G. Thurston, 1844–45; Francis B. Fay, 1868; Henry S. Nourse, 1885–86.

The following have been executive councilors:—Maj. Simon Willard, 1654–76; Joseph Wilder, 1735–52; Abijah Willard, 1775.

William Stedman was Representative to Congress, 1803–10, and Prentiss Mellen, a native of Lancaster, was United States Senator, 1818–20.

The population of Lancaster, at various periods, has been as follows:—1652, 9 families; 1675, 50 or 60 families; 1692, 50 families; 1704, 76 families; 1711, 83 families, 458 souls; 1715, 100 families; 1751, 285 families, 355 polls; 1764, 1999; 1776, 2746; 1790, 1460; 1800, 1584; 1810, 1694; 1820, 1862; 1830, 2014; 1840, 2019; 1850, 1688; 1855, 1728; 1860, 1732; 1865, 1752; 1870, 1845; 1875, 1957; 1880, 2008; 1885, 2050.

The population of the whole territory once belonging to Lancaster is about twenty-two thousand.

The United States Coast Survey locates "Lancaster Church" in 42° 27′ 19.98″ north latitude, and 71° 40′ 24.27″ longitude west of Greenwich. The elevation above the sea level of the grounds about this church is about three hundred and eight feet.

CHAPTER VII.

CLINTON.

BY HON. HENRY S. NOURSE.

Prescott's Mills—Destruction of the Settlement by Indians—The First Highways—The Garrison Census—The First Families.

ALTHOUGH Clinton received its name and began its corporate existence so recently as March, 1850, it being the youngest town save one in Worcester County, nearly two hundred years before that date white men were tilling its soil, and had impressed into their service some part of its valuable water-power. Its territory, in area only four thousand nine hundred and seven acres, was included in the eighty square miles purchased from Sagamore Sholan by Thomas King, of Watertown, in 1642, and confirmed to the Nashaway Company as a township, under the name of Lancaster, in 1653.

The earliest settlers in this river valley were at first clustered along the eastern slope of George Hill and upon the Neck north of the meeting of the two streams which form the Nashua. But for the existence of the falls on the South Meadow Brook, probably neither the pioneers nor their successors would, for many years, have sought homes in that more southerly portion of the town's grant, which now is traversed by numerous streets thickly lined with the residences and marts of ten thousand busy people; for most of this region, now Clinton, was clad with pine forest; its numerous hills, from their steepness or the shallowness of the soil, were not well adapted for tillage; and along the river were no extensive intervales, no broad meadows of natural grass, such as existed on the North Branch and main river, to invite the husbandmen. But the sagacious and enterprising leader of the Nashaway planters, John Prescott, had noted the little cascade where the brook leaped down over the ledge, and recognized it as the most easily available site in the township for a mill.

There was no English settlement nearer than those east of the Sudbury River, and even the carrying of a grist to be ground involved a tedious horseback ride of about twenty miles and back over the devious Indian trail and the crossing of the always treacherous Sudbury marsh. The rude processes of the savages or the laborious use of a hand-quern were often resorted to in preparing grain for bread in preference to so dreary a day's journey. A mill was a prime necessity to the settlers, and scarcely had the Colonial Government given formal recognition to the town which Prescott had founded, than, with his usual restless energy, he entered upon the task of compelling the wild South Meadow Brook to aid in the work of civilization. Mills run by water-power were yet rare in New England. The first built was hardly twenty years old, and the skilled mill-wright of Charlestown had scarcely a competitor in his art. Prescott's mill-dam was the prophecy of the prosperous manufacturing town whose special products have in recent years won a world-wide repute, and with his plucky enterprise the history of Clinton appropriately begins.

By November 20, 1653, Prescott's plans for the mill were so far perfected that he was ready to enter into an agreement with his fellow-townsmen for its erection. This agreement is found duly recorded in the third volume of the Middlesex County registry as follows:

Know all men by these presents that I John Prescott blackesmith, hath Covenanted and bargained with Jno. ffounell of Charlestowne for the building of a Corne mill, within the said Towne of Lanchaster. This witnesseth that wee the Inhabitants of Lanchaster for his encouragement in so good a worke for the behoofe of our Towne, vpon condition that the said intended worke by him or his assignes be finished, do freely and fully giue grant, enfeoffe, & confirme vnto the said John Prescott, thirty acres of intervale Land lying on the north riuer, lying north west of Henry Kerly and ten acres of Land adjoyneing to the mill: and forty acres of Land on the South east of the mill brooke, lying between the mill brooke and Nashaway Riuer in such place as the said John Prescott shall choose with all the priuiledges and appurtenances thereto apperteyning. To haue and to hold the said land and eurie parcell thereof to the said John Prescott his heyeres and assignes for euer, to his and their only propper vse and behoofe. Also wee do couenant & promise to lend the said John Prescott fiue pound, in current money one yeare for the buying of Irons for the mill. And also wee do couenant and grant to and with the said John Prescott his heyres and assignes that the said mill, with all the aboue named Land thereto apperteyneing shall be freed from all common charges for seauen yeares next ensueing, after the first finishing and setting the said mill to worke. In witnes whereof wee haue herevnto put our hands this 20th day of the 9mo In the yeare of our Lord God one thousand six hundred fifty and three.

Subscribed names

WILLM KERLY SENR., JNO. PRESCOTT, JNO WHITE, RALPH HOUGHTON, LAWRENCE WATERS, EDMUND PARKER, RICHARD LINTON, RICHARD SMITH, WILLM KERLY JUNR. THOMAS JAMES, JNO LEWIS, JAMES ATHERTON, JACOB FFARRER.

Joseph Willard, Esq., upon the authority of a direct descendant of John Prescott, states that the first mill-stone was brought from England. Some doubt is thrown upon this assertion by the fact that the alleged pieces of it, which have lain not far from the dam until modern times, are of a sienitic rock not found in England, but abundant enough in Massachusetts. The first grist was ground in the mill May 23, 1654.

Prescott probably at once removed from his home upon George Hill to a new house built on the slope overlooking the mill. This was the first dwelling above the grade of an Indian wigwam within the present bounds of Clinton. Its exact location was plainly marked less than fifty years ago by a considerable depression, showing where the cellar had been, and by a flowing spring near, water from which was conveyed in a conduit of bored logs to the residence of a later generation of the Prescotts, standing lower upon the hillside. The Lancaster historian, before named, in 1826 noted the site as "about thirty rods southeast from Poignand and Plant's factory." It is better defined now as south from the intersection of High and Water Streets, upon the northerly half of the Otterson lot, Number 71 High Street, and about one hundred and fifty feet from the front line of the lot.

The original building must have been of logs or squared timber, and was fortified doubtless with flankers and palisades; for it appears in early records as "Prescott's garrison" and, although having never more than five or six adult defenders, it successfully resisted fierce assaults made upon it by a large body of Indians. Prescott's will, written in 1673, proves that it was then commodious enough to accommodate two families, and had adjacent out-housing for cattle and an apple orchard. The dam probably occupied precisely the same position as that of Frost & Howard's, and the little grist mill stood somewhat lower on the brook than the extensive manufactory now utilizing its water-power.

Four years went by, years in which Prescott was busied not only at mill and anvil, but in various offices for the town. His skill and judgment, moreover, had gained such repute that he was chosen by the colonial authorities to serve on committees to lay out county roads and build important bridges, and even to survey special land grants. Emboldened by the success of his corn-mill and by growing prosperity, he determined upon another enterprise of the greatest interest to the community—the building of a saw-mill. His neighbors were again called upon to further the accomplishment of his purpose by substantial gift of land and temporary exemption from taxation.

Know all men by these presents that for as much as the Inhabitants of Lanchaster, or the most part of them being gathered together on a trayneing day, the 15th of the 9th mo, 1658, a motion was made by Jno. Prescott blackesmith of the same towne, about the setting vp of a saw mill for the good of the Towne, and y^t he the said Jno. Prescott, would by the help of God set vp the saw mill, and to supply the said Inhabitants with boords and other sawne worke, as is afforded at other saw mills in the contrey. In case the Towne would giue, grant and confirme vnto the said John Prescott a certeine tract of Land, lying Eastward of his water mill, be it more or less, bounded by the riuer east, the mill west, the stake of the mill land and the east end of a ledge of Iron Stone Rocks southards, and forty acres of his owne land north, the said land to be to him his heyres and assignes for euer, and all the said land and eurie part thereof to be rate free vntill it be improued, or any p^t of it, and that his saws and saw mill should be free from any rates by the Towne, therefore know ye that the ptyes abouesaid did mutually agree and consent each with the other concerning the aforementioned propositions as followeth :

The Towne on their part did giue, grant and confirme vnto the said John Prescott his heyres and assignes for euer, all the aforementioned tract of land butted and bounded as aforesaid, to be to him his heyres and assignes for euer with all the priuiledges and appurtenances thereon, and thereunto belonging to be to his and their owne propper vse and behoofe as aforesaid, and the land and eurie part of it to be free from all rates vntil it or any part of it be improued, and also his saw, sawes and saw-mill to be free from all towne rates, or minister's rates, prouided the aforementioned worke be finished and compleated as abouesaid for the good of the towne in some convenient time after this present contract, covenant and agreement.

And the said John Prescott did and doth by these presents bynd himself, his heyres and assignes to set vp a saw-mill as aforesaid within the bounds of the aforesaid Towne, and to supply the Towne with boords and other sawne worke as aforesaid and truly and faithfully to performe, fufill, and accomplish, all the aforementioned premisses for the good of the Towne as aforesaid.

Therefore the Selectmen concieving this saw-mill to be of great vse to the Towne, and the after good of the place, Haue and do hereby act to rattifie and confirme all the aforementioned acts, covenants, gifts, grants and immunityes, in respect of rates, and what euer is aforementioned, on their owne part, and in behalfe of the Towne, and to the true performance hereof, both partyes haue and do bynd themselves by subscribing their hands, this twenty-fifth day of February, one thousand six hundred and fifty-nine.

JOHN PRESCOTT.

The worke aboue mencconed was finished according to this covenant as witnesseth

RALPH HOUGHTON.

Signed and Delivred In presence of,

THOMAS WILDER,
THOMAS SAWYER,
RALPH HOUGHTON.

The township proprietors also granted Prescott leave to cut pines upon any common land to supply his saw-mill. In his will the corn-mill is described as "the lower mill," and a second house and barn are bequeathed to his son John as appertaining to the saw-mill. It seems certain, therefore, that the first saw-mill had a dam of its own, and that it was probably situated near where a dam existed early in the present century, a short distance below that of the Bigelow Carpet Company. Somewhere near stood the second house built in this region.

It is possible that about this time Prescott also made some attempt to manufacture iron from bog ore. In 1657 certain inhabitants of Lancaster and Concord, John Prescott being one, upon petition, obtained colonial license to erect iron works in those towns. The forge at Concord was soon after established and for many years had a meagre success. No mention is found in any records of similar works at Lancaster earlier than 1748, when John Prescott, third of the name, in deeds to his son John, speaks of the "forge" and an "iron mine." The former was upon South Meadow Brook, just below the dam of the Bigelow

Carpet Company. Mine Swamp Brook was so named because of the ore dug in its neighborhood for use at this forge. Whether this experimental bloomery was an adventure of the first, second or third John Prescott, the supply of ore was neither sufficient in quantity, rich enough in metal, nor free enough from sulphur to give encouragement for iron manufacture.

Although Indian names remain attached to numerous localities in all the adjacent towns, not one survives in Clinton. Her three great ponds were very early given their present names,—"Clamshell" appearing in records of 1697, "Moss," or "Mossy," in 1702, and "Sandy" not much later. Not a word is found in the annals of the first proprietors that suggests the existence of Indian dwelling-places or planting-fields anywhere near Prescott's Mills. Perhaps there were none permanently occupied after the coming thither of white men, nearer than Washacum, where the once powerful Nashaway tribe had then gathered its feeble remnant spared by small-pox and the relentless Mohawk warriors. In accordance with their nomadic habits, doubtless, families continued to pitch their wigwams at the falls in the Nashua during the season when the salmon and other migratory fish were making their annual journey up that stream; and to camp on the shores of the ponds at other seasons for the abundant food supply therein. The considerable quantity and variety of stone implements found from time to time on the east side of Clamshell Pond indicates the location of an Indian settlement there at some remote period of the past, or of a much frequented camping-ground.

Soon after his coming into the hunting-grounds of the Nashaway tribe, in 1643, we find that Prescott had won the respect of the Indians. This was doubtless largely owing to their need of his valuable craft as a maker of knives, arrow-heads, tomahawks and steel traps. But tradition ascribes it to his stature, giant strength, contempt of danger, skill with the gun, and other heroic attributes; and especially to his possession of a corselet and helmet, supposed to render its owner invulnerable. Various stories of his prowess and adventure are extant, wherein probably there lie germs of truth, but wrapped about with anachronistic or imaginative details supplied by the successive narrators. That he was upon terms of familiar intimacy with the Sachem Sholan is told by the records, and that his relations with Sachem Matthew and his warriors were also friendly is evinced by his possession of a house and farm at Washacum and his purchase of land adjoining the Indian fort there. When the machinations of Philip aroused a pitiless war of races throughout New England, however, Prescott's property was not spared.

On February 10, 1676, a picked force of warriors, at least four hundred in number,—Nashaways, Quabaugs, Nipnets and Narragansets,—under the leadership of Shoshanim, Muttaump, Monoco and Quanipun, fell upon Lancaster. Prescott's garrison was one of the five resolutely assaulted at daylight. It was heroically defended by the stalwart owner and his sons, aided, perhaps, by two or three soldiers, and the savages were finally repelled. Ephraim Sawyer, one of Prescott's grandsons, aged twenty-five years, was slain here in the fight. A young soldier, from Watertown, of Captain Wadsworth's company, named George Harrington, was killed by the enemy a few days later in the same locality. Seventy-five years ago two graves were discernible in the grounds belonging to, and a little to the east of, the mill. These, perhaps, held the ashes of Sawyer and Harrington, though then called Indian graves. With the protection of the troops sent to the rescue, Prescott and his little band withdrew from their perilous situation to join the larger garrison of his son-in-law, Thomas Sawyer. The carnage at the Rowlandson garrison, and the destruction by fire of all the barns and unfortified houses in town, left the survivors so weak in numbers, so disheartened, and so effectually stripped of all means of subsistence, that, even if there had been no reason to fear a renewal of attack by the bloodthirsty foe, the temporary abandonment of the place was unavoidable. Major Simon Willard, on March 26th, sent a troop of horsemen with carts to remove the inhabitants who had not already fled to the Bay towns, and for about three years only the millstone and the rusting irons by the dams on South Meadow Brook marked the site of Prescott's Mills.

In 1679, after the red warriors had perished in the flame of the wrath they had kindled, among the first to move to the re-settlement of the town were the Prescotts. The mills were rebuilt on the spot where the corn-mill had stood, and the eldest son, John, assumed their management, Jonas having a mill at Nonacoicus, and Jonathan becoming a resident of Concord. In December, 1681, John Prescott, Sr., died, being about seventy-eight years of age. His eldest son became possessor of all the estate connected with the mills.

The lands granted by the Lancaster proprietors to the founder of the town for his public benefactions embraced much of the now densely inhabited part of Clinton, extending from a bound forty rods above the first dam down both sides of the brook to the river, while the eastern boundary of the tract was formed by the Nashua, from the brook's mouth to the ledge near the Lancaster Mills, formerly known as Rattlesnake Hill. This domain was largely extended westward by the second John Prescott. A third and fourth John succeeded him in its ownership, and a fifth held the homestead, dying childless.

The first town way to Prescott's Mills was commonly known as the "mill-path," and was recorded in 1658 as "five rods wide from the Cuntrie highway to the mill." This is the main thoroughfare of the present day, between South Lancaster and Water Street. The original record of its location being lost, it was laid out anew in 1811, together with its exten-

sion to Sandy Pond, varying in width from two and one-half to three rods wide. The people of Stow, Marlborough, and even Sudbury, for many years had no mills more conveniently accessible than Prescott's, and the population of Lancaster, after the resettlement, grew most rapidly to the eastward of the Nashua. For all these patrons, the old mill-path was a round-about road, and at a town-meeting in Lancaster, August 26, 1686, a proposition was entertained for another, the second town road laid out within Clinton lines. The petition was "for a way to Goodman Prescott's Corne-mill, to ly over the River at the Scar." Goodman Prescott "told the Town that if they would grant him about twenty acres of Land upon the Mill Brook lying above his own Land, for his convaniancy of preserveing water against a time of drought, he was willing the town should have a way to the mill threw his Land." A committee was appointed "to lay out a highway from the Scar to the mill, threw John Prescott's land," and he was recompensed by the grant desired, which is recorded as lying "on the Mill Brook, near to the South Meadow, bounded north and east by his own land, and south and southeast by common land."

In April, 1717, a town-meeting, upon petition of John Goss and the report of a viewing committee, voted to change the location of the westerly end of this highway, so that it should "lye by the River,—Provided said way be kept four Rods wide from y^e^ Scar bridge till it com to y^e^ Hill from y^e^ top of y^e^ River bank, and after it amount said Hill to lye where it shall be most conveniant to y^e^ Town, till it com to said Mill, said Goss to cleer said Rode when that Committy shall stake it out." April 24, 1733, John Goss conveyed to John Prescott eighty acres east of the Mill Brook, "a highway lying through said Land from the bridge that is over the River, a little above the place called the Scarr." The mills had now many rivals, and the current of travel flowed in other directions. In May, 1742, the town voted to move the Scar bridge down the river "to the road that leads from Lieut. Sawyer's to Doctor Dunsmoor's"—that is, to the crossing of the Nashua, now known as Carter's Mills bridge, where before this there was a fording-place only.

Few traces of the Scar road, though a noted public convenience for more than fifty years, can now be discerned. Close scrutiny reveals signs of the bridge abutments a few rods below the northern end of High Street, and of the raised roadway on the eastern bank of the river. Some time in the eighteenth century there were five or more dwellings located along this highway, of which two or three cellars on the part east of the Nashua are not yet obliterated; and other similar relics of human habitation upon the west side have disappeared within the memory of the living.

But many years before the abandonment of this route by the Scar, another had probably come into use from the eastward. This, now known as Water Street, was wholly in the land of the Prescotts and remained their private way until 1782, on April 1st of which year Lancaster accepted it as laid out two rods wide, "on condition that sd Town is not Burdened with the cost of a Bridge." No record is found to prove how long the bridge had then stood at this crossing of the Nashua, but mention is made of a "slab-bridge" in this vicinity about 1718, belonging to the second John Prescott. It was then, doubtless, like many of the bridges of that era, a narrow structure made of puncheons resting upon log abutments and trestles, and perhaps only passable for foot and horsemen. By the surveyors of Lancaster in 1795 the bridge is called "Prescott's," and noted as ninety-nine feet in length. It was not until December 4, 1815, that the town assumed the ownership of it and of the approaches to it from the county road to Boylston, although eight years earlier assistance was voted for its reconstruction. A few years later it appears in the town records as the Harris bridge.

A by-path very early connected Prescott's Mills with the county highway leading to Washacum and westward. Widened and otherwise altered at various dates, this is yet in use and known as the Rigby road. This name does not appear attached to it in old records, but the brooklet which it crosses in Clinton was called Rigby's Brook before 1718. What connection the cross-road or the stream had with John Rigby, who was one of the pioneer settlers of Lancaster, or with his heirs, has not been discovered. No family of the name is mentioned in the town lists since 1700, but a very old house which stood upon this road in the early years of this century was commonly known as the Rigby place.

In the surprise and massacre by the Indians, September 22, 1697, and in the attack by the French and Indians of July 31, 1704, no loss of life or property at Prescott's Mills was reported, though this, it would seem, must have been one of the six fortified posts said to have been assailed. The men belonging to this garrison in 1704 were John Prescott, his two sons, John and Ebenezer, and John Keyes, the weaver, three of whom were married men with little families. By a report of an inspection of garrisons ordered by Governor Dudley, in November, 1711, we learn that there were at that time but three families at the Mills, including four males of military age, besides two soldiers billeted there—fifteen souls in all. This may be called the earliest census of Clinton. For half a century the householders in this neighborhood had numbered no more, and no less; for half a century more the accessions hardly trebled this population. Along the roads leading westward, to Leominster, to Woonksechocksett, (now Sterling,) to Boylston, and to "Shrewsbury Leg," farms were cleared, humble dwellings arose, children were born, grew to manhood, migrated, and themselves set up roof-trees farther west; but at Prescott's Mills all remained apparently as when the fathers fell asleep.

Daniel and Benjamin Allen, of Watertown, were among the very early settlers in Lancaster, but abandoned their lands when the Indian raids of 1675 and 1676 desolated the frontier towns, and never re-occupied them. About 1746, however, Ebenezer Allen, of Weston, a son of Daniel, came to Lancaster, accompanied by his son Ebenezer, and the two made their homes upon a tract of land containing one hundred and eighty acres, the northerly portion of which is now in possession of Ethan Allen Currier. This had been the homestead of John Goss, who bought the property of John Prescott and John Keyes in 1717. Upon the brook which runs through the farm Goss built a mill at the site of the existing dam, and his dwelling and farm buildings stood on the uplands near.

The deed to John Allen, dated February, 1746, and that of John to Ebenezer, in 1751, speak of the roadway in use through the farm "from Prescott's Mills to a Fordway, where there was a Bridge called the Scar Bridge." The elder Allen sold his whole estate to Ebenezer, Jr., in 1756, including some lands bought on the west side of the mill-path where probably about that date the mansion was built, which was torn down in 1879, to make room for Mr. Currier's present residence. Ebenezer Allen, Sr., died in 1770, at the age of ninety-four, and Ebenezer, Jr., in 1812, aged eighty-eight years. The farm passed out of the Allens' hands in 1811, and Moses Emerson became its owner shortly after. The bluff upon the east bank of the Nashua, so often mentioned in town records as the Scar, from the time of his purchase began to be called Emerson's Bank. Mr. Emerson dying in 1822, the estate was sold at auction by the guardian of his children, and in 1825, George Howard, from Pembroke, bought it. At that time no trace of the Goss Mill or the other buildings once standing in the vicinity of the brook remained, but a cart-path led up over the plain to Harris Hill, perhaps the last trace of the long-disused Scar Road.

Along the old county highway which leads from Bolton to Boylston, where it winds about among the rocky hills east of the Nashua in Clinton, a few farms were tilled many years before the Revolution. Here lived Lieutenant Thomas Tucker; Thomas Wilder, the son of John, and his son Jonathan; Simon Butler, and the late John Pollard. Philip Larkin and his soldier sons had homes to the southeast from Clamshell Pond. Thomas Tucker acquired his lands through Capt. Thomas Wilder in 1716, and probably built his house here about the date of his marriage, in 1719. He transferred his farm to his son William in 1757. In 1788 James Fuller bought the southerly portion of the tract, and in 1798 the homestead came into possession of Charles Chace, from Bellingham, whose descendants have prominent place in the annals of Clinton. The Tucker family had then wholly disappeared from Lancaster. Upon the other farms named, sons built near the fathers, and family names clung to the estates far into the present century. Now, however, but one lineal descendant of any of these old families—the venerable Frederick Wilder—dwells in this section of the town.

CHAPTER VIII.

CLINTON—(*Continued*).

The Revolution—The "Six Nations"—Immigration—The Comb-makers—Poignand & Plant—Coming of the Bigelows—The Clinton Company—The Lancaster Quilt Company—The Bigelow Carpet Company—The Lancaster Mills—Clintonville, its Builders and its Enterprises.

WHEN the rallying cry, "taxation without representation is tyranny," rang through the land, and patriots began the organization of rebellion, John Prescott, fourth of the name, was chosen one of the town's Committee of Correspondence and Safety. Like his grandfather, he seems to have been a radical republican in politics, and was especially active in the prosecution of those who sold tea, and all suspected of a leaning towards Toryism.

When the Lexington alarm-courier summoned the yeomanry to arms on the morning of April 19, 1775, John Prescott, fifth of the name, led as captain one of the six companies from Lancaster which made a forced march to Cambridge. As his command of thirty-two men was mustered neither with Colonel Asa Whitcomb's regiment of militia nor Colonel John Whitcomb's regiment of minute-men, they were probably a mounted troop of volunteers. They served twelve days. Two of his sergeants, Elisha Allen and James Fuller, were residents within the bounds of Clinton; Moses Sawyer was second-lieutenant in Captain Joseph White's militia company; Ebenezer Allen, Jr., and Jotham Wilder were in Captain Andrew Haskell's company, which fought in the battle of Bunker Hill; James Fuller and Jotham, Stephen, Titus and Reuben Wilder served for short terms later in the contest, most of them being at Saratoga. Several of the Prescott family did patriotic service for national independence, but at that date the Prescotts mostly lived upon ancestral lands in Chocksett or elsewhere than in the south part of Lancaster.

The region round about the boundary stone where the lines of Berlin, Boylston and Clinton meet, including sundry farms of each town, was, in the years following the Revolution, known as the "Six Nations," that name attaching to it because families representing half a dozen or more different nationalities were therein resident. The Wilders, Carters and others were English by descent; Andrew McWain, Scotch; the sons and grandsons of Philip Larkin, Irish; the families of Louis Conqueret and —— Hitty, French; Daniel and Frederick Albert, Dutch; and John Canouse was a Hessian, a deserter from the captive army of Burgoyne. Other names and nationalities are sometimes added to the list.

Beyond the mills to the southward, towards Sandy Pond, for a long distance all the lands desirable for tillage or timber had fallen, by original proprietary division of commons or by inheritance, to the Prescotts and their kinsfolk, the Sawyers. The third John Prescott, in 1748, the year before his death, "for love and good-will," gave his grandchildren, Aaron, Moses, Joseph, Sarah and Tabitha Sawyer, about ninety-seven acres of land lying on both sides of a stated highway and of the brook "aboue the forge." These grantees were the children of John Prescott's only daughter Tabitha, wife of Joseph Sawyer. It has often been asserted that Aaron was the founder of Sawyer's mills in Boylston, but the credit of building the first saw and grist-mills in that locality probably belongs to his father, Joseph. Moses Sawyer was the first to reside upon the lands thus deeded to him and his brethren by their grandfather, and his son Moses was the second. Their houses yet remain upon what is now called Burditt Hill, and the latest has long outlived its hundredth year.

From the death of the fourth John Prescott, in 1791, began a subdivision of his landed estate into many lots, and its rapid alienation from the family. He had five sons and four daughters. To the two youngest, Joseph and Jabez, he deeded in 1786 the two mills, upon condition that each should deliver to him or his wife, annually so long as either should live, "five bushels of Indian corn, three of rye, three of wheat, and one thousand feet of boards." Within two years after the death of their father, the sons, with the exception of John, had parted with their patrimony and removed from Lancaster. Captain John, the fifth and last of his name in the town, clung to thirty or forty acres of land and the old homestead, where he died, childless, August 18, 1811, aged sixty-two, his wife, Mary (Ballard), surviving him.

In the closing years of the eighteenth century the people were weighed down by debt and taxation—legacies of the long years of the war for independence. Shays' Insurrection had been summarily quelled, for New England common sense recognized the fact that anarchy could afford no relief from the general distress. The yeomanry, however full their barns, held mortgaged lands and empty purses. Everywhere the sheriff was busy with executions, foreclosures and forced sales. The merchants and lawyers mercilessly devoured the debtors; large estates were broken up and homes changed owners on every hand. Thus Prescott's Mills and some of the lands around them in 1793 fell into the possession of John Sprague, the Lancaster lawyer and sheriff, and until his death, in 1800, they are sometimes mentioned in records as Sprague's Mills. Several heads of families during this decade fixed their habitations upon land in the vicinity bought for prices that now seem ludicrously small. They were: Jacob Stone, a noted framer of bridges and buildings, whose house, burnt many years ago, was west of Sandy Pond, a mile from any other dwelling, save one at a saw-mill on Mine Swamp Brook, owned by Jonathan Sampson, of Boylston; Joseph Rice, a basket-maker from Boylston, who married a daughter of Moses Sawyer and lived near him; Nathaniel Lowe, Jr., from Leominster, who in 1795 bought of Moses Sawyer a farm lying between the mills and the river, which North High Street now bisects; Lieut. Amos Allen, who bought lands of Jonathan Prescott in 1792 and built the first house on the west side of the highway between the mills and Ebenezer Allen's; Benjamin Gould, father of the poetess, Hannah Flagg Gould and the scholar, Benjamin Apthorp Gould, who began a dwelling probably about the same date, which he never found means to finish, on the spot where Deputy Sheriff Enoch K. Gibbs lives; Coffin Chapin, Richard Sargent and his sons, and John Hunt, who lived at the summit of the hill on Water Street, about half-way between the mills and the bridge over the Nashua; John Goss, who bought a farm upon the east of the river, near the Bolton and Berlin corner; Elias Sawyer, who built on the river bank near his dam already mentioned. James Elder lived just outside Clinton bounds.

During the first ten years of this century accessions became more numerous, and among them were some whose descendants have been honorably identified with every phase of Clinton's material progress. Ezekiel Rice purchased the house and farm of Moses Sawyer, Jr., in 1802. John Lowe, a comb-maker of Leominster, in 1800 bought of John Fry fifty acres of land, and in 1804 another lot adjoining, which included the cellar of Benjamin Gould's house and a shop of Asahel Tower's on the brook. Here he built a few years later, and deeded a moiety of land and house to his father, Nathaniel. Nathan Burditt came from Leominster in 1808 and succeeded Mr. Rice in possession of the house built by Moses Sawyer, Jr. John Severy, a Revolutionary pensioner, came to reside on Mine Swamp Brook the same year, buying of Sampson his house, brick-yard and saw-mill. John Goldthwaite, the splint-broom maker, occupied a dilapidated building, the only one on the Rigby Road. Daniel Harris, a Revolutionary pensioner from Boylston, in 1804 and 1805 bought of John Hunt's numerous creditors his substantial house and large farm, which he in later times shared with his sons—Emory, Asahel and Sidney—who, by their industry, thrift and business ability, became leading men in the community.

Next to the saw and grist-mills, the first manufacturing industry to employ any considerable number of workmen was the making of horn-combs, introduced about the beginning of the present century from Leominster, where it had been a profitable employment from the days of the Revolution. John Lowe and Nathan Burditt were the earliest to ply this trade in the town, but they soon taught it to many

others, who gradually brought improved tools and machinery into service to increase the quantity and improve the quality of their products.

At first the comb-makers exercised their handicraft in diminutive shops or rooms in their own dwellings, and the women and children helped in the lighter parts of the work. The horns were sawn into proper lengths by hand, split, soaked, heated over charcoal, dipped into hot grease, pressed into required form between iron clamps by driven wedges, stiffened by cold water, marked by a pattern for the teeth, which were sawn one by one. The combs were then smoothed, polished and tied in packages for sale. The earliest makers carried their own goods to market, and it is told of John Lowe that he often journeyed as far as Albany on horseback, with his whole stock in trade in his saddle-bags.

The use of water-power in the manufacture was not adopted until 1823. Through Lowe's land ran a little brook, which was finally utilized for comb-making by his son Henry, with whom was associated his cousin, Thomas Lowe. The stream had been dammed at least twenty years earlier, and a small shop thereon had been occupied by Asahel Tower for nail-cutting, and Arnold Rugg for wire-drawing. The Lowes were succeeded several years later by Henry Lewis, and he, in 1836, by Haskell McCollum, who built a second shop and greatly increased the business, having as a partner his brother-in-law, Anson Lowe. E. K. Gibbs built a third shop about 1840.

The age was one when a man was fortunate whose personal peculiarity of form, feature, dress or habit, were not salient enough whereupon to hang some nickname — when many a worthy citizen walked among his fellow-men almost unknown by his baptismal name. The same fashion obtained respecting neighborhoods, every little section of the town gaining some quaint designation fancied to be descriptive of the district or its people. The region about these comb-shops on Rigby Brook became in popular parlance, Scrabble Hollow.

The water privilege on South Meadow Brook in the possession of George Howard was soon turned to use in the horn industry; at first by lessees Lewis Pollard and Joel Sawtell, later by the owner, who was enterprising and prosperous. But the most extensive makers of horn goods were the sons of Daniel Harris, who learned the trade of Nathan Burditt. Asahel Harris at first conducted the business at his house east of the river, still standing. This dwelling he had bought from Samuel Dorrison, who built it upon a lot severed from the Pollard farm. Mr. Harris built later the brick house upon the height of the hill west of the Nashua, where he introduced horse-power and improved machinery in his work-shop. In 1831 Asahel and Sidney Harris built a dam and shop upon the river just above the bridge, securing a fall of about six feet. Sidney Harris, in 1835, bought his brother's interest in the water-power and the house above, and here began a career of great prosperity. Upon the sale of the Pitts mills, in 1843, the grist-mill machinery was brought thither.

In 1805 Samuel John Sprague sold the Prescott saw and grist-mill, with a house and land, to Benaiah Brigham, of Boston. Thomas W. Lyon soon after bought them of Brigham and acquired other estate in the neighborhood. In August, 1809, Lancaster was stirred with the news that two wealthy foreigners, residents of Boston, had bought the Prescott Mills and were about to erect a factory for the weaving of cotton cloth by power looms. Soon workmen began laying the foundation of the new structure, and the enterprising owners for twenty-five years thereafter were notable citizens of the town. The elder of the two, the capitalist of the firm and president of the corporation afterwards organized, was David Poignand, a dapper, urbane gentleman of French Huguenot descent, born in the island of Jersey. He wore a queue, and carried a gold-headed cane, was both a jeweller and a cabinet-maker by trade, and an exceptionally good workman. He also had made and lost a fortune in the hardware trade in Tremont Street, Boston. His partner was his son-in-law, Samuel Plant, an Englishman who had been in America about twenty years as factor for a great cloth manufacturer of Leeds. Mr. Plant had made himself thoroughly acquainted with the manufacture of cotton in England, and secretly brought thence drawings of the machinery necessary for a mill, and perhaps some of the more important parts of certain machines. From these, with the aid of the ingenious machinist, Capt. Thomas W. Lyon, he was able to completely equip the factory and put it into running order. Under the methodical management of Mr. Plant, aided by the skill of the machinist, the difficulties which always attend a novel undertaking of such magnitude were soon overcome, and the success of the enterprise was assured. This factory was one of the earliest of its kind successfully run in America. The town granted the firm partial exemption from taxation temporarily. The embargo and war with England served all the purposes of a high protective tariff for the infant industry. Common cotton cloth which at the building of the factory cost about thirty cents a yard, before the close of hostilities commanded double that price.

A little above the factory, upon the same stream, stood a saw-mill built, probably before 1800, by Moses Sawyer, or his son Peter, but at that time owned by Joseph Rice. It commanded a fall of ten to twelve feet, but had a very limited reservoir. This mill was often, and necessarily, a grave source of inconvenience to Poignand & Plant by causing an intermittent flow of water to their wheel. Mr. Rice's land and water-rights were purchased in 1814, his log dam was replaced by one of stone somewhat higher, and a second factory was built a little below the saw-mill site, to which the looms were moved from the old mill.

The business had grown until it called for more capital than the firm possessed. February 12, 1821, David Poignand, Samuel Plant, Benjamin Rich, Isaac Bangs and Seth Knowles were incorporated with the title of the Lancaster Cotton Company, representing a capital of $100,000. Benjamin Pickman, Benjamin T. Pickman and Lewis Tappan also became stockholders in the company, and the two last named were in succession made treasurers. The old Prescott dam having been broken through by a freshet in 1826, was rebuilt and made one or two feet higher, giving a fall of twenty-nine feet. The square, brick mansion near the lower mill upon Main Street was also built by the company as a residence for the superintendent, Mr. Plant, twenty-five hundred dollars being appropriated for the purpose.

The treasurer was accustomed to drive up from Boston in his own chaise once a month to attend to his special duties, and it was usual for a four-horse team to be sent to the city once a fortnight with the sheetings manufactured. The wagon for its return trip was loaded with cotton bales and goods for the store which Mr. Plant established a short distance from the factory. For several years most of the teaming for the company was done by Nathan Burditt, Sr. In case of any repairs which required a new casting to be obtained, there was no foundry suitably equipped to furnish it nearer than South Boston.

August 28, 1830, while casually at the house of his friend, John G. Thurston, in South Lancaster, David Poignand died suddenly. In 1835 the company, finding their business unprofitable because of changes in the tariff and the superannuated machinery, advertised their property for sale, described as follows: "one hundred and seventy-seven acres of land, one brick factory with nine hundred spindles, one wooden factory with thirty-two looms and other machinery; blacksmith shop, machine shop, eleven dwelling houses and other buildings." The mills with such land and structures as were essential to their operation were finally sold at auction July 26, 1836, and bought by Nathaniel Rand, Samuel C. Damon, John Hews and Edward A. Raymond, for $13,974. Their successors in 1837 leased the mills to the brothers Horatio N. and Erastus B. Bigelow, who came from Shirley, where the elder had been manager of a cotton-mill. Mr. Plant removed to Northhampton, and there died in 1847.

The Bigelows had selected this location preparatory to the organization of capital for the developing of some inventions of the younger brother. H. N. Bigelow occupied the Plant mansion, and from this time became a resident of the village and an indefatigable and wise promoter of its best interests, moral, social and material. March 8, 1838, the Clinton Company was duly incorporated with a capital of one hundred thousand dollars, and the right to hold real estate to the amount of thirty thousand dollars. The incorporators whose names appeared in the legislative act were: John Wright, H. N. Bigelow and Israel Longley. The most notable inventions of Erastus B. Bigelow, at that date perfected, were two power looms: one for weaving figured quilts, the other for the weaving of coach-lace. The upper, then styled the yellow factory, was leased by the Clinton Company for the latter manufacture, and the brick factory was devoted to the making of quilts.

Before this time coach-lace had always been woven by hand looms, and any attempt to supplant human fingers in the complicated manipulation required was scouted at by the weavers as presumptuous. But the lace made by the ingenious mechanism invented by Mr. Bigelow in 1836 and patented in 1837 proved of a very superior quality, while the cost of weaving was reduced from twenty-two to three cents a yard. The manufacturers were rewarded with immediate and ample financial success, which continued for about ten years, when stage-coaches began everywhere to be superseded by the railway train, and coach-lace found no place in the new fashion of vehicles.

The company was fortunate in the time of entering upon its work as well as in the genius of its inventor and the ability of its management. The period was one of great and general prosperity. August 17, 1842, the real estate, hitherto leased, was bought of Samuel Damon, and extensive improvements were begun. In 1845 the capital of the company was increased to three hundred thousand, and in 1848 to half a million dollars. Meanwhile the working plant was re-enforced by the purchase of Sawyer's Mills, in Boylston, where the water-power was utilized for the making of yarn. Additions were annually made to the original buildings, and new ones were erected. When the demand for their special product began rapidly to decrease, machinery for the making of pantaloon checks, tweeds and cassimeres was gradually introduced.

A large machine shop was connected with the works which, under charge of Joseph B. Parker, turned out nearly all the machinery required in the factory. Horatio N. Bigelow was general manager from the outset, being, however, relieved for three years, 1849 to 1851, by C. W. Blanchard. About four hundred hands were engaged when all the looms were running; twelve hundred yards of coach-lace and four thousand yards of pantaloon stuffs were finished per day.

Although the brick factory was bought in 1838 for the introduction of the Bigelow quilt looms, owing to financial difficulties the weaving of counterpanes did not begin until 1841. The successive transfers of the property are of interest, as giving the names of those who began the quilt manufacture and as showing the sudden rise in real estate values at that date. Rand & Damon, by purchase of their associates' shares, became sole owners of the cotton-mills in 1837, and in 1838, Rand, having acquired his partner's rights in the brick factory, sold it to E. G. Roberts, who the same day transferred it to W. R. Kelley for six thou-

sand dollars consideration. In September, 1839, it was deeded to Thomas Kendall, the price named being twenty-five thousand dollars. The property, with, of course, additions and improvements, next passed into possession of Hugh R. Kendall in 1842, the alleged consideration being thirty thousand dollars, and in 1845 it was sold to John Lamson for forty thousand dollars. October 1, 1851, Lamson disposed of the property to the Lancaster Quilt Company for one hundred and seventy-five thousand dollars.

The quilts that came from the new looms were from ten to thirteen quarters in width and of a high grade in quality, equal to those of foreign make for which the importers demanded six to ten dollars each. The Bigelow quilts were soon in the market at less than half those prices. In the quilt loom, as in all his inventions and improvements in weaving machinery, the design and mechanical construction of each machine were carefully perfected under Mr. Bigelow's own oversight, and not more with a view to the saving in cost of production than to attaining the highest standard of excellence in the fabric produced.

February 11, 1848, John Lamson, William P. Barnard, George Seaver and associates were incorporated by the name of the Lancaster Quilt Company, for the purpose of manufacturing petticoat robes, toilet covers, and the various descriptions of counterpanes, quilts and bed-covers, with an authorized capital of two hundred thousand dollars. Thirty-six looms and about one hundred hands were employed and the annual output was over seventy-five thousand quilts. Charles W. Worcester was the managing agent of the works.

The devices harmoniously combined in the coach-lace loom were seen by the inventor to be equally applicable to the weaving of any pile fabric. With suitable enlargement and modification of parts the product would become Brussels carpet, or, by the addition of a cutting edge to the end of the pile wire, be given a velvet pile. The adaptation to the carpet loom of the chief novel feature of the lace loom—the automatic attachments to draw out, carry forward and re insert the wires—was an easy problem for one who "thought in wheels and pinions." The carpet loom, as a conception in the inventor's brain, was soon complete in all its details. The machinists under Mr. Bigelow's eye shaped the conception in wood and metal, and at Lowell in 1845 Jacquard Brussels carpeting was woven upon the power loom. The invention was patented in England March 11, 1846, and in the great London Industrial Exhibition of 1851 specimens of Bigelow's carpeting were exhibited which won from a jury of experts the highest encomium. It was declared in their official report that the Bigelow fabrics were "better and more perfectly woven than any hand-woven goods that have come under notice of the jury."

The Bigelow brothers, the success of the new carpet loom thus made certain, bought a building at the south end of High Street, in which Gilman B. Parker's foundry and other mechanical industries had been carried on, raised it and built a brick basement beneath, thereby obtaining a room two hundred feet long by forty-two in width. In this they set up twenty-eight looms run by a thirty horse-power steam-engine, and in the autumn of 1849 began the making of Brussels carpet by power. The requisite spinning was done at other mills. About one hundred hands were employed and five hundred yards of carpeting made daily. The day's labor of a skilled weaver on the hand loom rarely brought five yards, while the power loom, managed by a girl, readily produced four or five times as much and ensured superior finish. The works were under the management of H. N. Bigelow. H. P. Fairbanks became a partner with the Bigelow Brothers in 1850, and with added capital, larger and more substantial buildings, year by year crowded the little valley site.

A map of Lancaster, dated 1795, notes the existence of a "falls of about seven feet" in the river at the place where now stands the dam of the Lancaster Mills Company. At that time this great water-power was owned by Elias Sawyer, who built a dam across the stream and began a saw-mill, which, from lack of means, he was never able to complete, although he sawed considerable lumber here. For a time he lived near by, but the property passed from his hands, and in 1810 was acquired by James Pitts, a millwright of Taunton, who came to reside upon and improve his purchase in December, 1815. The narrow, rock-walled valley, and the hills that hem it in, were densely covered with forest, and no public road led thither. A few acres of the bottom lands were soon cleared, and during 1816 Mr. Pitts erected upon the mud-sill of the old Sawyer Dam a new one, thirteen feet in height, and the same year completed a saw and grist-mill. Possessing some spinning machinery at a factory in West Bridgewater, he brought it to Lancaster, and began the manufacture of cotton yarn in 1820, gradually enlarging his buildings and increasing his production as success warranted. A small part of his power was leased in 1818 and for a few years later to Charles Chace & Sons, who built a small tannery near the mills. Comb-making was also carried on here at a later day, with power leased of Mr. Pitts.

James Pitts, Sr., died in January, 1835, and his sons, James, Hiram W. and Seth G., continued the manufacture of satinet warps. The saw and grist-mill was burned in 1836, but immediately rebuilt. November 12, 1838, the town accepted a highway laid out from the "red factory" of Poignand & Plant—which stood where the Bigelow Carpet Company's spinning department now is—to Pitts' Mills. This was the first public road to that locality, and marks the origin of Mechanic Street. In 1842 the Pitts Brothers sold their entire estate, including about eighty acres of land, to Erastus B. Bigelow, for ten thousand dollars.

February 5, 1844, E. B. Bigelow, Stephen Fairbanks, Henry Timmins and associates were incorporated as the Lancaster Mills Company, with a capital of five hundred thousand dollars, and at once laid the foundations of the manufactory now famous as one of the largest gingham-mills in the world. It was at first proposed to begin with the manufacture of blue and white cotton checks only, but in view of the liberal pecuniary returns at that time rewarding manufacturing enterprise, and the deserved confidence of the capitalists in the inventive genius of the younger Bigelow, and the rare organizing ability of the elder, it was determined to build a gingham-mill of twenty thousand spindles. Up to this time ginghams had been chiefly made upon hand looms. The processes which this fabric passes through before it is ready for market are in number more than double those required in the making of plain cloth, and hence the design of the machinery and buildings was correspondingly complex in character. To this novel problem E. B. Bigelow devoted his energy and marvellous constructive skill for more than two years, when his health gave way, under the intense strain of the mental toil and anxiety he had undergone, and he sought rest and found cure in foreign travel. He had, however, perfected all plans and contracts for the essentially new elements of the plant, and his brother, being thoroughly familiar with them, carried the works onward to completion, and put them into successful operation.

H. N. Bigelow continued in management of manufacture until 1849, when he was succeeded as agent by Franklin Forbes, under whose long and very able control the company attained great financial success and an honorable name for the unvarying superiority of its products. The various purchases of real estate, —two hundred and thirteen acres in all,—and the construction of dam, mills and machinery ready for operation, cost about eight hundred thousand dollars, and the stock was divided into two thousand shares. Both buildings and machinery were of the highest excellence in design and workmanship. The dam was built chiefly of stone quarried in the immediate neighborhood, and the town of Lancaster at the time of its construction joined the banks of the river just above with a wooden trestle bridge, and laid out a roadway from it to the county highway. The water-power was at first developed by three breast-wheels upon a single line of shafting, each twenty-six feet in diameter with fourteen buckets. These were supplemented by a Tufts' engine of two hundred and fifty horse-power. The mills were admirably lighted and ventilated, and neat, convenient tenements of wood were built near them, accommodating seventy families. About eight hundred operatives were required when the works were in complete running order, two-thirds of whom were females. Girls earned about three dollars per week above their board. The head dyer, Angus Cameron, was reputed the most skilful of his craft in America. The weaving-room, containing six hundred looms, was the largest in the United States, having a floor-area of one and one-third acres. Thirteen thousand yards of gingham were finished in a single day—the estimated annual product being four million yards—and the price, which had been sixteen or eighteen cents per yard, dropped at once to less than twelve. In 1849 the capital of the company was increased to one million two hundred thousand dollars.

The prosperity of the Clinton Company and the starting of the Lancaster Mills speedily worked great changes in their vicinity by the constantly-increasing demand for intelligent labor, and the consequent encouragement offered to skill and traffic. The growth of the village was very rapid, yet systematic and substantial. Streets were laid out according to a well-digested plan, reserving prominent sites for public buildings. In this and other work calling for the art of an engineer, the judgment and foresight of H. N. Bigelow were ably seconded by the taste and scientific attainments of the famous civil engineer John C. Hoadley, then resident in the Prescott house, at the corner of High and Water Streets. The town of Lancaster in 1848 accepted Church, Union, Chestnut, Walnut, High, Nelson and Prospect Streets as town roads, the expenditure for land and construction having been wholly defrayed by the villagers. Hundreds of shade-trees were planted, of which the town is now justly proud. Stores and dwellings soon rose in every direction, and owners or lessees hastened to occupy them before the hammer and saw of the builders had ceased work upon them.

The final location of the Worcester and Nashua Railroad through the town in 1846 gave new energy to enterprise, again to receive fresh impetus when the road was formally opened to Groton on July 24, 1848, and on November 5th of the same year to Worcester. Before this the travelling public were dependent upon Stiles' stage-coaches for conveyance to Worcester, and reached Boston by patronizing McIntire and Day's coaches, which at 5.30 and 10 A.M. and 3.45 P.M. started for Shirley Village, there connecting with the Fitchburg Railway trains. A. J. Gibson's rival line also carried passengers to South Acton, where the same trains were met.

The *Lancaster Courant*, a weekly newspaper, was established by Eliphas Ballard, Jr., and F. C. Messenger, in connection with a job printing-office located on the east side of High Street, in the building of C. W Field. Mr. Messenger was editor of the paper, the first number of which was published Saturday, July 4, 1846. In July, 1850, it was enlarged by the addition of one column to each page and its name changed to *Saturday Courant*.

The professions of medicine, law and engineering soon had gifted and public-spirited representatives here, whose honorable careers adorn the town's an-

nals and whose wisely-directed influence made its mark upon the town's institutions. Other wide-awake young men coming hither to seek fortune and build themselves permanent homes, engaged in trade or plied various handicrafts, and by their worthy ambitions and energy gave a tone to the community notably superior to that which generally characterizes a new manufacturing town.

Postmaster Rand authorized the establishment of a branch of the Lancaster post-office at the store of Lorey F. Bancroft, which stood on the corner of High and Union Streets until removed for the building of Greeley's block in 1875. Regular postal privileges were petitioned for and obtained in July, 1846. H. N. Bigelow was the first postmaster commissioned, and located the office in the north end of the Kendall building, placing it in charge of George H. Kendall.

By popular usage the title of the corporation which had been most influential in creating this thriving village gradually became attached to it. It was called Clintonville; and therefore the reason for the selection of its name by the company in 1838 obtains some historic interest. It must be said that the name *Clinton* was not adopted for any specially apt significance or with intent to honor any person or family, but simply because it satisfied the eye and ear better than other names that may have been proposed. It was doubtless chosen by Erastus B. Bigelow's desire, and was suggested to him by the Clinton Hotel of New York, which he had found a very comfortable resting-place in his business journeys to Washington.

The Bigelow Mechanics' Institute was founded in 1846. It was an association formed by several of the more intelligent citizens, who proposed to benefit themselves and the community by the support of courses of lectures upon scientific and literary subjects, the collection of a library, the establishing a reading-room and perhaps an industrial school. A reading-room was opened to members and subscribers June 5, 1847, in the second story of the Kendall building, then on High Street, where the Clinton Bank block now stands. A fee of three dollars annually entitled any resident to its privileges. The book fund and expenses of lectures exceeding membership fees and sale of tickets were met by subscription. The introductory lecture was delivered in October, 1846, by Hon. James G. Carter. He was followed by John C. Hoadley, Dr. George M. Morse, Charles G. Stevens, Esq., Rev. Hubbard Winslow, and other educated gentlemen of the vicinity. In later years, through the instrumentality of the Institute, noted lecturers like Horace Greeley, Henry D. Thoreau, Oliver Wendell Holmes, Josiah Quincy, Jr., etc., were brought to delight and instruct Clinton audiences. Regular monthly meetings of the members were held for conference and the discussion of questions relating to the mechanic arts and manufactures. The finances of the society were never quite commensurate with its ambitious aims, but in its six years' life it was an efficient public teacher and accumulated a valuable library of nearly seven hundred volumes.

The first tavern in Clintonville was kept by Horace Faulkner in the old Plant farm-house, which in later years served as a boarding-house for the Lancaster Quilt Company. In 1847 H. N. Bigelow built the hotel known as the Clinton House, Oliver Stone being the contractor for its construction. Horace Faulkner and his son-in-law, Jerome S. Burditt, opened it to the public in Christmas week of that year, and the "house-warming" was a notable occasion in the village. The hall was added in 1850, its completion being celebrated by an "opening ball" October 2d.

In the autumn of 1839 Ephraim Fuller's cloth-dressing and wool-carding works at Carter's Mills having been destroyed by fire, he purchased of George Howard his water-power on South Meadow Brook, and lands adjacent, where he erected a fulling-mill and carried on a thriving business for many years. His son, Andrew L. Fuller, soon became associated with him, and, as the times favored, machinery for the manufacture of every variety of woolen knitting-yarn, satinets and fancy cassimeres was introduced. For a time the business employed thirty hands, and sixty thousand yards of cloth were put upon the market yearly, the mill sometimes being operated by night as well as day.

In the winter of 1846 Ephraim Fuller dammed Goodridge Brook where it crosses the highway in Clinton and built a shop with a trip-hammer and forge conveniences in the basement. Here Luther Gaylord—who for several years had been engaged in the manufacture by hand of cast-steel tools for farm use—made all kinds of hay and manure forks, garden rakes, hoes and agricultural implements of similar character, employing from six to ten men. His work was unrivaled in excellence. There being more than sufficient power for his limited needs, the upper story of the building was fitted with a line of shafting and leased to W. F. Conant, a builder of water-wheels, Isaac Taylor, sash and blind manufacturer, and others.

Shortly after the starting of the Bigelow carpet-mill, Albert S. Carleton began the making of carpet-bags of a superior quality, using Bigelow carpeting made in patterns expressly for his purpose. His work-rooms were in the brick building now the residence of Dr. Charles A. Brooks. The business later came into the hands of James S. Caldwell.

October 16, 1847, Gilman M. Palmer started an iron foundry on land now covered by the weaving department of the Bigelow Carpet Company, at the southerly end of High Street. In 1849 he transferred this property to the Bigelows, and built upon the site of the present foundry, near the railway station.

Deacon James Patterson introduced in 1848 the manufacture of belting and loom harnesses and the covering of rolls, over the carpenter-shop of Samuel

Belyea, the two occupying one end of Mr. Palmer's foundry. When the building was taken by the carpet company, Mr. Patterson built a shop in rear of his own residence, but sold his business in July, 1853, to George H. Foster, who was located near the railway.

Of any Massachusetts community it needs not to be told that the foundations of school and meeting-house were among those earliest laid and most promptly built upon; and that generous provision was always made for the intellectual, moral and religious culture of young and old, rich and poor alike. In 1849 there were already three churches in Clintonville, each with its settled clergyman and commodious house of worship. Though forming two districts in the Lancaster school system, the village, under laws of that day, was permitted to manage its schools according to special by-laws of its own, and its prudential committee printed elaborate annual reports. A more complete autonomy was soon acquired.

CHAPTER IX.

CLINTON—(*Continued.*)

The Incorporation—Favoring Auspices—New Enterprises and Changes in the Old.

THE fourth article of a warrant calling a town-meeting in Lancaster, Nov. 7, 1848, was, "To see if the Town will consent to a division thereof and allow that part called Clintonville to form a separate township, or act in any manner relating thereto." The subject was referred to a committee, with instructions to report at a future meeting. This committee included Elias M. Stilwell, James G. Carter, John H. Shaw and Jacob Fisher, of the old town; Horatio N. Bigelow, Ezra Sawyer, Sidney Harris, Chas. G. Stevens and Jotham T. Otterson, of Clintonville. A citizens' meeting was called in the latter village, Monday, October 29, 1849, to discuss the question of separation, at which H. N. Bigelow was chairman and Dr. George M. Morse, secretary. Those present, with almost entire unanimity, declared in favor of petitioning for township rights, and a committee was chosen, consisting of Charles G. Stevens, Sidney Harris, Joseph B. Parker, Horatio N. Bigelow and Alanson Chace, "to carry forward to accomplishment the views of the meeting, leaving the terms and the line of division to the judgment and discretion of the committee."

November 12, 1849, at a town-meeting, majority and minority reports were presented by the committee chosen the year before. They contained such obvious arguments, pro and con, as are usual in the debates preceding town division, and both were tabled, the tone of a brief discussion indicating that no compromise could be readily effected at that time. The citizens' committee of Clintonville, in obedience to their instructions, proceeded to prepare a petition to the Legislature.

The majority report, favoring the division, had gone so far as to propose a straight line of separation, to begin "at the town bound between Lancaster and Sterling on the Redstone Road . . . and run thence S. 75° 42′ East to the easterly line of the town, striking the Bolton line at a point 289.56 rods from the town bound which is a corner of Bolton, Berlin and Lancaster." This severed from the old town nearly the whole of the Deershorns School District, and vigorous remonstrance was made by almost every resident therein. Therefore, on February 9, 1850, a meeting was called at the vestry of the Congregational Society's meeting-house, to consider a proposed line of division, so run as to include little more than the old Districts Ten and Eleven in the new town.

February 15th, at a special town-meeting, the chief article in the warrant was, "To see what action the Town will take in reference to the petition of Charles G. Stevens and others to the legislature of the Commonwealth, for a division of the town of Lancaster." After some friendly discussion of the matter the assemblage voted that the citizens of the old town should select a committee to confer with a like committee representing the petitioners, and that they should "report as soon as may be what terms, in their opinion, ought to satisfy the town of Lancaster, to consent not to oppose a division of the town." The meeting adjourned for forty minutes, having chosen John G. Thurston, Jacob Fisher, Silas Thurston, Dr. Henry Lincoln and Nathaniel Warner to consult with the Clintonville committee already named. Upon re-assembling the unanimous report of the joint committee was adopted, as follows:

1. That all the property, both real and personal, owned by the town of Lancaster at the present time, shall belong to and be owned by the town of Lancaster after the division shall take place.

2. That the inhabitants of Clintonville shall support and forever maintain those persons who now receive relief and support from the town of Lancaster as paupers, who originated from the territory proposed to be set off; and also forever support all persons who may hereafter become paupers who derive their settlement from this territory.

3. That Clintonville, or the town of Clinton, if so incorporated, shall pay to the town of Lancaster the sum of ten thousand dollars in consideration of the large number of river bridges and paupers that will remain within the limits of the old town; the same to be paid in ten equal payments of one thousand dollars, with interest semi-annually on the sum due, the first payment of one thousand dollars to be made in one year after the separation shall take place. And the amount shall be in full for all the town debt which Lancaster owes.

4. That the line of division shall be the same as this day proposed by Charles G. Stevens, Esq., as follows: Beginning at a monument on the east line of the Town, 289.50 rods northerly from a town bound, a corner of Bolton, Berlin and Lancaster; thence north 65° 30′ west 488.11 rods to a monument near the railroad bridge at Goodridge Hill; thence south 48° 30′ west 783 rods to a town bound near the Elder farm, so called; thence by the old lines of the Town to the place of beginning.

5. If a division of the Town is effected, the substance of the foregoing articles having been put in legal form, shall be inserted in the act of incorporation.

J. G. THURSTON, C. G. STEVENS, } *Chairman of Town Committee.*

The act incorporating the town of Clinton in accordance with this agreement was signed by Governor Briggs, March 14, 1850. The main eastern boundary of the new town had been fixed by the formation of Bolton out of Lancaster territory by an act passed June 27, 1738. The southern boundary had been determined by the act of February 1, 1781, which annexed about six square miles of the southerly part of Lancaster's original grant to Shrewsbury. The western boundary was defined in the act of April 25, 1781, incorporating the Second Precinct of Lancaster as the town of Sterling. The irregular intrusion of Berlin at the southeast corner was created by an act of February 8, 1791, setting off Peter Larkin with his family and estate from Lancaster to Berlin, then a district of Bolton.

The new town took from the old very nearly two-thirds of her population, although but one-fifth of her acreage, and a similarly small proportion of the public roads and pauper liabilities. Of the ten bridges crossing the Nashua, eight were left to Lancaster, all being of wood and mostly old, demanding large annual expenditures for repairs, even when spared serious damage by the spring freshets, and sure to require rebuilding within twenty years. The debt of the town was about three thousand dollars. It was in view of these facts that the pecuniary consideration paid the mother town was by the fair-minded men of both sections held to be, perhaps, no more than justice demanded. The liberal concession at least silenced the loud-voiced opposition which at first met the proposal for division, and so confirmed the bond of friendly feeling between the two communities that nothing has since been able seriously to weaken it.

Clinton began its corporate life with a population of thirty-one hundred and eighteen, according to the United States census of that year; although but twenty-seven hundred and seventy-eight by an enumeration made for the assessors in June, 1850. It had a debt of about four and a half dollars and a valuation of over four hundred dollars per head of its inhabitants. It could, with good reason, boast itself in many respects a model manufacturing town. Its territory and population were compact, nine-tenths of the citizens dwelling within a single square mile. It was burdened with few and short roads and bridges. Though not blessed with a productive soil, it was surrounded by towns possessing rich farming lands and chiefly devoted to agriculture. Its industries were widely diversified, there being already well established manufactories of ginghams, Brussels carpets, coach-lace, counterpanes, tweeds, cassimeres, combs, carpet-bags, agricultural tools, sash and blinds, castings, machinery.

At the head of its chief corporations stood managers who were not only generous and public-spirited, but gifted with qualities more rare and valuable—taste and foresight. While studying the true economy of machinery and manufactures, they looked less to penny-wise saving than to enduring reputation. They and their successors built comfortable, detached homes for their employés, instead of huddling them in cheap blocks, and thoughtfully planned for ample light, fresh air, convenience and safety in the workrooms, believing that health and contentment in the workmen largely conduce to the employer's profit. Without undue expense they made the architecture and surroundings of their works attractive. The influence of this policy, which has been permanent and followed very generally by private enterprise of the townspeople, is not only to be seen in its external and æsthetic results, but felt in the social life, the atmosphere of content that pervades the place.

The first town-meeting was held in the vestry of the Congregational meeting-house on Monday, the 1st day of April, 1850, at 9 o'clock A.M. A citizens' caucus had previously nominated a list of town officers, which the voters did not fully endorse. Albert S. Carleton was chosen town clerk, and Sidney Harris, treasurer and collector. The selectmen elected were Ezra Sawyer, Samuel Belyea and Edmund Harris; the assessors, Alfred Knight, Joseph B. Parker and Ira Coolidge; the overseers of the poor, James Ingalls, Alanson Chace and Nathan Burditt. The school committee, who were elected at an adjourned meeting April 15th, were Rev. William H. Corning, Rev. Charles M. Bowers, C. W. Blanchard, Dr. George W. Burditt, Dr. George M. Morse, F. C. Messenger and James Patterson. The three last named declining to serve, Augustus J. Sawyer, William W. Parker and Charles L. Swan were chosen in their places. The sum of eight thousand two hundred dollars was voted for the year's expenses, including two thousand dollars for schools, and five hundred for a Fire Department.

Certain pressing wants called for early public action. There was no place for the burial of the dead within the town limits, although a cemetery association had been organized October 3, 1849. About ten acres of land, admirably suited in position and character for a public cemetery, were soon purchased, laid out with taste and judgment, and named Woodlawn. Near by a small farm was bought of Sumner Thompson for an almshouse. Upon it were a small house and barn; to this were added three acres obtained of Joseph Rice, and a dwelling of eleven rooms was at once built. The twelve acres and improvements cost $3859.71.

A volunteer fire company, called Torrent, No. 1, was organized September 18, 1850, its members being the chief business men of the town. A Hunneman fire-engine was procured, for which one thousand dollars had been appropriated, and on March 10, 1851, a Fire Department was established by legislative enactment. Franklin Forbes was chosen chief engineer. A second company, the Cataract, No. 2, was formed June 17, 1853, and a third, the Franklin Hook-and-Ladder Company, July 7, 1858. Organizations bearing the

same titles yet exist, but the engine companies were disbanded and re-organized as hose companies after the introduction of water for fire purposes, each having in charge six hundred feet of hose. A fourth company, formed in 1870, has care of a steam fire-engine, one of Cole Brothers' manufacture, and twelve hundred feet of hose. The firemen have always received liberal support from the town, are supplied with every modern appliance for use in the extinguishment of fires, and provided with comfortable and attractively furnished halls, in the upper stories of the neat structures in which the apparatus is stored. The Gamewell electric fire-alarm system was adopted in July, 1885.

May 15, 1851, Franklin Forbes, Albert S. Carleton, Charles G. Stevens and associates obtained incorporation as the Clinton Savings Bank, and were authorized to hold real estate not to exceed ten thousand dollars in value. H. N. Bigelow was elected the first president of the bank. In this office he was succeeded by Franklin Forbes. The first treasurer, Charles L. Swan, is now president, and C. L. S. Hammond has been treasurer since 1864. For several years deposits were received by the treasurer at the office of the Lancaster Mills and by the president at his office in the Bigelow Library building; later, by the treasurer at the office of the Bigelow Carpet Company. Since 1864 the business of the bank had been conducted in the rooms of the First National Bank. Its deposits now amount to $1,123,109, the number of depositors being about four thousand. The total deposits since organization have been over five million dollars, and the total number of accounts over fourteen thousand.

At the woolen-mill upon South Meadow Brook, Andrew L. Fuller succeeded his father, who retired from the business in 1850, just as their special manufactures of yarns and cloths began to be unremunerative. Mr. Fuller was a man of great business capacity and energy, shrewdly watchful of the market, and he gradually introduced new machinery for the production of goods for which there was a better demand. When fashion decreed that hoop-skirts should be an essential article of female apparel, he filled his work-rooms with tape-looms and braiders for covering hoop-skirt wire, and soon developed a very successful business. In 1865 he more than doubled the capacity of his main building, added two hundred braiders to the two hundred and fifty he had previously run, and increased the number of his tape-looms to forty. Nearly one hundred hands were given employment. September 10, 1867, Mr. Fuller died, but the manufacture was continued by his partner, Everett W. Bigelow, until change in fickle fashion destroyed the sale for such goods, and bankruptcy followed in 1870. N. C. Munson, of Shirley, under mortgagee rights, took possession of and sold the property to Boyce Brothers, of Boston, in whose ownership the mills were when destroyed in 1876, as narrated hereafter. The industry has never been resumed. The water-power is now in possession of George P. Taylor, who, in 1885, built a neat, one-story brick mill here, which was for a time leased to the Ridgway Stove and Furnace Company, but is now unoccupied.

In 1852 the Bigelow Library Association, a joint stock company, assumed the functions and received the assets of the Bigelow Mechanics' Institute. It began its career under far more favoring auspices than its predecessor, having, beside the capital rerived from its stock subscription, generous donations from various citizens, including the sum of one thousand dollars given by Erastus B. Bigelow. A substantial brick building was erected upon Union Street, giving ample accommodations for the use of the society and several rooms for rent. Here a choice library was gradually gathered, and the association became a prominent factor in the literary life of the town. When, in 1873, the town resolved to maintain a free public library, the association placed in its charge the four thousand four hundred volumes which it had accumulated. It then sold its remaining effects and real estate, and its twenty years' career of usefulness and beneficence closed.

A lot of about four acres in the heart of the village, bounded by Walnut, Chestnut, Church and Union Streets, was, in 1852, given to Clinton by H. N. Bigelow, with the stipulation that it should be laid out according to plans of J. C. Hoadley, that no permanent structure of any kind should ever be built upon it, and that it should be suitably embellished and cared for forever as a public square. The town accepted the gift April 5, 1852, and at once appropriated one thousand dollars for its improvement. This has now become a tree-shaded park, and is the most useful of Mr. Bigelow's many and wise benefactions to the town which he did so much to found, and was ever striving to improve and adorn.

Joseph B. Parker, who for twelve years had been superintendent of the Clinton Company's machine-shop, built, in the summer of 1852, near the railway station, a shop fitted with steam-power and tools for the manufacture of machinery. Having associated with him Gilman M. Palmer, he began work here on the 1st of January, 1853. The firm of Parker & Palmer was dissolved October 31, 1857, and two years later A. C. Dakin was taken into partnership.

September 7, 1853, John T. Dame, Esq., received a commission as postmaster, and removed the office from the Kendall store to the Bigelow Library Association's building on Union Street. During the same year a new road from Clinton westward through Lancaster, now known as Sterling Street, was laid out by the county commissioners and constructed. October 19th of this year a noteworthy celebration of the surrender of Cornwallis, the last in this part of the State, brought to Clinton fifteen hundred regular and irregular militia and an immense crowd of people. The time-worn comedy of the sham fight was manœuvred to its historic issue on Burditt Hill, with more smoke

and noise than the town has ever experienced before or since, and the traditions of former days were outshone in the farcical evolutions and grotesque accoutrements of the "Continentals."

March 8, 1854, H. N. Bigelow, Franklin Forbes and Henry Kellogg were constituted a corporation, with the title of the Clinton Gas Light Company, and authorized to hold real estate to the value of thirty thousand dollars, with a capital of fifty thousand dollars. Buildings had been erected the year before in rear of the carpet-mill. Mr. Forbes was elected president, and C. L. Swan, treasurer, of the company. Milton Jewett became superintendent, and yet holds that position. The Schuyler Electric Light Company began building works in town, March, 1886, and in July were authorized to furnish a few street lights. Their plant and privileges were soon after sold to the Gas Light Co. April 17, 1887, legislation was obtained authorizing the corporation to increase its capital to two hundred thousand dollars, and to hold real estate to the value of seventy-five thousand dollars. By the same act its corporate privileges were extended to include the town of Lancaster.

The little steel forge upon Goodridge Brook was lost to Clinton in 1852. Mr. Gaylord, being unable to find a near market for his products in competition with goods of inferior grade, accepted inducements to remove to Naugatuck, Conn. The water privileges and buildings, owned by Ephraim Fuller, were for several years leased to various parties, chiefly for the manufacture of doors, sash and blinds. Christopher C. Stone then bought the mill and carried on that business here for three years. In 1859 Eben S. Fuller bought out Mr. Stone, and in 1867 supplemented the water-power with a steam-engine, when large additions were also made to the buildings. The establishment now embraces a saw-mill, which turns out about three hundred thousand feet of native lumber annually, planing and various other wood-working machines, a large shop for the manufacture of all kinds of wood-finish used by builders, and an extensive lumber and wood-yard. About twenty men are kept constantly employed in its various departments, and a small village has grown up about it.

In 1854 the electric telegraph wires appeared in Clinton, and on the 23d of September the first business message was sent over them.

The first loom to succe-sfully weave wire cloth was an invention of Erastus B. Bigelow's, and upon its success the Clinton Wire Cloth Company was founded in 1856. Charles H. Waters, of Groton, was chosen to assist H. N. Bigelow in superintending the erection of the original works, and in the summer of 1857 began manufacture. He was made general manager, and served as such with marked ability until March, 1879, when he became president of the company and Charles B. Bigelow manufacturing agent. Buildings of large area have from time to time been added to the first mill, located at the intersection of the railroads—notably in 1863, 1865, 1870, 1872, 1876, 1880 and 1887—and now the works cover about six acres. The looms and other machinery have been often improved by new inventions or adaptations, mostly those of Mr. Waters, whereby numerous difficulties attendant upon the weaving of so stubborn a material as wire have gradually been in large measure overcome. At the death of Mr. Waters, March 13, 1883, James H. Beal became the president of the company, and Charles Swinscoe was made manager in 1885, when Mr. Bigelow was called upon to assume the duties of manufacturing agent for the Bigelow Carpet Company.

The capital of the Wire Cloth Company is four hundred thousand dollars, and it is claimed to be the largest manufactory of woven wire goods in the world, turning out fifty million square feet in a year. The mills are of brick, very substantial in construction, and possess attractive architectural features. The most prominent structure in the town, one that earliest engages the attention of every one when approaching it from any direction, is the tower used for the drying of painted wire cloth. It is one hundred and eighty-five feet in height, eighty by thirty-six feet in horizontal section, having room for twenty-five tons of cloth suspended in webs of about one hundred feet in length. The chief products of the works are: hexagonal netting of every width and variety, painted window-screen cloth, wire lathing, locomotive sparker cloth, malt-kiln flooring, sieve and bolting cloths, etc. An extensive galvanizing plant has been erected a short distance from the main works beside the Worcester and Nashua Railway, where a special process, peculiar to this company, is used for the protection of iron goods; the zinc being chemically united with the iron, instead of simply forming a mechanical coating upon it.

Sidney Harris, who began the making of horn combs by hand in a small way in 1823, continued the business until his death, November 21, 1861, when his shops on the Nashua supported from twenty-five to thirty workmen. His sales sometimes amounted to twenty thousand dollars a year. Mr. Harris was the youngest son of Daniel, and born in West Boylston. He was one of the most enterprising and thrifty citizens of Clinton, prominent in church and municipal affairs, and every way worthy of the public esteem in which he was ever held. He was among the earliest and most outspoken advocates of the temperance cause. His sons, George S. and Edwin A., continued the fabrication of horn goods, retaining the partnership title of Sidney Harris & Sons, and greatly enlarged the shops in 1866. The elder did not long survive his father, and Edwin, by purchase of his brother's interest, became sole proprietor of the factory, and so remained until his death, in the spring of 1875. August 9th, of that year, a joint-stock company was organized to continue the business, with a capital of sixty thousand dollars, called the S. Harris' Sons Manufacturing Company. Elisha Brimhall,

Daniel B. Ingalls and Henry E. Starbird were by turns presidents of the company, which gave work to about eighty hands, and finished goods to the value of from eighty to one hundred thousand dollars per year, chiefly dressing and fancy-back combs. The enterprise won no financial success, and in November, 1881, the whole stock of the company, having much depreciated in value, was bought by Mrs. Edwin A. Harris, who has since managed the manufacture under the corporate title, giving work to fifty hands. The present production of the factory is about forty thousand dollars' worth of staple goods, chiefly toilet combs, yearly.

The original incorporators of the Lancaster Quilt Company were succeeded in May, 1859, by James Reed & Co., and the mill changed hands more than once thereafter, though the business was always conducted under the name of the first corporation. The firm of Jordan & Marsh finally controlled the property, and in 1869 started the Marseilles quilt manufacture as a specialty. A few months later the weaving of crochet counterpanes was begun, but the adventure not proving sufficiently profitable, the making of quilts was wholly abandoned in January, 1871, the looms were sold to the Bates Company, of Lewiston, Me., and machinery for weaving other styles of goods took their place. In the autumn of 1871 the works were closed.

William E. Frost and Sidney T. Howard, forming a partnership under the title of the Clinton Yarn Company, purchased the factory for twelve thousand five hundred dollars March 28, 1873. They fitted it anew for the spinning of cotton, and began manufacture in April. The houses and remaining lands of the Quilt Company were sold at auction the following June for forty-three thousand three hundred and fifty dollars. The Clinton Yarn Company has employed from seventy-five to one hundred and twenty-five hands, and used annually from seven hundred to one thousand bales of cotton; selling products annually to the value of about one hundred and fifty thousand dollars. Both partners have deceased, and the mill is now run by John R. Frost as agent. Bleach and dye works are connected with the factory, and seven thousand spinning and thirty-five hundred twisting spindles are run. The power from the twenty-nine feet fall in the South Meadow Brook has been used until recently, assisted by a Wheelock steam-engine of one hundred and fifty horse-power.

CHAPTER X.

CLINTON—(*Continued*).

Clinton in the Rebellion—Soldiers' Roster.

WHEN the political champions of slavery treasonably sought to break up the Federal Union, nowhere did the spirit of patriotism—so fervent everywhere in Massachusetts—flame forth sooner, or with more genuine fire, than in Clinton. In the Presidential election of 1860 four votes out of her every five were cast for Abraham Lincoln. As the plans of traitors gradually disclosed themselves and armed secession tore star after star from the flag, not four-fifths, but the whole community as one man declared for the maintenance of the Constitution at even the cost of civil war. In hall and street, mill, shop and home, the national peril was the dominant topic of thought and speech. To the military organizations of the Commonwealth the people naturally looked for the call to action.

The second and third officers of the Ninth Regiment of Massachusetts Militia were Clinton citizens—Lieutenant-Colonel Gilman M. Palmer and Major Christopher C. Stone; and of that regiment also was the Clinton Light Guard. This company, which dated its existence from May 12, 1853, was composed of some of the best manhood of Clinton and vicinity, and had been efficiently disciplined under the direction of its successive commanders: Captains Gilman M. Palmer, Andrew L. Fuller, Henry Butterfield and Christopher C. Stone. It was now led by Henry Bowman, who, in accordance with a vote of the company in February, 1861, signified to Governor Andrew its readiness for immediate service in defence of the national government. It was supposed that the Ninth Regiment might be sent to the front at once, and the stir of hurried preparation was seen on every hand.

In the annual town-meeting, March 4th, the sum of one thousand dollars was voted for the purpose of furnishing the Guards with a service uniform. Thus Clinton was the first town to anticipate by actual appropriation of money the expected call for State troops. Such expenditure of public funds being, however, beyond the authority delegated to towns, a special act of the Legislature was invoked and passed April 2d, sanctioning such action when ratified by two-thirds of the members present and voting at a meeting legally called for the purpose. The company soon after paraded in new suits of gray.

Sunday, April 21st, there came a dispatch from the Governor calling upon the Light Guard to be ready to move at twenty-four hours' warning. Notices were read from the pulpits in the morning, and in the afternoon the vestry of the Baptist Church was thronged with earnest women workers, busily making flannel underclothing for the volunteers. At a town-meeting, the next day, generous provision was voted for the care and protection of soldiers' families in the absence of their natural guardians. But the anxiously expected summons was long delayed, and it was not until June 28th that the volunteers, preceded by the cornet band and an escort of citizens, marched to the railway, and amid the tearful farewells of near friends and the cheers of the multitude assembled, were borne away for Camp Scott, Worcester, to join

the Fifteenth Massachusetts, to which regiment they were assigned as the color company, C. Just four months later they had passed through the terrible defeat of Ball's Bluff, and the captain, with thirteen other Clinton men, were prisoners at Richmond, five were wounded and two had lost their lives.

The Fifteenth Massachusetts Volunteer Infantry was especially noted for its proficiency in drill, its staying qualities in fight, and its exceptionally sanguinary battle record. The men of Company C sustained its colors, and bore at least their full share of the regiment's glory and blood sacrifice. The Clinton men serving in the regiment were seventy-four, all told, of whom, before the Rebellion succumbed, fourteen were slain in battle or died of wounds, three died of disease, and over thirty had received wounds not fatal. Their loss was quite severe at Antietam, September 17, 1862, when five received mortal injuries and twenty others were more or less seriously wounded. At Gettysburg, of the twenty-four in the battle line belonging to Company C, sixteen were hit by rebel missiles, of whom Clinton lost Lieutenant Buss and three others killed and four wounded.

Next in numbers to those of the Fifteenth was the group of Clinton men in the Twenty-fifth Massachusetts Volunteer Infantry, thirty-seven in all, including a few recruits enlisted in 1862. These were nearly all German-born, workmen at the Lancaster Mills, and mostly mustered in Company G. Four of these were killed in battle, five died during the war, and at least sixteen others were wounded. The regiment won an honorable record, serving in North Carolina during 1862 and 1863, and in Heckman's brigade of the Eighteenth Army Corps, chiefly in Virginia, during 1864.

In the Twenty-first Massachusetts Volunteer Infantry were twenty men claimed for Clinton's credit, four of whom died of wounds received in battle. The regiment suffered severely at Chantilly, Antietam, and in the final advance upon Richmond. Its first experience was with General Burnside's expedition in North Carolina. Five of the Clinton volunteers re-enlisted after their first term had expired.

The three regiments above mentioned left for the front during 1861. Of those who enlisted for the town in 1862, the majority joined the Thirty-fourth, Thirty-sixth and Fifty-third regiments. In the first were sixteen soldiers accredited to Clinton. They performed garrison duty along the Potomac during 1862 and 1863, and had no serious engagement with the enemy. Their valor and endurance were, however, severely tested during 1864, in the nine battles and constant marching and countermarching of the Shenandoah campaign.

The Thirty-sixth Massachusetts Volunteer Infantry contained thirty residents of Clinton, one of whom, Henry Bowman, was its colonel. It was attached to the Ninth Army Corps, narrowly escaped participation in the bloody work at Antietam, and though present met with no loss at Fredericksburg. In 1863 it was transferred to the West, became greatly reduced in numbers during the campaign against Vicksburg by climatic diseases, and passed through the siege of Knoxville with Burnside. Its eventful experience closed in Virginia, whither it returned in 1864 to join in the final grand struggle for the possession of Richmond. But one of its Clinton members fell in battle; three died in captivity and three of disease.

Twenty-eight Clinton men, with Lieutenant Josiah H. Vose, served in the Fifty-third Massachusetts Volunteer Infantry and he, with two others, laid down their lives in battle. Although but a nine-months organization, its stormy voyage by sea to New Orleans, its adventures along the Mississippi River, and its fiery ordeal of battle at Fort Bisland and in the assault and siege of Port Hudson, comprise a more notable experience than many three-years' regiments could boast.

The numerous other enlistments to the credit of the town, mostly of a later date, were distributed among many organizations, the record of which can receive no particular mention here.

The action of the town-meetings already noticed was but an earnest of a generous policy pursued through the four years of war, and ever since, towards those who volunteered in their country's service.

The selectmen were given large discretionary powers for the purpose of aiding families dependent for support upon bread-winners who had become soldiers of the Union; the maximum bounty was paid to citizens enlisting to fill the town's quota; all soldiers were relieved from the payment of a poll-tax; and after each successive call for troops Clinton was found registered as furnishing an excess above the number demanded. Private generosity never failed whenever exigencies arose. Large sums were obtained by voluntary subscription for the equipment of the enlisted; for forwarding material aid to the wounded and sick in hospitals; for sending agents to the field after the great battles, and for other and constantly-recurring calls upon patriotic sympathy where money could avail. For help to families, known as "State aid," during the five years ending with 1865, the town expended $36,171.28; for other war purposes, $14,043.19. Nine thousand dollars raised by various private subscriptions were also disbursed in bounties to recruits and for kindred objects.

The busy afternoon of that April Sabbath in the crowded vestry taught the people much concerning woman's mission in war-time, and was suggestive of what could be effected under wise organization. Within a week thereafter an association was formed by patriotic women which, in connection with the parish sewing circles, sent to hospital and field thousands of useful articles of their own handiwork. After a year's experience, the aims of the society

taking wider scope, a citizens' meeting was called at the Clinton House Hall, August 1, 1862, and the Soldiers' Aid Society then organized issued a general invitation calling upon all inhabitants of the town to join in the work for the welfare of the volunteers. The directors of the association were: Franklin Forbes, president; Gilbert Greene, treasurer; Henry C. Greeley, secretary; Mrs. J. F. Maynard, Mrs. Jared M. Heard, Mrs. Charles W. Field, Mrs. Charles G. Stevens. A room was furnished for the society's use in the Bigelow Library Association's building, and kept open during three hours each afternoon six days in the week, for work and the reception of articles contributed. The donations of material and labor made by the society to the patriot cause have been estimated at three thousand dollars in value. Its charitable ministrations did not end until long after the surrender at Appomattox.

The quota of Clinton under the various calls of the government amounted to three hundred and seventy-one men for three years' service. Adjutant-General William Schouler credits it with an enlistment of four hundred and nineteen, being a surplus of forty-eight above demands. The enrollment lists of the town fail to account for so many, lacking nearly one hundred of that number after making due allowance for over thirty nine-months' enlistments, and adding the eighteen who paid commutation and twenty for veteran re-enlistments. It may be therefore inferred, perhaps, that the unknown non-residents hired for the town or assigned to its quota by the State or national authorities, were very numerous.

The population of the town at the outbreak of hostilities was thirty-eight hundred and fifty-nine. Its valuation was $1,690,692, and its debt $14,500. At the end of the war it had four thousand and twenty-one inhabitants, a valuation of $1,860,763 and a debt of $34,190.

The following alphabetical roster of residents who did military service for Clinton during the Rebellion is doubtless not free from errors or omissions, but it is the result of many revisions, and is the best now attainable. Names are followed by the records of service in the following order: the number of regiment, Massachusetts Infantry being understood (unless otherwise stated), the letter of the company, the age of the soldier when enlisted, date of muster in, experience of soldier.

CLINTON SOLDIERS.

Amsden, Marcus E., 2d H. Artillery, B; 21; July 28, '63; transferred to Navy May 17, '64.

Ball, Henry F., 4th Cavalry. (See Lancaster.)

Wilder, Sanford B., 2d H. Artillery, M. (See Lancaster.)

Winter, Christian, 25th, G; 35; Oct. 1, '61; mustered out Oct. 20, '64.

Wood, John, 60th, F; 20; July 20 to Nov. 30, '64.

Wright, Archibald D., 15th, C; 18; July 12, '61; sergeant; wounded twice at Ball's Bluff Oct. 21, '61; wounded at Gettysburg; prisoner at Wilderness May 6, '64; mustered out May 25, '65.

Wright, Daniel, 36th, F; 30; Aug. 6, '62, corporal; sergeant Oct. 1, '62; 2d lieut. Sept. 1, '63; 1st lieut. April 23, '64; wounded and prisoner at Wilderness; mustered out June 8, '65.

Zeigler, Heinrich, 25th, G; 42; July 25, '62; mustered out Oct. 20, '64.

Zimmerman, John, 53d, I; 37; Oct. 18, '62, to Sept. 2, '63.

In July, 1863, eighty-seven citizens of the town were drafted, of whom five served subsequently, five had previously served and the following paid commutation:

Atherton, Frederick A.	Greeley, Henry C.
Bartlett, Joseph F.	Hosmer, Samuel H.
Brown, John N. W.	Hayes, Junius D.
Butterick, William F.	Lowe, George W.
Cutting, George H.	Loring, Frank M.
Dawes, Alfred.	Marshall, Herman A.
Fuller, Sidney F.	Murphy, Cornelius.
Fuller, Eben S.	Weeks, George W.
Foster, John R.	Wilder, George C.

The remainder were exempted for special reasons.

CHAPTER XI.

CLINTON—(*Continued*).

Horatio Nelson Bigelow—Banks—Town-Hall—Bigelow Free Library—Soldiers' Monument—Annals of Manufacturing Corporations—The "Washout" of 1876—Franklin Forbes—Erastus B. Bigelow.

By what has been said on previous pages it clearly appears that the more important industries of Clinton were founded upon, and made possible by, the inventive genius of one man. But the town, if not its manufacturing interests, owes at least as great a debt of grateful remembrance to the older as to the more widely famous younger of the Bigelow brothers; and

Erastus B. Bigelow has feelingly recorded his great obligations to his elder brother for the vast amount of toil and care undertaken by him in building and carrying into operation successively great establishments based upon inventions before untried—for the ability and patience displayed by him in meeting exigencies constantly arising—and for perfecting numerous practical adaptations essential to successful manufacture. He frankly says: "For whatever success has attended the development of my inventions, I am indebted in no small degree to his fidelity, skill and perseverance."

In the building of the town the elder was the master-spirit, and his will, his judgment, his generosity ordered its foundations and influenced its early growth as no other man could. The results of his solicitude for the welfare of his townsmen continue to honor his name, and will long endure to proclaim his prescience and the wisdom of his benevolence.

In the prime of life and at the height of his usefulness Horatio Nelson Bigelow in 1864 was suddenly forced to yield to others the leadership he had so long held. Thoroughly conscientious and self-reliant, he had ever been unwilling to entrust to other agents any share of the duties which he felt to be his own; he had never spared himself. Nature, long and heavily overtaxed, at last revolted and compelled a total withdrawal from labor and business cares. A voyage across the ocean failed to repair the broken mental power, and after three years of invalidism he fell quietly asleep on Wednesday, the 2d day of January, 1868. At the time of his funeral, manufactories, banks and all places of business throughout the town were closed in token of respect for a public benefactor.

Mr. Bigelow was born at West Boylston, Mass., on the 13th of September, 1812. His father, Ephraim, the son of Abel, was a wheelwright and a chairmaker by trade, who also cultivated a small farm. The family lived in a very modest way, as became their moderate circumstances. His mother, Polly (Brigham) Bigelow, was a woman of marked character, unaffected piety and native dignity, who brought up her two sons to fear God and love the truth. The father died in 1837 at the age of forty-six, but the mother lived eighteen years in widowhood, most of the time with her eldest son, honestly proud of the esteem and honor which her children won from their fellow-men.

The boyhood of H. N. Bigelow was one of toil, and his schooldays were few—two terms at the Bradford Academy closing his educational opportunities. He therefore owed little to books, but derived valuable lessons from intelligent study of men, and early personal contest with adverse circumstances. In youth he worked upon the farm and in the neighboring mills, and at the age of twenty had so far mastered the ordinary details of cotton manufacture that in 1832, when his enterprising father started a small factory on the Nashua, he was installed as its overseer. September 24, 1834, he was married to Miss Emily Worcester, and about that time was employed as overseer in the Beaman mill. In 1836 he was called to Shirley to become general superintendent of a cotton-factory there. Thence, at the age of twenty-five, with scant capital and his moneyless but gifted brother as partner, he came to the idle water-power on South Meadow Brook to build a town. In all the positions he had held he had exhibited a restless diligence and confidence in himself, and had developed that exceptional administrative ability which proved invaluable in organizing the giant manufactories which he was called upon to construct and manage until success became assured.

During the anxious first years at Clintonville, when the load of responsibility thrown upon him in the establishment of several novel manufactures seemed too exacting of time and onerous for any one man to bear, he found abundant leisure to be solicitous about the well-being of the neighborhood in which he had cast his lot, and the future economy and comeliness of the bustling town, which, with prophetic vision, he foresaw, must, before many years, people the hill-slopes around. His energy hastened the forming of the first church society, and the building for its use of the little chapel in the grove near his residence. In his first manhood he had become a member of the Orthodox Congregational Church, and remained ever zealous in its behalf; but his sectarianism was free from bigotry, and he often gave efficient service and substantial aid to other religious organizations. He urged the erection of commodious school-houses, and a radical improvement of the local school system, liberally contributing land and money to aid in effecting the desired end, and when growing prosperity made it possible, he often persuaded his fellow-citizens, by his own munificent donations, to a more generous support of worthy public institutions and town improvements.

Like the majority of self-made men, so called, he had a vigorous individuality. He often acted upon impulse, and when confronted with unexpected or what he deemed unreasonable opposition he met it with resolute self-assertion. But he was easily placable and prompt to correct any injustice in his own act or speech. He was happy in his home and took great pleasure in its tasteful adornment, but he gave few hours to what men call recreation, and his chief enjoyment of life seemed to be in ceaseless mental and bodily activity. Despite the engrossing care incident to the agency of important corporations, he accepted various public trusts, the duties of which were never neglected. He was the first postmaster of the village, and represented the town at the General Court during the first two years of its corporate existence. He was the first president of the Savings Bank, vice-president of the First National Bank, and director in the Worcester and Nashua Railroad Company, the City Bank and the Mechanics' Mutual Insurance Company of Worcester.

Mrs. Bigelow has long outlived her husband, residing in the home he built in Clinton. Of four children born to her, two died before his decease. Her sons, Henry H. and Charles B. Bigelow, inherit their father's administrative talent, and succeeded him in due time as managing agents of the Bigelow Carpet Company.

The First National Bank of Clinton was chartered in April, 1864, with a capital of two hundred thousand dollars. Hon. Charles G. Stevens was chosen president, and C. L. S. Hammond, cashier, both of whom have been continued in office to the present day. The bank was at first located in a brick building on Union Street, but in 1881 and 1882 built the costly brick and marble block on the corner of High and Church Streets. It remained the only general banking institution in town until June 15, 1882, when the Lancaster National Bank transferred its office to rooms leased in Brimhall's Block, Hon. Henry C. Greeley being at the time president, and William H. McNeil cashier. In 1885 the latter secured control of a majority of the stock, elected certain friends of his directors, and placed himself in the presidency, probably in order the better to conceal from the stockholders irregularities in his methods of conducting the business of the bank. At the close of the year he fled to Canada, a defaulter, and the settlement of the bank's affairs was placed in the hand of John W. Corcoran, Esq., as receiver. Its creditors have been paid seventy per cent. of their claims, but final settlement has been delayed awaiting the termination of certain lawsuits. The Clinton Co-operative Bank was incorporated in 1887. Daniel B. Ingalls is president, C. A. Woodruff, treasurer, and Walter R. Dame, solicitor.

For over seven years all town-meetings were held in the vestry of the Congregational Church. From November, 1858, the hall connected with the Clinton House was used by the town on public occasions. The erection of a special building for town use was a subject often discussed, and from 1866 began to arouse warm debates in annual town-meetings. In 1869 a committee was appointed to investigate available sites and consider plans. A location upon High Street was by many considered very desirable, and the lots now covered by Greeley's and the bank blocks were much talked of. That now occupied by the High School building was also advocated by many; but the more suitable ground upon Walnut and School Streets was fortunately chosen, purchased for four thousand dollars, and thereon the foundations of the present capacious and imposing town-hall were laid, in July, 1871.

The design adopted by the town was that of Alexander R. Esty, a Boston architect. The edifice is of brick, relieved by a free use of Nova Scotia stone in pilasters, beltings and other constructive and ornamental details. On the first floor are various rooms for town officers and Bigelow Hall, sixty feet wide by eighty feet in length. The public library-room is located at the rear of the hall, in a one-storied semi-circular apse of twenty-five feet radius, which has an entrance and vestibule of its own. The upper floor is occupied mainly by Clinton Hall, ninety-five feet by eighty, in which, including the gallery across the south end, about eighteen hundred persons can be seated. A large stage and retiring-rooms attached occupy the space at the rear of the hall. The interior finish of the whole building is of ash, and all the appointments for heating, lighting, etc., are of the best for their purposes.

The building was dedicated with appropriate ceremonies December 4, 1872, when addresses were given by Colonel T. W. Higginson and Hon. Charles G. Stevens. Franklin Forbes, as chairman of the building committee, made a brief speech in delivering the keys to the committee chosen by the town to have exclusive control and management of the building for three years, and George M. Morse, M.D., in response, gave a condensed history of the town from the time of Prescott's settlement on its soil. The building of this important structure added one hundred and ten thousand dollars to the town's indebtedness, bringing the total to one hundred and forty-six thousand. A funding scheme was adopted in October, 1871, which provided for the issuing of bonds to the amount of one hundred and twenty-five thousand dollars, payable in twenty years from January 1, 1873, bearing six per cent. interest; six thousand five hundred dollars of the principal to be paid annually. These bonds were mostly sold at par. They were exempt from town taxation, and were issued in denominations of one hundred and five hundred dollars.

The Bigelow Free Public Library was opened December 6, 1873, Andrew E. Ford being the first librarian. It began its life of usefulness with four thousand four hundred and eight books upon its shelves, which had been donated by the Bigelow Library Association. This nucleus has grown in fourteen years to fourteen thousand one hundred and eighty-seven volumes, showing an average annual addition of about seven hundred volumes. The association's bequest was made conditional upon the yearly expenditure by the town of at least five hundred dollars for the purchase of books. The annual appropriation, from fifteen hundred dollars in 1874, has increased to twenty-three hundred in 1888, besides the amount received from the dog tax and sale of catalogues, usually about six hundred dollars additional. The circulation from eleven thousand eight hundred and forty-two in 1874, has grown to thirty-five thousand seven hundred and twenty-two in 1886–87. The management of the library is vested in six trustees, whose term of service is three years, two being elected annually. Miss Charlotte L. Greene is librarian, succeeding her sister, Miss Fannie M. Greene, in 1886. A catalogue was printed in 1887.

An appropriate monument to the memory of the fifty-eight Clinton men who died in the Union service during the Civil War was erected in the summer of

1875, the dedicatory services taking place August 28th. It stands in the southwest corner of the town-hall enclosure, and consists of an architectural base of Concord granite eleven feet in height, surmounted by a bronze figure of an infantry volunteer standing at rest, copying a design by M. J. Powers. The exercises of its dedication were a procession with music, the formal transfer of the memorial to the town by Franklin Forbes for the committee of construction, and patriotic addresses by Hon. Charles G. Stevens, John T. Dame, Esq., and the Reverends V. M. Simmons and W. S. Burton. The cost of the monument was about four thousand dollars, of which sum eight hundred and forty dollars was collected by the women of Clinton in various ways for such a memorial, and the remainder was paid from the town treasury.

During the closing year of the Civil War there began for the Lancaster Mills, as for most manufacturers, a period of great prosperity, during which extensive improvements and additions of buildings and machinery were made year by year. In 1867 the dam was entirely rebuilt, with an extreme length of one hundred and seventy feet, securing a fall of twenty-seven feet. At the same time the old breast-wheels were replaced by two turbines of three hundred and fifty horse-power each. In April, 1875, a branch of the Boston, Clinton and Fitchburg, now a division of the Old Colony Railway was built to the mills, giving transportation facilities much needed. In 1877 Franklin Forbes, for twenty-eight years manager, died, and George W. Weeks, then superintendent, upon whom very many of Mr. Forbes' original duties had before this devolved, was appointed manufacturing agent.

During the administration of Mr. Weeks, the years 1880, 1881, 1887 and 1888 have been marked by very important extensions of the working plant, the capacity for production having been increased at least seventy-five per cent. The weaving-room, supposed to be the largest of the kind in the United States, if not in the world, has a floor area of one hundred and thirty-seven thousand feet, or three and one-seventh acres, affording space for twenty-eight hundred looms. The carding and spinning departments occupy two brick mills of huge dimensions, one three, the other four stories in height. The whole floor area of the works, including basements, etc., used for storage, and the Sawyer's Mills in Boylston, is about sixteen acres, twelve of which are devoted to manufacture. The company has also about two hundred tenements, nearly all of a class superior to those usually found in manufacturing towns, and three large boarding-houses, each accommodating one hundred persons. An unusually large proportion of the employés have dwellings of their own.

When the recently completed extension receives its machinery, the corporation will require the labor of nearly twenty-two hundred operatives, about equally divided between the two sexes, and its yearly product is expected to reach twenty-eight million yards of twenty-seven inch ginghams; last year it was nearly twenty-five million yards. Three large steam-engines of Corliss pattern, developing fourteen hundred horse-power, are employed to aid the turbines, while six small engines are in constant use for various purposes. Among the army of workers are skilled mechanics of various crafts, and corps of chemists and designers perform important duties. But a single quality of goods is here made, a high grade of gingham everywhere known for its always reliable colors and exceptional durability. Although combinations of color are restricted to stripes and checks, already about two hundred thousand distinct patterns have been designed.

It will be noticed that the enormous increase of production over that of the earliest years of the corporation's life is far in excess of the numerical increase of looms and operatives. In every department new processes and improvements in mechanism have been introduced from time to time, and greater speed of movement attained, until the product per operative is two and four-tenths times what it was in 1850. The average wages have during the same period been increased eighty per cent., and this although the hours of labor per day are now two hours less than in 1850.

The present officers of the company are: S. G. Snelling, president; Harcourt Amory, treasurer; George W. Weeks, agent; George P. Taylor, superintendent.

February 18, 1864, the corporation which gave name to the town ceased to exist, its charter being annulled by legislative enactment. The coach-lace looms had been sent to Philadelphia, it had the year before sold its real estate in Boylston, known as Sawyer's Mills, and certain of its looms for weaving checks, to the Lancaster Mills Company; and its water-rights, factory buildings, tenant-houses and lands in Clinton to the Bigelow Carpet Company. The latter corporation had already made preparations to do its own wool-cleansing and spinning,—for which preliminary processes of its manufacture it had previously been dependent upon other parties,—and to the extensive plant required for these the grounds and buildings of the coach-lace mills were devoted. A large worsted-mill was completed in 1866, and the dam was rebuilt and raised to control a flowage of two hundred and thirty-six acres, including Mossy and Sandy, two of the three great natural ponds of Clinton.

Upon the death of Horatio N. Bigelow, in 1865, his eldest son, Henry N. Bigelow, was made superintendent of the new department, and Charles L. Swan held the same position in the weaving-mill. In December, 1871, Mr. Bigelow became managing agent of the company. Under his supervision extensive additions were made in both departments during 1872. A new worsted-mill, three stories in height, two hundred feet long by sixty-five feet wide, was built in 1875, and great improvements were made in

the machinery. Upon his retirement, March 26, 1881, he was succeeded in the management by his brother, Charles B. Bigelow. During 1885 the weaving department was very greatly enlarged, and in 1886 and 1887 an extension, two hundred feet in length, was added upon the west, reaching to School Street. In this have been placed newly-invented looms for the weaving of Axminster carpeting.

The president of the company is James H. Beal, and C. F. Fairbanks is treasurer. The capital, which was two hundred thousand dollars at the incorporation of the company in 1854, has been increased to one million.

The number of looms is two hundred and forty, and when the works are run to their full capacity, twelve hundred persons are employed, whose pay amounts to fifteen hundred dollars each day, and the production is at the rate of one million eight hundred yards per year. About six million pounds of wool are used annually. The company is complete within itself, importing the grade of wool which it requires, and conducting all the operations of its fabrication, —cleansing, spinning, dyeing, weaving,—on its own premises. The floor space occupied amounts to ten and three-fourths acres. Its various buildings are of brick, and very attractive in appearance. The company also owns houses accommodating sixty-three families, and has three boarding-houses.

Three grades of carpeting are manufactured by the Bigelow Company,—Wilton, Axminster and Brussels. The first power-loom, invented by E. B. Bigelow, thirty years ago won admiration, because with it a single girl wove as much Brussels carpeting in a given time as four men and four boys could do with four hand looms. The perfected loom of to-day has fourfold the capacity of the first Bigelow loom.

C. M. Bailey & Son, a few months after the destruction by fire of their property at Sterling in February, 1868, purchased the low-lying land between Sterling Street and the Boston, Clinton and Fitchburg Railway in Clinton, and established thereon an extensive tannery with sixty-one vats, a large currier shop, engine and boiler-house, and other accessories of their business. The capacity of the yard was about twenty thousand hides, and required the attendance of forty men and boys. The junior member of the firm, George E. Bailey, died in 1873, when Bryant & King, by purchase, succeeded to the business. They at once enlarged the works to more than double their original capacity, employed about one hundred hands, and were apparently in full tide of prosperity when the breaking of the Mossy Pond reservoir dam in 1876 swept away their large stock of material, demolished their buildings and left them weighed down by too heavy discouragements for renewal of the enterprise. Two years later C. M. Bailey and William J. Stewart rebuilt some portions of the buildings, gave work to twenty-five or thirty men, and continued the tanning business until August 28, 1880, when a fire laid the property again in ruins, in which condition it remains.

Deacon Joseph B. Parker, the veteran machinist of Clinton, died September 1, 1874, at the age of seventy years. He was a native of Princeton, but came here from Providence, R. I., where he had a shop, to organize and manage the machine-shop connected with the Clinton Company's works. His practical ability and judgment were of great value to E. B. Bigelow in the adjustment and construction of his inventions. He was a pillar of strength in the Congregational Church, a man of thorough independence and originality.

A joint stock company was formed to continue the business of which he was the founder and had been for nearly twenty-five years the manager, which took the title of the J. B. Parker Machine Company. The capital is forty-five thousand dollars, and the yearly manufacture is estimated as fifty thousand dollars in value. A. C. Dakin is president, C. C. Murdock, treasurer, and N. E. Stowell, foreman. From seventy-five to one hundred men are required when the machinery of the shops is fully employed. The special line of work done is the construction of carpet-looms, the Bancroft mule, the Clinton yarn-twister, and other mechanism for wool manufacturers. The buildings of the company are commodious, well equipped with power and tools, and conveniently located beside the tracks of the Worcester and Nashua Division of the Boston and Maine Railway.

Closely allied with and adjoining the machine-shops are the new and admirably appointed works of the Clinton Foundry Company, recently completed in place of the old foundry, built by Gilman N. Palmer, in 1849, which was crushed in during the great snow-storm of March 12, 1888. Major Christopher C. Stone, for many years associated with Colonel Palmer, bought the foundry in October, 1881, and, forming a partnership with the J. B. Parker Company, under the corporate title above named, became general manager of the business. Twenty-six men are regularly employed here, chiefly upon machine and railroad work, casting daily from a three-ton cupola furnace. The value of castings sold annually is about thirty-six thousand dollars.

Colonel Gilman M. Palmer came to Clintonville from Dover, N. H., in 1847, but was born in Gardner, Maine, December 4, 1812. He was foreman of the first engine company, the first captain of the Clinton Light Guards, lieutenant-colonel of the Ninth Militia, vice-president of the Savings Bank, and director of the First National Bank. He served the town as selectman for four years; was one of the founders of the Unitarian Church, and a member of Trinity Masonic Lodge. He died May 27, 1885. By his will nearly fifteen thousand dollars were left in public bequests.

Upon Sterling Street, near the station of the railway, stand the neat brick workshops of the Gibbs Loom, Harness and Reed Company, which was incor-

porated April 1, 1874, with a capital of fifty thousand dollars. William H. Gibbs, the president of the company, became in 1865 associated with George H. Foster in the manufacture of belting, loom-harness and roll-covering, and later began making reeds—in which business they had been preceded by Robert Turner. In the autumn of 1868 the partnership was dissolved, and in a division of the assets Mr. Gibbs retained the loom-harness and reed manufacture, and Mr. Foster that of belting and roll-covering. Hearing of an improved heddle machine of English invention, Mr. Gibbs imported one, the first brought into the United States. A rapid increase of orders rewarded his enterprise, requiring more machinery and capital, and the formation of a company followed. It now has in operation thirteen heddle—or heald—machines, giving work to forty operatives, male and female. The ebonized loom-harness is a specialty for which the company have a patent, granted February 1, 1881. The reed manufacture was begun in November, 1884, and has met with such encouragement that but one reed maker in America now rivals this company in yearly production. This success has been attained by superior workmanship. Charles L. Swan is treasurer of the corporation.

About half-past three o'clock of Sunday, March 26, 1876, the people of Clinton and villages adjoining, were startled by loud and long-continued alarm signals from the steam gong of the wire-mill, giving wide warning of an unforeseen and grievous disaster, one that, because of the fortunate hour of its happening, was not attended with loss of human life, but which forever ruined several useful industries, seriously interrupted others, and utterly destroyed three hundred thousand dollars' worth of capital, buildings, machinery and goods.

A snow-storm, quickly followed by copious rains, had filled the great reservoir of the Bigelow Carpet Company to overflowing. In the Mossy Pond portion of it the water stood higher than in the Clinton basin, the culvert under the Worcester and Nashua Railway, which joined them, proving insufficient to take away the unprecedented flow poured in by the South Meadow Brook. Before danger was suspected, the waters rose so high as to wash over or through an embankment at the northerly side of Mossy Pond, just above the sources of the little brook formerly known as Rigby's. This dam of earth was about forty feet long and ten feet in height, and the ground at either end of and beneath it was porous gravel and sand. The trickling overflow soon grew to a resistless torrent and tore this obstacle from its path, opening a broad gap between the hills down to the level of the marshy ground below.

About sixty rods away the Boston, Clinton and Fitchburg Railway crosses the valley upon a gravel embankment nearly forty feet in height, which dammed the flood for a while, affording time for the residents of houses upon the meadow below to escape. In less than half an hour, however, a river nearly one hundred feet in width was rushing through the railroad bank over the vats of Bryant & King's tannery, bearing along the *débris* of falling buildings and thousands of hides from the extensive yards. Crossing Sterling Street, it spread over the wide, level tract below, undermining several dwellings, the occupants of which barely escaped with such valuables as they could hastily snatch and carry away in their arms. The next impediment met was the embankment of the Worcester and Nashua Railway. This, being a much lower and older earthwork than that previously burst through, held firm for a time until a great lake had formed behind it, and the water began to pour over the track; but at length it gave way at the little brook culvert, when the mad flood poured across Main Street, whirled the old dams and shops built by the early comb-makers, and a house which it had brought from the meadows above, crashing down the ledges into the valley of the South Meadow Brook.

On this stream a factory, then the property of the Boyce Brothers, of Boston, a three-story wooden building, over one hundred and fifty feet in length, stood upon the dam directly in the path of the waters. It was quickly lifted from its foundations and borne away upright over the Currier farm into the Nashua, to bring up with a loud crash against the first island. Nearly half of the structure, caught in a swirl, again floated on at terrific speed towards the iron bridge and the mills at South Lancaster. Luckily, the depth of the flood was so great that the main flow poured outside the river banks, and the wreck following it passed down between the cotton-factory and the grist-mill, struck the Lancaster Railroad Bridge a sounding blow as it went under it, toppled over and was torn into fragments. Meadow farms along the river for many miles were deeply inundated, strewn with wreckage of buildings, machinery, furniture, hides, horn goods and great masses of peat from Mossy Pond, and covered with a deposit of sandy mud. The gaps in the railroads had to be bridged, and remained serious interruptions to travel for several days.

The Carpet Company, during the summer, filled the crevasse through which the reservoir had drained itself so disastrously with a solid structure. Tedious lawsuits for damages followed, and the sites of the manufactories demolished are even now marked by ruins and desolation.

No citizen of Clinton ever stood nearer the popular heart than Franklin Forbes, the manager of the Lancaster Mills. In 1866 some warning from overtaxed brain impelled him to seek much-needed rest, by a vacation in Europe; but although he soon returned to his wonted labors much invigorated, he began to delegate more and more of his duties to the assistant whom he had trained from youth to be his successor—George W. Weeks, then holding the office of superintendent. After a year or two of visibly fad-

ing strength, he died, December 24, 1877, at the age of sixty-six, mourned as an irreparable loss by young and old, in all classes of society, and wherever his genial presence had been known.

Mr. Forbes was born in West Cambridge, Mass., March 8, 1811, but his parents removed to Boston in his early childhood. He was prepared for college at the Latin School, being a schoolmate of Charles Sumner, and was graduated at Amherst in 1833. Thrown upon his own resources, he decided to adopt the profession of teaching for a livelihood, and accepted the position of usher in a Boston school. Scholarly in his tastes and a diligent student, he also possessed the gift of inspiring others with his own enthusiasm for knowledge, and his success as an instructor was correspondingly marked. He became master of the school, and was called thence to Lowell, to become principal of the High School in that city. In 1837 he was married to Martha A. S. Cushing, of Lunenburg. He continued to teach for several years after his marriage, but finding this field of occupation somewhat narrow for his abilities and aspirations, he began to employ his leisure in legal studies. He was not, however, destined to practice at the bar.

The avocation for which his natural powers pre-eminently fitted him, and in which he subsequently won so honorable repute, was pointed out to him and others during his short period of service for the Locks and Canals Company of Lowell. His peculiar ability in the conduct of large business affairs attracted notice and brought him the offer of the agency of the Lancaster Mills, which he accepted, and on December 1, 1849, assumed his new duties. From that day, for twenty-eight years, Mr. Forbes stood prominent among the foremost citizens of Clinton, a respected leader in municipal and church affairs and social circles, whose breadth of culture, genial and sympathetic nature, unselfishness and strong practical sense, made him not only an intelligent adviser in matters of public concern, but one to whom all were glad to listen.

He believed the true interests of capital and labor to be identical, and his management of the great manufactory placed in his charge was consonant with his theory. His services were invaluable to the corporation, whose annual product increased during his administration from four million to fifteen million yards; but he never forgot the workman's rights or welfare while he successfully labored to secure for the stockholders their proper yearly harvest of profit. Once, in a period of great depression in businesss circles, his innate kindliness of heart prompted him to keep the mills running half-time for several weeks at a probable loss, to save the wage-earners from the privations that would inevitably have followed the entire stoppage of the works. He was ever thinking of his operatives' needs and planning for their elevation. To this end he established evening schools and popular lectures, to which he contributed much personal labor.

His long experience as a teacher and his warm interest in the education of the young made him a valuable member of the town's School Board, of which he was chairman thirteen years, a service exceeded in length only by that of John T. Dame, Esq. He was for many years president of the Savings Bank, of the Clinton Gas-light Company, and of the Bigelow Library Association. He was the first chief engineer of the Fire Department, director in the First National Bank, and his counsel was sought on all questions of grave interest to the town. The esteem and respect in which he was universally held were never, perhaps, more conspicuously shown than when, in 1864, he was persuaded to allow himself to be a candidate for Representative of the Eighth Worcester District, then comprising the towns of Clinton and Lancaster. He received every vote cast, save one in Clinton. The Unitarian Society, which he was active in organizing, found in him a generous benefactor and an indefatigable Christian worker. His patriotism was not only fervent and inspiriting, but self-sacrificing. He was president of the Soldiers' Aid Society during the Rebellion, and the volunteers and their families knew no more loyal, no more tender-hearted and cheery friend and adviser than he.

Mr. Forbes left two sons and three daughters, and his wife still survives him.

December 2, 1879, Erastus Brigham Bigelow died at his residence on Commonwealth Avenue, Boston. His body was, in accordance with his expressed wish, brought for burial to the town which his genius had created, and was there received with public demonstrations of genuine respect and sorrow.

Mr. Bigelow was phenomenal even among inventors for his power of analysis and mental concentration. Some of his inventions consist of very numerous elements in harmonious conjunction, forming the most complex mechanism used in manufacture. But these were all complete mental conceptions, as the author of them himself assures us, fully fashioned and adjusted in his mathematical imagination before draughtsmen attempted to delineate, or workmen wrought a single cam or lever of them. Singularly enough, he was no mechanic, handled no tool well, made only rough pencil sketches, and entrusted to others the draughting of his ideas to working scale for the machinists. His extraordinary power was shown very early in life, for he was but fourteen years of age when his little machine for the making of piping-cord was perfected. During the fifty years of his subsequent career he was granted in the United States more than fifty patents, the larger number of them for improvements in textile machinery.

He was a native of West Boylston, Massachusetts, born April 2, 1814. He was obliged to contribute to his own support when a mere boy by daily labor upon the farm, and at the age of thirteen years began work

in a cotton-mill. The fortunate earning of one hundred dollars by the sale of the piping-cord machine enabled him to pay for a few terms' tuition at a neighboring academy. He earnestly desired a higher education, but means were wanting, and for a few years, apparently unconscious of his special talent, he wandered from one place and occupation to another with youthful instability—displaying, however, great energy not wholly wasted, inasmuch as varied experience was a part of the preparation for his life's work. At sixteen years of age he is found a clerk in a Boston dry-goods store. Next he became a zealous student of stenography; even published upon that subject his first book, and earned a little money by teaching the art, travelling with a partner through New England and the Middle States. For a time he then became overseer of a cotton factory at Wareham, and later he taught a writing-school and began the study of medicine. Suddenly he conceived the idea of weaving Marseilles quilts by power, and abandoned his intention of becoming a physician to build the counterpane loom, having induced a firm of Boston importers to undertake the cost of the experiment. The financial troubles of 1837 interfering with the expected support by the firm, he came to Lancaster with his brother; Horatio bringing to the partnership his moderate savings, Erastus contributing an automatic device for weaving coach-lace by power which the experts declared would not work, but which the brothers were confident would.

Prosperity rewarded pluck, and did not come with its usual coyness and at laggard pace; fame followed closely after. Mr. Bigelow had at last evidently found his appointed place in the world's army of workers. He was henceforth to take rank among the creators and organizers of human industry; a fellow-laborer for human progress with Watts, Arkwright and Eli Whitney. The Lowell Companies employed him at appropriate salary to act as their advising agent, to suggest special improvements in machinery and methods of manufacture. Invention after invention speedily followed. The gingham, the various carpet, the wire and the brocatel looms successively won their victories and extended his reputation. The great English carpet manufacturers acknowledged themselves outdone by American ingenuity, and purchased the new machinery.

It is noteworthy that Mr. Bigelow's aim, both as an inventor and a manufacturer, was ever towards greater perfection in the product. No prospective profit could induce him to cheapen manufacture by allowing the quality to fall below his ideal of excellence. His object was to produce by machinery a fabric every way better than that wrought by hand—the decreased cost of production inevitably following, and the consumers enjoying a double gain. He always perfected his ideas, resolutely laboring until the object sought was consummated, never abandoning the half-wrought for some promising afterthought.

Mr. Bigelow first married Miss Susan W. King. She died in 1841, leaving an infant son, Charles, who survived his mother but six years. He found a second wife in Miss Eliza Means, of Amherst, N. H., by whom he had one daughter, Helen, now the wife of Rev. Daniel Merriman. His stay in Clinton was but brief, though he was a frequent visitor here. His regular residence for most of his life was in Boston, but he owned an estate of two hundred acres at North Conway, N. H., which he named Stonehurst, and there he spent the summers of his later years.

The degree of Master of Arts was bestowed upon him in 1845 by Williams College; in 1852, by Yale; in 1854, by Dartmouth, and in 1861 by Harvard. Amherst conferred upon him, in 1867, the degree of Doctor of Laws. He was a member of the American Academy of Sciences, the Massachusetts Historical Society, and the London Society for the Encouragement of the Arts, Manufactures and Commerce. He was one of the founders of the Massachusetts Institute of Technology. In politics he was generally a conservative, never an active partisan, and in later life proclaimed his independence of party. He was, in 1860, nominated by the Democracy of the Fourth District as their candidate for Representative to Congress, but his opponent, Alexander H. Rice, afterwards Governor of the State, secured the election by a small plurality.

Mr. Bigelow's published writings mostly treat of political economy, and are characteristic of the man, exhibiting his analytical skill, and remarkable rather for precision of statement and lucidity than for rhetorical graces. He sent to the press in 1858, "Remarks on the Depressed Condition of Manufactures in Massachusetts, with Suggestions as to its Cause and Remedy;" in 1862, a large quarto entitled, "The Tariff Question Considered in Regard to the Policy of England and the Interest of the United States;" in 1869, an address, "The Wool Industry of the United States;" in 1877, "The Tariff Policy of England and the United States Contrasted;" in 1878, "The Relations of Labor and Capital," an article in the *Atlantic Monthly*.

CHAPTER XII.

CLINTON—(*Continued*).

Schools—Churches—Newspapers—Water Supply—Statistics, Etc.

WHEN, in the latter days of the Revolution, it became necessary to resort to a draft to fill the quotas demanded for the Continental service, towns in Massachusetts were usually divided into districts called squadrons, in such manner and number as were suggested by neighborhood convenience and the number of men to be raised. An exactly similar plan seems

to have obtained at the same time, if not earlier, for the distribution and use of school money. A law of 1788 made this custom as applied to schools general in this Commonwealth, and at this date Lancaster was divided into thirteen squadrons. Two of these, known as Prescott's Mills and South Woods, were within the bounds of Clinton. Judging from the share of the town's appropriation received, they were among the smallest districts in population. In succeeding years the limits of the squadrons and their number were frequently changed, but these two remained essentially unaltered until 1846, being generally called Districts Ten and Eleven.

Each squadron provided its own school accommodations, whether a special building, or, as was often the case, a room in a dwelling house, or an unused shop. The earliest school-house known to have been built upon Clinton soil was that at Prescott's Mills, in 1800—a cheap, frame structure located upon a slight elevation in the woodland on the southwest corner of the intersection of the Rigby Road (now Sterling Street) with the main highway. On each of three sides it was lighted by small windows, placed high above the floor and protected on the outside with board shutters. The room was about eighteen feet square and had a plank seat running around the three windowed sides, with long heavy writing-desks before it. To the front of the desks were attached board seats for the abecedarians. On the fourth side was a fire-place broad enough to take in cord-wood. The South Woods School-house, or Number Eleven, was similar in style, but less capacious, and situated entirely out of sight of any other building on the old county road east of the Nashua, about half-way between Bolton corner and Boylston line.

With the increase in population and wealth brought by the enterprise of Poignand & Plant, the pride of the "Factory District"—as Prescott's Mills began to be called—demanded larger and better school accommodations, and in 1824 a brick edifice was built upon Main Street, about fifty rods southerly from the old one, its cost, four hundred and twenty dollars, being assessed upon the property of the district. This was planned by James Pitts, Sr., and the scholars' seats all faced in one direction, being arranged in tiers gradually rising from front to rear. This building served in the cause of education for about twenty-five years. The first teacher in the old school-house was Miss Sally Sawyer, who was paid one dollar per week, and boarded with Captain John Prescott, who was paid five shillings per week by the district. In 1808 there were twenty-seven scholars coming from twelve families. Those who sent children were expected to contribute wood, cut fit for use, the amount being prescribed by the prudential committee and apportioned according to the number of scholars. There were never but two terms of schooling in the year—a summer and a winter session, each of seven to ten weeks. Titus Wilder, Silas and Charles Thurston, and Ezra Kendall were for many years the winter teachers of Number Ten, noted disciplinarians all, who sucessfully guided the youthful generations of their day along thorny paths of learning, according to the often-quoted Hudibrastic version of Solomon's proverb. Titus Wilder, in 1808, received four dollars and fifty-eight cents per week for his instructions, and "boarded himself."

The whole population in both districts, during even the prosperous days of Poignand & Plant's mills, probably did not reach two hundred and fifty souls, and the schools were small. Upon the opening of the new industries the old school-rooms were soon filled to overflowing, and a primary school for Number Ten was established in 1844. A so-called high school was started in Clintonville by private enterprise during 1846, kept by Miss Adolphia Rugg. She was soon succeeded by George N. Bigelow, an exceptionally successful instructor, who was called away to become principal of the State Normal School at Framingham, in 1855. There were in 1847 about two hundred and thirty children of school age in Clintonville, and the citizens, with commendable zeal, combined to establish graded schools, elected a prudential committee, a board of overseers and treasurer, and authorized the borrowing of thirty-five hundred dollars for the building of the needed school-houses. The South Woods District was abolished and the whole territory divided into four sections. New houses were erected at Lancaster Mills and Harris Hill, the central brick house was refurnished, and the northern section was provided with a suitable room by the enlargement of the primary school-house. The third grade, or grammar school, at first occupied the chapel of the Congregational Society at the corner of Main and Sterling Streets, and was generally known as the high-school. The establishment of a high school as distinct from the grammar school dates from 1874.

Clinton has now eleven school buildings, all but two being substantial brick structures. Thirty-six teachers—all females but one—and a general superintendent are employed, besides eight engaged in the evening schools. The various schools are thus graded: one high, ten grammar, twenty-two primary—all open ten months in the year. In 1888 twenty-seven thousand dollars were appropriated for their support, and the pupils attending them numbered fifteen hundred and ninety-four. The number of children between five and fifteen years of age is now nineteen hundred and sixty.

The first high school building, which also served for the centre grammar school, was built at the corner of Church and Walnut Streets in 1853. The present handsome structure at the corner of Chestnut and Union Streets, one of the most finely appointed in the Commonwealth, was completed in 1885, from plans of J. L. Faxon, at a cost of sixty thousand dollars. It is of brick and Long Meadow sandstone, and con-

tains eight rooms above the basement. The principals of the high school have been as follows: George N. Bigelow to 1853; C. W. Walker, one year; Josiah S. Phillips to 1859; Henry S. Nourse, temporarily to fill out Mr. Phillips' term; Rev. Frederick A. Fiske one year; Miss Elizabeth A. Owens, one year; Dana I. Joscelyn, one year; Rev. Milo C. Stebbins, 1862 and 1863; Josiah H. Hunt, eight years; Andrew E. Ford, from 1873 to present time. Mr. Ford is a graduate of Amherst College, a member of the class of 1871. The superintendents have been: Samuel Arthur Bent, 1883–85; William W. Waterman, 1886–89.

There are now nine organized religious societies in Clinton, seven of which own capacious and comfortable meeting-houses. The residents preceding the advent here of the Bigelow looms were a God-fearing and church-going people, most of whom regularly attended the Sabbath services in Lancaster, two or three miles distant. When members justified it, the managers of the Clintonville corporations and other leading citizens organized neighborhood meetings, which were usually held in the brick school-house. November 14, 1844, a church of the Orthodox Congregational denomination, called the Second Evangelical Church of Lancaster, was formed, having fifty-one members, and occupied as their place of worship a chapel built upon or near the site of the first school-house at the corner of Main and Sterling Streets. The first pastor, Joseph M. R. Eaton, was engaged at a salary of five hundred and fifty dollars, and ordained January 9, 1845. The society hired the bass viol used in the choir, but the performer upon the instrument was one of its most prominent members. In September, 1847, signs of a change in the fashion of church music appeared, by a vote of the parish that they "would be pleased to have the Seraphine played on trial." The society rapidly increased in numbers and prosperity, and January 1, 1847, dedicated a new house of worship upon Walnut Street. This building, much enlarged in 1859 and again in 1871, it continues to occupy. Mr. Eaton was dismissed April 11, 1847. His successors have been as follows: William H. Corning, ordained December 8, 1847, dismissed October 2, 1851; William D. Hitchcock, ordained October 21, 1851, dismissed July 16, 1853; Warren W. Winchester, ordained March 23, 1854, dismissed June 17, 1862; Benjamin Judkins, Jr., acting pastor, December 1, 1862, resigned December 1, 1867; DeWitt S. Clark, ordained November 11, 1868; dismissed December 12, 1878; Charles Wetherbee, installed April 30, 1879, dismissed July 31, 1884; Darius B. Scott, installed January 14, 1885.

So early as March, 1816, several families of the Baptist faith formed themselves into a society and held meetings, sometimes in the South Woods School-house, sometimes at the house of Charles Chace, and engaged various preachers to visit them on stated Sabbaths. Elders Luther Goddard and Thomas Marshall were thus hired for some time. The leaders in the society were mostly residents of School Districts Ten and Eleven, and included Charles and Alanson Chace, John Burditt, the Lowe and Sargeant families, Deacon Levi Howard, Joel Dakin, Abel Wilder, Benjamin Holt, etc. In 1830, when the Hillside Church was established, many of these joined that society. The second church organized in Clintonville was called the First Baptist Society, and dates from April 24, 1847. For two years its meetings were held in the chapel on Main Street vacated by the Congregational Society. In 1849 it removed to the present house on Walnut Street, the capacity of which, however, was greatly increased in 1868. The land upon which the meeting-house stands was a gift from Horatio N. Bigelow. The first pastor of the church, Charles M. Bowers, D.D., resigned March 28, 1886, after thirty-nine years of faithful ministry. He was succeeded by Rev. Henry K. Pervear.

A chapel for Roman Catholic worship was built upon Burditt Hill, on Main Street, in 1849, by Rev. John Boyce, occupied as a mission church, and called St. John's. Clintonville had then been for about four years a mission station, a priest from Worcester coming on one Sunday of each month to say Mass at the house of some parishioner. Rev. J. J. Connelly succeeded Father Boyce in 1862, residing in Clinton, and the next year the town became a parish, with Rev. J. Quin as pastor. He was followed in May, 1868, by Rev. D. A. O'Keefe, who died in October of the same year. Rev. Richard J. Patterson, the present pastor, was ordained a priest December 22, 1866, and came to Clinton in November, 1868. The chapel on Pleasant Street was built by him in 1869. The corner-stone of the new Gothic church building at the corner of Union and School Streets was laid August 8, 1875. This is by far the largest and most costly of Clinton's houses of worship. It is solidly built of brick and cut Fitzwilliam granite, according to plans of P. W. Ford, of Boston, and can accommodate a congregation of three thousand persons. It was formally dedicated June 27, 1886.

The Methodist Episcopal Society was organized in October, 1851. Regular meetings had been attended previously by those attached to this faith, in Burdett's —then known as Attic Hall, and were continued in Concert Hall until the dedication of their present meeting-house on High Street, December 25, 1852. The basement of this edifice was added and finished as a vestry in 1856, and the whole building was renovated and improved in 1868. A parsonage which stood until this year upon the opposite side of the street was the gift of Daniel Goss, of Lancaster. In 1887 the church building was again remodeled and enlarged. The pastors have been as follows:—Philip Toque, October, 1850 to March, 1851; George Bowler, one year; J. Willard Lewis, two years; Augustus F. Bailey, one year, 1854; Newell S. Spaulding, two

years; Daniel K. Merrill, eight months, 1857; Willard F. Mallalieu, four months; William J. Pomfret, two years; Thomas B. Treadwell, one year, 1860; Albert Gould, two years; John W. Coolidge, hired for a brief time; William G. Leonard, four months; E. F. Hadley, fourteen months; Edwin S. Chase, one year, 1866; Frederick T. George, one year, 1867; Joseph W. Lewis, two years; William A. Braman, three years; A. C. Godfrey, one year, 1873; Volney M. Simons, three years; Watson M. Ayers, three years; Chas. H. Hanaford, two years, 1880–81; Albert Gould, three years; John H. Short, three years; M. Emory Wright, 1888.

The First Unitarian Church was organized June 12, 1852, though services had been regularly held in Burdett and Clinton Halls, by its members, during the two previous years. The meeting-house upon Church St. was dedicated Feb. 2, 1853. Twenty years later it was raised, greatly enlarged, and the basement fitted up for use as a vestry and church parlor. A bequest received from the estate of Colonel G. M. Palmer has enabled the parish to build a spacious and comfortable parsonage upon a valuable lot on the corner of Walnut and Water Streets. The pastors have been as follows:—Leonard J. Livermore, began preaching April, 1851, resigned September, 1857; Jared M. Heard, ordained August 25, 1858, resigned in 1863; James Salloway, installed November 9, 1864, dismissed December, 1868; Ivory F. Waterhouse, began preaching January 3, 1869, resigned May 25, 1873; William S. Burton, began preaching October 5, 1873, resigned December, 1875; Charles Noyes, began preaching May 7, 1876, resigned August 13, 1882; J. Frederick Dutton, installed June 6, 1883, resigned November 24, 1885; James Cameron Duncan, ordained June 17, 1886.

The Church of the Good Shepherd (Episcopal) was established as a mission in 1874. Regular services began April 12th of that year, in Bigelow Hall. On the last Sunday of June, Rev. L. Gorham Stevens assumed charge of the mission, and remained until the following April. After a brief interval he was succeeded by Rev. John W. Birchmore, who, however, never became a resident of Clinton, but was in charge of the mission until April 28, 1878. October 28, 1876, the foundations of a chapel were laid on Union Street and the building was consecrated on the 17th of the following April. Rev. Henry L. Foote was settled as rector in August, 1878, and a parish organization was effected April 14, 1879. In July, 1881, Mr. Foote was called to the parish of Holyoke and Rev. E. T. Hamel, an Englishman, became rector in September, 1881. He was followed by Rev. George F. Pratt, in May, 1884, who resigned and was succeeded by Rev. Thomas L. Fisher, April 1, 1888.

The Second Advent Society meet in Courant Hall. The organization dates from 1871, but no minister has been settled. Isaac Barnes is the elder.

The Spiritualists hold meetings in Currier's Hall, having no settled pastor. Their organization dates from 1882.

The German Church, Rev. F. C. F. Sherff, pastor, has recently built a neat Gothic meeting-house at the corner of Haskell and Birch Streets. Services in the German language had been held for about a year previous to its dedication, May 20, 1888, in the vestry of the Congregational Society.

The post-office, in its present spacious and convenient quarters, occupies nearly the same site as when established in 1846, by H. N. Bigelow, the first postmaster. The second postmaster, John T. Dame, Esq., served from September 7, 1853, to April 6, 1861, when he was relieved by Deputy Sheriff Enoch K. Gibbs, who held the office until August 1, 1870. His successor, Charles M. Dinsmore, closed his service January 3, 1887, when John McQuaid, the present postmaster, received his commission. From the date of the removal of the office from Kendall's Block, in 1853, to its return to High Street upon the completion of the Bank Block, April 9, 1882, it occupied the western end of the Bigelow Library Association building, on Union Street.

Under the law of 1858, creating trial justices, John T. Dame, Esq., was commissioned and held office until 1864. Daniel H. Bemis, Esq., succeeded to the office, and was superseded by Christopher C. Stone in 1871. The Second District Court of Eastern Worcester was established in July, 1874. It took the place of the trial justice, and includes in its jurisdiction the towns of Berlin, Bolton, Harvard, Clinton, Lancaster and Sterling, its sessions being all held at Clinton. Hon. Charles G. Stevens was appointed the first standing justice, Major C. C. Stone, special justice, and Frank E. Howard, clerk of the court. September 7, 1880, Major Stone was confirmed as justice in place of Mr. Stevens, who declined further service, and Jonathan Smith, Esq., was commissioned special justice on September 14th. In January, 1886, Mr. Smith resigned, and Herbert Parker, Esq., was appointed to succeed him January 27, 1886.

The *Saturday Courant's* early history has been told in a former page. With its restricted local circulation becoming unremunerative when the war prices of paper and labor were encountered, it was discontinued with the number for December 13, 1862. In July, 1851, Mr. Messenger had withdrawn from both editorship and partnership, to be succeeded by Edwin Bynner, who with genial versatility figured at the same time as editor, painter, poet, town-wit, auctioneer and station-master. November 1, 1853, the publishing office was moved across High Street to rooms under the Clinton House hall, where it remained for fifteen years. Mr. Bynner abandoned the enterprise July 1, 1854, finding it not sufficiently profitable, and was replaced temporarily by John P. Davis. January 1, 1855, Rev. Leonard J. Livermore was given editorial charge of the paper, which he retained until September 5, 1857, when he removed to Lexington. Rev. Charles M. Bowers then acted as editor for twenty months, but did not permit his

name to appear as such. Thenceforward for about three years the paper was nominally under the direction of "an association of gentlemen." March 22, 1862, Horatio E. Turner essayed the task of editing it, but at the end of four months enlisted in the Thirty-fourth Infantry, to give his life for country. Wellington E. Parkhurst performed the editorial duties from August 16, 1862, to the farewell number.

Upon the muster-out of the Union forces, Lieutenant William J. Coulter, a skilled printer, who had been employed upon the *Saturday Courant*, resolved to resume its publication. Mr. Parkhurst was chosen as editor, and September 30, 1865, the first number of the *Clinton Courant* appeared from the old office. The venture proved promising enough to warrant enlargement of the paper in 1866, 1867 and 1870. In January, 1869, the office of publication was removed to Tyler's Block, then just completed, and October 10, 1872, to its present location on Church Street. Its management remains unchanged. The *Courant* has maintained from the outset an independent position in politics and religious matters, but is not weakly neutral, nor reticent in expression of opinion upon any topic of public interest. It is now twice the size of the original sheet of 1846, has a wide circulation for a paper of its class and is growing in deserved popularity. A smaller sheet was published as an experiment, on Tuesdays from September, 1880, for one year, in connection with the Saturday issue, and called the *Clinton Advance*. The unique file of the *Courant* preserved in the Bigelow Public Library is an invaluable record of Clinton's progress.

The *Courant* has had an active competitor for public favor during the last ten years. The *Clinton Record* was first published by John W. Ellam September 1, 1877. Its editors were E. A. Norris and R. M. Le Poer. This newspaper was bought by Trowbridge & French, and its name changed to the *Clinton Times*, November 13, 1882. Mr. Trowbridge soon sold his interest to his associate, George French, who, in April, 1884, disposed of the paper to George W. Reynolds, from Melrose. During 1883 the *Times* also appeared in semi-weekly form. It was Republican in politics and advocated prohibition. It was published Wednesday afternoons from a printing-office in Greeley's block. Its publication ceased March 24, 1887. Meanwhile a third candidate for the people's favor had appeared.

The *Clinton Enterprise*, published by Wood Brothers in Greeley's block dates from Friday, May 14, 1886. M. E. C. Hawkes was its first local editor and manager.

For the first thirty years after its incorporation the town's people were wholly dependent upon wells and rain-cisterns for water required for domestic purposes. The larger manufacturing companies, by means of their steam pumps, supplemented by reservoirs upon high ground, protected their works from fire and supplied their tenants. The question of the introduction of water for general use was often agitated, but it was not until November 22, 1875, that definite action favoring such introduction was taken by a town-meeting. On that date the report of a special water-supply committee, of which Hon. Daniel B. Ingalls was chairman, was adopted, and the committee instructed to obtain the necessary legislation for the furtherance of their recommendations. April 4, 1876, an act was approved authorizing Clinton to take the waters of Sandy Pond, or any other pond or brook within the town limits, for domestic and fire purposes, and to borrow the sum of one hundred and twenty-five thousand dollars for the construction of works. During the subsequent five years, however, nothing resulted save surveys, estimates and warm discussion. Upon petition the Legislature revived and extended the act February 4, 1881, for three years. During that year a reservoir, with a capacity of two million gallons, was constructed upon the summit of Burditt Hill, and the main pipes were laid connecting it with the principal streets.

The water of Sandy Pond is of great depth and purity, covering an area of about fifty acres, and so situated as easily to be guarded from external contamination. The supply from it can be cheaply increased by bringing to it the flow of Mine Swamp Brook; but its elevation is insufficient to obviate the necessity of a costly pumping-station. Explorations were, therefore, extended into the adjoining towns, in the hope of obtaining a reservoir at sufficient height to supply the town by a gravity system. Investigation of the sources of Wickapeket Brook, begun by Jonas E. Howe of the committee, disclosed such unusually favorable conditions that the scheme for using the waters within the town bounds was abandoned, and a petition met the Legislature of 1882 asking authority to take water from Sterling. An act gave the desired privilege, and also authorized the issuing of additional water-bonds to the amount of one hundred thousand dollars. This legislation was accepted by the required two-thirds vote of a town-meeting March, 1882, and by January 1, 1883, the main works were completed.

The cast-iron main is sixteen inches in diameter, and about five and three-fourths miles in length. The water is of unsurpassed purity, abundant for all probable needs, and reaches the hydrants in High Street with a pressure of about eighty pounds to the square inch, having a head of over one hundred feet. At the mills the hydrant pressure is one hundred and ten pounds. During 1883 Lynde Brook and Pond were taken into the reservoir system. The first basin had a capacity of three million gallons; Lynde reservoir has a capacity of ten million gallons. An act, approved March 27, 1884, and accepted by a town vote, permits the additional sum of fifty thousand dollars in water bonds to be issued, and authorizes the selling of water to the inhabitants of Lancaster along its main line, and to the Lancaster Water Company,

provided the needs of the inhabitants of Clinton are first supplied. The water bonds authorized have not all been issued. They yield four per cent. interest, payable April and October 1st, and run for twenty years. Work has recently begun upon an additional reservoir of thirty million gallons capacity.

In connection with the subject of water supply, that of public sewage was given to the consideration of the committee of 1875, and a report was made to the town March 5, 1877, advising that no action be taken at that time looking to any plan for a general system of drainage. The little reservoir of the Clinton Yarn Company, known as Counterpane Pond, had already become seriously polluted by the foul matter constantly poured into it from the carpet-mills and various other sources, and, being in the heart of the town, was a fruitful cause of complaint, especially from those dwelling in its immediate vicinity. A plan for a system of sewers was obtained from the noted engineer, Phineas Ball, in 1883, and a petition for authority to construct a sewerage system was presented to the Legislature of 1886. The petitioners, however, preferred to be given leave to withdraw rather than accept any bill prohibiting the discharge of unfiltered sewage into the Nashua River, a restriction which was demanded by the inhabitants of towns upon that stream below Clinton. The subject continues to be persistently debated, but the multiplicity and importance of the interests involved, and the cost of an efficient and comprehensive system, have, thus far, prevented the adoption of any but a make-shift policy. Pipes for house drainage are now being laid through the main streets.

The period of the town's life, thirty-eight years, has been one of almost uninterrupted prosperity, exempt from those episodes of great depression and financial disaster which frequently visit similar manufacturing towns. This is, doubtless, in part due to the high grade and great variety of the products of its mills and workshops, but greatly also to the friendly relations which have been sustained between labor and capital. It speaks much for the intelligence of its working citizens as well as for the liberal spirit of those who have managed the capital here invested, that the harmony which should exist between the employer and the employed has never been very seriously nor generally disturbed.

In the hard times of 1857 the larger manufactories, for several weeks, were run on half-time or less, and, but for the sympathy of the managers with the workers, would have been closed. The tact, energy and unselfishness of Franklin Forbes were brought prominently into view during the trials of this critical period. The shares of the older companies gradually fell in the stock market to half their par value. The stock then, as now, was largely in the ownership of non-residents, a fact preventing any strong personal bond of sympathy between the wage-payer and the wage-earner. But the managers, though firm in the control of their great trusts, were tender of heart and heedful of the needs of the toilers for daily bread. The commercial stress, though long continued, therefore created little bitter antagonism. New inventions, and improvements of the old, were brought forward by E. B. Bigelow, cheapening manufacture, and when the clouds of civil war began to lift, a new era of prosperity dawned, surpassing that of earlier days.

In 1879 a reduction of wages was found necessary at the Lancaster Mills to compensate for a great depreciation in the market for ginghams, and was accepted without unusual demonstrations of dissatisfaction. In March, 1880, the old rates were voluntarily restored, when the manager was met by a demand from some of the weavers for an additional and large increase. This was firmly refused, as the petitioners were already receiving larger daily wages than given at other mills in New England for the same or similar labor. A portion of the weavers struck work, and for several days the community was excited by fears of trouble and loss. The cause of the disaffected, however, signally failed to win public sympathy, and, after about a month of idleness, the deserted looms were all manned again.

A similar difficulty arose in April, 1886, at the carpet-mills, when seventy-seven dyers, being refused demands deemed unreasonable, resolved to leave their work. Upon the attempt to fill the places vacated with workmen procured elsewhere, threats and abuse were used to intimidate the newcomers, and riotous demonstrations were made in the vicinity of the mills by certain sympathizers with the strikers. The manager at once closed the works, announcing that they would remain closed until the company's property and employés were safe from mob violence and insult. A strong special police force was organized, a few arrests were made, order was at once restored and in a few days the machinery was again set in motion.

These two short-lived disturbances, participated in by comparatively few, and those for the most part the least responsible, are all that blot the industrial annals of the town.

Associations for benevolent, charitable and social purposes, as well as mutual benefit societies, are exceedingly numerous in Clinton. Besides many more or less closely connected with the several churches, the following distinct organizations exist:

MASONS—occupying Masonic Hall, in National Bank Block: Trinity Lodge, organized 1859, and Clinton Royal Arch Chapter, organized 1869.

ODD-FELLOWS—having a hall in Greeley's Block: Lancaster Lodge, No. 89, organized 1846; Clinton Encampment, No. 29, organized 1883; Germania Lodge, No. 42, Daughters of Rebecca, instituted October 31, 1884.

GRAND ARMY OF THE REPUBLIC—occupying G. A. R. hall in National Bank Block: E. D. Baker Post, No. 64, organized August 17, 1868;

Ladies' G. A. R. Relief Society, organized 1883; Camp A. L. Fuller, Sons of Veterans, mustered in November 7, 1887.

TEMPERANCE SOCIETIES.—*Good Templars*—Everett Lodge, No. 31, and Good Samaritan Lodge, No. 81; Clinton Temperance Associates; Women's Christian Temperance Union; Young Women's Christian Temperance Union; St. John's Total Abstinence and Mutual Aid Society.

IMPROVED ORDER OF RED MEN.—Wattoquottoc Tribe, No. 33; Juanita Council, No. 7, Daughters of Pocahontas.

UNITED ORDER OF THE GOLDEN CROSS.—Wachusett Commandery, No. 56.

KNIGHTS OF HONOR.—Clinton Lodge, No. 193.

ANCIENT ORDER OF UNITED WORKMEN.—Clinton Lodge, No. 29.

ROYAL ARCANUM.—Wekepeke Council, No. 742.

UNITED ORDER OF THE PILGRIM FATHERS.—Nashawog Colony, No. 75.

ROYAL SOCIETY OF GOOD-FELLOWS.—Sholan Assembly, No. 166.

GERMAN ORDER OF HARUGARI.—Lichtenstein Lodge, No. 129.

TURNVEREIN SOCIETY, organized 1867.

SCHILLER VEREIN, organized 1868.

SONS OF ST. GEORGE.—Rose Lodge, No. 40.

ST. ANDREW'S SOCIETY, organized 1879.

ANCIENT ORDER OF HIBERNIANS.—Division No. 8, organized 1872.

VERMONT ASSOCIATION.

MASSACHUSETTS CATHOLIC ORDER OF FORESTERS.—Clinton Court, No. 56.

FIREMAN'S RELIEF ASSOCIATION, incorporated 1875.

TWENTY ASSOCIATES.

TWENTY-FIVE ASSOCIATES.

FULL SCORE ASSOCIATION.

CLINTON SPORTSMEN'S CLUB.

PRESCOTT CLUB, incorpated April 20, 1886.

CLINTON BOARD OF TRADE, organized February 15, 1884.

CLINTON RIFLES, Company K. Sixth Regiment Massachusetts Volunteer Militia.

CLINTON BICYCLE CLUB.

The growth of Clinton has been very uniform. Its population, by the official enumerations, has been as follows: 1850, 3113; 1855, 3636; 1860, 3859; 1865, 4021; 1870, 5429; 1875, 6781; 1880, 8029; 1885, 8945; 1888, 10,037.

Numerous nationalities are here represented. The Germans have a neat village by themselves, known as Germantown, with a house of worship and a capacious Turnverein Hall. The Irish are in the majority in three or four localities—notably the "Acre," "Duck Harbor" and "California." By the last census, the native-born numbered 5547, and the foreign-born, 3398, although three-fourths of the population are registered as of foreign parentage. Of those born aliens, 2097 came from Ireland; 465 from Germany; 295 from Scotland; 257 from England; 248 from various British provinces in America; 9 from France; 8 from Austria; 4 from Italy, and 1 from China.

The valuation of the town has increased at more rapid rate than the population: 1850, $1,262,813; 1855, $1,607,991; 1860, $1,690,692; 1865, $1,860,763; 1870, $2,952,568; 1875, $4,340,919; 1880, $4,444,937; 1885, $5,143,726; 1888, $5,531,811.

The total indebtedness of the town in the same years was: 1850, $13,600; 1855, $14,500; 1860, $14,500; 1865, $34,190; 1870, $40,262; 1875, $132,000; 1880, $99,500; 1885, $337,000; 1888, $342,500.

Of the one hundred and twenty-five thousand dollars in six per cent. bonds issued at the building of the town hall in 1872, twenty-seven thousand five hundred dollars remain unpaid, six thousand five hundred dollars of the amount having been annually called in. The school-house four per cent. loan, which was fifty-four thousand dollars in 1886, has been decreased six thousand dollars annually. Of the four per cent. water bonds, two hundred and fifty-three thousand dollars are outstanding, and nine thousand dollars in amount have been bought for the sinking fund. Most of the principal is due in 1901 and 1906.

The amount annually raised by taxation has grown from $9059 in 1850, when the tax rate was seven dollars to the thousand, to $104,598 in 1888, the rate being eighteen in a thousand.

The votes of the town for Presidential candidates have been:

1852. Winfield Scott, 200.
Franklin Pierce, 100.
John P. Hale, 82.
1856. John C. Fremont, 353.
James Buchanan, 54.
Millard Fillmore, 3.
1860. Abraham Lincoln, 346.
Stephen A. Douglas, 71.
John Bell, 11.
John C. Breckenridge, 7.
1864. Abraham Lincoln, 334.
George B. McClellan, 84.
1868. Ulysses S. Grant, 443.
Horatio Seymour, 107.
1872. Ulysses S. Grant, 524.
Horace Greeley, 298.
1876. Rutherford B. Hayes, 576.
Samuel J. Tilden, 482.
1880. James A. Garfield, 682.
Winfield Scott Hancock, 513.
James B. Weaver, 1.
Neal Dow, 7.
1884. Grover Cleveland, 683.
James G. Blaine, 630.
Benjamin Butler, 42.
John P. St. John, 16.

The following citizens have served the town as Representatives in the Legislature: Horatio Nelson Bigelow, 1851–52; Andrew Lowell Fuller, 1854; James Ingalls, 1855; Horace Faulkner, 1856–58; Jonas Elijah Howe, 1860, 1870, 1872, 1887; Rev. Jared Mann Heard, 1862; Franklin Forbes, 1864; Rev. Charles Manning Bowers, 1865–66; Charles Whiting Worcester, 1868; Elisha Brimhall, 1871; Lucius Field, 1878, 1882; Daniel Bowman Ingalls, 1880; Edward Godfrey Stevens, 1881; Alfred Augustine Burditt, 1884; Jonathan Smith, 1886; Frank Edward Holman, 1888–89. Charles Godfrey Stevens, Esq., was delegate in the State Convention of 1853.

The following have served as State Senators: Charles Godfrey Stevens, 1862; Henry Clay Greeley,

1870 and '71 ; Elisha Brimhall, 1876 and '77; Daniel Bowman Ingalls, 1881 and '82.

Henry Clay Greeley was a member of the Executive Council in 1885 and '86.

The clerks of the town have been: Albert S. Carleton, 1850–52; C. S. Patten, 1853; Artemas E. Bigelow, 1854–59; Henry C. Greeley, 1860-69; Wellington E. Parkhurst, 1870–72; Lucius Field, 1873–77; Wellington E. Parkhurst, 1878–80; Martin J. Costello, 1881–84; John F. Philbin, 1885–.

Treasurers in order of service: Sidney Harris, one year; Alfred Knight, four years; Sidney Harris, one year; Alfred Knight, ten years; Elisha Brimhall, five years; Edwin N. Rice, four years; Wellington E. Parkhurst, one year; Alfred A. Burditt, one year; Henry O. Sawyer, one year; G. Walton Goss, ten years.

The following have served as selectmen: Ezra Sawyer, Samuel Belyea, Edmund Harris, Gilman M. Palmer, Calvin Stanley, Nelson Whitcomb, Alanson Chace, Jonas E. Howe, Abel Rice, J. Alexander, Horace Faulkner, David Wallace, Joshua Thissell, B. R. Smith, James F. Maynard, Gilbert Greene, Charles W. Worcester. P. L. Morgan, Elisha Brimhall, Alfred A. Burditt, George S. Harris, Charles Bowman, Otis B. Bates, Charles L. Swan, Dr. George W. Symonds, Charles H. Chace, Henry C. Greeley, Albert H. Smith, T. A. McQuaid, William Haskell, A. C. Dakin, George F. Howard, Christopher C. Stone, Eben S. Fuller, C. C. Murdoch, Samuel W. Tyler, Alexander Johnston, John Sheehan, Eli Forbes, Sidney T. Howard, J. C. Parsons, C. C. Cook, George W. Morse, Anton Wiesman, Henry N. Otterson, P. J. Quinn, Herman Dietzman, Charles A. Vickery, William H. Nugent.

The following served upon the School Committee: Rev. William H. Corning, Rev. Charles M. Bowers, Dr. George M. Morse, Dr. George W. Burdett, C. W. Blanchard, Charles L. Swan, W. W. Parker, Augustus J. Sawyer, Franklin Forbes, for thirteen years; John T. Dame, Esq., for sixteen years; Horatio N. Bigelow, Albert S. Carleton, Rev. William D. Hitchcock, Rev. George Bowler, James Ingalls, Dr. Preston Chamberlain, Rev. Leonard J. Livermore, Rev. T. Willard Lewis, Artemas E. Bigelow, Charles G. Stevens, Esq., Josiah H. Vose, Henry C. Greeley, Daniel W. Kilburn, Eneas Morgan, Dr. George W. Symonds, Joshua Thissell, Charles F. W. Parkhurst, William Cushing, Rev. James Salloway, George W. Weeks, Alfred A. Burditt, Wellington E. Parkhurst, for twelve years; M. H. Williams, Daniel H. Bemis, Harrison Leland, Henry N. Bigelow, Daniel B. Ingalls, Edward G. Stevens, Samuel McQuaid, John W. Corcoran, Esq., Rev. Charles Noyes, Dr. Philip T. O'Brien, Frank E. Holman.

The following have been practicing physicians in Clinton: George W. Symonds, M.D., 1841, Dartmouth, M.M.S.S., died 1873; George W. Burdett, M.D., 1846, Harvard, M.M.S.S.; George M. Morse, M.D., 1843, Harvard, M.M.S.S.; Charles D. Dowse, ——; A. W. Dillingham, ——; Pierson T. Kendall, M.D., 1816, Harvard, M.M.S.S., died 1865; Adoniram J. Greeley, M.D., 1845, Harvard; Charles A. Brooks, M.D., 1859, Homœopathic Medical College, Philadelphia; Oscar T. Woolhizer, ——; George A. Jordan, M.D., 1872, Harvard, M.M.S.S.; L. W. Taft, ——; Philip T. O'Brien, M.D., 1872, Albany; Perley P. Comey M.D., 1878, Harvard, M.M.S.S.; Walter P. Bowers, M.D., 1879, Harvard, M.M.S.S.; Charles L. French, M.D., 1869, New York, College of Physicians and Surgeons, M.M.S.S.; C. R. Bradford, ——; Thomas F. Roche, M.D., 1882, Bellevue, M.M.S.S.; Thomas H. O'Connor, M.D., 1883, Bellevue; O. A. Everett, ——; Edward S. Everett, ——; George C. Ward, M.D., 1882, Hahnemann College, Chicago; Albert C. Reed, M.D., 1887, Boston University.

The following attorneys have had offices in Clinton: Charles G. Stevens, A.B., Dartmouth, 1840; John T. Dame, A.B., Dartmouth, 1840; Isaac Baldwin; Daniel H. Bemis; William B. Orcutt; John W. Corcoran, LL.B., Boston University, 1875; Jonathan Smith, A.B., Dartmouth, 1871; John F. Brown; Charles G. Delano; Herbert Parker; Walter R. Dame, A.B., Harvard, 1883; John G. Crawford; Thomas F. Larkin.

The following, born upon Clinton soil or residents of the town when graduated, have received degrees at collegiate institutions:

George Ide Chace, born in Lancaster, February 19, 1808, son of Charles and Ruth Chace; graduate at Brown University, 1830; tutor of mathematics, 1831; professor of chemistry, 1834; of physiology, geology, etc., 1836; LL.D., 1853; president *ad interim*, 1867; professor of moral philosophy, 1868; died at Providence, R. I., April 29, 1885.

George Harris, A.B., 1837, Brown; a son of Emory; died 1838, aged twenty-three years.

Frederic Warren Harris, A.B., 1845, Harvard; a brother of the preceding; died 1863.

George W. Burdett, M.D., 1846, Harvard, M.M.S.S.

Alfred Plant, A.B., 1847, Yale; a son of Samuel; now a wealthy merchant of St. Louis, Mo.

Charles A. Bowers, A.B., 1864, Harvard; died 1865.

Charles H. Parkhurst, A.B., 1866, Amherst; D.D., 1880; pastor of Madison Square Presbyterian Church, New York City.

Eli Forbes, S.B., 1868, Massachusetts Institute of Technology.

Charles S. Gowen, S.B., 1869, Massachusetts Institute of Technology.

Edward G. Stevens, 1870, West Point Military Academy.

Arthur F. Bowers, A.B., 1871, Brown University.

Howard E. Parkhurst, A.B., 1873, Amherst.

Charles L. Swan, Jr., A.B., 1874, Yale.

John W. Corcoran, LL.B., 1875, Boston University.

Michael Kittridge, A.B., 1875, Holy Cross, Worcester, clergyman.

Peter T. Moran, A.B., 1877, Holy Cross; M.D., 1883, Bellevue.

Clarence H. Bowers, D.D.S., 1878, Boston Dental College.

Walter P. Bowers, M.D., 1879, Harvard, M.M.S.S.

Thomas J. Kelly, A.B., 1880, Holy Cross, Worcester.

James F. Maher, A.B., 1880, Holy Cross, Worcester, clergyman.

Elmer S. Hosmer, A.B., 1882, Brown University.

Thomas F. Roche, M.D., 1882, Bellevue, M.M.S.S.

Thomas H. O'Connor, M.D., 1883, Bellevue.

Walter R. Dame, A.B., 1883, Harvard; LL.B., 1886, Boston University.

James H. Grant, M.D., 1883, Bellevue.

John M. Kenney, A.B., 1884, Holy Cross, Worcester, clergyman.

Michael J. Coyne, A.B., 1884, Ottowa, clergyman.

John H. Finnerty, M.D., 1884, Bellevue.

John J. Leonard, A.B., 1884, St. Michael's, Toronto, clergyman.

Thomas H. MacLaughlin, A.B., 1884, Boston College.

Henry K. Swinscoe, A.B., 1885, Harvard.

Henry A. McGown, A.B., 1886, Amherst.

Charles L. Stevens, A.B., 1886, Amherst.

Martin Moran, M.D., 1887, Bellevue.

J. Frederic McNabb, S.B., 1887, Worcester Institute of Technology.

Patrick J. O'Malley, A.B., 1888, Ottawa.

Henry Forbes Bigelow, S.B., 1888, Massachusetts Institute of Technology.

CHAPTER XIII.

CLINTON—(*Continued.*)

MASONIC HISTORY.[1]

TRINITY LODGE.—The charter of Trinity Lodge was dated January 30, 1778. It was issued by the Massachusetts Grand Lodge, of which Joseph Warren was appointed the first Grand Master. Trinity Lodge's charter was signed by Joseph Webb, Grand Master; Moses Deshon, Deputy Grand Master; Samuel Barrett, Senior Grand Warden; Paul Revere, Junior Grand Warden. It was addressed to Michael Newhall, Edmund Heard, James Wilder, Jonas Prescott and Richard P. Bridge. No previous dispensation had been granted these Masons to erect a lodge and initiate candidates; but, as was often the case at that period, the charter was issued, in the first instance, upon application of the brethren. All the charter members were residents of within what are now the limits of Lancaster, except James Wilder, whose home was in the Squareshire District in Sterling. Newhall came from Bolton, and Heard from Worcester; but neither had lived in Lancaster very long, nor did either of them die there. Newhall went to Leominster some time after 1800, and Heard removed to Lower Canada about 1793. Their places of death are unknown. Jonas Prescott was a descendant of John Prescott, one of the first settlers of the town. He always lived in Lancaster and died there. Of Richard P. Bridge very little is known. If a resident of Lancaster at all, he lived there but a short time, and his name does not appear in the records after December, 1783. It is not known where any of the charter members received their Masonic degrees, though it was most probably in Boston, as at that time (1778) there was no lodge existing nearer than Boston and Newburyport.

Trinity Lodge was numbered six, but was the fifth in order chartered by the Massachusetts Grand Lodge. The Lodge of St. Andrew, of Boston, was number one, and was chartered November 30, 1756, though it had done some Masonic work for two years or more, receiving its charter from Sholto Charles Douglass, Lord Arbedour, Grand Master of Masons in Scotland. By the concerted action of St. Andrew's and three traveling lodges, which were holden in the British army, then stationed in Boston, a commission was obtained from George, Earl of Dalhouse, Grand Master of Masons in Scotland, appointing Joseph Warren Grand Master of Masons in Boston and within one hundred miles of the same, upon the receipt of which the brethren of the above-named lodges proceeded to organize the Massachusetts Grand Lodge. The first charter issued by this Grand body was to Tyrian Lodge, of Gloucester, March 2, 1770. Then followed Massachusetts Lodge, of Boston, May 13, 1770; St. Peter's Lodge, Newburyport, March 6, 1777; Berkshire Lodge, Stockbridge, March 8, 1777; and Trinity Lodge, January 30, 1778. There were other Masonic Lodges in the State, at the time Trinity was organized, which received their charters from the St. John's Grand Lodge of Boston, a body chartered by Anthony, Lord Viscount Montague, Grand Master of Masons in England, in 1733. St. John's Grand Lodge issued charters for lodges in Boston, Nova Scotia, Philadelphia, Rhode Island and other States, and claimed jurisdiction over all the Masons in America, while the Massachusetts Grand Lodge had jurisdiction of Masons in Boston and within a hundred miles thereof only. The agitation which grew out of the existence of these rival bodies found its way into Trinity Lodge.

While the two grand bodies did not unite until 1792, yet as early as April, 1786, it was voted in Trinity Lodge, "to chuse a Comity of three to Consider of our Situation as a Lodge and Connection there is between us and the Massachusetts Grand Lodge or any other order of Antient Masons with their opinions of the proceedings necessary for us to take to render our

[1] By Jonathan Smith.

Situation More Eligable." And in the following June it was "voted to Acknowledge the Supremecy of the present Grand Lodge of Massachusetts on Condition our Quarterage take place from the present Date." There is no further allusion to the subject on the records of the lodge, and the union of the two grand bodies six years later created no disturbance in its relations to the Supreme Masonic authority of the State.

In its first years Trinity Lodge exercised jurisdiction over a wide territory. Applications were received and acted upon from Merrimack, Medford, Barre, Worcester, Oxford, Brookfield, Amherst, N. H., and even from Lower Canada. But the founding of new lodges, which proceeded rapidly after the close of the Revolutionary War, and notably the organization of Morning Star Lodge in Worcester, in 1792, narrowed its jurisdiction, and during its last years in Lancaster it covered a territory no larger than that now embraced in the territory of the present Trinity Lodge of Clinton.

Its records up to 1783 and subsequent to 1800 are missing, and but little of its history, except between those dates, is known. Michael Newhall was the first Master, and he was succeeded by Timothy Whiting, Jr., and probably by Isaiah Thomas, of Worcester, though this is not certain. Thomas was a member up to about 1792, and among the very earliest of the existing records is described as a Past Master. In 1783 the list of officers was as follows: Edmund Heard, Master; James Wilder, Senior Warden; Ephraim Carter, Junior Warden; Joseph Carter, Treasurer; Moses Smith, Secretary; James Wyman, Senior Deacon; Samuel Adams, Junior Deacon; Jonas Fairbank, Senior Steward; John Prescott, Junior Steward.

There was evidently considerable interest in the order prior to 1800, notwithstanding the hard times following the Revolution. The records show a good attendance at the meetings, and that on every meeting night, from 1783 to 1801, through summer and winter, the lodge was regularly opened with a full set of officers and a liberal representation of the brethren. The number present varied from twelve to fifty at each communication, and in the eighteen years following 1783 one hundred and forty candidates received their degrees.

The first hall occupied by the lodge in 1778 was in a building once standing on the site of the house now owned by Daniel Howard, in South Lancaster.

In 1778 Edmund Heard purchased this property of Dr. Israel Atherton. The house has since been known as the Ballard House. When it was torn down, many years ago, there could still be seen at one end of the north front chamber the platform and other indications of the lodge's tenancy. Some trouble afterwards grew up between the lodge and Edmund Heard over the lodge's occupation. When Heard purchased the property he borrowed of the lodge £224 4*s*. 6*d*. (£35 7*s*. 2*d*., reduced scale) with which to pay for it. Matters run along until 1788, when, after repeated efforts on part of the brethren, a settlement was had, at which Mr. Heard presented a long bill for sundry repairs on the house and hall, and for care of the lodge-room and property. The matter was finally settled by Heard's giving the lodge his note for £56 11*s*. 4*d*., at the reduced scale, and a lease of the "hall with the chamber adjoining, with the usual privilege the Lodge have heretofore had in the house from time to time, and at all times so long as the Lodge shall continue as a Lodge." But the lodge did not always remain there. In February, 1799, a committee was appointed "to make provisions for a suitable hall for Trinity Lodge," and in the following February another committee was chosen to "contract with Brother Merrick Rice to furnish a suitable and convenient hall for the use of the Lodge." But when it removed to the new quarters, and how long it there remained, are unknown. One of the houses then owned by Merrick Rice is the same now occupied by Mrs. E. M. Greene, in the Centre Village, and it is probable, but not certain, that it was to this house the lodge removed in 1799. Afterward, the lodge occupied a hall in the Lancaster Hotel, and as the order grew unpopular, about 1826, the furniture was removed to a private room in the house of some one of the brethren, where the faithful continued to assemble until the organization became finally extinct.

The meetings were on the first Monday of each month, lasting from four o'clock P.M. until eight o'clock, up to September, 1787, when the dates were changed from four o'clock on the first Monday of every month until six o'clock P.M. on the first Tuesday of August, October, December, February, April and June. But in February, 1790, the dates were again changed to the first Tuesday of every month, from six o'clock to ten P.M., and so continued, though in 1792 the hour was changed back to four o'clock.

The brethren faithfully observed the feast days of the order. The festival of St. John the Evangelist (in December) was celebrated in their hall, only members of the craft being admitted. But the feast of St. John the Baptist (June 24th) was public, and often an imposing affair. All the brethren were summoned, and the clergy in the neighboring towns, whether Masons or not, were formally invited, and one of them, by special request of the lodge, preached a sermon. The brethren assembled at their hall at nine A.M., transacted any business that came before them, and at eleven a procession was formed which marched to the church to attend a religious service. Sometimes, as at the celebration in 1790, they were escorted thither "by a well-disciplined company of cavalry in complete uniforms," and were preceded by "a band of music playing Entered Apprentice Song." The services were interspersed with singing by selected choirs, and were listened to by large audiences, "whose attention and decency of behavior manifested an unfeigned approbation of the animating truths

delivered." After the service the brethren, with the clergy and invited guests, returned to the hall, where a grand banquet was served. At the festival in 1790 the following toasts were drank:

1. "The Memory of St. John the Baptist."
2. "Our Illustrious Brother, George Washington, President of the United States."
3. "The United States of America, with the Craft."
4. "The Venerable Clergy."
5. "All Mankind."

Among the clergymen who preached on these occasions were Rev. Mr. Sumner, of Shrewsbury, in 1789; Rev. Phineas Whitney, of Shirley, in 1790; Rev. Peter Whitney, of Northboro', in 1792; and Rev. Wm. Emerson (father of Ralph Waldo Emerson), of Harvard, in 1793. After 1792 Trinity and Morning Star Lodges often united in the observance of this feast, meeting alternately in Worcester and Lancaster. On these occasions the programme was very elaborate, and was successfully carried out to the great pleasure and, be it hoped, to the edification of all the brethren.

The meetings of the lodge were occasions of refreshment, as well as labor. A suggestive fact is the amount of the steward's bill, which was presented at the close of every meeting and promptly ordered paid. In 1793 a committee was chosen "to accommodate the Hall with a conveniency for mixing liquors," and at another time it was voted, "That the Treasury furnish some brother with money to purchis 2 Dozen Tumblers;" and as a preparation for one of their June festivals, they procured five dozen tumblers for the banquet. But no intemperance or excess was tolerated; for at one of the meetings a committee was chosen to remonstrate with Brother —— —— for his intemperate habits. The admonition did not cure the appetite, however, for subsequently the lodge, by a formal vote, debarred the erring brother from the privilege of celebrating the approaching Feast of St. John's with them. But, with all these festivities, the records show that the lodge was fully alive to its duties to the "poor and distressed," and to their widows and orphans. They buried their dead brethren, relieved the widows, made liberal donations of money to those in misfortune, and, in many other ways, extended sympathy and help to those in need in a manner which made it a society dear to its members and sincerely respected by the community.

In those days Washington was regarded as the most illustrious patron of the order in America. At all Masonic festivals his health was drank and his virtues eulogized in speech and song. His death was the occasion of a memorial service by Trinity Lodge. At a special communication held January 11, 1800, the lodge voted to meet on the 22d of the following February, "for the purpose of testifying in a public manner the sorrow we feel on acct. of the decease of the greatest and best of men, Br. Genl. George Washington." The hall was draped in black and all the brethren summoned to be present. Rev. Nathaniel Thayer was invited to preach the sermon. There was a very large attendance, and citizens and soldiers joined in the procession to the church. "The discourse," says the record, "delineated in a comprehensive manner the virtues and excellencies of the deceased, and enjoined it on all the Brethren to imitate, as much as possible, his great and unequalled virtues."

After the services a banquet was held at the hall of the lodge. In the records a memorial page is given to Washington, as follows:

BROTHER GEORGE WASHINGTON.

Born Feby. 11th, Year of Light, 5732.
Invested with the Command of the American Armies, 5775.
Resigned his Commission to Congress, 5783.
Chosen President of the United States, 5788.
Gave in his Resignation, 5796.
Invested a second time with the Organization and Command of the American Forces, 5798.
Died December Thirteenth, 5799.

The following were the Masters of the lodge from 1783 to 1801: Edmund Heard, 1783–89–90–91–92 and part of 93—six years; Timothy Whiting, Jr., 1784–85–87–93–94–97—six years; Ephraim Carter, 1786—one year; Abijah Wyman, 1788—one year; John Maynard, 1795–96—two years; Abraham Haskell, 1798—one year; Moses Thomas, 1799—one year; Amos Johnson, 1800—one year. Not all of these were residents of Lancaster.

Among those holding the office after 1800 were Joel Pratt, Luke Bigelow, John G. Thurston and Calvin Carter. The dates and length of their services are unknown.

The year in which the lodge ceased to hold meetings is in doubt. It was not represented in the Grand Lodge after 1824, and it ceased to exist as an active organization about 1832. The Morgan excitement and the political agitation arising therefrom were the principal causes of its decline. The society became unpopular. The hall was given up and a small room obtained, where, for a time, the faithful of the craft continued to meet. At last even this was abandoned, and the lodge property was taken in charge by John G. Thurston, one of the members. A part was stored in his attic, where it was found twenty-five or more years later, and the altar, pedestals and some other articles were put into his barn, and were never recovered. Neither the charter nor any of the furniture or regalia were surrendered to the Grand Lodge. When the lodge was reorganized in Clinton in 1858, the old charter, a portion of the records, the jewels, seal and many papers belonging to the Old Trinity Lodge were recovered, and are now deposited in the archives of the new organization, where they still remain as interesting relics of the elder Trinity Lodge.

NEW TRINITY LODGE.—On the evening of September 8, 1858, E. Dana Bancroft, of Ayer, Geo. L. Thurston, of Lancaster, and Henry Bowman, Alfred A. Burdett, Daniel Marsh, Charles W. Odiorne and A. M. Eaglesham, of Clinton, met in Harris Hall, in what is now known as C. W. Field's Block, to open a lodge for instruction in Masonry. E. Dana Bancroft was chosen Master, and gave instruction to the brethern in the work and lectures. At this meeting Mr. Bancroft was appointed a committee to ascertain if Trinity Lodge, No. 6, formerly existing in Lancaster, could be revived in Clinton; or, if that could not be done, to make such further inquiry as he might deem material for the establishment of a new lodge. At a meeting one week later the committee reported that in the opinion of the secretary of the Grand Lodge, Old Trinity Lodge could not be revived, and that the proper course was to organize a new lodge. The brethren at once voted to ask for a dispensation for a new lodge in Clinton, to be called Trinity Lodge, and the following were elected officers thereof: E. Dana Bancroft, W. M.; Henry Bowman, S. W.; Alfred A. Burdett, J. W.; Daniel Marsh, Treas.; Geo. L. Thurston, S. D.; A. M. Eaglesham, J. D.; C. W. Odiorne, S. S.; Henry Eddy, J. S.

The Grand Lodge granted the prayer of the petitioners; the new dispensation was received and accepted September 29, 1858, and the list of officers previously selected was confirmed.

On the 21st of September, 1859, the charter, dated September 8, 1859, was received, and the lodge formally constituted and organized by the officers of the Grand Lodge, John T. Heard being Grand Master. The following were the charter members: Henry Bowman, Alfred A. Burdett, Daniel Marsh, George L. Thurston, Charles W. Odiorne, Luke Bigelow, Levi Greene, Josiah H. Vose and Henry Eddy. Of these, all but Josiah H. Vose were Masons prior to the date of the dispensation, though Henry Eddy had received two of his degrees in Trinity Lodge under the dispensation; and George L. Thurston, Levi Greene and Luke Bigelow were members of Old Trinity Lodge, No. 6.

The first list of officers under the charter were Henry Bowman, W. M.; Alfred A. Burdett, S. W.; Geo. L. Thurston, J. W.; Josiah H. Vose, Treas.; Henry Eddy, Sec.; Samuel T. Bigelow, S. D.; Daniel Marsh, J. D.; John T. Buzzell, S. S.; A. A. Pevey, J. S.; Gilman M. Palmer, Marshal; Levi Greene, Tiler.

The establishment of the lodge was largely due to the zeal and efforts of the three first officers—Bowman, Burdett and Thurston. The following is a list of the members of Old Trinity Lodge who joined the new organization: George L. Thurston, Levi Greene, Luke Bigelow, Joel Pratt, Artemas Barnes, Reuben Blood and A. M. Eaglesham. The lodge, when firmly established, grew rapidly, though the War of the Rebellion made heavy inroads upon its membership. The records of that period illustrate the loyalty of Masons to the supreme civil authority, and their ardent patriotism in behalf of the Union cause. Some of the brethren entering the army were presented with substantial tokens of respect and affection; several of the lodge's most beloved and, up to their enlistment, active members fell upon the field of battle or died of disease contracted in the military service, and were brought home and tenderly laid at rest with the impressive funeral ceremonies of the order. The following is a list of those who served in the army. It includes only those who were Masons at the time of or during their military service.

Geo. L. Thurston, adjt.; captain 55th Ill. Vols.; died of disease contracted in service.
Josiah H. Vose, lieut. 53d Mass. Vols.; mortally wounded July; died July, 1863.
Henry Bowman, capt. 15th Mass.; col. 36th Mass. Vols.
Franklin Howard, Co. C, 1st Mass. Cav.
Frank T. Holder, sergt. Co. B, 3d Mass. Cav.
William L. Cobb, lieut 34th Mass. Vols.; died of wounds.
Lucius Field, lieut. 36th Mass. Vols.
Alonzo S. Davidson, capt. 36th Mass. Vols.
William Orr, Jr., sergt. Co. I, 53d Mass. Vols.
Edwin Sawtelle, Co. I, 53d Mass. Vols.
Andrew L. Fuller, lieut. 15th Mass. Vols.; died of disease contracted in service.
William G. Waters, lieut. 15th Mass. Vols.
Chas. B. Culter, lieut. 34th Mass. Vols.
W. H. Bigelow, asst. surgeon 32d Mass. Vols.

The lodge first leased a hall in C. W. Fields' building, then called "Harris Hall," which it continued to occupy until April 6, 1869, when it removed to a new hall in Tyler's Block, which was formally dedicated January 28, 1870. On the completion of the New Bank Block, in 1882, it again removed to the new hall in that building, which had been finished and elegantly fitted up by the brethren at an expense of about twelve hundred dollars, and where it now remains. The new hall was solemnly dedicated to Masonry October 20, 1882, by the officers of the Grand Lodge, Samuel C. Lawrence, Grand Master, with impressive ceremonies, at the close of which a grand banquet was served in the Clinton House Hall. The following brethren have served as Masters of the lodge: E. Dana Bancroft, 1858–59, under dispensation; Henry Bowman, 1859–60, one year; Alfred A. Burdett, 1860–61, 1861–62, 1863–64, 1873–74, four years; Josiah H. Vose,[1] 1862–63, one year; Daniel Marsh, 1866–67, one year; Levi Greene, 1864–65, 1865–66, two years; George W. Burdett, 1867–68, one year; Henry N. Bigelow, 1868–69, one year; Charles W. Ware, 1869–70, one year; Charles F. Greene,[2] 1870–71, one year; Daniel B. Ingalls,[3] 1871, 1871–72, one and a half years; Sylvester S. Welsh, 1872–73, one year; Henry A. Putnam, 1874–75, one year; Henry O. Sawyer, 1875–76, 1876–77, two years; G. Walton

[1] Entered the military service soon after his installation, and fell in battle before the close of his Masonic year.
[2] Died in office.
[3] Elected to fill vacancy.

Goss, 1877–78, 1878–79, two years; Henry McGown, 1879–80, 1880–81, two years; George Sutherland, Jr., 1881–82, one year; Edward G. Stevens, 1882–83, one year; James B. Finnie, 1883–84, one year; Samuel Booth, 1884–85, 1885–86, two years; Charles A. Bartlett, 1886–87, one year; Jonathan Smith, 1887–88, one year.

In 1885 Col. Gilman M. Palmer left a legacy of two thousand dollars to the lodge, the income thereof to be devoted to the relief of the widows and orphans of its deceased members. The lodge has had a steady growth, and now numbers one hundred and forty members. It has upon its rolls many of the most substantial and honorable citizens of the towns within its jurisdiction, whose zeal and fraternal love for its honor and welfare deservedly place it first, as it is by many years the oldest, among all the societies of the community.

CLINTON ROYAL ARCH CHAPTER.—In April or May, probably in April, 1869, the following Royal Arch Masons met in Masonic Hall, in Tyler's Block, to organize a Royal Arch Chapter in Clinton: Henry N. Bigelow, Alfred A. Burdett, Levi Greene, Henry A. Putnam, Charles W. Field, Charles W. Field, Jr., George M. Lourie, Albert Shattuck, John Bennett, Marcus E. Amsden and C. L. S. Hammond. All but John Bennett were then residents of Clinton—Mr. Bennett lived in Lancaster—and all belonged to chapters in Worcester, Marlborough and Fitchburg.

The meeting organized by the election of Henry N. Bigelow chairman, and C. L. S. Hammond secretary. It was voted to petition the Grand Chapter for authority to form a chapter in Clinton, and the name of "Clinton Royal Arch Chapter" was selected for the new organization. Choice was made of the following officers: M. E. H. P., Alfred A. Burdett; E. King, Henry N. Bigelow; E. Scribe, C. L. S. Hammond. These officers were also chosen a committee to obtain the recommendation of the chapters in Worcester and Marlborough, and also to draw up and obtain signatures to a petition to the Grand Chapter the following June for a dispensation to work.

In September of that year the Grand Chapter granted leave to the new body to work. The dispensation was dated September 7th, and was addressed to the petitioners, which included, besides those at the first meeting, Henry E. Starbird, J. E. Hitchcock, C. W. Odiorne, Reuben Blood, E. W. Bigelow, Quincy A. Whitney, H. Stevens and Benjamin Whittemore. The three officers chosen at the first meeting were appointed High Priest, King and Scribe respectively, and the dispensation was signed by Henry Chickering, Grand High Priest, and Thomas Waterman, Grand Secretary. On the evening of September 8th, of the same year, the chapter held its first meeting under the dispensation, and the necessary steps were taken to procure an instructor in the work, a hall for meetings and the proper regalia and jewels for the officers. For the first year the chapter met nearly every week, and the Royal Arch Degree was conferred on nineteen candidates.

September 15, 1870, having worked a year under a dispensation, Clinton Royal Arch Chapter was formally constituted and consecrated by the officers of the Grand Chapter. The list of charter members includes those petitioning for a dispensation the previous year, and also the names of Elisha Brimhall, George H. Evans, Robert J. Finnie, Charles F. Greene, Alonzo S. Davidson, Lucius Field, Henry O. Sawyer, Wellington E. Parkhurst, Albert T. Bigelow, A. S. Jaquith and Charles M. Dinsmore, twenty-five in all. The charter dated from September 7, 1870.

The chapter leased rooms of Trinity Lodge, in Tyler's Block, which it occupied until September 4, 1882, when it removed into the new and more commodious rooms fitted up by Trinity Lodge in the new Bank Block, where it still remains. Since 1870 the chapter has had a steady and prosperous growth and now numbers sixty-one members. The following are the names of those who have filled the office of High Priest, in the order of their service: Alfred A. Burdett, three years, one under dispensation and two under charter; Henry N. Bigelow, two years; Charles W. Field, Jr., one year; Lucius Field, two years; Alonzo S. Davidson, two years; C. L. S. Hammond, one year; G. Walton Goss, one year; C. C. Stone, two years; George B. Dinsmore, two years; Jonathan Smith, two years; George Sutherland, Jr., in office.

BIOGRAPHICAL.

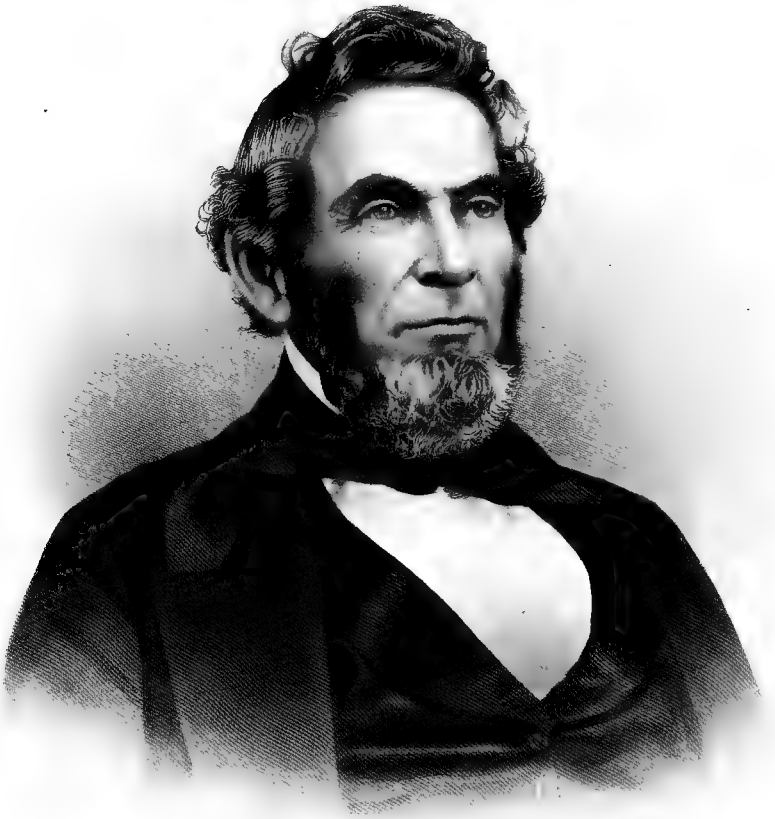
SIDNEY HARRIS.

A fitting tribute to the life-work of an honored citizen cannot be given in the brief sketch herewith presented, but the people of Clinton can see that in Sidney Harris they had a citizen whose influence for good was widely spread in all directions and will continue to be felt for generations to come.

Mr. Harris was born in Lancaster (in that part now called Clinton) in 1804, the youngest son of Daniel and Abigail (Reed) Harris, and always resided in the town of his birth.

His father was a Revolutionary pensioner, a strong temperance man, as was likewise the son, who bore the mantle of his father with the fearless, independent spirit which is required to successfully carry on a good cause in the face of opposition.

In early manhood he established the business of manufacturing horn-combs, many of the methods being original with himself, and from a small beginning built up a business which became national in its reputation and yielded an ample fortune. The territory bounded by his works became known as "Harrisville," in which resided many happy families, contented with their lot and surrounded by that neat-



Sidney Harris

E. L. Harris

Samuel W. Tyler

ness and thrift which characterize a successful New England village.

He was noted for his kindness to his employés and to those who were associated with him in business, and showed his appreciation of their faithfulness and honesty by many kind and generous deeds, so that the few surviving him still hold his name in grateful remembrance.

Mr. Harris was married in Lancaster by Rev. Nathaniel Thayer, D.D., in the year 1829, to Sally Kilburn, daughter of Daniel and Rachel (McIntosh) Kilburn, of Lunenburg, Mass.

Their children were: Edwin, born December 7, 1829; died December 27, 1829. Almira Jane, born June 6, 1831; died September 22, 1847. Christopher Thayer, born March 22, 1833; died March 20, 1854. Edwin Algernon, born May 31, 1837; died May 28, 1875. George Sidney, born March 13, 1839; died April 28, 1867.

He served on the Board of Selectmen in 1838 and also as treasurer and collector in 1850 and 1855.

In religion he was a Unitarian, a pillar in the church of his faith. As a citizen he espoused every good cause and became identified with every movement which pertained to the welfare of the town.

The last few years of his life were enfeebled by disease, and after relinquishing his business to his sons, he slowly declined until November 21, 1861, when death released him from his sufferings. His widow survived him until March 9, 1872.

EDWIN A. HARRIS.

One of Clinton's young and active business men forms the subject of this sketch, and though passed from this life, his influence is still felt among the living, and his memory cherished in grateful remembrance.

Mr. Harris was born May 31, 1837, at the Harris homestead, in Clinton, Mass., the fourth child of Sidney and Sally (Kilburn) Harris. His boyhood was passed at school and in his father's workshops, so that when he came to years of manhood he was thoroughly prepared to assume the responsibility of the business which was relinquished by his father on account of failing health. He was connected with one of our most successful business establishments. The father, Sidney, long and well known in this community, commenced the comb business in 1823, on the site of the present works, and upon his death was succeeded by his sons, Edwin A. and George S.; the subsequent death of the younger brother threw the entire responsibility upon the elder, the business being conducted throughout these changes under the firm-name of S. Harris & Sons. From the start Mr. Harris was remarkably successful, and under his vigorous efforts the works rapidly increased in size and capacity, until they became the largest comb works in the United States. He was one of the most active and earnest men in business life, giving to his business all his powers of mind and body; a practical believer in industry and all that it can do; though a young man, he was able to show what earnestness and perseverance may accomplish.

His excellent business traits commanded the admiration of his fellow-citizens, and his death in the prime of life, while fulfilling a mission of great usefulness, was mourned by all, particularly by the residents of the village which bore his name.

He married, December 28, 1858, Adeline K. Damon, daughter of William Damon, of Fitchburg, Mass.

Children's names as follows: Herbert Christopher, born April 28, 1862, deceased June 24, 1863; Flora Kate, born July 20, 1865, deceased January 6, 1883.

In religion Mr. Harris was a Unitarian, and gave generously to the support of the church. Like his father, he was active in reform, and manfully defended the right on all occasions. Ever interested in the public welfare, he was one of the first projectors and supporters of the Agricultural Branch Railroad, and the town is greatly indebted to him for the successful culmination of this important enterprise, which marked a new era in the growth of the town. Besides being one of the railroad directors, he was also one of the directors of the First National Bank of Clinton, and greatly interested himself in the growth of this institution.

But ere he had reached the age of thirty-eight, when his future seemed full of promise and the remaining years of his life prospectively free from the harassing cares of business, was he called to a higher stage of existence, his death occurring May 28, 1875. The funeral procession to the beautiful Harris lot in Woodlawn Cemetery was one of the largest ever seen in town, and well attested to the worth of the citizen whose departure was mourned by the whole community.

SAMUEL W. TYLER.

Samuel Willard Tyler, the subject of this sketch, settled in Clinton in 1864, coming from Attleboro', his native town, Bristol County. His emigrant ancestor, Job Tyler, who came from England about 1653, was one of the pioneer settlers in the domain of the good Massasoit, the steadfast friend of the English.

When but twelve years of age his father died, leaving him and an only sister to the care of a widowed mother. He remained on the farm, spending the time in rural pursuits, until he was twenty-one. The only pride he was taught to desire was that which arose from the exercise of an honest industry, and he found full scope for its indulgence during his early years. Though not of age, he was permitted to act for himself, and to dispose of the results of his labors.

Forty years ago a lad's school advantages in the

country were circumscribed, and the boy Samuel's were supplemented by only a brief academic course.

Possessing a talent for music, all the hours of recreation were spent at the key-board of the home instrument; while only a boy, the Sabbath found him presiding at the organ of the country church. Later, in his adopted town, he was identified with various church choirs, and officiated as organist in more than one of the leading churches.

His life was not an eventful one, and its history is briefly told.

Large knowledge of the outside world was gained in the War of the Rebellion, where he served as musician until orders were issued from the War Department discharging all regimental bands from the United States service.

His honored father and grandfather served in preceding struggles, the latter being an officer in the Revolutionary War. In the military and civil departments of the annals of his native town, from the date of incorporation, in 1694, the names of grandfather and great-grandfather appear conspicuously, and are suggestive.

While in the South Mr. Tyler formed the acquaintance of a comrade and brother-musician, and in 1864 the two formed a co-partnership in business under the firm-name of Tyler & White. Four years subsequently he disposed of his interest in the business, and himself engaged in the musical instrument trade.

If we were to select any traits of character for which Mr. Tyler was especially remarkable, they would be his almost stern justice and fidelity to what he believed to be right. His honesty made him not less exacting with himself than with others. His accounts were always correct, his dealings always just.

In these days, when chicanery, malfeasance in office, embezzlements, breaches of trust and fraud are so prevalent, it is pleasant to write of one who kept himself free from any kind of stain on his integrity.

He wrought continuously, ungrudgingly and unselfishly for the public weal; and no fruits of his labors were so grateful to himself as those garnered in connection with public service.

He enjoyed always the esteem of the best elements of the community. The public is ever willing to place responsibility on competent, trusted and willing shoulders. During his residence in his adopted town he was one of Clinton's most active and honored citizens in every line of business enterprise, activity and public service. Though not a member of the Board of Trade, on its records may be found the following: "The Clinton Board of Trade hereby expresses its hearty appreciation of Mr. Tyler's unfaltering interest in our town, and his constant devotion to its welfare, as shown in liberal and successful efforts to enlarge and improve the business facilities of Clinton."

He was elected to various positions, which he filled to the universal acceptance of his constituents and the public generally.

He was selectman for a period of four years, assessor ten years, and water commissioner two years, serving always with an enthusiastic appreciation of responsibility and opportunity.

While possessing a quick discernment, he was cautious in adopting new measures; weighed all matters in the balance of a clear judgment, and, after forming an opinion, was very decided, rarely finding any reason to alter it.

So far we have spoken of Mr. Tyler only in his business and public life; but, as is ever the case, that life is the most real and important of which the public sees but little and can know but little,—the life each man lives in his family. In 1864 Mr. Tyler married Persis Eldora Bemis, of Paxton, Mass., with whom he passed more than twenty years of wedded life.

Their children were Samuel Willard and Harriet Frances.

Mr. Tyler died February 19, 1886, aged forty-seven.

"He liveth long who liveth well."

JOSEPH B. PARKER.

Joseph B. Parker, son of Quincy Parker and Patience Brooks, was born in Princeton, Mass., in 1805. His ancestors were of Puritan origin, and for several generations lived in Massachusetts. Aside from his home training, his early education was limited to the common district school of his town. At the age of fifteen he was apprenticed to Mr. Joel Howe, a blacksmith of Princeton, with whom he remained six years. Completing his apprenticeship, he entered the machine-shop of Samuel Flagg, of Oakdale, a village in West Boylston. In this position he developed at once an uncommon tact for his new employment; for within a year he was appointed foreman of the shop, on account of which some of the senior workmen, refusing to work under so young a man, left the shop; but his apparent ability as a mechanic held for him his position, and his manly demeanor won back his disaffected shop-mates and made them ever after his true and faithful friends.

This position he held for eight years, until the failure in business of his employer—1834. A year prior to this he had built himself a house and married, in October, 1833, Miss Mary A. Morgan. In July, 1835, he was chosen deacon of the Orthodox Congregational Church in West Boylston. His engagement with Mr. Flagg terminating, he commenced the machine business on his own account, occupying the shop formerly occupied by Mr. Flagg.

Meanwhile, E. B. Bigelow, then of West Boylston, and since so distinguished as an inventor, had conceived the idea of building a loom for weaving counterpanes. In his struggle to bring forth his inven-

Jos B Parke

Levi Greene

tion, he sought the aid of Deacon Parker. The coming together of these two men resulted in the formation of a company to complete the undertaking and put the loom in operation. The company consisted of E. B. Bigelow, Deacon Parker and Eli Holbrook, all young men, and all about the same age.

This loom, however, was not a success. The company wanting means to carry on the work further, the enterprise was, for a time, abandoned, though the company fully believed in the final success of the work. From this, the inventive genius of E. B. Bigelow was turned to his coach-lace loom, which at once came to better results.

This loom was built by Deacon Parker and put in operation in Shirley Village, and later was removed to Clinton. In 1840, Deacon Parker removed his business to Providence, R. I. The success of the Messrs. Bigelows being assured, they, with others, formed a company, purchased the water-power in Clinton, built a machine-shop and made extensive preparations for operating their new inventions. After the trial of other machinists to build their machinery, the Bigelows again sought the aid of Deacon Parker. He was called from Providence to Clinton and put in charge of the new machine-shop built by the Clinton Company.

This new position brought more fully his mechanical ability to the test. Following the coach-lace loom came the reconstruction of the counterpane looms then running, but had not done satisfactory work. These were all rebuilt, resulting in the manufacture of a much improved fabric. Following these were the gingham and the Brussels carpet looms, each of which was the first power loom of its kind ever in operation. All these were made under Deacon Parker's supervision. All were new; there being no models to work from or workmen experienced in that line of machine building. Everything was wrought out step by step, without the suggestion or aid of others. In the coach-lace loom was found the germ of the Brussels carpet loom, which was brought to its present state of perfection only by the protracted study of years. To invent or make such a masterpiece of machinery is honor enough for any man, and justly entitles him to lasting fame. It may seem invidious to institute comparisons between men of eminent qualities in any profession. No one is greatest in everything. Each has his weak as well as his strong characteristics. The weak points of one man are exactly those in which another is strongest. This was especially true in case of E. B. Bigelow and Deacon Parker. One was the counterpart of the other. The two ought and did work together. Neither could have accomplished alone what they achieved unitedly. E. B. Bigelow was an inventor of the highest order, but was not a practical mechanic. Construction was not his forte. But where he was weakest Deacon Parker was strongest. The idea of a machine being given him, he could make it, which oftener than otherwise is the most difficult part to perform. In 1851, Deacon Parker was sent by the Messrs. Bigelows to England, to superintend the setting up of Brussels carpet looms. He remained there some six or eight months, when he returned to Clinton. Soon after his return he built a shop and commenced the machine business again on his own account. His business at once increased, his machine-shop was twice enlarged and under his management became an important business interest of Clinton.

His strong points as a man of business were his strength and clearness of mind. These were seen in everything. United with his intense application this quality was invaluable to him as a machinist.

He was a man of superior judgment. This also appeared in all matters of every-day life. He was every man's counselor, though he never wore a title. In his business few men were his equal as a judge of machinery. Young men esteemed it a privilege to be taught the business of a machinist by him.

His ideal of a machine was perfection. Great care was taken to make every machine perfect. Nothing was allowed to leave his shop that was not so. This had much to do with his success in after-life.

His attention to all the details of his business was unremitting. He trusted nothing to others. And as it was continuously on the increase, it was almost a matter of necessity that he be more and more industriously occupied with its cares and management. In the summer of 1859 he and his family spent a day at the seashore in York, Maine, which up to that time was the only holiday of the kind he had enjoyed.

Few men are identified with the almost model town of Clinton more than Dea. Parker. In the variety and extent of its manufactures, in its rapid growth and continued prosperity, he took a constant interest, and bore a conspicuous part. And could the town be photographed in its moral, as well as in its material aspects, it would appear that he was even more an important factor in it. A man of clear head, sound judgment, and a Christian character that always commanded respect and confidence, he, with others, did most valuable pioneer service in laying the foundations of the moral and religious institutions of the town. He exerted a strong influence over young men, and by his counsel and example was most useful in aiding them to make a good start in life.

Though sufficiently conservative, he was a man of reform; always headed in the right direction, always standing for the best things, no man ever doubting how he would talk, and what he would do, when the common good was at stake.

LEVI GREENE.

Prominent among the early pioneers of this town was the subject of this sketch, who was born in Berlin, Mass., October 12, 1801, the son of Aaron and Lydia (Goddard) Greene.

After serving his apprenticeship at carpentering, under the famous Jacob Stone, of Lancaster, Mass., he married Achsah, Jacob's daughter, November 5, 1829, settled in Lancaster and became a builder and lumber dealer on his own account, in which occupation he was very successful, which, with judicious investments in the then small village of Clinton, laid for him the foundations of his ample fortune.

The death of his first wife occurred October 21, 1843, and September 19, 1844, he married Lucy Harris, of Lunenburg, Mass., daughter of William and Betsy (Spaulding), who survived him.

The children of Mr. Greene were,—Charles F., born August 21, 1830, died March 29, 1871; Ellen M., born May 7, 1832, died August 2, 1863; Eliza A., born July 30, 1833, died January 9, 1856; Emery W., born October 7, 1839, died June 18, 1857; Lucy H., born July 18, 1846, died August 24, 1846; Charlotte E., born July 23, 1848, died September 18, 1848.

In 1848 he served the town of Lancaster as selectman, also in 1846–47 as assessor, in which latter capacity he also served the town of Clinton in 1855–56, '58, '60–62, '65, most of the time as chairman of the board.

In Masonic circles Mr. Greene took an active interest, and Trinity Lodge and Clinton Royal Arch Chapter elected him to their highest offices.

The Congregational Church also found in him a faithful supporter, he being one of the original founders. Always discharging his duties with perfect honesty, he held the respect of his fellow-citizens, and his opinion was sought by all classes, with full confidence in his judgment. In his family and personal friendships he was kind and affectionate, and few men were more conscientious than he and none felt more deeply the responsibility of citizenship and the duties devolving upon him.

HON. ELISHA BRIMHALL.

Mr. Brimhall was born in Oakham, Mass., March 25, 1825, and died in Clinton, after a brief illness from pneumonia, April 9, 1887. Age, sixty-two years and fifteen days.

He was the only child of Jonas and Caroline (Nye), of Oakham, whose names for many generations were prominent in the history of that town. His first work was on his father's farm, but at the age of twenty he commenced to learn the trade of a carpenter, which, with fortunate circumstances, enabled him to lay the foundation of his successful fortune. Coming to Clinton at its first formation, he quickly became a successful business man, and among those early pioneers he was one of the most active and energetic, adding much to the growth and progress of the then small village.

In 1857 he erected the large block on High Street, known as Brimhall's Block, while the Courant Block, Oxford House, and the large tenement block, bearing his name, followed in quick succession to become, not only ornaments to the principal streets of the town, but enduring monuments to his zeal and business enterprise. Before his decease he completed an elegant mansion on Prescott Street, where he was permitted to reside but a brief period, ere he was called away. During the Rebellion he was on the Board of Selectmen, and to him the town was largely indebted for his valuable services during those trying times. As an example of his energetic and persistent nature, his special trip to Washington may be cited, where, through a personal interview with President Lincoln, he secured a credit to the town of seventy men, thereby saving a draft. From 1866 to 1871 he was the treasurer of the town, having been unanimously elected twice in the five years.

In 1873 he was again elected selectman, and in 1874 was chosen chairman of the Board of Assessors, but declined to serve.

In politics Mr. Brimhall was a life-long Republican, and also a firm believer in temperance principles, carrying out his belief in every-day life.

In 1871 he was elected to the Legislature from the District then comprising Clinton, Northboro', Berlin, by 170 majority over Jonas E. Howe. In 1876 he was elected to the State Senate by 1048 majority, and re-elected the following year by 1920 majority.

In financial matters Mr. Brimhall's services were almost constantly employed. He was a director of the Lancaster National Bank, which failed through the defalcation of the president. With his sharp eye, Mr. Brimhall detected methods of business distasteful to a man of his habits, and rather than be identified with anything which had the semblance of dishonesty he withdrew from the institution entirely. At the time of the failure of the Lancaster Savings Bank his services were secured as one of the receivers, which position he held at the time of his death. The Congregational parish, of which he was an efficient member, is largely indebted to him for generous financial aid and hearty co-operation in all good works.

To enjoy an honorable position in the business world was Mr. Brimhall's great ambition, and that he attained it his fellow-citizens bear cordial testimony by holding his memory in grateful esteem. He acquired the high regard of his fellow-citizens by his exemplary methods of life, in his business or social relations, and he won the esteem of all by undeviating rectitude. He belonged to that class of men whose motives are always honest, and who, in the pursuit of wealth, never sacrifice their honesty for a single moment.

Mr. Brimhall married Mary A. Fletcher, of Springfield, Vt., who survives him.

PERLEY P. COMEY, M.D.

Perley P. Comey, M.D. (Harvard), youngest son of Elbridge G. and Abigail (Pierce) Comey, was born in

E. Brimhall

Perley P. Comry M. D.

Lyman Leighton

Holliston, Mass., January 14, 1852. His father was born in Hopkinton, Mass., was a farmer and returned to Hopkinton to reside when the subject of our sketch was eight years of age,—a man of sterling integrity and exemplary character. Perley P. Comey received his early education in the common and high schools of Hopkinton, being also kept busy upon his father's farm.

In 1868, his father having died, he was sent to the Oread High School, in Worcester, a classical school connected with the Oread Institute, afterward learning the apothecary business in Worcester. Later he began the study of medicine with Dr. A. P. Richardson, of Boston, and at the Harvard Medical College, at which institution he graduated in June, 1878, and in August of the same year he began practice in Clinton, Mass. He almost immediately began to have a very liberal patronage and soon had a very extensive practice, not only in Clinton, but in all of the adjoining towns. Ever ready to sympathize with and advise the afflicted and suffering, he seemed to possess the qualifications which make a man popular in the medical profession. Few men bring to the study and practice of their profession more of those varied qualifications which help to make up the true physician and surgeon. Always on the alert in everything relating to his profession, quick to see and prompt to act, make him a successful surgeon as well as physician.

He married Marion L. Jones, daughter of John O. Jones, of Boston, and granddaughter of Col. Jas. Estabrook, of Worcester, with whom she resided. They have three children, two daughters and one son—Effie M., Gertrude J. and Clifton J.

He is a member of the Massachusetts Medical Society, a prominent Mason and Odd-Fellow, a member of the Improved Order of Red Men, Knights of Honor and United Order of Golden Cross.

LYMAN LEIGHTON.

Mr. Leighton was born in Upton, Mass. His father, Hazard Leighton, was strongly built, over six feet tall, and an athlete. The stories of his suppleness, physical feats and strength are quoted to this day. His mind and judgment, though little schooled, were as vigorous and self-poised as his powers of body. He was highly skilled in agriculture. In 1839 he married Lydia Aldrich, of the same place. Lyman was one of six children born to them, and the eldest of three boys. He was early sent forth to earn something for the family, or at least his own bread. The first place open to him was as a boy on a farm, and in this humble way he began his battle with the world.

Mr. Leighton's school advantages were meagre. In them, however, he acquired elements of an education that have enabled him to use well such advantages as came to him in life. He importuned his parents to let him learn the trade of a carpenter, and with their consent entered the employ of Thomas J. and Nahum B. Hall, a then active co-partnership of contractors in Upton. The old-fashioned days of apprenticeship were on the wane, and the firm allowed him to work with them and under their instruction for what he could earn. He was a mere boy, but being permitted to enter the ranks as a fellow-workman aroused his manliness and called out his best traits. With these men, who were skillful workmen and led their men as well as planned and directed them, he had a fine opportunity, not only to train his hands in the use of tools, but to study their ways as successful builders. They did not suppress but encouraged every laudable effort, so that he found full play for his ambition and energy, and while he learned the details of the art of his choice he also gained an insight into those ways that laid the foundation for his future successful business career. He applied himself diligently and faithfully to his chosen profession until the breaking out of the Civil War. He enlisted at the age of eighteen years in that fine regiment which was the pride of Worcester County,—the Twenty-fifth Massachusetts Volunteers,— and in September, 1861, went to Annapolis, Maryland, where he entered at once upon the train and drill of a soldier. He was here stricken down by an attack of the measles and was sent to the hospital, and though receiving the best possible care, came from it with a weakened voice and wasted frame, and the experienced surgeons felt he would not be able to go through the hardships of an active campaign. He did not shirk his duty, however, but went with his regiment to North Carolina. After two battles he was so reduced in strength that a court of surgeons recommended his discharge for disability, which he received in July, 1862. He returned home at once, and in his native air and with good nursing he so far recovered as to be accepted by the examining surgeon, and again became an enlisted man. He joined a company of heavy artillery in September, 1863, and served until the close of the war with credit to himself and to his company.

He returned to his native town to take up again the pursuits of peace. His trade had not been completed, and its work was now found to be very dull, and he was compelled to accept any chance offered him. In these new fields of labor he enlarged his knowledge and gained valuable information that was afterwards turned to good account in the management of his affairs as a contractor. It was about this time that he made the acquaintance of Miss Carrie Clark, a young lady who resided in Upton with her mother, and they were married in November, 1866. She was of patriotic stock. Her ancestor, Edward Clark, was a soldier in the Colonial army, and was present at the surrender of the fortress of Louisburg to the English in 1758.

After his marriage, finding he was unable to command a sufficient income to satisfy his household requirements, Mr. Leighton removed to Clinton, Mass.

Here he obtained employment as a foreman at his old trade, and eventually went into business for himself as a contractor and builder. Mr. Leighton's business grew rapidly; he has added to it a lumber-yard, which is also doing a large and increasing business. Many fine buildings erected by him through the town stand as monuments to his skill and enterprise.

Mr. Leighton is an enterprising citizen, and all matters pertaining to the advancement and welfare of his adopted town find in him an earnest advocate. He is a Republican in politics, and takes an active interest in the affairs of the party. Mr. Leighton has a family of five children.

CHAPTER XIV.

SOUTHBOROUGH.

BY DEXTER NEWTON.

Location and Incorporation—Soil and Surface—Waters—Productions—Agriculture—Manufactures and Mechanical Industries.

THIS town is situated in the extreme easterly part of Worcester County, about twenty-eight miles from the State-House and about sixteen miles from the court-house in the city of Worcester. The town-house is located at a bearing of about seven degrees south of due west from the State-House. Southborough is skirted on three sides by Middlesex County. It has Marlborough on the north, Framingham and Ashland on the east, Ashland and Hopkinton on the south and Westborough and Northborough on the west. A large portion of this town formerly belonged to Marlborough. Before its incorporation it was called "Stoney Brook," probably so-called from a stream of water which still bears that name. The part which lies north of said brook was called "Cow Commons," from the fact that it was used by the inhabitants for a common pasture. The cattle were marked and their whereabouts was reported to the owners by the friendly Indians, from time to time. The town of Southborough was incorporated July 6 (old style), or July 17 (new style), 1727, in response to the following *remarkable* petition, to-wit:

To the Honorable William Dummer, Esq., Lieutenant-Governor and Commander-in-Chief, the Honorable Council and House of Representatives at their session in May, 1727:

The petition of us, the subscribers inhabitants of the Southerly part of the town of Marlborough, Humbly sheweth That, whereas Devine Providence, which appoints the bounds and habitations of all men, hath so ordered our lots, or at least most of us, that we are at such a distance from the Place of Public Worship, that ourselves, but especially our aged and infirm, together with our women and little ones, cannot comfortably endure the necessary travel that they are forced unto for the attaining an opportunity at the place of Public Worship, and likewise others, whose lots, although, not at present so difficult as the other aforesaid, yet considering that it is but a point of christian duty and charity to compassionate the circumstances of such, and having also obtained a vote of the town of Marlborough in our favor to be set off as a seperate Town, by such bounds as is described by the vote of Town and the Plan herewith annexed, and likewise for a further manifestation of the aforesaid Town of Marlborough's good-will towards us in the matter, have by their vote directed their Selectmen to sign or order an assignment with us as petitioners to this Honorable Court, upon the consideration of the whole, we have some reason to think Providence favors the matter and have hope of a Blessing. Wherefore, we humbly petition this Honorable Court that we, the Inhabitants of the aforesaid southerly part of the Town of Marlborough, being about fifty families already settled with some preparation for more, may be set off by such bounds as described by the aforesaid vote of the Town for setting us off, and more fully set forth in the plan herewith annexed, and with the land may be incorporated into a Town and have and enjoy all immunities, Privileges, Rights and power as other Towns within this Province have and do by law enjoy, and we your humble Petitioners, as in Duty Bound, shall ever pray."

The above pursuant to a vote of the town of Marlborough, June 12, 1727, directing the major part of the selectmen, or the whole of them to sign a petition to the General Court with the inhabitants of "Stoney Brook," being the southerly part of the town, for a corporation of the same: Joseph Stratin, John Sherman, Eliazer Howe, Samuel Brigham, Abraham Eager, selectmen. Names of petitioners: William Ward, William Johnson, John Bellows, David Fay, John Woods, Daniel Taylor, Nathan Brigham, Nathaniel Joslen, John Mathis, Jr., David Bruce, William Johnson, Jr., Jonathan Witt, John Amsden, Jon. Newton, Joseph Woods, Roger Bruse, Othniel Taylor, Daniel Newton, Isaac Bellows, Samuel Bellows, Robert Horn, John Newton, Joseph Ball, Abram Newton, Ephraim Newton, Benjamin Newton, Caleb Witherbee, Samuel Lyscom, Eliazer Bellows, John Belknap, Isaac Newton, Joseph Witherbee, Samuel Gibbs, Jon. Bellows, Moses Johnson.

From its local situation in the mother town it was named Southborough. At the time of the incorporation of Southborough it contained about eight thousand eight hundred and twenty-two acres. On the 7th day of March, 1786, in response to a petition signed by the following persons, who resided on the premises, viz.: Daniel Fay, Elisha Bemis, Phinehas Bemis, John Leonard and Lydia Pierce, that part of Framingham, then known as "Fiddle Neck," and which now forms the southerly portion of Southborough, containing about three hundred acres, was, by an act of the Legislature, set to Southborough. May 5, 1835, by an act of the Legislature, about sixteen acres were taken from the formerly supposed area of Southborough and added to Westborough, thereby putting an end to a long contest between the two towns in regard to their boundary lines, March 24, 1843, by an act of the Legislature, and in response to the petition of Willard Newton, Willis Newton, Henry B. Newton, William F. Newton, David Temple and Daniel Walker, that part of Southborough lying north of Monument No. 3, near the house formerly owned by Barnabas Brigham, and Monument No. 5, near the "Tunnecog Bridge," containing about eighty-two acres, was set to Marlborough. Southborough now contains about nine thousand and twenty-four acres, according to the

old surveys, including roads, common, cemeteries and land under water. Its surface is somewhat undulating, and its scenery delightful and varied. The soil is a strong, deep, gravelly loam, rich and very productive. The land is somewhat stony, especially in the southerly portion of the town. The principal rock is granite. In the western part, and near Fayville, there are numerous springs which contain large quantities of iron. The wood consists chiefly of oak, walnut, chestnut, maple and birch. The following are the names of its familiar hills, meadows and streams of water: Wolf-pen Hill, Break-neck Hill, Pine Hill, Oak Hill, Clean Hill, Mount Victory, Troublesome Meadow, Bloody Meadow, Handkerchief Meadow, Angle Brook, Deerfoot Brook, Pancake Brook, Stony Brook and Sudbury River. Stony Brook, having its source in the westerly part of Southborough, meanders in an easterly direction through the central portion thereof, and falls into the Sudbury River in Framingham. This last-named stream has its source in Westborough, and forms the southern boundary of Southborough. Its thread divides this town from Hopkinton. The two streams afford considerable water-power. Angle Brook, a tributary of Stony Brook, has its source in Marlborough. Numerous towns and county roads of superior quality checker the town. Her many bridges are mostly of stone. The inhabitants of the town, in her early days, were principally employed in agriculture. The sturdy yeomanry of the town, from generation to generation, have laid low many of her forests, and her men of energy and perseverance have, through the lapse of her past years, converted many of her once rugged hills and valleys into beautiful fields, orchards and gardens, which bring forth abundant crops for man and beast.

This town now contains several superior farms, and there are one hundred and seventy-nine in all, of from ten to four hundred acres. By statistical comparison of farm products, including her great yield of excellent fruit, Southborough appears to lead all the towns but one in the Commonwealth. The farms are nearly all in a high state of cultivation, and are mostly fenced with good stone walls. The buildings are commodious and tasty and are generally kept in good repair. Her agricultural products in 1875 amounted to $197,365. The farmers formerly produced butter, veal and beef for the market; now their energies are largely devoted to the production of milk and fruit. The noted "Deerfoot Farm Company" is a corporation established under the laws of the State, and the shares thereof are owned by members of the Burnett families; Hon. Edward Burnett being president; Robert M. Burnett, treasurer; Seth H. Howes, clerk; William W. Rogers, superintendent. Butter of superior quality is made here on the most scientific principles, from the milk of pure Jersey cows. About 55,000 pounds of butter are made here yearly, and 49,000 quarts of cream are sent to Boston; 146,766 cans of milk were used in this factory the past year. There has also been sent to Boston by other parties 445,193 cans of milk during the past year.

Southborough has had a Farmers' Club for some twenty-eight to thirty years. It has done much to revolutionize the whole system of farming. Farmers have been stimulated largely through the influence of the club to vie with each other in having the finest breeds of cattle and the best herds of cows. Much greater yields of grain, vegetables and fruit, and of vastly better quality and size, reward the intelligent and industrious farmers. The great success of the club is largely due to the indefatigable exertions of a few men, among the foremost of whom we would mention Samuel N. Thompson, its president; Deacon D. W. C. McMaster, its clerk; and Horace F. Webster, its treasurer.

The superior grazing fields of Southborough impart a peculiarly rich and agreeable flavor to the milk and butter. The inhabitants of this town are generally in comfortable circumstances. The number of persons fully supported by the town during the twenty-eight years immediately preceding 1888 averaged yearly only about seven. The following statistics from the Assessor's Report in 1888, concerning the wealth of the citizens and other matters of interest, shows that there are in the town 398 horses, 1089 cows, 22 sheep. 79 swine, 421½ houses, 16 oxen, 234 other neat cattle, Personal property taxed, $287,043; real estate taxed, $1,142,400—total, $1,429,443. Number of polls, 618. Amount of taxes raised, $18,249.13. Statistics show that there is much wealth in this town, far exceeding *per capita* that in most other towns. Although a large portion of the inhabitants in former years were employed in agricultural pursuits, we find that there has been a commendable degree of interest manifested in other important enterprises. There have been in town since its incorporation at least six grist mills. three saw mills, one wire factory, one carpet factory, one flour mill, two sash and blind factories, one peg mill, three extensive tanneries, one currier shop, one brush factory, two brick kilns, three cotton and wool factories, six boot and shoe factories, one bonnet factory and one carriage factory. This town contains four villages, viz.: Southborough Centre, Fayville, Cordaville and Southville. Fayville is situated in the easterly and Cordaville and Southville in the southerly portion thereof. The Boston and Albany Railroad extends through Cordaville and Southville; the Old Colony Railroad extends through Southborough Centre and Fayville, and connects with the Boston and Albany Railroad at South Framingham. In about the year 1845 Southborough seemingly took upon herself a new life, in consequence of the sudden influx of manufacturers. Extensive boot and shoe factories were built in the south part of the town, and, as a consequence, the beautiful village Southville sprang into existence. John Hartt & Co. and Newton & Hartt manufactured

boots and shoes there extensively and successfully for many years, giving employment to a large number of workmen. G. Bickford Brigham continues the business there, and employs about one hundred hands; and his annual sales of boots and shoes amount to $165,000.

William B. Wood also erected a factory in Southville, in which he manufactured cotton and woolen cloths for many years, giving employment to a num ber of people.

Soon after the erection of those factories, Milton H. Sanford, Esq., purchased a large tract of land in the south part of the town, and in 1846–47 he erected thereon a large stone factory for the manufacture of cotton and woolen goods. He also built thereon many dwelling-houses and other buildings. This thriving village he named Cordaville, in honor of his wife, Cordelia. The same factory was burnt October 31, 1855. Two persons lost their lives in consequence of the fire, and others were injured. On the same spot he erected the present stone factory. He manufactured very extensively various kinds of cotton and woolen fabrics, and jute blankets. He became very wealthy. In 1864 he sold the real and personal property to a stock company, called the "Cordaville Mills Company," Franklin Haven, Esq., being president, John H. Stevenson, Esq., treasurer, and Judge Thomas Russell, clerk. In 1871 said property was sold by auction to Adolphus Merriam, Esq., of Framingham. For some years large quantities of goods were there manufactured by Merriam & Wilson. March 9, 1876, a stock company was formed under the corporate name of "Cordaville Woolen Company," Hubbard Willson, Esq., president and superintendent, and Adolphus Merriam, Esq., treasurer, said Willson, Merriam and Joseph Merriam, directors. This company now manufacture blankets. They employ about one hundred operatives, and the sales amount to about one hundred thousand dollars per year.

In 1860 one Kidder commenced the manufacture of brick near Fayville; after his death the property was owned and the business continued by Ball & Holman. They were succeeded by the Framingham Brick Company. By the aid of steam-power and improved machinery the latter company are able to manufacture yearly one and a half millions of brick. Fayville was so named in honor of a large portion of its former business men, to wit: Colonel Dexter Fay, and his two brothers, Colonel Francis B. Fay and Honorable Sullivan Fay, Colonel Artemas Fay and his brother, Elijah Fay. Colonel Dexter Fay commenced business as a butcher. He afterwards built a small store about fourteen feet square. His trade so increased that he had to enlarge his store from time to time. It became a famous place for trade and eventually the yearly sales therein for many years exceeded $125,000. His brothers formerly were more or less interested with him in this business; so, latterly, were his sons, Emery B. Fay, Caleb T. Fay, Sylvester C. Fay and Augustus F. Fay. Colonel Dexter Fay was also a noted cattle broker, and was a constant attendant at the Brighton Cattle Market for over forty years. Colonel Francis B. Fay, after having filled many important offices in town and county, moved to Chelsea, Mass. He became a very successful commission merchant, was several times in his lifetime honored with a seat in both branches of the Legislature, and was once elected representative to Congress. He was the first mayor of Chelsea. Honorable Sullivan Fay was conveyancer, settled many estates, was clerk of the Agricultural Branch Railroad Company, was elected to both branches of the Legislature, and was president of a Medical College in Worcester, Mass. Colonel Artemas Fay was a manufacturer of boots, shoes and bonnets. Elijah Fay was a currier. The phrenological poet once wrote concerning the organ of weight in the head of Colonel Dexter Fay: "This organ is very large in your friend, Colonel Fay—Colonel Dexter, of course. There are many of that name on the records of fame —there is Francis of Boston, in the mercantile trade; and Artemas, here at home, by whom bonnets are made."

In those days beef cattle were sold in market by estimated weight or by weight of the sides after they were killed and dressed. In estimating droves of heavy cattle his judgment was most always sought, as no broker who attended the cattle market could excel him in that art. He was a very honorable man in his dealings, was very active in business, and was honored and respected by his townsmen. He held many of the principal offices and represented the town in the General Court. He was an excellent colonel in his regiment. Fayville received the following distinguished honor:

General Lafayette, in about the year 1815, while journeying from New York to Boston with his bodyguards, stopped at the hotel in Fayville for refreshments. The people of the village assembled to do him honor, and he shook hands with them all.

John L. Whiting was born in Shrewsbury, Mass., May 28, 1823. He was the son of Seth Whiting and Mary Kendall, and was one of nine children.

The Whiting family in the United States is descended from Rev. Samnel Whiting, who came to this country in 1636, and was the first minister of Lynn, Mass. (1636 to 1679).

Seth Whiting and family moved to Southboro' in 1841, and from that date until 1850 the brush business was carried on by the father and son in Fayville. Mr. Whiting, Sr., was one of the earliest and one of the best brush-makers in New England; he made several valuable improvements in the art, and did more than any other man to supersede English with American paint-brushes in the Boston market. He considered it a sin to make a poor brush, or one that was not exactly what it

John L. Whiting

seemed to be. Shoddy of any kind, moral or material, found no favor in his sight.

John L. Whiting married Mary, daughter of Moses Sawin, of Southboro', in 1852. He commenced the manufacture of brushes in Boston in 1864, and has for years been the largest brush manufacturer in the United States. Whiting's patent brushes have a national reputation, and have been introduced to some extent in other countries. Mr. Whiting has introduced machinery into his factory, thus effecting a great saving of labor. The brush-makers of the olden time used but one machine, while John L. Whiting & Son have in use between seventy-five and eighty.

Several of Mr. Whiting's inventions effect a very material saving in the length of bristles used in brushes; this is accomplished by mechanical devices which secure the bristles in the ferrule by a shorter hold than any of the old methods, thus practically extending their length and increasing their value, without injury to the quality of the brushes. This economy of stock of course reduced the prices of the brushes; the result has been more of a public than a private benefit, as other brush-makers have been stimulated to extra exertions, in order to accomplish, as far as possible, the saving effected by Mr. Whiting's inventions.

Mr. Whiting is popular with his employés, it being worthy of note that there has never been a strike in his factory.

He is a public-spirited citizen and a liberal contributor to many worthy charities.

In 1872, Curtis Newton and Dexter Newton, sons of Stephen and Sally Newton, having purchased the large estate of the late Col. Dexter Fay, erected, with the assistance of Daniel H. Thompson, Joseph Fairbanks, Allan D. Howe and Lewis Brewer, a shoe-factory in Fayville, forty by fifty feet. Since that time the factory has been twice enlarged, so that now it contains over forty-six thousand feet of flooring. The last addition was made by Dexter Newton, Joseph Fairbanks, Allan D. Howe, Henry H. Newton and Augusta E. Brewer, who are the present owners of the factory. It is leased to H. H. Mawhinney & Co.; Allan D. Howe, superintendent.

The monthly pay-roll amounts to about twelve thousand dollars. They employ about three hundred operatives. The sales amount to about four hundred thousand dollars annually.

Since the erection of this factory Fayville has more than doubled its inhabitants and tenements.

Lincoln Newton (2d), was formerly a boot and shoe manufacturer in Fayville, and gave employment to many persons.

CHAPTER XV.

SOUTHBOROUGH—(*Continued*).

THE number of inhabitants in town at the time of its incorporation is not positively known. There were about fifty families, and probably about two hundred and eighty inhabitants. In 1757 it appears that the number of enrolled men was 75, and the number of minute-men 56. In 1790 the number of inhabitants was 837. At the close of each subsequent decade the number of inhabitants was as follows, viz.: 1800, 871; 1810, 926; 1820, 1,030; 1830, 1,080; 1840, 1,145; 1850, 1,347; 1860, 1,854; 1870, 2,133; 1880–85, 2,100.

Of the names of the inhabitants, the Newtons, Fays and Brighams have always predominated. The number of Newtons born in town since its incorporation is 443; and the number of Fays born in town during the same time is 334.

By order of the General Court, the first town-meeting was held August 28, 1727, at the house of Timothy Brigham, which stood where is now located the St. Mark's School-house. William Johnson was moderator. The first town-meeting, under warrant of selectmen, was held March, 1728—James Newton, moderator; Moses Newton, Seth Bellows, Doe Mathes, and Captain Ward were selectmen. The principal business of this meeting, besides the choice of officers, and of several town-meetings which followed, was to arrange for procuring a minister of "good conversation to preach God's word," and to devise ways and means to build a meeting-house. Money for both purposes was promptly raised. The first meeting-house built was 50x40 feet, and 20-foot posts; £300, or $1,000, was appropriated for same. It was built in 1727–28. This house lasted seventy-nine years, at the end of which time it was sold for $76.99, and taken down. It was located a few feet south of the house now owned by the Pilgrim Evangelical Society, and on a portion of the land given by the inhabitants of Marlborough to the inhabitants of this section thereof, previous to the incorporation of Southborough (said land was given and set apart for the accommodation of meeting-house, burial-place and for a training-field forever). In 1806, December 17th, the second church edifice was dedicated; it cost $7,778.

The pews sold for $2,658 above the appraisal. In 1856 said meeting-house was conveyed by the First Parish Society to said Pilgrim Evangelical Society, and by the latter it was remodeled and fitted up in its present modern style at a cost of about $13,000, and dedicated. In 1828, September 10th, the Baptist Society dedicated the brick church which is now occupied for a dwelling. For want of sufficient room in the church, the dedicatory services were held in the grove near "Mount Vickory." The present Baptist Church was built in 1845. The first church

of the Pilgrim Evangelical Society was built in 1832. It is now the high school-house. The Episcopal Church was dedicated August 15, 1862. The Second Congregational Church was located in Southville, was built in 1872.

St. Matthew's Catholic Church, located between Cordaville and Southville, was built in 1879. St. Anne's Catholic Church was built in 1887, and located between Fayville and Southboro' Centre. Rev. John F. Redican is rector of both societies. He was born in Worcester, April 2, 1858; is a graduate of the public schools of Worcester, also of the Holy Cross College, Worcester, Mass; studied theology in Montreal University; was ordained in Montreal; spent five years as assistant in Webster; came to Cordaville as first pastor of St. Matthew's Church November 26, 1886.

The first minister settled by the town was Rev. Nathan Stone. He was ordained October 21, 1730, and continued their pastor until his death, May 31, 1781. June 1, 1791, Rev. Samuel Sumner was settled. He was dismissed, agreeably to his request, December, 1797. In 1799, October 9th, Rev. Jeroboam Parker, a native of Southborough, was ordained, and became their pastor. He was dismissed at his own request in 1832. The First Parish Society afterwards settled Rev. John D. Sweet, Rev. William Lord, Rev. Alden and Rev. Barnard. The salary first paid to Mr. Stone was £120 or $400, and thirty cords of good wood. In 1734 his salary was raised to £150 and thirty cords of good wood.

Only one religious society existed in town until 1825. The Baptist Society have settled Rev. Jonathan Forbush, Rev. Abiasaph Sampson, Rev. W. Morse, Rev. Aaron Haynes, Rev. M. Ball, Rev. John Alden. They have had several acting pastors, the present one being Rev. H. G. Gay. The Pilgrim Evangelical Society was organized February 17, 1831, and have settled Rev. Walter Follett, Rev. Jacob Cummings, Rev. E. M. Elwood, Rev. G. D. Bates, Rev. W. J. Breed, Rev. John Colby, Rev. H. M. Holmes, Rev. A. L. Love, Rev. J. E. Wheeler and Daniel E. Adams, D.D. Rev. Alanson Rawson was acting pastor from April 28, 1843, to April 12, 1852. Rev. Andrew Bigelow, D.D., was acting pastor from April 1, 1874, to April 1, 1875.

The Episcopal Society have had for rectors Rev. Joshua R. Pierce, Rev. A. C. Patterson, Rev. Charles Wingate, Rev. Robert Lowell, Rev. J. I. T. Coolidge, D.D., and the present rector, Rev. Waldo Burnett.

The Second Congregational Society have settled Rev. C. A. Stone, and have had for acting pastors Rev. John Le Bosquet, and Rev. Truman A. Merrill.

The first appropriation made by Southborough for teachers was in 1732, viz.: to Timothy Johnson, six pounds; and to Samuel Bellows, four pounds ten shillings. Subsequently, for several years, Solomon Ward was employed to teach in rotation the four schools located in different sections of the town. Southborough maintained but four schools until 1837. The citizens of Southborough have ever manifested a great interest in education.

In 1859, Henry H. Peters, Esq., a wealthy citizen, feeling a deep interest in the education of the youth, and having a desire that the scholars of Southborough should have as good advantages for obtaining an education as was enjoyed by the scholars in the neighboring towns, donated the present school-house, nicely finished and furnished, and the land connected therewith, to the town, on condition that it should be used for a high school, to be taught by a master qualified to teach the branches usually taught in a high school, and to be kept at least eight months in each year. The town accepted the very liberal donation at a regular town-meeting; and as a token of their appreciation of his generosity, they directed that it should be called the "Peters High School-House."

The citizens generally have manifested great satisfaction with the good results of the school. They have been willing to appropriate a liberal sum yearly for the support of this as well as for the other ten schools. The School Committee, in 1878, expended for schools, $5,854. In 1852 a free public library was established. The opening of the same was properly celebrated. A public meeting was held in the Town Hall February 12th. The occasion was enlivened by speeches, songs and music. A. L. Hobart, M.D., then of Southborough, made the principal address. The following extract from his address will quite fully explain the character of the preliminary measures incident to its establishment:

> Col. Francis B. Fay, in the fullness of his soul and liberality of his spirit, conceived in his heart to do a good thing unto the inhabitants of the good old town of Southborough, which gave him birth; and so, unsolicited, and of his own good-will and pleasure, he thrust his hand deep into his pocket, and drawing forth five hundred pieces of silver ($500), held them up before the eyes of the inhabitants of the town, while he thus spoke: "Fellow-citizens! Fellow-townsmen! I was born, and nurtured, and rocked, and reared in your midst. I am one of you, and you are dear unto me. And now, as you are dear unto me, and as my heart and hands are drawn towards you in affection, and as the enlightenment and elevation of your minds are things near my heart, therefore, if all together, or any of you, will give a like sum, I will give these five hundred pieces of silver to form the nucleus of a Town Library, which shall be free for all the inhabitants of the town, to use for their improvement, and for their children's children forever."

The town appropriated the other five hundred dollars, and directed that as a token of their esteem for the generous donor, it should be called the "Fay Library."

In 1870, April 20th, Col. Fay donated to the town the additional sum of one thousand dollars, for the benefit of the library. There is now a fund of fifteen hundred dollars in the hands of the trustees of the library, the interest of which, with various other items contributed and appropriated, enable the trustees to expend about two hundred dollars annually for books. There are now in the library five thousand six hundred and thirty-five volumes. The people of Southborough have great cause to hold in fond remembrance the

names of aforesaid donors; and not only we, but, in future years, full many a son and daughter, who shall inhabit this land, read books and learn in this school, —looking back, perhaps, through time's long vista,— will also exultingly claim these donors as their immortal benefactors.

In 1865 the St. Mark's School was incorporated under the laws of the Commonwealth, and was founded for the classical education of boys. Its course of studies is prepared with the purpose of giving a thorough preparation for the admission to the universities and colleges of the country. It is a school for the Episcopal Church, and its order and management are in conformity with the principles and spirit of the Church. Its scholars number about sixty, and are required to board at the institution. It is said to be one of the most thorough and best-disciplined schools in the State. The establishment of this school and the erection of the beautiful Episcopal Church are the results of the great enterprise and perseverance of our honored and esteemed fellow-citizen, Dr. Joseph Burnett. The school is under the management of the following officers:

Episcopal Visitor.—The Right Rev. Benjamin H. Paddock, D.D., Bishop of the Diocese of Massachusetts.

Board of Trustees.—Rt. Rev. B. H. Paddock, D.D., Rev. D. C. Millett, D.D., Rev. George S. Converse, A.M., Rev. Thomas R. Pynchon, D.D., Joseph Burnett, Esq., Joseph Story Fay, Esq., Francis C. Foster, Esq., H. N. Bigelow, Esq., Rev. S. U. Shearman, George P. Gardner, Esq.

Head Master.—William E. Peck, A.M.

Treasurer.—Joseph Burnett, Esq.

Dr. Joseph Burnett was born in Southborough, November 11, 1820. He married Josephine Cutter, June 20, 1848, by whom he has had twelve children. He received his education from the common schools in Southborough and the English and Latin schools in the city of Worcester, commencing business as an apothecary in that city, where he remained two years. He then removed to Boston, where he continued the business for several years. He is now a manufacturing chemist of great notoriety.

The beautiful appearance of the Centre Village is largely due to his benevolence, influence and taste. In 1840 the town built its first town-house. Previous to that time the town-meetings were held in the church of the First Parish Society. Said town-house cost about $4,000. It was burnt in 1869. Without delay the inhabitants proceeded to erect another. The present handsome, substantial and commodious brick town-house was built in 1869–70, at a cost, including fixtures and furniture, of about $30,000. The building committee, consisting of Dr. Joseph Burnett, Dexter Newton, Dr. J. Henry Robinson, Franklin Este and Curtis Hyde, delivered the keys thereof to the selectmen April 20, 1870. In 1824 the young men organized a lyceum. Hon. Francis B. Fay was president of the same for several years. This is said to be one of the first lyceums ever formed in this vicinity. One of the most exciting debates participated in by the then young America was: "Is an untruth ever justifiable?" Disputants appointed in the affirmative were Peter Fay and Blake Parker; negative, Joel Burnett and Brigham Witherbee. The discussion waxed warm. The disputants, pro and con, fought the battle inch by inch during the allotted time. Question was finally decided on its merits, in the negative. This lyceum accomplished much good.

Another lyceum was formed in 1842. Its members at one time numbered forty-four. Many momentous questions were considered. Interesting and instructive free lectures, through their exertions, were given to the public. Southborough has raised many noble men and women, and several distinguished scholars.

The following is a list of those reared in town who have availed themselves of the benefits of a college-education, viz.: Jeroboam Parker, graduated at Harvard in 1797, became a minister; Nathan Johnson, graduated at Yale in 1802, judge of Court of Common Pleas; Sherman Johnson, graduated at Yale in 1802, minister; Luther Angier, graduated at Amherst in 1833, minister; Marshall B. Angier, graduated at Yale in 1834, minister; Henry M. Parker, graduated at Harvard in 1839, teacher; Joel Burnett, graduated at Harvard Medical in ——, physician; Waldo I. Burnett, graduated at Harvard Medical in 1849, naturalist; Edward Burnett, graduated at Harvard in 1871, M.C.; Harry Burnett, graduated at Harvard in 1873, chemist; Waldo Burnett, graduated at Harvard in 1875, rector; Clarence Thompson, graduated at Amherst in 1874, civil engineer; George E. Brewer, graduated at Amherst in 1874, insurance broker; Charles T. Murray, graduated at Dartmouth College in 1882, teacher; Winfield Scott Hammond, graduated at Dartmouth College in 1884, teacher; Charles C. Burnett, graduated at Harvard in 1886, railroad manager.

Jeroboam Parker, mentioned above, was for many years the minister in Southborough. Joel Burnett was a noted physician in the town, was particularly interested in her schools and was greatly honored and respected. He delivered the first lecture on the subject of temperance given in the town. His son, Waldo I. Burnett, was a zealous student and became a distinguished naturalist. By the Boston Society of Natural History he was elected curator of entomology. In successive years he gained many of the prizes offered by said society. In the winter of 1851 he delivered, at the Medical College in Atlanta, Ga., a course of lectures in microscopic anatomy. In 1852 he prepared the essay which received the prize from the American Medical Association. He died of consumption July 1, 1854, in the twenty-sixth year of his age. From an address concerning his life and writings, delivered before the Boston Society of

Natural History, July 19, 1854, by Dr. Jeffries Wyman, is taken the following extract: "We cannot but sensibly feel that in his death we have lost an associate of no ordinary talents; we can point to no other member of our society, and not more than one other naturalist in our country, who has given such proofs of zeal and industry, and who, in so short a life, has accomplished so large an amount of scientific labor. Had he been spared to future years, we cannot but feel the assurance that he would have acquired for himself a far higher place and still more honorable name in the annals of science. Let us cherish his memory and profit by his example."

The records of the town show that the people have always taken a forward rank in the cause of freedom. Capt. John Taplin went in command of a company of forty-nine men on the Crown Point expedition in 1756; was out from February 18th to December 20th. Capt. Aaron Fay commanded a company sent for the reduction of Canada, and was out from March to November, 1758.

Capt. John Taplin was also out in this campaign.

A number of Southborough men were out in the campaign of the last French and Indian War.

Dilenton Johnson was at Fort William Henry when it capitulated, August 9, 1757, and was exposed to the Indian barbarities of that terrible day. Elijah Reed and Joshua Newton, also of Southborough, were in that battle.

In 1765, in town-meeting, the following unanimous vote of instruction was given to their representative, Ezra Taylor, Esq.: "That you would in the most effectual and loyal manner firmly assert and lawfully maintain the inherent rights of the Province, that posterity may know that if we must be slaves, we do not choose by our own acts to destroy ourselves, and willingly entail slavery on them."

The military warrant, dated November 7, 1774, will be read with interest by the citizens of the town:

To Ezekiel Collings, One of the Corporals of the Military foot Company, in the Town of Southborough, in the County of Worcester, under the command of Josiah Fay, Captain, and in the Rigimant whereof Artemas Ward Esq. of Shrewsbury is Colonel—Greeting.

You are hereby Directed to Warn forthwith all the afternamed Non-Commission Officers and Soldiers of Said Company, Viz.,—

Jonathan Champny, sargeant.	Asahel Newton.
Elijah Brigham. sargeant.	Luke Newton.
Hezekiah Fay, sergeant.	Sirus Newton.
James Williams, corporal.	Gideon Newton.
Ezekiel Collins, corporal.	Mark Collins.
Ebenezer Richards, corporal.	John Richards.
Isaac Newton, Jun., drummer.	Josiah Fay, Jun.
Joshua Smith.	Andrew Phillips.
Benj. Smith.	John Phillips.
Nathan Tapplin.	Eben. Newton.
Elisha Tapplin.	Josiah Ward.
Eneas Ward.	Ebenezer Collins.
Elisha Fay.	John Clifford.
John Fay, Jun.	Zacheus Witherbee.
Elisha Johnson.	Daniel Johnson.
Ephraim Amsden.	Kirby Moore.
Moses Newton.	Edmand Moore.
Erasmas Ward.	Mark Collings, Jun.
David Newton, Jun.	William Winchester.
Isaac Newton.	Jabez Newton.
Solomon Leonard.	Williams Williams.
Timothy Angier.	Abnor Parker.
Jonah Johnson.	John Johnson.
Edward Chamberlin.	Isaac Ball.
Nathan Champny.	Nathan Fay.
Job Biglo.	Jedediah Parker.
Thomas Stone.	John Leonard.
Peter Ston.	Jonas Woods.

To appear in the Common training field By the Meeting House in said Southbro with their fire-arms Compleate on the ninth Day of this Instant November, att Eight of the Clock, in the fournoon of said Day then and thair Remain attend to and Obay further orders Hereof fail Not and make return of this Warrant with your Doings thereon Unto me att or Before Said time. Given under my hand att said Southbo the seventh Day of November anno-dom 1774,

JOSIAH FAY *Cap.*

Capt. Josiah Fay's company of fifty-six minute men, who were disciplined and supported at the expense of the town, marched to Lexington and Concord, April 19, 1775. Every able-bodied male citizen, sixteen years old and upward, was armed according to law. They were required to be in constant readiness to repel any attack of the enemy.

In town-meeting April 29, 1861, on motion of Sylvester C. Fay, Esq., it was voted, unanimously "that the town is ready to respond to the proclamations of the President with every able-bodied citizen and every dollar, if necessary." The town furnished two hundred and nineteen brave and patriotic men, being thirty-three more than enough to fill her quota under every call of the President during the great Rebellion. Seventeen of those men died in the service of their country, and these names appear on the monument erected to their memory. Said monument, erected on the common in Southborough Centre, is of Fitzwilliam granite, and was built by E. F. Meaney, of Boston, from a design of A. R. Esty, Esq. It was dedicated January 1, 1867. It is twenty feet high. On the south (front) side are inscribed the words, "Erected by the citizens of Southborough;" on the east, "In Memoriam;" on the north, "Our Country's Defenders;" and on the west, "Rebellion, 1861."

Patriots are here in freedom's battle slain—
Men whose short lives were closed with scarce a stain;
Men lovers of our race, whose labors gave
Their names a memory that defies the grave.

This monument cost $1613.50, and was paid for mostly by subscription. Some of the money, however, was contributed by various assemblies and societies. Henry H. Peters, Esq., subscribed $500; Dr. Joseph Burnett, $100; the ladies, nearly $200; Curtis Newton, E. D. Rockwood, Peter Fay and S. N. Thompson, each $25; and ninety-two other persons contributed smaller sums. This town has a very perfect record of her soldiers who enlisted in the late war. To William P. Willson, Esq., great credit is due for his alacrity and perseverance in its preparation and completion. The following is a list of the names of said soldiers:

S. H. Andrews.	Lyman B. Collins.
George Brown.	Daniel Chick.
John F. Bates.	Otis Q. Claflin.

Moses Sawyer

Edwin F. Barney.
Charles Baldwin,
George T. Brigham.
Alfred W. Brigham.

George O. Allen.
Arthur A. Henry.
William H. Smith.
Thomas Shadwick.
Charles Smith.
Hiram Storer.
Jeremiah Shemnaham.
Frederick Scarlett.
Frederick A. Smart.
Joseph Staples.
Timothy Toomey.
—— Taskett.
Leroy L. Walden.

Among the names of many prominent men of this town—part of whom are now living and the others have recently deceased—who have done much to promote its highest and best interests, are the following:

Moses Sawin purchased the grist and saw-mill and a small lot of land situate one-half mile west of Town Hall, in Southborough, of Deacon Gabriel Parker, in 1833. The year following he bought of said Parker seven acres of land adjoining same, and on south side of Mill Pond, and built thereon a spacious dwelling-house, barn and other buildings. The estate is now owned and occupied by Charles B. Sawin, youngest of his three surviving sons. Said Moses Sawin was a lineal descendant of a long list of millers. His ancestor, Thomas Sawin, was the third son of John Sawin, of Watertown, who was the father of the American Sawins. Thomas Sawin bought of the Natick Indian (a branch of the Massachusetts) fifty acres of land in South Natick, for which he paid ten pounds of lawful money. The following conditions were agreed upon in their transaction, viz.: The said Thomas Sawin was to build a mill on the premises for the grinding of corn, and he and his heirs and assigns were to maintain said mill forever, and on the other part it was agreed that there was to be no other corn-mill built in town without the consent of said Thomas Sawin, his heirs and assigns. Said mill remained in possession of said Thomas Sawin and his descendants from 1685 to 1833—one hundred and forty-eight years. Said Moses Sawin possessed and carefully preserved through life the curious old deed, signed and sealed by the Indian chiefs of whom his said ancestor purchased the land. They are now in possession of said C. B. Sawin, at the old homestead, where antiquarians and others interested in curious legal documents can examine them.

Moses Sawin was thrice married. In 1820 he married Joanna T. Lane, of whom he had one child, Joanna L. Sawin. In 1823 he married Mary B. Morse, of whom he had eight children, viz.: John B., Mary B., Sarah C., Maria A., Moses M., Lucy A., Charles B. and James H. Two of these passed over the dark river in early childhood, viz.: Lucy A. and James H. Sarah C. died in early womanhood, August 9, 1853. Joanna L. (Mrs. Libby) died November 15, 1860. The other five children are still living, and earnestly laboring to carry forward the great principles of progress and reform, which their father labored so assiduously to promote. In 1852 said Moses Sawin married Mrs. Catharine A. Rice, who still survives him and is loved and cherished, as a good mother should be, by all his children. Mr. Sawin was an active and excellent citizen. He took a lively interest in town affairs, was a faithful member of the Board of Overseers of the Poor for many years, and was enthusiastic in promoting the best interests of the town. He was very active in aiding the great temperance reform. When the clarion notes of William Lloyd Garrison rang through the land calling the nation to repentance for supporting and maintaining chattel slavery, Mr. Sawin did not hesitate to enlist in the great cause of humanity. He was convinced it was a sin against God and a crime against his brother man.

He had the courage to ask the members of the church to which he belonged to testify against the sin; when his request was rejected he refused to commune with them as a church of Christ, and when, for this refusal, they cast him out of the church, he exultantly quoted to them the words of Christ, viz.: "Inasmuch as ye did it unto one of the least of these my brethren, ye did it unto me." He was especially gratified that he had lived to see slavery entirely abolished; it was what he had long labored for and sought. But the crowning glory of his latter days was in hearing his former opponents acknowledge the righteousness of his cause, and labor earnestly with him in the overthrow of American slavery.

Mr. Sawin lived to a good old age (seventy-six) and died February 7, 1871, of rheumatism, after long and patient suffering.

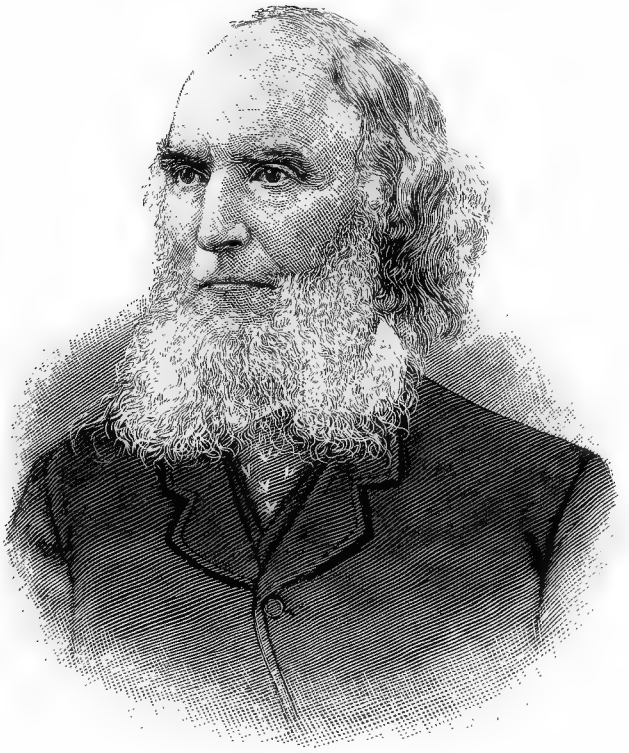
John Thomas Cotton was the son of Rev. Ward Cotton and his wife, Rebekah (Jackson), and one of the numerous descendants of John Cotton, first minister of Boston. Said John Thomas Cotton was the oldest of six children, born in Boylston, Mass., February 25, 1801. In youth and early manhood he had a long and severe sickness, which left him in a feeble condition, and although he lived to a great age, he never enjoyed good health. He was a very conscientious man, firm in his convictions, and was greatly beloved by his fellow-citizens. He served as representative to the General Court for several years, and long held the office of town clerk of said Boylston. In consequence of the failing health of his mother, to whom he was entirely devoted, he was induced to give up all public employment. His mother died October 11, 1854, after which he purchased a small place for a home and sold the old homestead in Boylston. He lived in Southborough in great contentment and comfort, near his sister (Mrs. Hannah S. P. Whitney), for near a quarter of a century. Though he lived alone, he was no recluse, but was very sociable and very fond of his neighbors and flowers. He spent his last days with his sister, and passed over the dark river to beloved ones beyond, October 17, 1884.

Peter Fay, Esq., was born in Southborough, October 15, 1807. He married Roxanna Whipple, December 29, 1829. She died November 28, 1853. March 15, 1858, he married Dolly Collins. By his first wife he had six children—two girls and four boys. He lived on the old homestead formerly owned by his father, Peter Fay—and which is now owned and occupied by Charles F. Choate, Esq., president of the Old Colony Railroad Company—until March 1, 1855, having previously sold the same to Henry H. Peters, Esq. He then bought the Parker farm, which for many years was owned and occupied by the former ministers of the First Parish Society. He lived there about two years. He built the fine house in which he now lives in 1857. He has held many of the highest offices in town, and has received many honors from the citizens thereof. He represented the town at the General Court in 1845. He has served as selectman some nine years. He was very active, during the late war, in obtaining men to fill this town's quota under every call made by President Lincoln. He served on the Board of School Committee about nine years; assessor, one year; overseer of the poor, nine years; deacon of the Pilgrim Evangelical Church for about fifteen years. He settled the estate of his sister, Mrs. Dolly Bond, late of Shrewsbury, deceased. This estate amounted to over $100,000. He received great credit for his faithfulness and energy concerning the settlement thereof.

On the old homestead he kept some forty head of cattle, and he took great pride in having extra nice ones. He made butter until 1840, and was the first farmer but two in town who sold milk to go into Boston. He had fine apple orchards on his farm, which often yielded him one thousand barrels in a year. He was president of the first temperance society of Southborough for fifteen years.

Daniel S. Whitney was born at Danvers (now Peabody) on February 4, 1810. He is one of the many descendants of John and Elenor Whitney, of Watertown, and the eighth in descent from the original stock. Mr. Whitney was early engaged in the great reforms of the century. In 1830, at the age of twenty, after listening to an address by the celebrated Dr. Pierson, of Salem, he signed a pledge to abstain entirely from ardent spirits as a beverage, and from that time he has labored on through all the phases of the great temperance reform abstaining from all

Peter Fay



D. S. Whitney

intoxicating liquors as a beverage. He still works on, hoping for and believing in the final triumph of this great cause of human progress.

In 1836, while keeping school on the Marblehead coast, he first listened to the Gospel according to anti-slavery. Samuel J. May was the heavenly-tongued apostle on that occasion in the Branch Church of Salem, and from that lecture dates his interest in the great anti-slavery agitation begun three or four years before by William Lloyd Garrison. In the ranks of that grand army of freedom he was ever happy to be found. He was ordained as evangelist by the Massachusetts Association of Restorationists, and occupied pulpits as a supply for a few years. While thus engaged he became deeply interested in the undertaking of Rev. Adin Ballou, at Hopedale, Milford, Mass. This attempt to realize in actual life our highest conceptions of Christian principles was entered upon with great enthusiasm, and for eight years under several changes of business arrangements he joyfully labored on at the great moral problem. He still clings to the hope that under more favorable surroundings, and profiting by past experiences, what was there attempted will yet be accomplished. All the great reforms of the age—temperance, anti-slavery, peace, the equal rights of women with men, and the golden rule as the law of intercourse and labor—constituted the policy of this attempt to realize the ideal of the great Master. The weakness of the undertaking, was found in the joint stock property of the undertaking which placed the continuance of the experiment in a few hands, and so brought it to a premature end. But while it lasted it formed a grand standpoint for living souls to utter and live their highest convictions.

Mr. Whitney married, in 1842, Miss Hannah S. P. Cotton, youngest child of Rev. Ward Cottton, of Boylston. Three children were born to them—Daniel Cotton, who left them at the age of seven years; Mary P. C. (Billings), and Alice G. C. (Burton).

After leaving Hopedale in 1850 Mr. Whitney spent one year in Beverly and two years in Boylston. In 1853 he was chosen delegate from Boylston to amend the Constitution of Massachusetts, and removed to Southborough, that he might return daily to his family while attending on that convention. The conservative Whigs managed to quash the proposed amendments before the people, but Mr. Whitney had the satisfaction of voting to leave the term "male" out of the amended Constitution. The conservatives of that day looked upon the proposition as the wildest of political dreams; but the thirty-five years since that convention has brought it near even to our doors here in Massachusetts.

During the years of darkness and violence following the enactment of the Fugitive Slave Law, Mr. Whitney was ever ready and glad to do duty in the ranks of the Garrisonian Abolitionists. The flying fugitives were ever welcome to his home, and the sharp encounters with his pro-slavery neighbors were frequent. On a town-meeting day a zealot in a bad cause addressed him with, "Mr. Whitney, you have nigger on the brain." "Oh, no, Mr. B., you have nigger on the brain; I have negro on the heart," was his reply.

When the final crash of arms came it was not difficult to see that the end of slavery was near. Mr. Whitney, during the last year of the war, labored in the Sanitary Commission at City Point, and was greatly pleased with the magnanimity of the Northern soldiers, and the absence of all disposition to take vengeance on the fallen traitors, as is common with other nations.

He was delighted when the great silent man, who brought the Rebellion to grief, brought our mother, England, who treated us very shabbily during the war, to a sense of her duty, or interest to pay the damages. And since that day every effort and every advance towards a permanent arrangement between the two great English-speaking nations to settle all their differences by arbitration, instead of the sword, has given him the liveliest pleasure.

He believes in the good time coming, when nations shall have outgrown the barbarism of war, and the injustice, oppression and ignorance which constitutes a chronic state of war. And he believes, further, that this good time is to come through the instrumentality of his beloved country. He knows that he must pass over the dark river before these great events transpire, but a firm faith of the final triumph of righteousness on earth and beyond the earth makes the evening of life joyful.

Curtis Newton was born in Fayville, November 13, 1803. He married Lydia Ball Smith. He died October 11, 1880. In early life he was much interested in military matters; was Captain of the Rifle Company for several years, and was chosen major, but declined to serve. He represented his district to the General Court, was many years assessor, was selectman fourteen years, deputy sheriff, auctioneer for more than twenty years, was moderator of town-meetings several years, justice of the Peace.

At the annual town-meeting in March, 1881, the following resolutions were unanimously passed, viz.:

Resolved, That in the death of our late townsman, Curtis Newton, Esq., which occurred on the 11th day of October last, we realize that the town has lost a beloved citizen, a man who has filled many of its highest offices, represented it in the General Court, and has ever performed the duties intrusted to him in a manner and with a degree of fidelity that has done himself honor and has given satisfaction to his constituents. He has contributed liberally in many ways to the cause of freedom, and has always manifested a great love for the prosperity of this, his native town.

Resolved, That as a mark of respect due to so faithful a servant, we direct our town clerk to record these resolutions on the town book of records, and send an attested copy thereof to the widow of said deceased.

Dexter Newton was born in Fayville, January 13, 1823. He married Arathusa A. Brigham, December 9, 1846. In early life he was engaged in the provision business. He taught achool in this town three winters.

He received his education in the common and high schools in Southborough and in the academy in Westfield, Mass. He was station agent at Fayville and Cordaville about eleven years; kept store in Cordaville about three years; has been postmaster in Fayville since July, 1869; United States assistant assessor of internal revenue about five years; represented the district in the General Court in 1861 and 1877; has been auctioneer about twenty years, selectman ten years, served on the Board of School Committee ten years, assessor twenty-seven years, overseer of the poor five years, moderator of town-meetings over thirty years, land surveyor, justice of the peace, notary public, and has been justice of the First District Court of Eastern Worcester since June, 1879; has dealt largely in real estate, has built nine houses and has settled and helped to settle over two hundred estates of deceased persons. He has zealously advocated the principal reforms of his time.

Jonas Fay, Esq., a native of Southborough, was twice married. He was selectman, assessor and member of School Committee for many years. Was a school teacher when young; represented the town in General Court; deacon of the Pilgrim Evangelical Church; settled many estates of deceased persons and was active in town affairs.

Deacon Francis Fisher was twice married; held the office of selectman; represented the district in General Court; in his younger days was a seafaring man, and for a number of years a sea captain.

Ezekiel D. Rockwood was twice married; was a very prominent man; served as selectman, overseer of poor for many years, and represented the district in the General Court. He was very liberal in his donations for the cause of freedom and temperance.

Harvey Newton, Esq., son of Hezekiah Newton, was born September 26, 1819, married Ann S. Gamage, July 30, 1844; served as selectman one year. Was once chosen to represent the district in the General Court, but declined to serve—a very remarkable case. He manufactured boots and shoes with John Hartt, in Southville, some seventeen years, and afterwards carried on the business alone about eight years. He built and now owns the shoe factories in that village, and has contributed largely towards building up said village. He was never blessed with children, but has been highly blessed in many things.

James Henry Robinson, M.D., born February 9, 1831, married Charlotte K. Rice, November 9, 1857. He graduated from Albany Medical College in 1856, and commenced practice as physician at Deer Island the same year. He practiced also in Kansas, and while there was the family physician of the famous John Brown. Since that time he has practiced in Southborough and vicinity. He has represented the district in the General Court.

William H. Buck, Esq., born August 26, 1813. He married Sally Maria Brigham, June 20, 1850. He was in the meat business some four years, and for many years has been a cattle broker. He served as selectman eight years, and has held various other important offices in town. He represented the district in the General Court one year.

Benjamin F. Prentiss, Esq., born July 25, 1820; married, July, 1850, to Susan S. Johnson, of whom he had five children. He has held the office of selectman eight years, overseer of the poor eleven years; is a master-builder by trade, and has erected nearly three hundred buildings.

Sylvester C. Fay was born May 23, 1825. He married Eliza Bell Burnett, daughter of Dr. Joel Burnett, February 16, 1858. He kept store in Fayville with his father and brothers many years. Lately he has been engaged in the manufacture of corsets. He is a man of much energy; has served as selectman. He has long been engaged in the temperance cause and other reforms. His wife and her sister, Harriet Burnett, have caused to be erected a large schoolhouse, in which is kept by them a school for about thirty-five small boys, who are here prepared for entrance to the St. Mark's and other classical schools.

Leander W. Newton was born in Southborough November 26, 1838. He married Emma M. Muzzy February 27, 1861. He has served as overseer of the poor ten years, and as collector nine years. He has represented the district in General Court. He is an active business man.

Horace F. Webster was born January 22, 1829. He married Ann M. Fox February 13, 1852. He has been town treasurer six years. He also represented the district in General Court one year.

CHAPTER XVI.

STURBRIDGE.

BY LEVI B. CHASE.

STURBRIDGE is located in the southwest corner of Worcester County, bordering south upon the Connecticut line, and west upon the county of Hampden.

The surface is made up of long parallel ridges, more rounded hills, and corresponding valleys.

The upheaval of rock is mostly of the gneiss formation, the dip of the strata in some instances, as at the lead-mine, being almost perpendicular. Laterally, the trend of the strata is invariably northeasterly and southwesterly. The ridges have their uniformity broken up by differences in height, and the rounding and excoriating action of the glacial period.

Right across these formidable barriers, and from its entrance at the west to its outgo at the east line of the original town, nearly—if it held a direct course—at right angles with the rock system, the Quinebaug has its way, dividing the territory into two nearly equal portions.

The streams affluent to the Quinebaug take the water-shed from both directions, their general course being governed by the same rule as the rock formation.

In the present town we have Breakneck Brook and Hamant Brook from the south, the former discharging at the south bend of the river, the other higher up, near the centre of the valley. On the north side is Hobbs, or Sugar Brook, which takes the flow from Walker Pond, passes near the Common, and with its long series of meadows forms a large portion and the lowest level of the Central Valley.

Cedar Pond Brook, near the Fair Grounds, and Long Pond Brook, near the western border, discharge the water of the respective reservoirs of the same name into the Quinebaug.

Allum Pond is a notable natural body of water situated about two miles northerly of Fiskdale Village. It is about one mile long and half a mile wide. It has Mount Toby upon the west of it, and is bordered by elevated land. The water is held in a rocky basin above the surrounding country. Fed by springs, its clear water abounding in fish, the salubrity of the air and the romantic scenery has given the shores of this pond a local reputation as a camping-ground.

Walker Pond, in old times called Salstonstal's Pond, is noted as a pleasure resort. Here the country road skirts the eastern border beneath tall trees, while upon the opposite side of the pond rises the abrupt precipices of Walker Mountain, over which winds the "mountain road," making up a drive which is highly appreciated by the people in the vicinity.

Lead-mine, Long and Cedar Ponds, have each their peculiar attractions.

Shumway Hill throws out its northern point as if to stop the Quinebaug about two miles from the western border of the town. The river is forced to turn and go around the hill close under the northern slope. Along the northern bank of the river, just where it curves, are situated the factories and the village of Fiskdale. From the opposite slope of Shumway Hill the view of this village is enchanting. From the pinnacle of the hill very fine views of rural scenery are obtained in every direction except the southward, where lie the wooded hills and rocky ridges that environ the lead-mine region. To the eastward lies the central valley of the town, and beyond the noted Fisk Hill.

From Fisk Hill one has an extensive and delightful view in every direction.

Looking westward across the valley, the Quinebaug is seen emerging from Fiskdale along the base of Shumway Hill, and seems to loiter idly along by grassy meadows and cultivated fields, winding about in many a romantic nook and charming retreat—a blending of water, meadow and forest scenery seldom surpassed.

All along the valley it is the quiet Quinebaug. Turned aside at Fisk Hill, it takes a southerly course, going a little more hurriedly until it turns and plunges eastward between high, rocky hills, and then turns again to the northward, washing the opposite side of the hill which turned it from its former course. The river is again turned eastward by a high, rocky precipice and by this time charged with power, which is utilized for the purposes of man along the villages of Southbridge.

The quiet central valley is seen to the best advantage from Fisk Hill, presenting many points of rural beauty.

To the inhabitants of this town this valley has the additional charm of ancestral and historic associations—of being where are clustered the religious and secular institutions of civilization which gives value to life, and of being the resting-place of departed and loved ones. To those who have their *home* here it is the very centre of the world.

TANTOUSQUE IN NIPNET.—In September, 1633, John Oldham, with three companions, passed through Nipnet to the Connecticut River, "lodging at Indian towns all the way."

While being entertained by the Indians at Tantousque, he was shown some specimens of what proved to be plumbago, or black-lead, and was shown, or told, where the substance was to be found in large quantities, near a pond called by the Indians Quassink. That this took place in the valley of the Quinebaug, in Sturbridge, is probable from following circumstances.

A path to the Connecticut River passed through here, and there could have been none south of it until beyond the abrupt ridges of the Breakneck region; the extent of which tract would carry any southern route nearer, and probably south of the deposit of plumbago at the hill of Ocquebituque, "near the cornfield where one Namaswhat lives."

The last-mentioned lead-mine was known to John Pynchon some ten years later, but appears not to have been discovered by John Oldham in 1633. The hill of Ocquebituque is situated near the south line of Union, Connecticut, six miles or more from the Sturbridge mine. Hence, clearly John Oldham went by the Quinebaug Valley path through this town, about two miles north of the Sturbridge lead-mine, and about ten miles from the cornfield where Namaswhat lived.

William Pynchon established a trading-post for furs at Agawam (Springfield) in 1635.[1] He had a monopoly of the trade over a large territory, and for a number of years the profits were considerable. One of his first enterprises was opening a road to the Bay settlements.

Preserved in the archives of Sturbridge are records of roads which were used before the settlement, and afterwards until the town was incorporated. By plotting the town according to the original survey and

[1] Hon. George Sheldon.

distribution of lots, these isolated items of record about the old paths have become available, and their location known.

The one that will be described was called, upon the records, "The road from Brimfield to Oxford." From the west line of the town to Fiskdale there is no record; from a point back of Bacon & Bates' store to No. 2 School-house; from there to the lower crossing over Cedar Brook, near the residence of Mr. Geo. Wight, it was identical in location with the present road; passed the south side of Mr. Wight's house, and a small pond-hole near Mrs. Ransom's, then across the present highway, and to where Mr. C. D. Russell now resides; then across to near Mr. W. T. Lamb's, and along there with the present road to Mrs. H. Plimpton's; then crossed Sugar Brook, where N. D. Ladd & Son's mill-dam now is, on over a field; then through pasture and woodland (where the tracks are still to be seen) to the northwest mowing lot, on Mr. J. H. Lyon's farm; thence through the north part of his farm, passing Mr. N. Eggleston's, to the southeast corner of Mrs. McGilpin's farm, to where there was a fordway over McKinstry Brook by old Oxford line, and may be traced in the direction of Dudley. It was the road used by the first settlers of Sturbridge when they moved from Medfield, Watertown and other places.

It is here suggested that this may be the exact location of a section of the road opened by William Pynchon, about 1635–38, and that it then followed the general course of a previous Indian trail, which, in its course westward, doubtless passed a little north of Fiskdale, near the wigwams of the Putikookuppogg Indians, and on to Ashquoash, in the north part of Brimfield.

Ten years later, 1648, Gov. John Winthrop writes in his journal (ii. 325): "This year a *new way* was found out to Connecticut, by Nashaway (Lancaster), which avoids much of the hill way." This new way is described by Mr. Temple ("Hist. North Brookfield") as passing down the valley of the Quaboag, and "struck the south trail east of Steerage Rock," in Brimfield. Other evidences of record furnish satisfactory proof that we have here the "Bay-Path" of Dr. J. G. Holland's admirable historical novel with that title.

Two important Indian paths, one from Providence and another from Norwich, united at Woodstock, and continued as one path through Sturbridge to Brookfield. The course was quite direct from Lebanon Hill to Fisk Hill, thence over Walker Mountain, south of the pond and onward to South Pond, a branch passing up the east shore to the ancient village of Quobagud, while the more important route skirted the west side of the pond, going on to Wickaboag (now West Brookfield). It will be again noticed farther along, when opened for an Englishman's road, about 1680–90.

Gov. Winthrop sent Stephen Day, a printer, to Tantousque, in Nipnet, in 1644, to examine the deposits of black lead, and also to search for other minerals.

The 13th of November, the same year, the General Court granted to John Winthrop, Jr., "y^{e} hill at Tantousque, about sixty miles westward, in which the black lead is, and liberty to purchase some land of the Indians." (Winthrop by Savage, vol. ii. p. 213.) He purchased some land of the Indians, as it appears.

A plot of land containing ten thousand two hundred and forty acres was surveyed for Major-General Waitstill Winthrop in 1715. Its east line ran across Saltonstal's two thousand acres, which had been surveyed the previous year, taking off nearly one-third. A reasonable inference is, that there was a prior claim, based upon a bargain between the ancestor, John Winthrop, Jr., and the Indians. In this town the bounds were by natural features, Indian style: from a rock in a meadow south of Leadmine Pond, to an angle in Quinebaug River, north of Geo. Wight's mills; then northward on the west side of Cedar Pond to a point against the north end of the original pond; then west and onward, covering the site of Brimfield Centre; then southeastward to the rock in the meadow.

The bounds of the tract were located with the evident design of taking in the valuable lands along the "Old Springfield Road," and, if fixed in 1644, or in the days of John Winthrop, Jr., may be taken as evidence of the antiquity of said road.

The lead-mine was being operated in March, 1658, by employés of William Paine and Thomas Clark, of Boston. The gentleman last named, it is supposed, was the Captain Thomas Clark who, the latter part of the same year, obtained a grant of the southern mine of plumbago, or the hill of Acquebituque. It appears that the Boston merchants carried on the works at Tantousque for a share of the products, it being included in the bargain that they should have the owners' share at a stated price. A path was opened from the lead-mine, passing a little south of the house formerly owned by the late Otis Davis, through Holland and Brimfield to the Springfield road.

Richard Fellows kept a tavern, the site of which is in the northeast part of Monson, and he was "very willing to undertake to haul the lead to the waterside," past his own door, to Connecticut River.

In the great war of 1675–76, known as "King Philip's War," the Quabaugs were among the first to take arms against the English. The Quinebaug flowed between the land of the Wabbaquassets and that owned by the Quabaugs.

No notable historical event occurred in Tantousque; its paths, however, were used by parties of both English and Indians.

Philip and his warriors were driven from Mount Hope, and about the last of July, 1675, forced to flee

from Pocasset Neck, passed through Woodstock and Tantousque to Quabaug Old Fort. They were at that time pursued by Captain Henchman, aided by Oneko, son of Uncas, with fifty Mohegan warriors.

The fugitives crossed the Quinebaug and skurried up the forest-covered slope of what is now known as Fisk Hill, in the land of their allies, the Quabaugs. Their English pursuers, looking up the broad expanse stretching away to the northward, knew that beyond were the Quabaug Ponds, and that somewhere about there were collected, in large numbers, their savage foes. Captain Henchman here ordered the pursuit to cease, and turned toward Boston.

Philip being reduced to a feeble following of forty men, and "women and children many more," was unwilling to advance in the direction of the English forces at Brookfield, and at Tantousque passed on to the Old Springfield Road, and arrived at Quabaug Old Fort on the 6th of August. Quabaug Old Fort, called by the Indians Ashquoach, was situated just north of Sherman's Pond in Brimfield. A few days later another party of Wampanoags, endeavoring to get on the Nipmuck path to follow their chief, was intercepted before it reached the Quinebaug River, and one hundred and eleven men, women and children were taken and delivered over to the English.

The same path was used by the fugitives who escaped from the great battle of Narragansett Fort, December 19, 1775.

The spring of 1676 came on with smiling sunshine, awakening vegetation and the song of birds; but among the colonists was a feeling of gloom and discouragement. The Indians had been successful at every point.

A change, however, was approaching. About the middle of March the Indians were repulsed at Westfield, Northampton and Hatfield—a grievous disappointment. Many of them became tired of the war, and returned to their fishing-places and hunting-grounds. Admonished by recent suffering from scarcity of food, many a sunny slope was being planted with corn, beans and other crops. The old wigwam was patched up, and their desire was for peace.

But that was not to be; they had carried the torch, the tomahawk and the scalping-knife to many a home of the white man, had commenced a war of extermination, had sown the wind,—the whirlwind was upon them.

Into the valley of the Quinebaug, beneath the green foliage, in the first week in June, 1676, came Major John Talcott, of Connecticut, with two hundred and fifty mounted Englishmen, accompanied by Oneko, son of Uncas, with two hundred Mohegan warriors. They crossed the river in Dudley and coming up the Springfield Road, rushed in every direction upon the surprised inhabitants. Along the Quinebaug, by the shores of our ponds, or wherever the dwelling of a Quabaug might be, the Mohegans hunted them out, pursued upon the track of those who attempted to escape, and killed or captured them.

When the war was over some of the hostile Indians who had escaped drifted away in small parties and became absorbed into other tribes. Some went towards Maine, some to Canada, and some to the westward, near Albany.

Their corn-fields, whether on the hillside or upon the plain by the river, were quickly seeded to pines, and thereon were standing when the settlers came here forests of fifty years' growth. Their wigwams entirely disappeared. Stone implements alone speak of former inhabitants.

Depopulated Tantousque was included in a tract of the Nipmuck country, which a remnant of the Indians, the former owners, made over to the Massachusetts government, February 10, 1681, for the sum of fifty pounds and a reservation of land five miles square, which is now in Dudley and Webster.

After the settlement of Woodstock, in 1656, and the second settlement of Brookfield, about the same time, a road from one place to the other, in their isolated and feeble condition, became a necessity, and was doubtless opened between these nearest neighbors at an early period. The Brookfield and Woodstock path came down on the west side of South Pond, and was essentially the "New Boston Road," so called, as far as Mr. C. D. Russell's, where it united with the Old Springfield Road, and followed that about a mile and a half to the old camping-grounds, now the northwest mowing lot on Mr. J. H. Lyon's farm. Turning southward past where stands the Levins Fisk house, then by Hosea Cutting's house and into the present road west of Mrs. Emmon's house; then down the hill and across by Mr. P. Bond's house, over by Mrs. Malcom Ammidown's residence, and down the slope by the brick-yard to the river, where a bridge was built of logs.

This was also near the fording-place of the old Indian trail. The path is traced by record southward from the river to near the residence of Mr. Lewis Morse. The present Woodstock road by the "Brown brick-yard," so called, was laid across this old path, not far from where Mr. Henry H. Wells' lane intersects it, and may have passed from there over Lebanon Hill.

This Brookfield and Woodstock path followed in a general way the previous Indian trail. Massachusetts acquired the title to these lands, with power to grant the same, in 1681, as has been stated.

Tracts of land, of whatever size, granted to an individual were called farms,—a name distinguishing such lands from grants made for towns. Individual ownership of land in Tantousque was established for the first time by lines and bounds November 24, 1714, the date of the survey of the Saltonstal farm. At an early date in the history of the colony the province of Massachusetts Bay gave to Sir Richard Salstonstal, Knight, one of the patentees named in the old charter, a tract of two thousand acres on the

banks of Connecticut River. This property was handed down among his descendants, and was owned in 1713 by his great-grandson, Rev. Gurdon Salstonstal, of Norwich, Connecticut.

An agreement entered into by the province of Massachusetts and the colony of Connecticut in the year 1713 established a new division line, south of which was found to be Mr. Saltonstal's two thousand acres, as well as many other grants of Massachusetts along this border. In accordance with the terms of the agreement, Massachusetts paid to Connecticut, for these former grants, an equal number of acres of land by other grants within her now undisputed territory; and these new grants took the name, and for many years were known as, "equivalent lands."

The following year Rev. Gurdon Salstonstal, then Governor of Connecticut, agreed and accepted of the General Assembly of the colony the right to "take up to his own use the said quantity of acres, among the equivalents allowed to this Colony, where it shall best suit him, provided that the tract be taken up in one entire piece," May, A.D. 1714.

It suited His Excellency to select the tract now called the central Valley of Sturbridge. He obtained his first view of the valley upon his arrival at the camping-ground, where the Woodstock road united with the Old Springfield. He made that point the eastern limit of his farm, the top of Shumway Hill the western extreme; the bend of the river near Mr. A. J. Morse's was made a southern angle, and the north line of the old Bullock place, Mrs. Luther Hamant's and J. J. Shepard's, defines the northern bounds. It was called by his children Pineland.

THE DEMICK FARM was west of and adjoined Salstonstal's farm. The origin of this grant is unknown. The most part of the village of Fiskdale is built upon this tract.

THE ELIOT FARM.—In "Ancient Plans," i. 285, is found a plot of John Eliot's one thousand acres, endorsed: "Purchased by Rev. John Eliot the 27th of September, 1655, of Wattaloowekin and Nakin, Indians—said 1000 acres of land lies Southward of, and contiguous to the township of Brookfield *alias* Quabaug, at a place called Pookookappog Ponds."

December 5, 1715, the title to this land was confirmed to the heirs of Mr. Eliot by the General Court. About eight hundred acres of the tract lie within the bounds of Sturbridge, owned by the following parties, viz.: Heirs of Mr. Austin Allen, Mr. G. H. Adams, Mr. Monahan, Mr. Griffin and Mr. S. F. Bemis.

Mr. Eliot petitioned the General Court in 1664, in ". . . behalf of the Indians of Putikookuppogg, . ." and was granted ". . . a plant tion to the Indians not to exceed fower thousand acres . . ." It was not to interfere with any former grant, and the Indians were not to convey it away, or any part of it, without the consent of the General Court. This grant was in view of Rev. Apostle Eliot's plan of establishing a "praying town here, after the model of that at Natick." The consummation of this enterprise was prevented by the breaking out of King Philip's War, and the removal from this vicinity of the Putikookuppogg Indians. No survey of the laying out of this grant has been found.

THE WINTHROP FARM.—The form and position of this farm, as first surveyed, has already been described on a preceding page.

Judge Wait Winthrop, who inherited this property from his father, died 1718, intestate. He left two children—John Winthrop, of New London, Conn., and Ann, the wife of Thomas Lechmere, of Boston.

The son's claim under English law, that the real estate was entirely his own, and the claim of Mr. Lechmere, in behalf of his wife, under the colonial law, occasioned a suit which continued ten years or more, being finally decided according to the colonial law.

The settlement of Brimfield was "hindered by the extent and uncertain tenure" of the Winthrop farm, and the committee for laying out the town petitioned the General Court in 1723 for a reform of the survey. This petition was refused. But it was renewed in 1727, accompanied by one bearing the same request from Mr. Lechmere. The result was a new survey, which was accomplished and accepted by the General Court December 18, 1728. It was in a square form, four miles each way, with the Connecticut line for the southern boundary. The farm formerly owned by Mr. Lyman Janes occupies the northeast corner; the road by the residence of Mr. John Hamilton is on the east line. The farm extends into Holland one and a half miles, the north line of that town being identical with that of the farm.

It is presumed that the position and "uncertain tenure" of the Winthrop farm may have postponed decisive action of the General Court upon "The petition of several of the inhabitants of Medfield and sundry others," . . . "for a Grant of the Province Land between Oxford, Brimfield and Brookfield."

The first petition of 1725 called out the action of the court, in so far as to order, June 2, 1725, the lands to be surveyed. The report, one year later, was made by John Chandler, Jr. The survey was made the 11th, 12th and 13th of May, 1726—Wm. Ward, surveyor; Ebenezer Learned and Joseph Plimpton, chairmen. The report gives thirteen thousand seven hundred and thirty-two acres as the amount of province land, exclusive of the farms which have been described. The subsequent re-location of the Winthrop farm diminished that amount to the extent of about three thousand acres.

The second petition, with twenty-seven names, came up June 13, 1728, and was ordered to be referred to the next full session; in the mean time a committee was sent to view the land and estimate the value, who reported it to be worth one thousand pounds.

A third petition, with fifteen more names added, in all forty-two, came up in the General Court July 4,

1729. The prayer of the petitioners was granted by a vote of the House, but the Council failed to concur.

September 3, 1729, William Ward, Esq., and Joshua Morse, by petition to the General Court in behalf of themselves and associates, obtained the object of several years of persistent effort,—the grant for

A NEW TOWNSHIP.—The evidence does not appear that the one thousand pounds were exacted by the General Court, but the grantees were put under certain obligations instead. They were "obliged in seven years' time from this date to settle, and to have actually on the spot fifty families, each of which to build a house of eighteen feet square at least, to break up and bring to fit for plowing and mowing,—and what is not fit for plowing, to be well-stocked with English grass—seven acres of land; to settle a learned orthodox minister and lay out to him a house-lot, equal to the other house-lots, which house-lot shall draw a fiftieth part of the province land now granted, and to be accounted as one of the fifty that shall be settled." Following were suitable regulations for managing the business of the association.

Building a meeting-house was not among the court's requirements.

PROPRIETARY HISTORY.—The following are names of the grantees in the order by them established. Most of those whose residence is not here given were of Medfield.

Meletiah Bourne.	Timothy Hamant.
William Ward, of Southborough.	William Plimpton.
Ezra Bourne.	Ephraim Partridge.
Shubael Goram.	Abraham Harding.
Thomas Learned, of Oxford.	Moses Harding.
Nathan Fisk, of Watertown.	Josiah Ellis.
Henry Fisk, of Watertown.	Peter Balch.
Ebenezer Learned, of Oxford.	Ezra Clark.
Nahum Ward, of Southborough.	Samuel Ellis.
Gershom Keyes, of Boston.	David Ellis.
Zerobabel Eager.	Francis Moquet, of Framingham.
John Shearman, of Marlborough.	Henry Adams.
Joseph Baker.	Ichabod Harding.
Jonas Houghton, of Lancaster.	John Plimpton.[1]
Thomas Gleason.	Josiah Cheney.[1]
Moses Gleason.	John Dwight.
Jonas Gleason.	Jonathan Boyden.[1]
Joshua Morse.	Joseph Clark, of Medfield.
Joseph Plimpton.	Nathaniel Morse.
Nathaniel Smith, of Dedham.	James Denison.
Solomon Clark.	Joseph Marsh.

Minister's right.

Seven supernumerous shares were sold for seventy-five pounds each to:

Gershom Keyes.	James Denison.
Abraham Harding.	Moses Allen.
Nehemiah Allen.	Seth Wight.

David Morse.

Twelve at least of these became inhabitants of the new plantation. Many others of the Medfield proprietors sent their children and grandchildren. So many came from that town, that after calling the place Dumer in 1731, it became known as New Medfield.

Several early settlers became proprietors by purchase. Ezekiel Upham bought of John Shearman; David Shumway of Ebenezer Learned; Hinsdale Clark one of the shares of James Denison; John Harding had one of the shares of his "father, Abraham;" Edward Foster bought of Joseph Plimpton; Moses Marcy becoming acting proprietor in November, 1735, by power of attorney from absent members. Abraham Harding, of Medfield, served as clerk for the proprietors for many years.

At the first meeting, November 6, 1729, a committee of five, viz.: William Ward, Esq., Joshua Morse, Capt. Ebenezer Learned, Capt. John Dwight and Abraham Harding, were empowered to act in all the affairs of the proprietors for the year ensuing.

They were "directed to lay out one hundred lots in the best of our land, adding to the poorest lots a quantity of acres according to the best of their judgment to make them as equal in value to the best as they can." "None of the one hundred lots to be less than fifty acres." "And then to couple two lots together and make them as equal in value, each couple or pair as they can." This was accomplished, and the drawing was carried out "July y^e^ 9th, 1730."

This first division comprised nearly all the proprietors' lands north of Quinebaug River; also south of the river the west side of Shumway Hill, and several lots where now are situated Globe Village and the centre village of Southbridge.

The second division, which was made in 1733, comprised the most part of the town now in Southbridge.

Most of the remaining lands were divided in 1740; and again some small remnants in 1761.

As early as June, 1730, the "Committee of Affairs" received a letter from the heirs of Governor Salstonstal containing proposals for locating the meeting-house on their land. In the following November, Jonas Houghton, of Lancaster, and Ebenezer Learned, of Oxford, in behalf of the proprietors, obtained a deed—free gift—of ". . . " six acres of land to set a meeting-house upon, out of a farm or tract of land containing two thousand acres, lately granted to the Hon. Gurdon Salstonstal, deceased, by the General Assembly of y^e^ said Province, lying in Pine-land, near or upon where y^e^ road which runs from Brookfield to Woodstock meets with the road now used from Brimfield to Oxford." Land was given for highways four rods in width through their lands where most convenient, east and west, north and south.

This deed contained no description of bounds, and the location within certain limits was left to the proprietors. This was well; and the names of William Ward, Esq., of Southborough, Jonas Houghton, of Lancaster, Joseph Plimpton, Joshua Morse and Abraham Harding (last three of Medfield), who located the meeting-house, the common, and planned the sys-

[1] Died before the first division of land.

tem of roads which diverge therefrom, should be held in remembrance. The suitable place was found about one-fourth of a mile southeast of where the road from Brookfield united with the road, as then used, from Brimfield to Oxford.

The heirs of Governor Salstonstal were four daughters, viz.: Elizabeth, wife of Richard Christopher; Mary, wife of Jeremiah Miller; Sarah, wife of Samuel Davis (all of New London, Conn.); and Catherine, wife of William Brattle, of Cambridge. The farm was divided, and Mrs. Christopher and Mrs. Miller had the eastern half, one thousand acres, which they sold, in 1732, to William Ward, Esq., who had been for two years preceding chairman of the committee for forwarding the settlement. He built a saw-mill on Sugar or Hobb's Brook, and the large pine trees found standing near by, perhaps on what is now Sturbridge Common, were cut and sawed into lumber, which was used in building the meeting-house in 1733–34. The meeting-house was built by John Comins, Jr., of Oxford, after a plan of one at Grafton. The first meeting-house stood upon the site now occupied by No. 1 School and public library building.

The money, five hundred and twenty-five pounds, received for the seven supernumerous shares sold was, by vote, donated to the purpose of building the meeting-house. Twenty pounds were raised in November, 1733, "for y^e^ completing and finishing y^e^ meeting-house at New Medfield (so-called)." In January, 1734, it was not finished, but meetings were held the latter part of that year. A Mr. Cowell was paid twenty-eight pounds, and eight pounds for board. Ninety-eight pounds were raised for preaching in 1735, and a like sum for 1736. It was an assessment of forty shillings to each share per year.

The settlers in New Medfield made choice, in March, 1736, of Rev. Caleb Rice, who was accordingly "called" to be their minister. Preliminaries being arranged, Mr. Rice accepted the call in August, was ordained September 29th, and installed pastor of a church formed at that time.

The installment of a pastor released the proprietors from any further care or expense about preaching in New Medfield.

In the matter of roads and bridges nothing whatever was done during the eight years that the public charges were paid by the proprietors. The members of the association, who were settlers, were a minority. From time to time—nearly every meeting—articles were inserted in the warrants asking for action about roads and bridges. A piece of road was laid out by the proprietors in 1736, and nothing expended upon its construction. A committee was appointed in 1731 to select the most necessary and convenient place or places for a bridge or bridges over Quinebaug River.

There is no record of any report of that committee. At a meeting of the proprietors, May 31, 1738, it was "Voted: That Joshua Morse shall have £1 : 16 : 0, for a journey to New Medfield in y^e^ year 1736, to a proprietors' meeting to prevent Building Bridges over Quinebaug river in s^d^ town."

This policy of the association occasioned much inconvenience and hardship to the settlers. The Old Springfield Road and the Brookfield and Woodstock were the only ways of ingress and egress, and, besides those, such paths as individuals made for themselves.

The time specified in the grant of the township expired in 1737. The court's requirement in every respect having been fulfilled, the "Committee of Affairs" elected November 9, 1737, were instructed, by vote, "to petition y^e^ General Court at their next session, that the settlers or inhabitants of New Medfield (so called) be invested with such privileges as other towns in this province by law Injoy."

The response of the Legislature, in May, 1738, was an "Act of Incorporation," entitled "An Act for Erecting a New Town in the County of Worcester, at a Plantation called 'New Medfield,' by the Name of Sturbridge."

The settlement having arrived at the dignity of a municipality, with the same privileges and rights of other towns in the province, the proprietors had no longer any official power in her affairs.

All the lands which had been received from the heirs of Hon. Gurdon Salstonstal, also the meeting-house, were given to be the property of the town, "for the use and benefit of the town of Sturbridge forever." This was voted at a meeting of the proprietors, April 10, 1740.

The proprietary association existed until 1788, when the book of records was closed. Job Hamant was the last clerk.

One of the original grantees, Henry Fisk, outlived the association. He died in 1790, aged eighty-three.

STURBRIDGE.—When first incorporated, no portion of "The Country Gore" was included. This was a tract of ten thousand acres, in the form of a gore, left between Oxford and Leicester, when the latter town was set off, which extended westward to a line running through Walker and South Ponds, the wide end of the gore.

In answer to a petition of John Davis, Caleb Child and others of the inhabitants, in 1741, the General Court annexed about one-third of the tract to this town. "Brookfield 500 acres" was annexed to that town in 1717, as compensation for the same amount previously laid out to Col. John Pynchon, on Coy's Hill, and occasioned the peculiar form of the lines between said town and Sturbridge.

Including what was called "The Neck," lying between Oxford or Dudley and Woodstock, the southern bounds of the original town extended east as far as Southbridge now does on the Connecticut line.

Those settlers who were inhabitants of New Medfield (so called), fulfilling the "Court's requirements" before the incorporation of the town, also the homesteads which they originated, are the following:

Aaron Allen (Joseph, Joseph, James), born 1715; wife Hannah ———; came from Dedham, originally from Medfield. His house is still standing, now owned by Mr. Nelson Bennett.

Moses Allen (brother of the preceding), born 1708. He was a proprietor. He began on the next lot north of his brother, now Henry Weld's. He had no family here, and removed from the town after a few years.

Joseph Allen, with the preceding, were the three sons of widow Miriam (Wight) Allen, who came with them from Medfield. He was born 1702; married, first, Abigail Gold; second, Sarah Parker; began the homestead long known as the "Squire Jabez Harding place." He and his family left the town after a few years.

Nehemiah Allen (Joseph, James) born 1699; married Mary Parker. He came from Sherborn and settled the site called the "Old Allen Place," north of the Baptist Church in Fiskdale. He was a proprietor.

Joseph Baker, from Dedham, probably (wife Keziah); was a grantee, and settled lot 47, his own right. The homestead is abandoned, and now included in the farm of Mr. C. G. Allen.

David Bishop; wife Hannah; on the Holland road, now known as the Deacon Jonathan Lyon place.

Nathaniel Bond; house site the east side of the road in the south part of the farm of Mr. T. E. Arnold.

Hinsdale Clark (Nathaniel, Joseph), born 1710; married Anne Partridge; house site near where Harvey Newell now resides in Globe Village.

Joseph Cheney (Josiah, Joseph), from Medfield; born 1709; married Margery Mason; settled the Cheney place on Shumway Hill; now abandoned.

Phinehas Collar, from Medfield; born 1702; wife Hannah; settled on the next lot east T. E. Arnold's farm; now abandoned.

Ebenezer Davis; wife Mary; settled where Mr. Hayer lives, near the turnpike school-house.

James Denison, a native of Scotland; wife Experience; located where Lewis Morse resides in Southbridge. He was a grantee.

Ebenezer Fay; married Thankful Hyde; located next north of Eliot's farm; known as the Cyrus Fay place.

Henry Fiske (Nathan, Nathan, Nathan), from Watertown; born 1707; married Mary Stone; house site upon E. T. Brooks' farm on Fiske Hill. He was a grantee.

Daniel Fiske, brother of the preceding; born 1709; married, first, Dilliverance Brown; second, Jemima Shaw; located next north of his brother.

Samuel Freeman; wife Mary; house site on Elm Street, Southbridge.

Jonathan Fosket; wife Hannah; settled where now Melvin Shepard resides.

Edward Foster; site now occupied by Alonzo Marcy, Southbridge.

Joseph Hatch; site of the Pauper Asylum, Southbridge.

Henry Hooker (Henry), from Medfield; married, 1733, Mary Parker, of Needham; first settler on the Brackett place; site now owned by Mrs. F. W. Emmons.

John Harding (Abraham, John, Abraham), born 1713; married Vashti Rice; settled where Mr. C. G. Allen now resides.

Caleb Harding, brother of preceding; born 1714; married Hannah Weld; settled the place now Edward Nichols'.

James Johnson; wife Susanna; settled the farm called the Merrick place, west of Fiskdale.

Ebenezer Knapp, of Medfield; married Elizabeth Mason.

Samuel Leach, from Boston; married, 1736, Lydia Mason, of Medfield; began where Ezekiel Cooper now lives.

Joseph Marsh, of Medfield; wife Sarah; originated the homestead now the residence of S. F. Bemis.

Aaron Martin; wife Sarah; began the homestead now Horatio Carpenter's, on Fiske Hill.

Moses Marcy, from Woodstock, Conn.; born 1702; married, 1723, Prudence Morris. His house is the residence of Andrew Marcy, in Southbridge.

Jonathan Mason, married, 1739, Hepzibah Morse, both of Dedham; settled where the late Oliver Mason resided in Southbridge.

Noah Mason, his brother, married, 1736, Keziah Muscraft; settled where the late Lyman Chamberlain resided, in Southbridge.

Joseph Morse (Joseph, Joseph), married Experience Morse, both of Medway; located where A. H. Morse now resides, in Southbridge.

David Morse (David, Ezra, John, Samuel), born 1710; wife Jerusha Smith; the homestead of A. J. Morse.

John Morse, his brother, born 1717; settled where Thomas Mack now lives, northwest of Fiskdale.

Joseph Moffett; wife Mary; the "Old Holbrook Place."

Josiah Perry; wife Hannah; homestead of the late T. N. Harding, in Southbridge.

Onesiphorus Pike; now Mrs. Luther Hamant.

Solomon Rood; wife Sarah; Jason Smith's or near there.

Rev. Caleb Rice; wife Priscilla; at the parsonage, now Wm. Whittemore's.

Richard Rogers; where W. H. H. Ormsby resides.

John Streeter.

Joseph Smith (Nathaniel, Samuel, Henry), born 1707; married Abiel Hamant. He was the first who stayed through a winter in this town, probably 1730–31. His location was between W. H. H. Ormsby's on the north and the George Plimpton place on the south.

Joseph Scott, settled on Moses Marcy's mill-grant. The house site is near the residence of Mr. David G. Whittemore.

Isaac Newell (Isaac, Isaac, Abraham), from Needham; born 1688; married, 1715, Abigail ——; settled first east of Cedar Pond.

John Stacy; wife Sarah ——; on the site of the residence of Mr. Melvin Haynes; kept tavern there.

Samuel Shumway, from Oxford; wife Sarah; farm now occupied by William H. Shumway, his great-grandson.

David Shumway, from Oxford; wife Esther; the S. M. Streeter farm, now owned by Fiskdale Mills Company.

Ebenezer Stearns; the Leonard place, now Mrs. Malcom Ammidown's.

Daniel Thurston (Daniel, Daniel, John), born Medfield, 1702; was in Marlborough 1732, in New Medfield (Sturbridge) in 1737; wife Miriam ——.

Rowland Taylor, from Leicester; house site where L. B. Chase now lives.

George Watkins; wife Dilliverance; the George Weld place.

Hezekiah Ward, son of William, of Southborough, married Sarah Green, of Leicester; site of the residence of S. H. Hobbs.

Charles Ward, his brother; wife Abigail; where J. H. Lyon now resides, on Fiske Hill.

Ezekiel Upham was of Dorchester, in 1726; born 1700; wife Hannah; his homestead has continued in the name, now Nathaniel Upham.

From items of record, gathered here and there, the foregoing are known to have been here before the town was incorporated. They constituted the main portion of those who fulfilled the court's requirements.

There were a few more, probably, on the ground, whose names cannot now be given. The number of families were increased to over one hundred in about twenty years, and after that, by the formation of new families by the sons and daughters of the early settlers, the town continued rapidly to increase in population during the period previous to the Revolution.

Many new names appeared. As founders of well-known families here, the following may be mentioned: John Weld, Nathaniel Walker and Jabez Nichols were brought into our limits by the annexation of over three thousand acres of the "Country Gore," in 1741 or '42. Rowland Clark, Benjamin Hyde, John Marsh, Benjamin Robbins, Jeremiah Streeter, Nathaniel Smith and Daniel Plimpton were here 1745. Ralph Wheelock, William McKinstry and Jabez Harding in 1755; Gershom Plimpton, 1759; James Plimpton, 1764. James Gibbs and the Howards settled in the lead-mine district before 1770. David Wight moved here in 1774.

The first meeting for the choice of officers for the organization of this town was held the 18th of September, 1738. The freeholders and other inhabitants qualified to vote in town affairs were assembled at the meeting-house, which was new and unpainted. The house was fifty feet long, forty wide, and twenty feet between sills and plates. It had three doors, east, west and south; and galleries along the same three sides; the north side of the hall being occupied by the pulpit. The pews had not at this time been made. The house stood on a knoll, and all about the slopes and the small plain to the eastward were the stumps, half-trimmed logs, broken snags, bushes, and the usual appearances of a recent clearing; beyond which was a small saw-mill on the brook, and two or three houses and some cleared land along the slope of the rising hill farther on. For two miles westward, and about one mile north and south, lay an unbroken forest—Salstonstal's Farm, held for rise in value. There were no highways. A path cut through the woods northward by where the cemetery now is to the "Old Springfield Road," and such ways as individuals made for themselves, was all that appeared.

Those who emerged from the woods and gathered at the meeting-house, upon the day above mentioned, were all young men, sanguine, full of the romance of life and the excitement and novelty of their position. They, upon that day, organized a municipal government, and began the following list of officers, reaching down to our time.

The names of moderators, town clerks, treasurers, selectmen and representatives will here be given. Other officers elected by the town have been: Assessors, constables and collectors of taxes, wardians—an office of ecclesiastical character, ranking in secular authority next after the minister. They were first elected in this town in 1762, and dropped after 1790. Two, sometimes three or four, were chosen each year. "Informers of the breaches of the law for the preservation of Deer," called later deer-reeves, were elected annually as late as 1825. Tythingmen were elected until 1840 or later, "Clerk of the Market," until 1775, after that called sealer of weights and measures. Haywards were elected at first, and the office was continued under the name of field-driver. Surveyors of highways, fence-viewers, hog-reeves, sealers of leather, surveyors of lumber, measurers of wood and bark.

It is designed in the following town officer lists that no individual should appear more than once under the same office, the name of each citizen being followed (1) by the first and last years of his election to that office; and (2) by the total number of times elected for annual terms of service during the intervening years. The first years after each name, reading downwards, show the order of elections in regular sequence.

Moderators.—Moses Marcy (Col.), 1738, 1773; 118. Isaac Newell (Dea.), 1739; 1. Edward Foster (Dea.), 1756; 1. Joseph Baker (Dea.), 1758; 1. Nathaniel Walker (Capt.), 1762, 1774; 14. Samuel Freeman, 1763, 1764; 2. Joshua Harding (Dea.), 1764, 1791; 13. Daniel Fisze (Dea.), 1766, 1773; 4. Moses Weld (Dea.), 1773, 1790; 31. Ebenezer Crafts (Col.), 1779, 1789; 11. Timothy Newell (Gen.), 1780, 1814; 24. Timothy Parker (Capt.), 1784, 1791; 9. Josiah Walker, 1787, 1800; 2. Oliver Plimpton, 1791, 1812; 37. Stephen Harding (Maj.),1793, 1797; 3. Erasmus Babbitt, Jr., 1797, 1799; 2. Joshua Harding, 1789; 1. Thomas Babbitt (Dr.), 1799; 2. Thomas Upham, 1802, 1818; 4. John

Paine, 1806; 1. Gershom Plimpton, 1809, 1815; 15. David Wight, Jr., 1813; 1. Simeon Fiske (Capt.), 1813, 1815; 2. Edward Phillips (Col.), 1816, 1855; 50. Sylvester Watkins, 1817, 1824; 4. Simeon Burt, 1818; 1. George Davis, Esq., 1819, 1821; 3. Roswell Warner, 1819, 1847; 5. Hiram Wheelock (Col.), 1826; 1. Avery P. Taylor, 1827, 1870; 14. Gardner Watkins, 1832; 1. Pliny Freeman (Capt.), 1833, 1837; 5. David Wight (Col.), 1834, 1841; 2. Thomas Merrick, 1837; 1. Caleb Weld, Jr. (Capt.), 1840, 1849; 9. Benj. D. Hyde, Esq., 1849, 1856; 12. David Wight (Capt.), 1845, 1867; 7. David K. Porter, 1847; 1. William H. Sanders (Dr.), 1850; 1. Truman Charles, 1851, 1852; 3. Simeon A. Drake, 1851, 1861; 14. Nelson Bennett, 1853, 1870; 6. Simeon F. Marsh, 1853, 1883; 47. Alpheus Shumway, 1855; 2. Henry Haynes, Jr., 1862, 1877; 8. Emerson Johnson, 1863, 1865; 3. Henry E. Hitchcock, 1866, 1879; 2. Noah D. Ladd, 1868, 1888; 9. Edmond Nichols, 1869; 1. A. B. Chamberlain, 1875; 1. John A. Gould, 1878; 1. Clarence Fowler (Rev.), 1879; 1. Arthur C. Moore, 1881; 1. C. B. Carpenter, 1882; 1. Frank H. Gleason, 1883; 1. Henry D. Haynes, 1884, 1. H. C. Wales, 1885; 2.

Town Clerks.—Daniel Fiske (Dea.), 1738. '42; 4. Isaac Newell (Dea.), 1739; 1. Moses Marcy (Col.), 1743, '61; 18. Joshua Harding (Dea.); 1759, '82; 22. Joshua Harding, Jr., 1783, '90; 7. Isaac Clark, 1785; 1. David Wight, Jr., 1791, 1808; 13. Jacob Corey (Dr.), 1809, '19; 8. Samuel Freeman, 1815, '17; 3. Benj. Bullock, 1833, '34; 2. Alfred M. Merrick, 1835, '36; 2. Jacob Corey, Jr., 1837, '41; 5. Truman Charles, 1842, '43; 2. George V. Corey, 1844; 1. George Davis (Esq., Dea.), 1845, '49; 5. David K. Porter (Dea.), 1850, '59; 10. Samuel H. Hobbs, 1860, '62; 3. Henry Haynes (Dea.), 1863, '65; 3. Emery L. Bates, 1866, '69; 4. Amasa C. Morse, 1870, '79; 9. Henry D. Haynes, 1873; 1. Alvin B. Chamberlain, 1880, '88; 9.

Town Treasurers.—Daniel Fiske (Dea.), 1738, '42; 5. Moses Marcy (Col.), 1743, '50; 8. Joseph Baker (Dea.), 1751, '57; 5. George Watkins, 1753, '54; 2. Joshua Harding (Dea.), 1758, '61; 4. Ralph Wheelock (Capt.), 1762, '81; 20. Samuel Hobbs, 1782; 1. Moses Weld (Dea.), 1783, '86; 4. Erasmus Babbitt (Dr.), 1787, '89; 3. David Wight, Jr., 1792, '08; 17. Jacob Corey (Dr.), 1809, '19; 8. Simeon Fiske (Capt.), 1816, '17; 2. Simeon Burt, 1818; 1. David Wight (Col.), 1820 '34; 15. Alfred M. Merrick, 1835, '36; 2. Jacob Corey, Jr. (Dr.), 1831, '41; 5. Truman Charles, 1842, '44; 3. George Davis (Esq., Dea.), 1845, '49; 5. David K. Porter (Dea.), 1850, '59; 10. Samuel H. Hobbs, 1860, '61; 2. Elisha Southwick, 1862, '74; 13. Emery L. Bates, 1875, '85; 11. G. Norval Bacon, 1884, '88; 3.

Selectmen.—Daniel Fiske (Dea.), 1738, '78; 21. Moses Marcy (Col.), 1738, '73; 34. Henry Fiske (Lieut.), 1738, '80; 5. Isaac Newell (Dea.), 1739, '48; 3. Joseph Cheney, 1739, '71; 14. Rowland Taylor, 1740, '54; 6. Hezekiah Ward, 1740; 1. James Denison, 1740, '58; 17. Joseph Baker (Dea.), 1741, '59; 5. David Shumway, 1742, '68; 11. Moses Allen, 1743; 1. Edward Foster (Dea.), 1743, '44; 2. Nehemiah Allen, 1747, '49; 2. John Morse, 1747, '62; 12. Jonathan Perry, 1747; 1. John Harding, 1748, '54; 4. Ezekiel Upham (Capt.), 1750, '65; 6. Nathaniel Walker (Capt.), 1752, '74; 5. John Weld, 1755; 1. Aaron Allen, 1758, '80; 3. Samuel Freeman, 1759, '69; 7. Moses Weld (Dea.), 1760, '81; 18. Daniel Plimpton (Col.), 1760, '76; 4. Joshua Harding (Dea.), 1761, '89; 4. James Johnson (Ensign), 1761, '74; 10. Abijah Shumway, 1772; 1. John Holbrook, 1772, '87; 8. Erasmus Babbitt (Dr.), 1773; 1. John Tarbel, 1774; 1. Samuel Ellis, 1774, '89; 5. Daniel Faulkner, 1775, '76; 2. Ralph Wheelock (Capt.), 1777, '81; 5. Samuel Hamant (Capt.), 1777, '79; 3. David Wight, 1781; 1. Timothy Newell (Gen.), 1781, 1803; 9. Lemuel Sanders, 1781, '98; 5. Ebenezer Crafts (Col.), 1782, '84; 2. Jonathan Gould, 1782; 1. Eli Towne, 1782, '84; 3. Benjamin Freeman (Col.), 1782, '96; 8. Jacob Allen (Capt.), 1782, '90; 6. Henry Fiske, Jr. (Dea.), 1783, 1808; 10. John Boyden (Capt.), 1785, 1830; 4. Stephen Harding (Maj.), 1786, 1806; 9. Jonathan Phillips (Dea.), 1786; 1. John Salmon (Lieut.), 1787; 1. Isaac Upham, 1787, '94; 5. Josiah Walker, 1788, 1805; 15. "Jeddidiah" Marcy, 1790; 1. Simeon Fiske (Capt.), 1790, '92; 3. Simeon Allen, 1790; 1. David Richards, 1791, '94; 4. Abel Mason (Capt.), 1792, 1801; 5. Eleazer Hibbard (Dea.), 1795, '96; 2. Comfort Johnson, 1796, 1810; 5. Stephen Geroud (Capt.), 1796, '99; 4. Oliver Plimpton (Esq.), 1797, 1808; 10. Samuel Hobbs, 1797, 1809; 9. Samuel Hooker (Maj.), 1798; 1. Elijah Shumway, 1800; 1. David Fiske, 1800, '03; 4. John Holbrook, 1801; 1. Nathan Fiske, 1804; 1. Perez Walker, 1806, '17; 5. John Watson, 1807, '08; 2. Gershom Plimpton, 1809, '15; 7. John Phillips (Dea.), 1809, '17; 6. Jered Lamb, 1810, '12; 3. Jonathan P. Curtis, 1811, '37; 3. Sylvester Watkins (Capt.), 1811, '25; 12. John Plimpton (Lieut.), 1812; 1. John Taylor (Lieut.), 1813, '15; 3. Ebenezer Cutting, 1813, '15; 3. Oliver Hooker (Maj.), 1813, '15; 3. Jabez Harding, 1816, '17; 2. Stephen Newell, 1816; 1. David Wight (Col.), 1817, '42; 6. Penuel Belknap, 1818, '29; 4. Jonathan Lyon, 1818, '37; 6. Ephraim M. Lyon, 1818, '19; 2. Penuel Cheney, 1818, '19; 2. Edward Phillips (Col.), 1820, '36; 8. Amasa Child (Capt.), 1820, '22; 3. David K. Porter (Dea.), 1821, '23; 3. Peter Belknap (Capt.), 1821, '45; 7. Hezekiah Allen, 1823, '25; 3. William Dwight, Jr., 1823, '24; 2. James Johnson, 1823, '30; 3. Cyrus Merrick, 1824; 1. Abijah Prouty, 1824, '34; 2. Zenas Dunton, 1825, '26; 2. Daniel Fiske, Jr., 1825, '39; 4. Nathaniel Walker, 1826, '36; 3. Pliny Freeman, 1827, '35; 3. George Watkins, 1827, '28; 2. Richard Arnold, 1827, '28; 2. Philemon Shepard, 1827, '29; 3. Thomas Merrick, 1828, '40; 5. Samuel Hobbs, 1829, '45; 3. Jeptha Plimpton, 1830, '42; 3. Lemuel Hooker, 1831, '35; 5. Benjamin Bullock, 1831, '39; 5. Festus Wight, 1831; 1. Jacob Upham, 1832, '49; 3. Ziba Plimpton, 1833, '34; 2. Daniel Mason (Dr.), 1833, '34; 2. Simeon Allen, 1833; 1. Alpheus Wight, 1834; 1. Erasmus Holbrook (Gen.), 1834; 1. Caleb Weld, Jr., 1835, '46; 5. John Plimpton, 1835; 1. Hiel Nichols, 1835, '42; 2. Edward Richardson, 1836; 1. Lyman Morse, 1837, '43; 2. Chester Stone, 1838, '39; 2. John Fay, 1838, '39; 2. Jonah Gifford, 1840; 1. Prince Bracket, 1840, '44; 2. Cheney P. Sheddon, 1841; 1. Livingston Shumway, 1841, '51; 3. Simeon F. Marsh, 1841, '79; 6. Elisha Southwick, 1841, '65; 8. Benjamin D. Hyde, 1842, '56; 2. Simeon Hooker (Capt.), 1843, '44; 2. John Smith, 1843; 1. Liberty Allen, 1843, '55; 3. James M. Belknap, 1844, '48; 4. Dwight P. Johnson, 1844; 1. James Batchelor, 1844; 1. Freedom Nichols, 1845; 1. Charles G. Allen, 1846, '50; 3. Aretas Hooker, 1846, '47; 2. Simeon A. Drake, 1847, '48; 2. Liberty Nichols, 1848, '49; 2. Abiel D. Williams, 1848; 1. Henry Haynes, Jr., 1848, '85; 6. Lewis W. Marsh, 1849, '50; 2. Ethan Allen, 1849, '76; 9. David Wight (Capt.), 1850; 1. Jabez Harding, 1850, '72; 8. Linus L. Belknap, 1850; 1. William H. Sanders, 1851; 1. Estes Bond, 1851; 1. George Davis, Esq., 1852; 1. Eliakim Chamberlain, 1852, '65; 6. Dexter Nichols, 1852, '53; 2. John W. Draper, 1852, '69; 3. Amos Munroe, 1854; 1. Winthrop Nichols, 1854; 1. Francis V. Plimpton, 1854, '55; 2. Melville Snell, 1855, '57; 2. Chester Walker, 1855; 1. Avery P. Taylor, 1856, '58; 2. Linus Leonard, 1856; 1. Aaron Lyon, 1857; 1. Penuel Plimpton, 1859, 1869; 5. Nathaniel Upham, 1859, '78; 8. Emery L. Bates, 1862, '65; 4. Lorenzo Plimpton, 1862; 1. Edmund Nichols, 1866, '69; 3. Amasa C. Morse, 1867; 1. William Wight, 1868; 1. Noah D. Ladd, 1870, '88; 7. Thomas Talbot, 1870; 1. Samuel F. Bemis, 1870, '78; 2. Samuel M. Edgerton, 1873, '74; 2. Melvin Haynes, 1873; 1. Charles Anderson, 1874, '75; 2. Marvin Clark, 1875, '77; 3. Elias M. Gifford, 1876; 1. Henry W. Nichols, 1877, '80; 2. Charles H. Allen, 1877, '79; 3. William Whittemore, 1879; 1. William H. Shumway, 1880, '88; 4. Edward Nichols, 1881, '82; 2. P. S. Callahan, 1883, '87; 4. David B. Wight, 1883, '84; 2. Elihu W. Moffit, 1885, '86; 2. Charles V. Corey, 1885, '87; 3. George N. Bacon, 1887; 1. James Nolan, 1888; 1.

There were five selectmen elected annually until 1835; since then three members have constituted the board.

In reference to Representatives previous to 1771, particular record has not been found. It is believed that Moses Marcy, Esq. (Capt., Col.), served in that capacity anterior to that time. The dates given in the following list are the years in which the election occurred:

Daniel Fiske, 1771; Timothy Parker, 1775; Joshua Harding, Jr., 1787, '88; Josiah Walker, 1789–97, and 1800–02; Frederick Plimpton, 1798; Thomas Babbitt (Dr.), 1799; Thomas Upham, 1803, '04; Oliver Plimpton, 1805–07, David Wight, Jr., 1806, '13; Rev. Zenas L. Leonard, 1808–12; Gershom Plimpton, 1809–12; John Phillips, 1814–16; Samuel Freeman, 1816; Sylvester Watkins, 1817, '18, '20, and in 1825.[1] None sent 1819, '21 and '23. Cyrus Merrick, 1824; Amasa Child, 1826, '27; Penuel Belknap, 1829; James Johnson, 1830–32; Roswell Warner, 1831; Thomas Merrick, 1832; David Wight, 1833; Edward Phillips, 1822, '28, '33, '38; Jared Lamb, 1835; David K. Porter, 1835–55; Jonathan P. Curtis, 1836, '87; Lemuel Hooker, 1836, '39; Abijah Prouty, 1838; Cromwell Bullard, 1839; Caleb Weld, 1840; Nathaniel Walker, 1841; Benjamin D. Hyde, 1842; Hezekiah Allen, 1843; Prince Bracket, 1844 and 1849; Simeon Hooker, 1845; George V. Corey, 1846; Francis W. Emmons, 1847; Dwight P. Johnson, 1848; Emerson Johnson, 1850; Seneca Richardson, 1851; Jabez Harding,

[1] Not to attend unless so instructed by the town.

1852; Hiel Nichols, 1853; Simeon F. Marsh, 1854; Vincent B. Newland, 1856. From Twenty-fourth Worcester District.— Henry Haynes, 1858; James M. Belknap, 1860; Elisha Southwick, 1862; Emery L. Bates, 1864 and 1882. From Eighteenth District of Worcester County.—Amasa C. Morse, 1867; Rev. Martin L. Richardson, 1870; Noah D. Ladd, 1872; George T. Lincoln, 1874; Charles Fuller, 1875; Alvan B. Chamberlain, 1877; G. Norval Bacon, 1879; David B. Wight, 1884. From Fifth Worcester Representative District.—Henry D. Haynes, 1887.

Senators.—General Timothy Newell, also member of the Governor's Council; Hon. Emery L. Bates, 1874, Third Worcester District.

Population in 1765, 896; 1776, 1374; 1790, 1740; 1800, 1846; 1810, 1927. Territory and inhabitants taken to be a part of the new town of Southbridge in 1816. Sturbridge population in 1820, 1633; 1830, 1688; 1840, 2005; 1850, 2119; 1860, 2291; 1865, 1992; 1870, 2101; 1875, 2213.

Town appropriations for highways and bridges: 1739, £200 (old tenor), "ten shillings a day allowed for each man;" 1756, £20, or allowing 2*s.* per day; 1770, £150, allowing 3*s.* per day in June, or 2*s.* in September; 1800, $1,000, $1.00 a day in June, or 67 cents in September; 1820, $700; 1840, $600; 1870, $1,000; 1888, $3,300.

Schools: 1742, £20; 1756, £16; 1770, £40; 1777, £60 (L. M.); 1793, £120; 1810, $600; 1831, $800; 1860, $1,500; 1871, $3,500; 1888, $3,200.

Total appropriation: 1800, $2,300; 1820, $1,900; 1840, $3,600; 1860, $4,907.08; 1865, $15,588.94; 1870, $14,300; 1880, $13,580; 1888, $11,575.

The total valuation of the town in 1815 was $325,233, deducting that part taken for Southbridge, $83,783. Sturbridge valuation in 1816 was $241,450. In 1860, $815,850; in 1871, $992,547; 1888, $975,107. The town is now out of debt, and owning property valued at $33,612.

Thirty-five years after the incorporation of this new town the central valley was still, for the most part, wild, unoccupied land. Five hundred acres adjoining Sturbridge Common on the northeast and northwest sides, extending to the brow of Fisk Hill on the one hand, and to the fair grounds on the other, and northward to the "Old Pauper farm" and Mrs. Hamant's, was owned by Dr. Francis Borland, of Boston, and so remained for fifteen years afterwards. West of that, and southward, was one thousand acres of unoccupied land owned by Mr. William Brattle, of Cambridge, which was purchased in 1774 by Mr. David Wight.

Good roads had been made each way through this central valley, and in all other parts of the town highways had been constructed, all tending toward the meeting-house, or the "great road." Large and productive farms had been wrought from the wild land, and more than a hundred homesteads, many of them commodious and substantial, had been built.

Two hundred times had sympathizing neighbors gathered at the house of mourning. The story of hardship and privation is told by the records of mortality among women and children.

Of the seventy early settlers mentioned on a preceding page, ten only had passed away. These were: Adam Martin, Noah Mason, Solomon Rood, John Streeter, Rev. Caleb Rice, Deacon Isaac Newell, Nathaniel Bond, Samuel Freeman, George Watkins and Jonathan Mason. Most of the first settlers who, when young men, had organized the municipality, were still active in the affairs of the town.

Their early assumption of responsibilities without the presence and support of elder men, their practical and long experience in the affairs of social government, bred self-reliance and a positive and strong feeling repellant of all foreign intervention.

The spirit and the enlarged view taken here upon the affairs of the public in the time of the Revolution are abundantly shown by the following extracts from the records. At a meeting called by the selectmen "y^{e} 27th day June, 1774, to consider of some measures proper to be adopted for the safety and defence of the Province in this distressed condition by reason of several late Acts of the British Parliament." After solemn prayer to God for direction, they proceeded after this manner, the selectmen to preside in the meeting —Deacon Daniel Fisk, speaker. "After considerable debate . . ." it appeared to be the mind of the town, universally, "not to purchase anything which shall be imported from Great Britain after the time stipulated and agreed to." "After making some small alterations" in the Worcester and Berkshire covenants, both were at that time signed, "universally."

September 28, 1774, in accordance with an article in the warrant, the town chose "military officers for the companies, and for their movements," viz.: Daniel Plimpton was chosen major; Timothy Parker, Timothy Newell and Ebenezer Crafts were chosen captains. The same day the town voted to provide four half-barrels of powder, five hundred pounds of lead and five hundred flints. Also a committee of seven, viz.: Ensign James Johnson, Captain Joseph Cheney, Lieutenant Henry Fiske, Mr. Hinsdale Clark, Captain Ezekiel Upham, Mr. Stephen Gerould and John Marsh, were appointed to make provision for the men in case they should be called into the service, and a vote was passed "by a great majority," to pay the men, if called, for the service rendered.

Voted, November 17, 1774, unanimously, "that the constibles of this town pay the Province tax to Henry Gardner, Esq., of Stowe; and his receipt therefor shall ever hereafter opperate as an effectual discharge to them for the same."

The November meeting was adjourned "to Monday, December 1st, at ten o'clock A. M., with the request that all the men in town, from sixteen years old and upwards, then assemble at the meeting-house with arms and ammunition, in order for reviewing." The old men formed a company of "alarm men." The young men were organized in companies called "minute men." They were marshaled and marched into the meeting-house in military order. After ap-

propriate exercises, conducted by Rev. Joshua Paine, business was resumed.

The alarm men, to the number of one hundred and three, some sixty and some over seventy years old, were, many of them, found to be deficient in equipments. The clerks of the other companies reported most of them present and generally equipped, or would be soon. Captain Crafts reported his company of cavalry well equipped and prepared. A few men belonging to the alarm list, who did not make their appearance at the review, were visited by a committee, who took their names and an exact account of their preparations. Report being made, the town voted: "It is the sense of this meeting that every man in town able to furnish himself with arms and ammunition do forthwith fix himself complete; and be it further recommended in the strongest terms to all in town unprepared to defend our just rights and privileges, and all that is dear to us, in this time of great danger and distress, to exert themselves to the utmost to be prepared immediately."

A committee of one from each school district was appointed to obtain signatures to the "Articles of Association," and a pledge for the strict observance of the laws and resolves of Congress.

Agreeable to the advice of the General Congress, the town chose, January 20, 1775, the following Committee of Inspection: Deacon Daniel Fiske, Deacon Joshua Harding, William McKinstry, Major Daniel Plimpton, Aaron Allen, Benjamin Freeman and Deacon Moses Weld.

Deacon Daniel Fiske, Major Timothy Newell and Colonel Daniel Plimpton were appointed a committee to prepare instructions for Captain Timothy Parker, the delegate to the Provincial Congress, which were presented to the town and adopted May 29, 1775. The first article was:

"1st. Respecting civil government (in case the petition or address to his majesty should be rejected), we think it highly necessary to assume government by and with the advice of our sister colonies as soon as may be."

At a special town-meeting, June 27, 1776 (the selectmen presiding), "being duely warned to know the minds of the town respecting Independence, &c.; after the resolve of the late house being read, & some debate thereon: The question was put, whether, should the Honorable Congress, for the safety of the colonies, declare them Independent of the Kingdom of Great Britaln, the inhabitants of this town will solemnly engage with their Lives & Fortunes to support them in the measure:—past in the affirmative by a great majority."[1]

For the year 1776 the Committee of Inspection and Safety was: Major Timothy Newell, Captain Ralph Wheelock, Benjamin Freeman, John Salmon, Isaac Stacy, William McKinstry and Nathaniel Walker.

[1] Town Records.

the present House of Representatives, Council, &c., should form and ratify a plan of government as proposed in a late Hand Bill: & it passed in the negative without one dissentant."

A committee was chosen to "draw up some reasons for their so voting;" viz., Dea. Daniel Fiske, Dea. Moses Weld, Col. Daniel Plimpton, Mr. John Holbrook and Lieut. Henry Fiske.

At an adjourned meeting, the first Monday in November, the committee laid before the town their report, from which the following is quoted: "As the end of government is the happiness of the people, so the sole right and power of forming and establishing a plan thereof is in the people; consequently, we think it unadvisable and irrational to consent that any set of men should form and ratify a constitution of government for us, before we know what it is. . . ." "Also, we look upon the present House of Representatives to be a very unequal representation of the State." The reasons being repeatedly and distinctly read, were approved by a vote of the town.

Committee on Inspection and Safety (1777): Major Timothy Newell, Col. Daniel Plimpton, William McKinstry, Capt. Abel Mason, Lieut. Benjamin Freeman, Lieut. John Salmon, Mr. Job Hamant.

"*Whereas*, the Continental Congress have formed and proposed to the Legislative Body of this State articles of Confederation and perpetual union between the States, therefore, voted: To instruct our representatives to use their influence that the confederation and perpetual union be ratified, & it past in the affirmative. January 26th, 1778."

The town had now taken its stand for independence and a "perpetual union between the United States,"—a position which has, first and last, cost so much in the blood and treasure of her citizens.

Colonel Daniel Plimpton died in June, 1777, and Deacon Daniel Fiske in March, 1778; and with them passed away something, it may be, of the "Spirit of '76," in this town. The enthusiasm and energy of Colonel Plimpton, the sterling character, superior education and easy command of language of Deacon Fiske, had done much to mold the sentiment and action of the town. Also died, October 9, 1777, "Moses Marcy, Esq.," who had in his day been one of the principal men of the town—to whom a generation of the inhabitants had looked for guidance, but of whom our records are silent after the opening of the Revolutionary struggle.

The town's financial efforts began 1775, April 27th, when the town, having ordered the constables having money in their hands, to pay it to Henry Gardner, Esq., of Stowe, appointed Deacon Daniel Fiske, Deacon Moses Weld and Major Daniel Plimpton a committee to see what money was in the hands of the constables and "to stir them up to their duty."

The town having voted in 1774 to pay the minutemen if called into service, a committee was chosen in January, 1777, consisting of Colonel Daniel Plimpton,

At a special town-meeting, October 14, 1776, the question was put: "Whether the town consent that Mr. Jonathan Gould, Ensign James Johnson, Mr. Job Hamant, Captain Ralph Wheelock, Captain Adam Martin and Captain Isaac Stacy, to "adjust or estimate the past services of Sturbridge soldiers in the present war, and to form some plan for the town to act or proceed."

The bounty was fixed at thirty pounds for each enlisted man for three years' service, and so remained through the years '77 and '78. In '79 one hundred pounds each was voted to nine months' men, forty pounds to be paid before they started. February, 1781, the town "voted to pay three hundred hard dollars to each man agreeing to serve three years," to pay one hundred at the time of marching, the remainder at the end of one and two years.

Clothing for the town's proportion of soldiers in the army was obtained mainly by voluntary contribution. The receipts from that source being short of the requirements in 1778, April 14th, the selectmen were directed by vote of the town to purchase shirts, shoes and stockings, which they did, and brought in their bill in May to the amount of £217 18*s.* 2*d.*

A large quantity of beef was furnished for the army, and when unable in 1780 to procure the amount called for (fifteen thousand nine hundred pounds), the town borrowed money and paid that instead to Colonel Davis' agent.

Names of soldiers of the Revolution from this town:

Abraham Allen, Caleb Allen, Eliphalet Allen, Joel Barrett, Justus Boyden, Amos Boyden, John Boyden, Thomas Boyden (also French War of '55), Nathan Brown, Asa Bullard, Asa Coburn, Pheneas Coburn, Zachariah Coburn, Edward Coburn, Henry Clark, Henry Clark, Jr., Rufus Clark, Lemuel Clark, Asahel Clark, Jepthah Clark, Elijah Carpenter (also French War of '55), Jacob Cleaveland, David Corey, John Corey, Joseph Cheney, Ebenezer Crafts, John Congdon, Stephen Draper, Benjamin Dix, Silas Dunton, John Dunton, James Dyer, Thomas Dyer, Robert Edwards, Cyrus Fay, Simeon Fiske, Nathan Fiske, Joshua Fiske, Benjamin Felton (also War of '55), Walter Freeman, John Goss, Abel Gunn, Joshua Hardiug, Hinsdale Hamant, Eleazer Howard (also War of '55), Benjamin Hobbs, John Holbrook, Benjamin Humphrey, Abijah Hyde, Joshua Hyde, Benjamin Hyde, John Hyde, Othniel Hyde, Samuel Hyde, James Johnson (also War of '55), Comfort Johnson, Thomas Janes, Marvel Jackson, Joshua Gerrold, William Leech, Abel Mason (also War of '55), Simeon Mason, Joshua Mason, Calvin Marsh, Silas Marsh, Duty Marsh, Aaron Marsh, Elijah Marcy, Adam Martin, Aaron Martin, Moses Martin, Ithamar Merrifield, Joseph Mills, Asa Morse, Samuel Morse, —— Morse, Daniel Morse, Jeremy Morse, Enos Morse, Timothy Newell, Samuel Newell, Stephen Newell, Timothy Parker, John Phillips, Ebenezer Philips, Elijah Plimpton, Elias Plimpton, Daniel Plimpton, Jr., John Plimpton, Oliver Plimpton, Moses Plimpton, Primus (colored man), Ichabod Robbins, Eli Robbins, Oliver Robbins, Nathan Rice, Jesse Sabin, Timothy Smith, Nathan Smith, Moses Smith, Nahum Smith, John Salmon, Joseph Shaw, Samuel Shumway, Abijah Shumway, Elijah Shumway, Mark Stacy, Amos Scott, William Simpson, Joseph Towne, Parmenas Thayer (was three years under Gen. Wayne in the Indian War of 1791), Isaac Upham, Jonathan Upham, Nathaniel Walker (also War of '55), Josiah Walker, Benjamin Walker, Obed Walker, Pheneas Walker, Isaac Warner, George Watkins, Thomas Wakefield, Mr. Welch, Charles West, Dennison Wheelock, Ralph Wheelock, Thomas Young, John Taylor.

The foregoing is the list collected by George Davis, Esq., and is found in his historical sketch of this town. The following names have been found by the writer upon our town records, and State Archives:

Abner Allen, Jacob Allen, Joseph Dunton, Benjamin Freeman Amos Gleason, Samuel Glover, Josiah Hicks, Asa Homer, Syriel Leech, Isaac Newell, Rev. Joshua Paine (chaplain), Josiah Partridge, Daniel Plimpton (also War of '55), Abner Plimpton, Samuel Richardson, Thomas Simpson.

We have here only the names of survivors, a few of whom moved into this town after the war. The Rev. Joseph S. Clark states, in his centennial address upon the history of this town, July 4, 1838, "that he had obtained the names of two hundred and thirty-nine men from this town that served in that war. Among this number was one colonel, one major, eight captains, eight lieutenants and two ensigns; besides, the Rev. Joshua Paine officiated two months as chaplain."

WAR OF 1812–15.—At a town-meeting in 1812, November 2d, on the question, "To see if the town will grant any additional pay to soldiers doing duty in defense of our country:" "Voted to pass the article by," is the only record upon our town's books referring to that war. It proves that Sturbridge men were at that time "doing duty in defence of our country." Their names, for the most part, are unknown. In 1840 there is mention upon our records of Levi Simmons having served in the War of 1812. In an old account-book kept by a trader of that period, an article of charge against Charles Coburn is written across "Settled by death in the Army." A trace of the foundation of a small house and a lilac bush mark the spot of Charles Coburn's humble home. He was a son of Edward Coburn, whose name is on the Revolutionary list.

The widows of Tilly Woodward and Captain Asa Fisk are drawing pensions for their husband's services in the War of 1812.

Captain Benjamin Bullock, a sea captain, whose home was on the site now occupied by the residence of the writer, was captured by a British armed vessel in 1812, he being on the route home from the East Indies in command of a vessel in the merchant service. He was subsequently exchanged and immediately entered the service of the United States and returned his compliments with much vigor and success. He was wounded in an engagement with the enemy, from the effects of which he died soon after reaching home.

WAR OF THE REBELLION.—The efforts of the town to aid and encourage men to enlist is about all that is found upon the records having reference to the war. From time to time money was raised to carry out the intention of all the acts of the Legislature relative to aiding the families, or those dependent on the volunteers on duty; also for the support of the widows and children of those that died while in the service. A bounty of one hundred dollars was offered by the town in 1862, August 28th, to those who volunteered and were mustered under the "Order of the President for a draft of three hundred thousand men." A bounty of one hundred and twenty-five dollars for volunteers was offered in 1864, May 31st. The real war history of this town, as well as all over the land, was

written in the hearts of brave men and loyal women — legible now only here and there—soon to be entirely obliterated.

On the occasion of choosing Presidential electors and State officers, November 8, 1864, there came into the town hall Dea. John Phillips, who was then one hundred and four years, four months and nine days old. He had been a soldier in the Revolutionary War, had served three terms as Representative in the State Legislature, and had frequently held other office in town affairs. He was a man of large frame, and a long, strong and intelligent physiognomy. A ticket of each of the great parties of that time was held in front of him, and he was asked to designate which he would deposit in the ballot-box. He said, in a voice audible throughout the hall, "I wish to vote for Abraham Lincoln." After that he requested that all the soldiers who had been in the service, who were present, should place themselves in a row in front of him, and then that each man be introduced. Thus comrades of the two great wars met and shook hands. He requested to be borne to his carriage by soldiers —*his comrades*—and the writer was one of the four selected to have that honor.

At the time the town preserved no list of Sturbridge soldiers in the war, and the one here presented is the result of much labor, yet may not be complete. They are as follows:

12*th Infantry.*—William L. Allen.

13*th Infantry.*—Charles A. Phillips.

15*th Infantry.*—Emery F. Baily, William L. Blood, killed at Antietam, September 17, '62; Abram Benjamin, William Carter, William H. Clark, died of wounds, October 1, '62, at Antietam, Md.; Lucian G. Lamb, Alexander Oakes, Charles M. Plummer, Alfred L. Russell, killed Sept. 17, '62, at Antietam; Charles E. Stone.

17*th Infantry.*—John B. Blodget, died Feb. 25, '65, at Newbern, N. C.; Henry Pepin, Albert Remington, Ezra Remington, Charles M. Whittemore, died April 25, '65, at Raleigh, N. C.; Simeon Young, his second enlistment.

19*th Infantry.*—Walter A. Learned, Arthur L. Walker, died Jan. 15, '65, at Andersonville Prison-pen, Ga.

21*st Infantry.*—George L. Bracket served three years, then re-enlisted; George Burr, John Crosby, re-enlisted; Curtis H. Dodge, Henry S. Edgerton, William H. Macomber, Ferdinand Rogers.

22*d Infantry.*—James Brigham, died of wounds, May 15, '64, at Laurel Hill, Va.; Jerome D. Childs, John B. Cooper, died July 18, '62, at Harrison's Landing, Va.; Edmund Mason, Henry G. Miller, John F. Moore, died of wounds, July —, '63; John Newton, Amasa Phetteplace, Isaac G. Plimpton, died of wounds, July 4, '62, at Malvern Hill, Va.; John A. Plimpton, Nathan L. Stone, killed June 27, '62, at Gaines' Mills, Va.; Ransom W. Towne, Jefferson Wellington, David Wilson, Alvi R. Woodward, Simeon Young.

25*th Infantry.*—George Burr, second enlistment; John Burns, Lewis W. Benson, Alfred Carpenter, Maurice Doran, Nathan E. Keash, William J. Stone, died of wounds, June 27, '64, at Washington, D. C.; Robert Young.

27*th Infantry.*—J. Arthur Johnson.

28*th Infantry.*—James King.

31*st Infantry.*—Thomas O'Harra, died Oct. 6, '62, at Jacksonville, La.

34th *Infantry.*—Waldo J. Allen, died Mar. 26, '65, at Sturbridge; George A. Blood, Michael Cleary, Asa F. Crosby, killed Sept. 19, '64, at Winchester, Va.; Patrick Gavin, died Aug. 27, '64, at Andersonville Prison-pen, Ga.; John Hilton, James Hurst, William King,[1] William W. Lombard, John Martin, Darius Moon, James Moon, Simeon G. Newton, died Oct. 7, '63, at Webster, Mass.; Richard Shannock, died of wounds, Nov. 30, '64, at Middletown, Va.; James Shepard.

40*th Infantry.*—Stephen Andrews, Francis A Cooper.

42*d Infantry.*—Albert H. Edgerton, Charles T. Fowler, Frank H. Gleason, second enlistment; Mark Heathcote, William Heathcote, James Nolan, Theodore Snell, John Stone, Albert L. Sykes, Levins R. Wight, Nelson Wright, died June 5, '63, at New Orleans, La.; George Wright.

45*th Infantry* —George P. Ladd.

51*st Infantry.*—Salem T. Adams, Albert Back, Levi B. Chase,[1] John Cobley, Frank H. Gleason, John P. Haynes, Henry E. Hitchcock, Everett C. Hooker, Lothrop L. Hooker, William H. Hooker, Edward E. Jaynes, John F. Kebler, Andrew J. Lee, Henry H. Lincoln, Franklin P. Lumbard, William D. Marsh, Albert Moon, Harlan L. Pepper, Levi W. Richards,[1] Henry H. Scarlborough,[1] Chester Scarborough,[1] Melvin Shepard,[1] Joseph S. Spencer, Edwin R. Spencer, Homer Smith, Merrick L. Streeter,[1] Reuben Walker, Harrison Wells, Henry H. Wells, Daniel W. Wight,[1] Delos Withey.

56*th Infantry.*—Andrew H. Barrett, Charles H. Brown, killed May 31, 1864, Cold Harbor, Va.; J. Arthur Johnson, second enlistment, died May 13, 1865, at Spottsylvania, Va., and his name is given to Post No. 173, Department Massachusetts, G. A. R.; William D. Marsh, second enlistment, died July 14, 1864, at Sturbridge; Homer Smith, second enlistment, killed May 24, 1864, at North Anna River, Va.

57*th Infantry.*—George C. McMaster, died in the service.

60*th Infantry.*—John M. Chick.

61*st Infantry* —Frank H. Gleason, third enlistment.

3*d Battalion Riflemen.*—Elias M. Gifford, Jr.

4*th Cavalry.*—Merrick Clark, George L. Marsh.

Veteran Reserve Corps.—William Amsden, Charles W. Smith.

11*th United States Colored Heavy Artillery.*—Abram B. Jackson.

23*d United States Colored Troops.*—Hiram H. Ransom, fell before Petersburg.

2*d Heavy Artillery.*—Albert H. Bump, Arthur M. Bullard, Alvin B. Chamberlain,[1] John Cobley, second enlistment; Edwin N. Draper, James L. Groves,[1] second enlistment; Lothrop L. Hooker, second enlistment; Frederick Holmes, William H. Levalley, Elbridge G. Perry, Samuel A. Shumway, Addison P. Smith, Augustine Snell.

Five of these men, of the Second Heavy Artillery, some way became credited to Charlton. It is but justice to say that they intended to serve for their native town of Sturbridge, where three of them still reside.

The following are the names of those who were at that time inhabitants of Sturbridge, and who enlisted for other towns:

1*st Battalion, Heavy Artillery.*—Addison C. Jackson, William T. Lamb, Levi W. Richards[1] (second enlistment), enlisted for Worcester.

4*th Heavy Artillery.*—George Remington for Southbridge, Samuel L. Thomson[1] and Emerson D. Vinton[1] for Worcester.

1*st Cavalry.*—Loren W. Johnson, Alphonso F. Childs, died August 20, 1864, at Andersonville prison-pen, Ga.; William S. Fuller, died January 10, 1863, at Annapolis, Md.; Amasa C. Morse, Ebenezer Smith and Farnum Southwick enlisted for Springfield.

4*th Cavalry.*—George P. Kendrick, George N. Stone[1] and James Stone enlisted for Boston.

34*th Infantry.*—Julius A. Parkhurst for Southbridge.

45*th Infantry.*—William P. Plimpton for Southbridge.

The following moved into this town soon after the war, and have remained until the present time, viz.:

Orsamus Kenfield[1] (34th Inf.), from Brimfield; S. Dana Merrill[1] (23d Inf., Maine); William H. H. Ormsby[1] and Ezekiel M. Cooper[1] (15th Inf.), from Brookfield; Andrew B. Fletcher (36th Inf.), from Charlton; Edward Hazzleburst[1] and Jeremiah J. Shepard,[1] from Rhode Island; Charles Vickers[1] and John Day,[1] from Connecticut; W. L. D. Lombard.[1]

Other resident members of Post 173 are:

W. E. Maynard, Maurice Cogan, Jerome Carto, Joseph L. Ballou, Joseph Kenworthy, in Sturbridge; B. C. Bennett, N. Alexander, W. Lill B. W. Charles, E. H. Davenport, E. W. Carder, A. N. Moulton an James Scarborough reside beyond the border of the town, in Brimfiel and Holland.

[1] Members of J. Arthur Johnson Post, No. 173, Department Mass., G A, R.; Commander (1888), W. H. H. Ormsby.

In 1871 the town erected a monument of granite upon the Centre Common, and inscribed thereon the names of those Sturbridge soldiers who did not survive the war.

RELIGIOUS SOCIETIES, CHURCHES AND MINISTERS.—A Congregational Church was organized in 1736, Wednesday, September 29th, consisting of fourteen male members, viz.: Rev. Caleb Rice, Henry Fiske, Ezekiel Upham, Joséph Baker, Joseph Cheney, Ebenezer Stearns, Joseph Allen, George Watkins, Solomon Rood, Daniel Fiske, Josiah Perry, Jonathan Fosket, Moses Allen, Daniel Thurston.

The same day Mr. Caleb Rice, a native of Hingham and a graduate of Harvard University, was ordained to the work of the ministry. As first pastor he became one of the associate proprietors, owning one-fiftieth part of the township. He died in 1759, September 2d, on a Sabbath day. Fifteen persons separated near the close of his ministry and established a Baptist Church. About one hundred members remained in his church.

Mr. Joshua Paine, a native of Pomfret, Conn., and a graduate of Yale College, was next called to minister to this church. He was ordained here in 1761, June 17th. To accommodate the multitude expected on this occasion a platform was erected on the Common at the foot of the hill, east of the present meeting-house, and the interesting ceremony there performed where all could see. Rev. Joshua Paine died in 1799, December 28th, and the funeral took place the first day of the year and century of 1800. By precept and example he nobly sustained the people in their struggle for independence.

A new meeting-house was built in 1784, on a site about ten rods northeastward of the old house, but was not completed and dedicated until the autumn of 1787.

The successor of Mr. Paine was Mr. Otis Lane, of Rowley, a graduate of Harvard University. A colony of twenty were dismissed from this society in 1801 to form a church in the Poll parish, now Southbridge. Mr. Lane was dismissed in 1819, February 24th, and was succeeded by Rev. Alvin Bond, a native of Sutton, and a graduate of Brown University. He was ordained in 1819, November 30th, and served a twelve years' pastorate, during which Sabbath-schools and Bible-classes were established here, and one hundred and twenty-three members were added to the church; also a temperance society was formed.

Rev. Joseph S. Clark, of Plymouth, a graduate of Amherst College, was ordained pastor in 1831, and remained seven years. With his ministry commenced the voluntary method of supporting religious worship by subscription, in this town. During Mr. Clarke's pastorate 203 members were added by profession, and 56 by letter. The whole number of members was 335. In the same period this church and society contributed for objects of Christian charity $4,000, besides aiding several young men in preparing for the ministry. The interior of the meeting-house was remodeled in 1835, giving more seating capacity than the old-fashioned pews.

The following are the pastors since 1838: 6. Rev. David R. Austin, 1839–51; 7. Rev. Hubbard Beebe, 1852–54; 8. Rev. Sumner G. Clapp, 1856–62; 9. Rev. Marshall B. Angier, 1863–67; 10. Rev. Martin L. Richardson began his labors here in 1867, October 20th, and, rounding out his twenty-one years' service, resigned in 1888, October 20th, much to the regret of his people.

Names of those who have served as deacons: Daniel Fiske, elected 1736; Ebenezer Stearns, 1736; Isaac Newell, 1741; Joseph Baker, 1747; Edward Foster, 1749; Moses Weld; Joshua Harding; Job Hamant; Rowland Clark; Elezear Hebbard; Joel Plimpton, 1807; Daniel Plimpton, 1808; Zenas Dunton, 1826; George Davis, 1826; Ephraim M. Lyon; James Chapin, 1832; Perley Allen, 1846–63; David K. Porter, 1850–53; Melville Snell, 1853–66; Henry Haynes, 1853, still in office; Charles Fuller, 1863–86; Henry E. Hitchcock, 1863–73; Isaac Johnson, 1869–74; William G. Reed, M.D., 1886.

BAPTISTS.—In 1847 a new church was formed in Sturbridge, and Mr. John Blunt was ordained as its pastor. Henry Fiske and David Morse were the ruling elders—the only persons ever appointed to that office in this body. Two years later thirteen of their number were baptized by Rev. Ebenezer Moulton, pastor of the Baptist Church at South Brimfield. Soon afterwards upwards of sixty were baptized, including their pastor, Mr. Blunt, and at that time this church is supposed to have fully conformed to the Baptist faith. Records of this society prior to 1780 are wanting. In 1784 a meeting-house was erected on the height of Fiske Hill, upon a piece of land given to the society for the purpose by Henry Fiske. This house and location was used for the meetings of the Baptist Society for nearly half a century.

Among the twelve who were added to the membership of the church in 1786 was John Phillips, who presided at a meeting in the Baptist meeting-house at Fiskdale, in 1860, June 29th, on the occasion of the celebration of his one hundredth birthday. He died in 1864, aged one hundred and four years.

The society built a new meeting-house, which was finished and dedicated in 1833, January 8th, on the site now occupied by No. 1 School-house.

After occupying that spot five years, this house was removed and located on ground given to the society for that purpose, by the Hon. Josiah J. Fiske, at Fiskdale.

Pastors.—Rev. John Blunt, 1747; Rev. Jordon Dodge, 1784–88; Rev. Lenas L. Leonard, 1796–1832; Rev. Addison Parker, 1833–35; Rev. Orrin O. Stearns, 1837–39; Rev. Joel Kenney, 1840–43; Rev. J. Woodbury, 1844–47; Rev. Thomas Driver, 1847–49; Rev. Geo. E. Dorrance, 1850–52; Rev. Addison Parker, 1852–55; Rev. Geo. W. Preston, 1855–58; Rev. An-

drew Read, 1858–62; Rev. J. M. Chick, 1862–64; Rev. William Reed, 1866–67; Rev. J. T. Farrar, 1867–69; Rev. C. A. Cook, 1869–70; Rev. C. W. Potter, 1871–73; Rev. T. M. Merriam, 1873–76; Rev. J. H. Gannett, 1876–80; Rev. S. M. Reed, 1885.

A revival occurred in the early part of the ministry of the Rev. S. M. Reed, resulting in the addition of some thirty new members to the church, including two or three admitted by letter.

Persons named in the following list have served as deacons of this Baptist Church: Daniel Fiske, John Newell, Jonathan Phillips, Henry Fiske, John Phillips, Jonathan Lyon, Moses Fiske, Prince Bracket, Rufus F. Brooks, Edward Richardson, P. L. Goodell, Jonah Gifford, D. W. Harris, N. Underwood, E. T. Brooks, H. A. Chamberlain. Deacons Goodell and Chamberlain hold office at this time, 1888.

First Unitarian.—This society was organized in 1864, June 3d. The application to E. L. Bates, Esq., justice of the peace, requesting him to issue his warrant to call a meeting for the organization of a religious society for the support of liberal preaching, was signed by Eliakim Adams, Liberty Allen, Nathaniel Upham, Wm. H. Upham, Bowers S. Chace, Levins Hooker, E. W. Moffitt and Wm. H. Skerry. The society started with about forty male members. The next year, 1865, the invitation of the National Convention of Unitarian Churches was accepted, and Emerson Johnson and Bowers S. Chace were chosen delegates to attend the convention with the pastor. A tasty and comfortable house of worship was built in 1872, and dedicated December 11th. A parish committee is chosen annually, and the following persons have served in that office: Nathl. Upham, Chas. N. Allen, Eliakim Adams, Saml. M. Edgerton, Ethan Allen, Farnum Southwick, Bowers S. Chace, Wm. H. Skerry, A. C. Morse, H. W. Nichols, Henry Weld, Edw. Nichols, Wm. H. Upham, Emery L. Bates, Chas. V. Corey, G. Norval Bacon, Jonas Rice, Alvin B. Chamberlain.

Pastors.—Rev. John A. Buckingham, 1864–66; Rev. Henry F. Edes, 1866–68; Rev. Charles T. Irish, 1870–71; Rev. John A. Buckingham, 1871–73; Rev. Clarence Fowler, 1874–80; Rev. B. V. Stevenson, 1880–82; Rev. Frank McGuire, 1882–88; Rev. Ephraim A. Reed, September, 1888.

Protestant Episcopal.—Was organized as a parish under the name of Grace Church. The old Union Hall was fitted up and used for a chapel.

Rectors. — Rev. Samuel Spear, 1870–72; Rev. Levi Boyer, 1873–76; Rev. De Estaing Jennings, 1877, and continued several years; then the services were dropped.

Catholic.—The Fiskdale mission was instituted as early as 1872. The Irish and the Canadian-French have always had their separate meetings, and while a mission, they were attended by the priests of their respected nationalities, who had charge at Southbridge. Two very tasty and well constructed churches were erected in 1885, and in 1886, September 1st, the Fiskdale Mission was made a distinct parish. The Reverend Father Jules Gratton was placed in charge as priest. The census of the parish in 1886, was: Irish, 45 families and 175 souls; French, 110 families and 610 souls.

Educational.—Rev. Joseph S. Clark, in his centennial address of 1838, says: "The first step towards the advancement of common education in this place was the establishment of four schools at the average expense of £5 per school. The names of the four teachers who had the honor of laying the foundation of learning among us (peace to their venerated dust!) were Margaret Manning, Mary Hoar, the wife of Jeremiah Streeter, and the wife of John Stacey, 1742.

Five school districts were formed in 1761, and referring to that, Mr. Clark says, such indeed, is the present law of the Commonwealth, but the plan was devised and adopted by the citizens of this town long before our law-makers had suggested such a thought.

The School Committee of 1825, Rev. Z. L. Leonard, chairman, made a report of the schools—the first on record in this town. In that report it is found that "The whole number that have attended school the winter past is five hundred and sixty, of which a respectable number in each school have attended to the higher branches of study." There were twelve school districts. The age of attendance at common schools was at that time extended at option to twenty years, more or less.

From the 1888 printed report of the School Committee of this town, we find that "the school year of thirty-three weeks was divided into a spring, fall and winter term, of ten, eleven and twelve weeks, respectively."

Number of public day-schools	14
Number of persons in the town May 1, 1877, between five and fifteen years of age	345
Number of different pupils of all ages in all the public schools during the school year	371
Whole number of teachers employed during the year	20
Average wages of teachers per month	$27.75

H. E. Hitchcock, A. B. Chamberlain, D. R. Wight, School Committee of Sturbridge, March 17, 1888.

Public Library.—In 1873 "The Quinebaug Library Association" gave their library of between four and five hundred volumes to the town, "on condition that the town appropriate not less than $100 annually for its increase and support and proper accommodation for the public." The town accepted the gift and the conditions, and the public library has been well cared for and increased to over 3000 volumes. It is located in the upper story of the Centre School-house building. In the year ending March 1, 1888, the number of persons drawing books was 352. Total number of books drawn, 6041.

Industrial.—The first saw-mill in the town was built in 1732 by William Ward, Esq., of Southborough, upon Hobb's Brook, not far above the crossing of the

Fiske Hill road. In 1795 the number of saw-mills upon the Quinebaug and tributaries had increased to fifteen. There were nine in 1837, and at the present time six. A large share of the sawing is now done by portable steam mills. Nehemiah Allen's corn-mill is mentioned upon our records in 1769, and may have been in operation at an earlier date. It was located near where the large dam owned by the Fiskdale Mills has been constructed. Moses Marcy's corn-mill, which accommodated the early settlers, was over the line in Oxford (Charlton after 1754). In 1795 there were four grist-mills in the town; in 1737, three; and at the present time, one—that owned by Mr. George Wight, which accommodates this and the borders of adjoining towns.

Three mills for the manufacture of cotton batting were operated in this town in 1837; at the present time, none.

A tannery was established near the site of the first saw-mill by Mr. Samuel Hobbs, a native of Weston, and a member of "The Boston Tea Party," who came to this town about 1780. Samuel Hobbs & Sons, Josiah Hobbs, P. B. & J. B. Johnson, Southwick & Tyler, and Nelson Bennett have successively owned and operated the tannery. The business has been dropped in that locality and the buildings are taken away.

The "Old Tannery," at Fiskdale, was established not far from the year 1780 by Abner Allen, who carried on the business about fifty years. Mr. Liberty Allen (living 1888), grandson of Abner, succeeded to the business in 1830, and has carried it on fifty-eight years. Henry Allen, father of Liberty, was a pump-maker.

Carriage and Harness Shop at the Centre Village.—Mr. Henry Haynes, then called junior, started in the business here in March, 1834. Mr. Melvin Haynes, a brother, was admitted a partner in 1844. H. & M. Haynes continued until 1861, when Melvin sold his interest to his nephews, Henry D. and John P., and the firm took the name of H. Haynes & Sons. John P. sold his interest in 1865, and the final letter s was taken off the firm-name. The number of hands employed has varied from one, at first, to fifteen or sixteen at the highest. Since carriage-making, in later years, has gone into larger concerns, H. Haynes & Son have reduced their force, and confine their attention to orders and repairing. The senior member of the firm, who is still active, has been in the business fifty-four years.

Boot and Shoe Business at the Centre.—Elisha Southwick, having obtained permission, and a lease of the ground from the town, built a shoe-shop on the Common in 1850, and went into business. In 1859 he leased to Henry Merrick and Charles N. Allen, but soon afterwards bought in, and when Mr. Merrick and Mr. Allen left the firm, continued the business alone until he gave it up to his son-in-law, Mr. A. C. Morse, about 1868. Mr. Hiram Carter bought an interest in 1869, and the firm of Morse & Carter did a business of about $120,000 a year. Mr. Carter withdrew, and Mr. Morse went on alone until the business was closed, about 1877.

Mr. Charles N. Allen, after leaving the firm of Southwick & Allen, did a large business on the opposite side of the Common. He operated for the greater part of the time between 1865 and 1875, usually doing a business of $100,000 a year.

At Fiskdale.—Mr. Emery L. Bates, in connection with Mr. Judson Smith, began in the boot and shoe business about 1846. The firm of Sessions Bates & Co. was formed about 1850, and did a business which, at the maximum, amounted to over $300,000 a year. The firm dissolved before the war, and Mr. Bates continued the business here. His trade was largely Southern, and the cloud of the Rebellion covered about $80,000 of his assets, of which he finally realized only about $10,000. Mr. Bates then discontinued the manufacture of boots and shoes, and organized the Snell Manufacturing Company, as described in another place.

The Ladd's Shop Privilege.—Mr. David K. Porter, in the spring of 1836, built a dam across the ancient "Sugar Brook," exactly where the "Old Springfield Road," which was opened in 1635–38, had passed, and flowed what was known to the wayfarer along this route, before the settlement of the town, as "Knotch Meadow." A very durable and valuable water-power was obtained, it being situated upon the outlet of Walker Pond, which is improved as a reservoir. Gibbs, Tiffany & Company, composed of Enoch K. Gibbs, Brigham Gibbs, Lucian Tiffany and Dr. John Seabury, began the manufacture of pistols here as the first enterprise. Town & Chaffee, from Rhode Island, began to make augers and bits here in 1841, the first made in this town. Mr. Sumner Packard began to make awls and general shoe-kit tools in 1846, and was succeeded in 1855 by Mr. Charles Varney, who commenced to make cutters and dies in 1857. He sold to F. W. & H. Slayton in 1863, who transferred a third interest to Mr. Noah D. Ladd in 1864, and the whole property to Ladd & Wight the next year. In 1867 Mr. Daniel R. Wight went out, and Mr. Ladd, taking his son Henry J. into the business, has continued under the firm-name of N. D. Ladd & Son. The shop was burned in June, 1878, and they had it rebuilt and running in sixty-one days after the fire. They manufactured shoe-knives, awl-hafts and a variety of small tools until about 1875; since that time they have given their attention principally to cutters and dies for cutting cloth, paper, rubber, veneering, leather, etc.

At Westville there is to be seen the ruined foundation of an old mill; also a canal and a broken-down dam. This is the site of the first cotton-factory in the town—including Southbridge. It was built by the Sturbridge Manufacturing Company in 1812. This

association was incorporated the 5th of December, 1811, with the following names: Rev. Zenas L. Leonard, Stephen Newell, Lieut. John Plimpton, Moses Fiske, Jephthah Plimpton, Ziba Plimpton, Moses Newell, Eleazer Rider, Comfort Freeman, Nathaniel Rider, Franklin Rider.

The factory building was thirty feet by forty-five, and three stories in height, with preparations for manufacturing cotton yarn. The mill began to run for the company in the fall of 1812, and continued to run with profit until the close of the war, when British manufactures were introduced below the cost of any similar production in these States. Southbridge was set off in 1816, and although the factory building was on the Sturbridge side of the river, it was subsequently owned and occupied by Southbridge parties. The mill was unoccupied a number of years; then it was struck by lightning and burned about 1882.

Charles Hyde's Box-Shop is on the Quinebaug, about half a mile above the ruins of the old factory. This mill-site was first utilized for a saw-mill owned by Dea. Edward Foster at an early period, and came into the possession of Mr. James Plimpton about 1770, who had a saw-mill and a grist-mill there. The place was called "Plimpton's Mills" for a period of fifty years or more. Stephen Bracket had a cotton-batting mill there; then it was "Bracket's Mills." Pails were made there a few years. Sawing of lumber, planing and matching, and the making of packing-boxes is the business now carried on there.

Wight's Mills.—Above the box-shop the Quinebaug may be followed nearly two miles in its winding, quiet course, before another mill-site is found; and that was originally found by the boys who followed the path the cows made going down through the bushes to drink. The river ran into a pocket surrounded by sand-hills, and had to go back and flow quietly out at the door. David Wight, Jr., built a dam across the door, or place of outflow, dug through the sand-bank and made a canal to conduct the water away down through the meadow to the river again, and thus obtained a very valuable water-power, which has been used by three generations of his descendants. A grist-mill, saw-mill, planing and matching is the business now carried on there.

Snell Manufacturing Company's Works.—In 1798–99, Mr. Alpheus Wight excavated a canal about half a mile in length, conducting the water from the Quinebaug, where a dam was constructed, to a convenient locality near "the great road," and established a water-power there, which has been of great public, as well as private utility. In his day it was utilized for a saw-mill, a grist-mill and a fulling-mill.

The manufacture of augers and bits was commenced at Wight Village, in the old fulling-mill building, as early as 1845, by Towne, Snell & Co. The following year Lauriston Towne went out, and the firm-name became Smith, Snell & Co., until 1850, when Lucius Snell bought out Judson Smith. The firm was then composed of Mr. Melville Snell, and two of his nephews, Thomas O. Snell and Lucius, and took the name of Snell & Bros. The old mill was burned in 1852, after which the firm bought the privilege and built the first stone mill, one hundred feet by thirty-two, and two stories in height. Then Dea. Thomas Snell, the father of Thomas O. and Lucius, sold his shop in Ware and removed his business to Sturbridge, went into partnership with his brother and two sons, and the firm-name was changed to Snell Bros. They built two stone mills in 1853, one thirty-six by forty-six, and the other one hundred by forty-five feet; the latter three stories in height. About seventy-five workmen were employed in 1854.

Deacon Thomas Snell was the son of Thomas Snell, of Ware, who originated the Snell auger and bit, the first of the kind made in this country. Thus, the hereditary skill and long-established business (from 1790) being transferred to this locality, when Mr. Emery L. Bates, of this town, formed a copartnership with Messrs. Clarke & Wilson, an old hardware firm in New York, and purchased the entire business in 1862, they very appropriately took the firm name of The Snell Manufacturing Company. Mr. Bates has been the business manager to the present time. In 1883 they added the business of making ship-augers, of which there is but one other manufactory in this country; and with improved machinery and skilled mechanics are said to make the finest goods in the world.

It is now a corporation with a capital of sixty thousand dollars and employing about one hundred and thirty workmen, manufacturing auger-bits and car-bits, millwright and nut augers, boring machines and boring machine augers, ship-builders' augers and the various kinds of augers and bits used for power machines, producing about one hundred and fifty thousand annually.

Fiskdale and Fiskdale Mills.—Nehemiah Allen, who was one of the proprietors and drew lands in various parts of the town, bought of Moses Allen, who had bought of Shubael Goram, original proprietor, the "Dimick Farm" and "lot No. 25, west," adjoining it on the north, now known as the "old Benson place," and also lot No. 37, now owned by Mr. Liberty Allen, the Fiskdale Mills (Taylor Place) and others, which bounded said "Farm" on the west. The south line of Demick's was identical with the north bounds of Mr. C. G. Allen's farm, and the eastward the same as the west line of J. D. Underwood's and D. W. Wight's pasture-lands on the hill, and continued the same course after crossing the river, northeastward to the lot 25 west above mentioned. The line last described was between the Salstonstal and Demick "Farms."

Nehemiah Allen built his house previous to 1738, upon the site of the "old Allen place," northward of the Baptist meeting-house.

In the second generation his son John remained

upon the homestead, "Captain Jacob" had the south part of the lot No. 37, and the grist-mill, and originated the homestead called the Taylor Place. Abner had the north end of 37, and built the house now the residence of his grandson, Liberty Allen; also originated the tanning business there.

In the third generation Moses Allen succeeded his father, John Allen, on the original homestead, having for a farm that part of Demick's north of the river. Dr. Abraham Allen had the real estate of his father, Captain Jacob, and Henry succeeded Abner.

These men of the third generation had become old, their family had had peaceable possession and quiet for over ninety years, when two brothers, Henry and Josiah J. Fiske, sons of David, of Fiske Hill, and grandsons of Henry (see grantees), bought Moses Allen's farm, erected the first factory and laid the foundation of the village that bears their name. Moses Allen's farm was deeded to Henry and Josiah J. Fiske in 1826. Hon. Josiah J. Fiske was a lawyer residing in Wrentham, but was largely interested in the Quinebaug Company, the first company formed for operating at this point on the Quinebaug River. Henry Fiske became resident proprietor here and erected the first brick mill and a suitable number of tenement houses in 1827–28, and to him is due the credit of performing the pioneer work of founding this village. The dimensions of this first cotton-mill were eighty-four feet by forty, and five stories high. It was put in operation in May, 1829, under the superintendence of Mr. Harvey Hartshorne, of Wrentham. The Quinebaug Company constructed the upper dam in a thorough manner and began the erection of the "stone mill" in 1834. Henry Fiske retired from the concern, and the old Quinebaug Company was merged in the Sturbridge Cotton-Mills, which was incorporated in 1835 with a capital of one hundred thousand dollars. It was through the efforts, the energy and perseverance of Hon. Josiah J. Fiske that the Sturbridge Cotton-Mills Company was formed and the construction of these mills carried to completion. After the retirement of his brother, he gave more of his personal attention to affairs here, residing here more or less, and died at Fiskdale in 1838. These first mills had ten thousand spindles and two hundred looms. Mr. Simeon A. Drake was the agent from 1832 to 1854, followed by Mr. Wm. B. Whiting.

In 1859 Mr. James C. Fisk, of Cambridge, was chosen treasurer, and assumed charge of these mills, with Mr. Bowers S. Chace as agent. Mr. Fisk held the office of treasurer until his death, in 1885. The corporate name of the Sturbridge Cotton-Mills was changed by an act of the Legislature in 1869 to Fiskdale Mills; and an increase of capital stock to five hundred thousand dollars was authorized.

When the property first came under the management of Mr. James C. Fisk the buildings were in a dilapidated condition, filled with old and worn-out machinery. The corporation houses were in equally as bad shape, and the general appearance of the mills and village was that of a run-down and worn-out concern.

Mr. Fisk tore down the old mills and built new ones; put in new machinery, remodeled the houses,—and to-day the village of Fiskdale stands as a monument to the energy and success of this man who has made it as pretty, healthy and successful a factory village as can be found; with its large and well-built mills, comfortable and neat houses, well-kept yards, and large farms, keeping some forty head of stock and twelve horses, it can well be called a model village.

The Fiskdale Mills property consists in part of two mills, the machinery of which is operated by one Hercules wheel of 400 horse-power, and one of 250 horse-power. These mills run 34,000 spindles, and 800 looms; using some 6000 pounds of cotton daily; producing some ten and a quarter million yards of 64x64 standard print cloths in a year.

Mr. James L. Fisk, son of the late Mr. James C. Fisk, is now (1888) president of the company; Mr. C. Curry, the treasurer, and Mr. O. B. Truesdell the agent.

AGRICULTURE.—As early as the beginning of the century the "Massachusetts Society for Promoting Agriculture," sent to all parts of the State a series of questions relative to the then existing condition of agriculture. In the report of the Massachusetts Society mention is made that replies had been received from "Sturbridge, where there is a *Society*." Autograph replies, written in the blank spaces between the printed questions, are under the name of Erasmus Babbitt, and the pamphlet bears the date of 1800. Mr. Babbitt reports a medium-sized farm in Sturbridge to be "130 acres, divided: one-third pasture—one-fifth mowing—one-fifteenth tillage—one-thirtieth orchard and one-third woodland; the orchards are generally increasing and yield a competent supply of cider." That "this farm will keep 15 head of neat cattle, 2 horses, and 15 sheep." "All the coarse fodder and meadow hay is fed to the cattle in the yards." "Provender is little used except for horses that work hard, or creatures fatting." On this medium farm "about 7 acres are planted or sown to grain." "Average crop of corn is 25 to 30 bushels to the acre;" potatoes, "130 to 150 bushels to the acre"—"12 or 15 bushels for seed," and "the largest are thought to be best." "About ¾ of an acre of potatoes is planted on a medium farm." We have the rose-back species of swine of the largest kind—killed twenty months old, weigh two hundred and forty pounds. The product of a cow, all the cream being churned, is seventy pounds of butter, and about as many pounds of skim-cheese can be made from the same cow.

The foregoing presents the main points of the replies to the questions of the Massachusetts Society, of Erasmus Babbitt, Esq., a lawyer then residing in this town and probably an officer of that early Agri-

cultural Society of Sturbridge, of which we have no further account.

The present agricultural condition of the town may be indicated by the following extracts from the census of Massachusetts, report of 1885:—Amount of land, cultivated, uncultivated and woodland, 19,111 acres; cultivated land, 16 per cent.; uncultivated, 40 per cent.; woodland, 44 per cent. Number of farms, 145; average size, 131 acres; number of farms reported over one acre and under two, 1; over three and under four, 4; over five and under ten, 8; over ten and under fifteen, 5; over fifteen and under twenty, 5; over twenty and under thirty, 9; over thirty and under forty, 8; over forty and under fifty, 6; over fifty and under sixty, 7; over sixty and under seventy, 4; over seventy and under eighty, 6; over eighty and under ninety, 8; over ninety and under one hundred, 19; over one hundred and under one hundred and fifty, 29; over one hundred and fifty and under two hundred, 13; over two hundred and under three hundred, 8; over three hundred and under four hundred, 4; over eight hundred and under nine hundred, 1. Aggregate value of these 145 farms:—Land, $262,930; buildings, $219,103; machines, implements, etc., $19,521; domestic animals, etc., $50,781; fruit trees and vines, $11,377. The total yearly product from these farms amounts to $125,152. Farms owned, 123; hired, 13; on shares, 5; not given, 4—total, 145. Number of persons owning or having charge of farms:—Males, 159; females, 8; farm laborers, 86.

Formation of the Second Agricultural Society of Sturbridge.—An informal meeting of citizens was held at the house of Mr. J. N. Chamberlain, October 31, 1843, and Maj. S. A. Drake was called to the chair. It was voted to hold an exhibition, November 8th, on the Common. Three were appointed to "extend and give notice over the town in general." The exhibition was held as appointed, and at an adjourned meeting, November 15th, a committee was chosen to draft a constitution and by-laws. At another adjourned meeting, November 27th, a constitution containing eight articles was adopted, and the following list of officers chosen, viz.:—President, S. A. Drake; Vice-President, Caleb Weld, Jr.; Secretary, Benj. D. Hyde; Corresponding Secretary, A. M. Merrick; Treasurer, Benj. Bullock; Directors, Thos. Merrick, John Boyden, David Wight, A. P. Taylor, Peter Belknap, Geo. V. Corey, Simeon Hooker, Samuel Hobbs, S. F. Marsh.

Out of this was evolved the Worcester South Agricultural Society, incorporated in 1854, "for the encouragement of agriculture and the mechanic arts by premiums and other means in the town of Sturbridge, in the county of Worcester." The fine park of this society, containing the buildings and conveniences for a first-class fair, the whole plant being valued at upwards of $16,000, is situated near the centre of this town.

CHAPTER XVII.

TEMPLETON.

BY H. F. LANE.

Location—Boundary—Elevation—Streams—Ponds—Soil — Productions Population—Valuation—Business Affairs of the Present Time.

TEMPLETON is in the extreme northerly portion of Worcester County, in the middle of the second tier of towns from the New Hampshire line. Royalston lies next it on the northwest, and Winchendon on the northeast. Gardner, whose territory was taken partly from this town, lies on the eastern side. Hubbardston lies to the southwest, separated from it by a straight boundary line. Phillipston, originally a part of this town, extends completely along the western side. The extreme length of the town is about eight miles. It varies in breadth from about three miles in the northerly portion to five miles in the middle and southerly portions. It contains from nineteen to twenty thousand acres of surface. The town lies fifteen miles west of Fitchburg, twenty-six miles northwesterly from Worcester and sixty-five miles from Boston. It is in latitude 42° 32′ north and longitude 72° 5′ west from London.

Templeton is situated on a high elevation. The village at the centre of the town is not less than twelve hundred feet above the level of the sea. Some hills rise even higher than that. There is an elevated plateau reaching from Wachusett Mountain, in the central part of Worcester County, to Monadnock, in Southern New Hampshire. This town lies on the western edge of this plateau, where it begins to slope toward the Connecticut River, as the eastern side of the plateau slopes toward the Merrimac. There are no mountainous elevations in the town, although the whole surface is hilly. The hills are rounded masses, usually fertile to the summit. The crests of some of these hills and ridges command extensive views of the surrounding country, as from Dolbear Hill, near the village at the centre of the town, Mine Hill, in the eastern part of the town, and from the high ridges of land in the southern and also in the northwestern parts of the town. It is a notable feature of this portion of Worcester County that it lies in long ridges or swells of land extending in a northerly and southerly line, with corresponding valleys between. Roads running north and south find locations quite nearly level; but running east and west it is one continuous course of up hill and down. The Ware River Railroad finds easy grades through one of these valleys.

The situation of this town, just on the western edge of the plateau, brings it just barely within the Connecticut River basin, into which river all of its surplus waters flow. The towns lying next easterly of this, send a portion of their waters into the Merrimac. The largest stream of water in town is Otter River. This stream has its sources in Hubbardston

and Gardner, flows through the southeasterly portion of this town, and the southwesterly part of Gardner, forms the boundary line between the two towns for some distance, then flows in a northwesterly direction through the northerly part of the town, yielding an abundant water-power at the villages of Otter River and Baldwinville. Just outside of this town it unites with Miller's River, a tributary of the Connecticut. Otter River has several tributaries in this town. Mill Brook, with several reservoirs for the storage of water, furnishes several water privileges at Partridgeville and East Templeton. Trout Brook, with several mill privileges, flows in a direct northerly course through one of the valleys and falls into Otter River a little below Baldwinville. Beaver Brook flows in a northerly course through another of the valleys in the extreme westerly part of the town, falling into Miller's River near South Royalston. There were formerly two saw-mills on this brook. There are several small tributaries of Otter River, some of which have in the past furnished mill-sites. The Burnshirt River drains the southwesterly part of the town and furnishes several mill privileges. This stream falls into Ware River, and thence by way of the Chicopee River reaches the Connecticut. On these various streams there are not less than thirty-five mill-sites, the water-power of which has at some time been turned to practical use. But some of them have in later times been given up.

Several neighboring towns, whose situation is much like our own, have their surface dotted with natural ponds, forming an attractive feature in the landscape. The artificial pond is suggestive only of utility; the natural pond seems to be almost wholly for the gratification of the eye. This town has only two natural ponds, and both are of small size. Snake Pond is in the extreme easterly part of the town, lying partly in Gardner; Cook Pond is in the southerly part of the town, small in area, and with no attractive features. The artificial ponds, for the mill privileges and reservoirs, are numerous and scattered over the town.

The soil of this town is not sterile; neither can it be called fertile. It yields fair crops when replenished by fertilizing material and stimulated to activity by the energetic hand of the owner. But the land is not easy of cultivation, and we cannot compete with Western States in the production of oats and corn. The usual agricultural products are raised here in moderate quantities. Grass is, perhaps, the most important product. The fruits are not produced in abundance here. The peach does not thrive. The season is hardly long enough for the grape. Apples are produced in moderate quantities, but not nearly enough for the home supply. The white pine is the most abundant of the forest trees. Spruce and hemlock are common, and also maple, birch and beech. The oak and the ash are not so often found, and chestnut trees have become quite rare. The American larch, sometimes known as tamarack, and the hard pine grow in some localities. The black cherry, leverwood, hornbeam, poplar, basswood and balsam are found in small quantities. The elm is rarely found, except where it has been set out as a shade-tree. The poison dogwood is found in some of our forests, and the usual wild shrubs grow in abundance—the laurel, common alder, black alder, withewood, sumac and hazel. Doubtless the town at its first settlement was densely wooded. We read from time to time in the Proprietors' Records of their sending persons "to burn the woods." An important product in the early times was the potash obtained from the ashes of the burned trees.

Templeton was incorporated as a town in 1762. Its population at different periods has been as follows: In 1765, including Phillipston, 348; in 1776, including Phillipston, 1016; in 1790, after Phillipston was set off, 950; in 1800, 1068; in 1810, 1205; in 1820, 1331; in 1830, 1552; in 1840, 1776; in 1850, 2173; in 1860, 2816; in 1870, 2802; in 1880, 2789; in 1885, 2627. Of this last number in the census of 1885, 1302 were males, 1325 were females; 2293 were native born, and 334 were foreign born.

The valuation of the property in the town in the year 1800 was less than one hundred and fifty thousand dollars; in 1840 it was somewhat less than six hundred thousand dollars; in 1887 it was a little over one million dollars. According to the assessor's lists for the year 1887, there were in the town 592 dwelling-houses, 429 horses and 450 cows. The number of polls taxed was 788; the number of legal voters in 1888 was 569.

Templeton has its population gathered chiefly in the four principal villages. Each of these villages has a post-office and a hotel; each has one or more churches and stores; each has a public hall; and, beginning with the year 1887, each, with a portion of the contiguous territory, constitutes a voting precinct for the purposes of the State election. The Centre village is at the summit of one of the high ridges of land of which this region is made up. Here the first houses were built; here was the meeting-house of the olden time; here was the public Common, serving as a military training field and muster-ground. The militia of this and the neighboring towns gathered here for the autumnal muster. On the west side of the common is the town hall. Near by is the Unitarian Church and chapel. On the east is the brick building of the Boynton Public Library. Next is the Trinitarian Church edifice. Opposite is the location of the summer school of Mr. Charles W. Stone, of Boston. At the south end of the Common Mr. Percival Blodgett keeps, in more than the usual quantity and variety, the miscellaneous assortment of dry goods and groceries usual in a country store. Mr. J. O. Winch deals in boots and shoes. For several years the hotel, now burned, was kept by Mr. Charles E. Ellis. Miss Delia Damon manages

the affairs of the post-office. Westerly of the village is the station of the Ware River Railroad. Near it is an establishment for painting and finishing furniture, carried on by Messrs. Kilner & Bourn. On Trout Brook, near by, Messrs. Bourn, Hadley & Co. are extensively engaged in the manufacture of pine and ash furniture.

Two miles easterly of Templeton Centre, and well toward the borders of the town, is the village of East Templeton. The Methodist Church has its location here. And here also is Memorial Hall, on whose walls are two marble tablets bearing the names of those soldiers who lost their lives in the Civil War. Ericsson Post, No. 109, of the Grand Army of the Republic, has its place of meeting in this building. There is a co-operative store in its lower story. Mr. F. L. Sargeant is the postmaster of the village, and has a grocery store. Mr. Henry J. Wright keeps a hotel and livery stable, and has a miscellaneous business besides. Mill Brook runs directly through this village and furnishes abundant water-power. Three shops on the upper part of this stream have been burned within a few years. A little farther down the stream is the factory of Mr. Chester N. Johnson, who makes children's carts and wagons in large variety and quantity. The next factory is that of the sons of T. T. Greenwood, who are largely engaged in the manufacture of furniture. They have a furniture store at Gardner. Chairs are manufactured at the lowest mill on the stream by the East Templeton Co-operative Chair Company, a prosperous organization of several mechanics of the village, which has carried on business here for several years.

The village of Otter River is in the northeasterly part of the town, about three miles from the Centre village. It has a station on the Fitchburg Railroad. There is a public hall in connection with the schoolhouse. St. Martin's Church, Catholic, is in this village. Frederick Warner is the postmaster and keeps a store. Francis Leland has built a large brick store on the site of the former hotel, and keeps groceries, dry goods and miscellaneous articles in great variety. Otter River furnishes water-power, on which are three factories, two of which are owned by the Hon. Rufus S. Frost, of Chelsea, Mass., and are occupied with spinning for his other factories elsewhere; the third has always been a woolen-factory. Messrs. Lord, Stone & Co. make a great many stoves, and send out agents to sell them in various parts of New England. There are two brick-yards at this part of the town. One has been somewhat recently established. The other was for many years carried on by Mr. Horatio N. Dyer, and more recently by his son, Charles C. Dyer. The annual product at this yard has recently been one and a half million of bricks.

Baldwinville is in the northerly part of the town, well toward the Winchendon line and about four miles from the Centre village. It has excellent railroad facilities, being situated at the junction of the Ware River Railroad with the Fitchburg. The Baptist Church and the Goodell Memorial Church are both in this village. There is also a public hall, named Union Hall. George E. Bryant is postmaster of the village. For several years Mr. George Partridge has been the proprietor of the hotel. The Templeton Savings Bank has its place of business in this village. Mr. Louis Leland has kept a store at the "Lee" stand in this village since 1870, keeping a supply of dry goods, groceries and miscellaneous articles. In the Cady & Brooks block, near the railroad bridge, Mr. C. S. Dickinson keeps drugs and medicines and a stock of furnishing goods in one store, and Messrs. C. S. Dickinson & Co. keep groceries in an adjoining store, in one portion of which is the post-office. Supplies of coal are furnished by Messrs. Evans & Bowker. Otter River flows directly through the village and furnishes a liberal supply of water-power, which is industriously used. The shop at the uppermost privilege is owned and occupied by Messrs. Smith, Day & Co., in the manufacture of chairs. A portion of the water-power here is used to turn the machinery of the paper-mill, where sheathing, roofing and fire-proof paper is manufactured by Mr. H. M. Small, formerly Small, Gould & Co. Mr. George A. Brooks is a contractor and builder, as well as a dealer in lumber. Following down the river, we come to what was formerly known as the "Red Mill." Here the Waite Chair Company manufacture children's chairs in a variety of patterns and with various ingenious devices for changing their form and rolling them about. At the "Lower mill" chairs of various patterns are manufactured by Messrs. D. L. Thompson & Son. On the north side of the river Messrs. Baker & Wilson manufacture children's wagons and carts at the lower shop, and carry on an extensive business of grinding and selling corn at the upper shop, formerly known as the "Hat-shop." There is a machine-shop near the railroad bridge in which William E. Nichols manufactures band-saw machines and chair machinery of various kinds and does other machinist's work. Messrs. Holman & Harris have built a new shop in the northerly part of the village, close by the railroad. They use steam-power only, and make large quantities of pails, buckets and other wooden-ware. This account of the business of the village would not be complete without mentioning an enterprise in which Mr. Frank L. Hosmer and Mr. E. W. Lund are separately engaged. Each has a green-house, heated by steam, in which cucumbers are raised during the winter, and are ready in the very early spring for the New York and Boston markets, to which they are daily sent.

CHAPTER XVIII.

TEMPLETON—(*Continued.*)

Grant of the Township—The Proprietors—Early Settlements—Old Houses—Incorporation; Templeton, Phillipston—County Relations—State Relations—Political Parties.

THE lands lying in this region were regarded as the property of the Province of Massachusetts. They were granted to persons with a view to the promotion of the settlement of the country rather than as a means of increasing the revenues of the Province. There were many persons in the towns of the eastern part of the Province who had rendered military service in the war against the Narragansett Indians, which terminated in 1675, ending with the destruction of the Indian tribes. Promises had been made to the soldiers in these wars that they should receive gratuities in land in addition to their wages; but for fifty years these promises had remained unfulfilled. The soldiers who survived and the heirs of others urged their claims and finally, June 15, 1728, the General Court recognized their claims by granting to them two townships, each six miles square. A convention of those who brought forward their claims met at Cambridge in 1730. At that meeting the number of those who presented claims was much greater than had been expected. Thomas Tileston, Esq., and others were appointed a committee to request the General Court to grant more townships. This petition was acted upon favorably by the House of Representatives, which voted that each one hundred and twenty persons whose claims shall be allowed by this court may be allowed a township of six miles square. The concurrence of the Governor and Executive Council was necessary to give validity to the grant. The House of Representatives sent to the Council a message setting forth earnestly and eloquently the valor and merit of the soldiers engaged in the Narragansett expedition and calling the attention of the Council to the fact that a "proclamation was made to the army, in the name of the government, when they were mustered on Dedham Plain, where they began their march, that if they played the man, took the fort and drove the enemy out of the Narragansett country, they should have a gratuity in land beside their wages." Additional lists of claimants were afterwards brought in, making the full number of officers and soldiers whose claims were allowed eight hundred and forty persons. A committee was appointed to lay out five more tracts of land in some of the unappropriated lands of the Province, in accordance with the order of the General Court. The grantees were also ordered to meet within six months to make choice of committees to regulate each propriety or township which was to be held and enjoyed by each one hundred and twenty grantees in equal proportion. The grantees of each township were to pass such rules and orders as to oblige them to settle sixty families, with a learned minister, within the space of seven years from the date of the grant. The grantees chose such committees June 6, 1733.

THE PROPRIETORS OF THE TOWNSHIP.—Each of the townships granted by the General Court to soldiers of the Narragansett Indian War seems to have borne the name Narragansett, with a number attached to distinguish the one from the other. Some of these townships seem to have been in New Hampshire. The neighboring town of Westminster was Narragansett Number 2. Templeton was, until the time of its incorporation, known as Narragansett Number 6. The proprietors of this township seem first to have drawn a township somewhere in New Hampshire, as at their first meeting they voted to accept of the township "on the back of Rutland, in lieu of the township assigned us, west of Ponocook and Suncook."

The first meeting of the proprietors of the township Narragansett Number 6, was on October 19, 1733, at the tavern of Jonathan Ball, in Concord, Mass. They chose Samuel Chandler, Jonas Houghton and John Longley as a committee to lay out a township "on the back of Rutland, if the land there be acomadable." At an adjourned meeting of the proprietors, December 3d, they voted to accept of the township. A survey of the township was made by Jonas Houghton, and a plot of the same was returned to the General Court, which was accepted by that body in February, 1734. A meeting of the proprietors was held April 1, 1734, when they chose Jonas Houghton, John Longley and Joseph Fassett a committee "to finish the lines of the township, and burn the woods from time to time until further orders;" they also voted that a tax of ten shillings should be paid by each proprietor.

The first step towards making a division of the land of the town among the proprietors was taken at a meeting held in Concord, October 30, 1734. At that meeting it was "voted that the township be laid out in part as soon as may be. Voted that there be laid out a hundred and twenty-three forty-acre lots of the best of the upland. Voted that Samuel Chandler, Captain James Jones, Mr. Joshua Richardson, John Longley and Joseph Fassett be a committee to lay out the lots above-mentioned. Voted that the lots be made as equal as may be, and in as regular form and as compact as the land will allow of. Voted that said committee order *ways* (roads), and where the meeting-house and the three public lots shall be, and to order land for a burying-place and for a training-place, and for other public use, according to their best discretion."

It will thus be seen that land for the public use was provided for at the earliest possible time, even before the settlement of the town. In accordance with the preceding vote, the committee proceeded to lay out the one hundred and twenty-three forty-acre lots—house-lots these were called—one for each of the one hundred and twenty owners of the township, and the

three public lots, of which one was for the support of schools, one for the first minister, and one for the support of the ministry. The committee employed surveyors, and spent about thirty days in the work of surveying the lots.

At a meeting held at Concord, January 24, 1735 (old style), the lots were distributed among the proprietors by a chance drawing. Any proprietor who did not like his lot was permitted to drop it and take an equal amount in the undivided land, provided he did so within a given time. The full list of the names of the original proprietors, with the numbers of the lots which fell to each, may still be seen in the book of Proprietors' Records. Very few of these original owners of the lots in the township ever settled here. Their lots were sold to others.

It was a condition of the grant of the township by the General Court that sixty families should be settled on as many lots within seven years. But settlers did not rapidly come in. In 1737 the proprietors voted that the owners of sixty of the lots, designated by drawing numbers, should pay into the treasury the sum of twelve pounds each, old tenor, and that the other sixty lots should be settled within three years, and that each proprietor who settled his lot should receive a bounty of eight pounds. In 1743 an additional bounty of twelve pounds was offered to each of the first ten families who, before September 1, 1744, would build a "good dwelling-house and inhabit the same, agreeably to the act of the Great and General Court." But a war between France and England came on, and the Indians acted as allies of the French, and the whole colony was so disturbed that all thought of settling new townships was given up. However, peace came in 1749.

The first meeting of proprietors held within the township was on October 6, 1742, on "Ridge Hill," supposed to be near where the Partridgeville School-house now stands. A contract was made with Samuel Sheldon to build a saw-mill, but he failed to build one. Another contract was made with James Simonds, Reuben Richardson and Oliver Richardson. It is believed that they built a mill in 1743, on the site now owned by A. S. Hodge. A meeting of proprietors was held in 1744, and after that no meeting was held until September 20, 1749, when they again met on "Ridge Hill," in the township.

A meeting was held May 9, 1750, "at the meeting-house place," in the township, and it was voted to divide the meadow land. *Four acres*, in the middling sort of the meadow, was taken as the standard or quantity assigned to each proprietor. John Whitcomb and Charles Baker were appointed surveyors. There was not enough of the meadow land to furnish each one four acres, and so it was voted that those who drew "blanks," should have *nine acres* each, "in any of the undivided upland," giving us an idea of the relative value of meadow and upland at that time. In 1751 there was a second division of upland, with *seventy acres* as the standard, but the committee had power to make the lots larger or smaller, according to their goodness. These lots, one hundred and twenty-three in number, were surveyed and distributed by lot, May 15, 1752.

A third division of the upland was agreed upon in May, 1753, with *forty acres* as the standard, and it was voted that each proprietor may "pitch to his own land,"—that is, select a lot adjoining one formerly received at a previous distribution,—and that the committee "qualify the land over or under the standard, as it is for goodness or accommodation." There were sixty-six "pitched lots;" the other proprietors drew for their locations. A fourth division of land was voted twelve years later, September 25, 1765, with *twenty acres* as the standard for each proprietor. And twelve years later still, October 29, 1777, a fifth division was agreed upon, and *six acres* was to be the standard, with the usual provision for increasing or diminishing the quantity according to the location and goodness of the land. And thus, if we include the division of the meadow lots, there were six divisions of land among the proprietors. In all of the divisions, each proprietor must have received about one hundred and eighty acres of land. Some received an excess of upland in the place of meadow lots; and some lots were made a little over or under the standard, according to location or goodness.

After the division of 1777 there was still remaining a quantity of land, in pieces of irregular shape, lying between the lots already laid, in various parts of the township, amounting in all to about nine hundred acres. At a meeting of the proprietors, held May 3, 1786, it was voted that "it is expedient to sell this land at public vendue, and, after paying the debts, divide the proceeds among the proprietors according to their interest." Any proprietor, who preferred it, was to have his share of the land set off to him under the direction of a committee. The sale was made in accordance with the vote. And it was further agreed on June 6, 1787, that the hill called the "Mine Hill" should be sold "at public vendue for the most it will fetch." Both sales having been made and the debts paid, there was found a balance of eleven shillings and six pence for each original right, which the treasurer was directed to pay to the owners of the rights.

The proprietors, at their meeting of May 3, 1786, granted the Common, and the burying-ground near it, to the town of Templeton, for the use and benefit of the people of the town and their heirs forever.

In the division of land among the proprietors, after the survey was made, it was usually laid before a meeting of the proprietors and afterwards recorded by the proprietors' clerk, in a book kept for that purpose. There are, in the archives of the town, two books, containing the records of the proceedings of the proprietors at their meetings, and a record of the surveys in the original laying out of lots throughout the town-

ship, with the length of the lines in rods, and their direction as indicated by the compass. There are many boundary lines of farms and lots, which, to-day, are the same that were made by the first surveyors as they laid out lots in these original distributions among the proprietors. The proprietors continued to hold meetings, with long intervals between, in the later times, until 1817. A meeting was called to meet at the dwelling-house of Lipha French, on the 10th of February of that year. This meeting was adjourned three times, the last meeting being on the first Monday of November, 1817. They then "voted to adjourn this meeting to the last Wednesday in May next, then to meet at Lipha French's." This is the last entry in the Proprietors' Book of Records. It is not even signed by the clerk, as was the custom.

The original proprietors of this township, as it appears, lived mostly in the towns of Concord, Groton, Lancaster, Bolton, Littleton, Westport, Chelmsford, Stowe, Marlborough, Billerica and Woburn. Their first meeting was held in Concord, and their earlier meetings were held in the more central of these towns. As has been already stated, their first meeting here was in 1742, on "Ridge Hill." Some other meetings were held there also. Sometimes after the meetings were held in the township, they met at the meeting-house place; sometimes at Joshua Wright's tavern, or at the house of Lipha French, in later times.

The early proprietors of this and other towns were constituted by the General Court a body corporate for managing the affairs of the settlement. Their legal powers were similar to those of towns. They could lay taxes for the making of roads and for the support of schools and public worship. But these taxes were assessed wholly on the land, and not on polls or personal property. Their meetings were conducted much after the manner of town-meetings. The presiding officer was called a moderator. They had a clerk and treasurer. They chose committees to perform various duties in their behalf. Samuel Chandler was a leading spirit among the proprietors in the earlier times and until his death, in 1742. Charles Baker was prominent in the earlier settlement, and was a leading citizen of the town after its incorporation. For some time he held the office of Proprietors' Clerk. He surveyed many of the lots in the original laying out, including the Common and burying-place. He died in 1813, at the age of eighty-five. His place of residence was in what is now Phillipston, on the farm recently owned by Henry S. Miner.

EARLY SETTLEMENTS—OLD HOUSES.—One hundred and fifty years ago this hilly region of northern Worcester County was probably one unbroken forest. The noise of the axe of the lumberman had not then mingled with the sound of the gurgling streams, which then ran quietly to the sea unvexed by dam or water-wheel. Twenty-five years ago there were white pine trees in our valleys which must have been standing when the Pilgrims landed at Plymouth. There is nothing to indicate that the Indians had any dwelling-places here or engaged in the cultivation of the land. They probably roamed through the forests merely for the purpose of hunting and fishing. An arrow-head has now and then been picked up. A stone mortar and pestle for pounding corn have been found. There is evidence that the early settlers in several of these towns were annoyed by the Indians. Buildings were burned, property destroyed, and some persons lost their lives at their hands.

The early settlers of this town cannot with justice be charged with wresting these lands from the Indians; for there is no evidence that the Indians had any more title to the lands here than the foxes and wolves that roamed through the same forests with them.

It has already been stated that a saw-mill was probably built in East Templeton in 1743. The first family probably came here in 1751. A bounty of eight pounds, and afterwards of twelve pounds additional, had been offered to the proprietor who should first settle his lot. The earliest payment to any person for building a house on his lot and living in it with his family was made to Elias Wilder in September, 1751; the next was made to Deacon Charles Baker in October, 1751; and the next to Timothy Chase, in May, 1752. Such payments had been made in the next three and a half years to about thirty actual settlers.

In 1753, when there were from eighteen to twenty families in the township, a meeting-house was built, which was fifty feet long and forty feet wide. The first framed dwelling-house in the township is believed to have been the "Dolbear" house, erected in 1760. This house, with its large chimney and unplastered ceilings and walls, still stands about one-half mile southerly of the Common, on the old Hubbardston road. The house standing next northerly of the Public Library building is a very old house. It formerly stood on what is now the Common, near the public pump. In this house Joshua Wright kept his tavern, and the proprietors at sundry times held their meetings there.

The "Wellington" house is one of the oldest houses, having been built by Rev. Mr. Sparhawk in 1764. Doubtless there are quite a large number of houses now standing that were built only a little later than these.

INCORPORATION—*Templeton, Phillipston.*—In the early years of the settlement the affairs of the township had been entirely under the management and control of the grantees or proprietors. The time at length came when it seemed best to the inhabitants to assume the powers and duties of a town, and accordingly the town was incorporated by the General Court.

COPY OF THE ACT OF INCORPORATION..

Anno regni tertii. } L. S. { *Regis Georgii Secundo.*

An Act for incorporating the Plantation called Narragansett No. 6, in the County of Worcester, into a Town by the Name of Templetown.

WHEREAS, the plantation of Narragansett No. 6, lying in the County of Worcester, is competently filled with inhabitants, who labor under great difficulties and inconveniences by means of their not being a town; therefore,

Be it enacted by the Governor, Council and House of Representatives, That the said plantation, commonly called and known by the name of Narragansett No. 6, bounding westerly on Poquoige, southerly on Rutland District and Petersham, easterly on Westminster, northerly on Ipswich Canada and Royalshire, be, and hereby is erected into a town by the name of TEMPLETOWN; and that the said town be, and hereby is invested with all the powers, privileges and immunities that any of the towns of this province do or may by law enjoy;—

Provided, That nothing in this Act shall be understood or construed as in any measure to supersede or make void any grants or assessments already made or agreed on by the proprietors of said place in time past, but that the same shall remain and be as effectual as if this Act had not been made.

And be it further enacted, That Joshua Willard, Esq., be, and hereby is, empowered to issue his warrants to some principal inhabitant of the said plantation requiring him, in his majesty's name, to warn and notify the said inhabitants qualified to vote in town affairs, that they meet together at such time and place in said plantation, as by said warrant shall be appointed, to choose such officers as may be necessary to manage the affairs of said town; and the inhabitants, being so met, shall be, and hereby are, empowered to choose said officers accordingly.

Feb. 23, 1762.—This Bill, having been read three several times in the House of Representatives, passed to be enacted.

JAMES OTIS, *Speaker.*

March 6, 1762.—

By the Governor, I consent to the enacting this Bill.

FRA. BERNARD.

In accordance with the provision made in the foregoing act of incorporation, Joshua Willard, Esq., of Petersham, issued a warrant directed to Jason Whitney, one of the principal inhabitants of Templeton, requiring him to call a meeting for the purpose of choosing town officers. And in accordance with the notification made, the first town-meeting in the new town of Templeton was held in the meeting-house, at two of the clock in the afternoon, on Tuesday, May 4, 1762, "in the Second year of his Majesty's Reign." They chose Abel Hunt town clerk, Jason Whitney, Joshua Hyde and Abner Newton for selectmen and assessors, Zaccheus Barrett treasurer and Charles Baker constable; also the usual minor officers. On June 7, 1762, another meeting was held to grant money for town purposes.

Thus Narragansett No. 6 was merged in the town of Templeton. The origin of the name is not known. The name was spelled "Templetown" in the act of incorporation. It was also so spelled in the town warrants and earliest town records. After 1764 the town-meeting warrants always have it "Templeton."

The township, Narragansett No. 6, and the town incorporated as Templeton, included most of the present town of Phillipston. Quite early it became manifest that there was an east and a west side of the town. The deep valley of the Burnshirt River and Trout Brook separated the two sections. Moreover, the meeting-house was decidedly to the east of the middle of the territory of the town. The central point would be in the deep valley previously mentioned, and never, in the olden time, was a meeting-house set in a valley. But it was a long way from the west part of the town to the house of worship, and especially inconvenient in the winter season. And so the town sometimes voted that the Rev. Mr. Sparhawk might, for a few Sundays in the winter, preach in the west part of the town, the meeting-house being closed on such Sundays; but this was done with reluctance by the town, and seems not to have been a satisfactory arrangement for either side.

Much discussion and controversy arose regarding the matter. It was proposed in town-meetings, at different times, to build a meeting-house in the westerly part of the town, to move the meeting-house to the middle of the town, and even to divide the town; but all these plans failed. Finally, in 1773, the westerly part of the town petitioned the General Court to be separated from the rest of the town in the matter of its parochial affairs. This petition was granted in 1774, and two precincts were thus formed. They acted together in transacting most of the ordinary town business. The town-meetings were held at the meeting-house on the Common, as usual, but in calling the meetings the selectmen made out two warrants, one to be served by a constable in the westerly part of the town, and another by a constable in the easterly part. The easterly part of the town was sometimes called the "First Precinct," the westerly, the "Second Precinct." In 1784 fourteen of the inhabitants of the Second Precinct, not satisfied with their situation, petitioned to be united again with the First Precinct, and that precinct voted to receive them, but there is no intimation that any action was taken by the General Court.

The Second Precinct, together with a portion of the southeasterly part of Athol, was incorporated as a town October 20, 1786, by the name of Gerry. The name was in honor of Elbridge Gerry, a man prominent in the political affairs of this State. The name was changed to Phillipston, February 5, 1814. In 1785 the town of Gardner was incorporated, whose territory was made up of portions of Winchendon, Ashburnham, Westminster, and from twelve to fifteen acres from the easterly side of Templeton. The town of Westminster, or Narragansett No. 2, formerly reached to the stone monument, near the residence of Mr. Lucas Baker. In laying out that town they had accidentally made the lines so as to include a portion of the territory granted to the proprietors of Narragansett No. 6, or Templeton. The amount thus included was estimated at four hundred acres, and as a compensation for the loss of this, the proprietors of this township were permitted to have an equal amount from the lands of the province on the northwesterly side of the town. This, in some way, resulted in a quite extensive enlargement of the

area of the town on that side. This arrangement was made about 1737.

COUNTY RELATIONS.—For more than a hundred years intermittent efforts have been made with reference to the formation of a new county made up of towns in the northern part of Worcester County, with the addition of some other towns lying either to the east or to the west of them. Sometimes it was proposed that Templeton should be the shire-town; sometimes Petersham was named; but the later efforts have been made with the design of having Fitchburg as the shire-town. This town chose Joshua Willard, Esq., as its agent to act "at the Great and General Court concerning a new county," in 1763, a little more than a year after the incorporation of the town.

A delegate was chosen to represent the town in a convention held at Petersham in 1781, but with instructions not to join in the petition for a new county unless the towns of Ashby, Ashburnham, Fitchburg, Lunenburg, Leominster and Westminster were also included. Charles Baker was chosen, in 1784, as agent of the town for a division of the county, and the next year the town refused to send a delegate to represent them in a convention at Petersham. In 1791 the town sent delegates to the same place; but later in the year "the town, by vote, signified their disapprobation of a new county." In 1792 an effort was made to form a county, extending from Ashburnham on the east to Pelham and Shutesbury on the west, and including nineteen towns. But this town voted that its agent should not sign this petition. The town made a like refusal in 1794.

There was a plan for building a new court-house at Worcester in 1796. But the people remonstrated against it for three reasons: first, the county of Worcester was too large, and if divided, the court-house, as it then was, would be sufficient; second, if not divided, the court-house should be nearer the centre; third, it was a time when building material and labor were too high. For several years after, the town gave its influence for a division of the county. In 1798 the town favored division by a vote of eighty four to one. These efforts all failed, and there was, for a time, a rest from these labors. But the contest was renewed in 1810, when a convention met in this town concerning the matter. The town sent a petition to the Legislature in favor of a division. But the county was not divided.

The paroxysms of agitation for county division occur less frequently as the years go on. Meanwhile, in all later efforts, Templeton has steadily opposed the division. In 1828, when it was proposed to form a new county made up of sixteen towns from Worcester County and five from Middlesex, the vote of this town was four in favor to one hundred and twenty-six against the division. Vigorous efforts for a new county were made from 1851 to 1855, with Fitchburg as shire-town. Templeton constantly remonstrated against the measure, and several times chose Colonel Artemas Lee a committee to unite with committees from the neighboring towns to oppose the division. But in 1856 some of the terms of the County Courts began to be held at Fitchburg. A court-house and jail were also established there. Another effort for division was made about 1875. Like all of the others, this effort failed, and the county remains with its liberal proportions, and posterity is likely to find its full integrity preserved.

STATE RELATIONS.—Templeton has always taken an active interest in the affairs of the State and the nation; but it sent no representative to the General Court until the beginning of the Revolutionary contest. In the first thirteen years of its existence as a town, nine times it "voted not to send," and in the four remaining years no action was taken upon the matter. Jonathan Baldwin was chosen to represent this town in the General Court, meeting at Salem in October, 1774, and also to a Provincial Congress, meeting at Cambridge, Concord, and at Watertown in 1775. He was the first representative from this town to any legislative body. His first election was the only instance in which such a representative has been chosen by this town at a meeting called "*in his majesty's name.*"

A Constitution was framed for Massachusetts by the General Court in 1778; in a vote by the people, it was rejected by a large majority. Templeton gave twenty-two votes for, and fifty-one against the adoption of that Constitution.

The present Constitution was adopted in March, 1780, by the favorable vote of more than two-thirds of the people. Templeton voted fifty-seven in favor to one against; and again in 1795, the vote in this town was, "seventy-six for the Constitution to stand as it is; none against it." Capt. John Richardson and Mr. Joel Grout were delegates from this town to the convention of 1779–80, which framed the present Constitution. Lovell Walker, Esq., was the delegate to the convention of 1820, which proposed fourteen amendments, nine of which were adopted. This town voted very decidedly in favor of all the proposed amendments except two. Gilman Day, Esq., was the delegate to the convention of 1853, which proposed eight amendments, all of which were rejected by vote of the State, although Templeton favored them, casting about two hundred and twenty-four votes in favor and one hundred and thirty-seven against. There have since been other amendments adopted singly, no convention having been called.

The Constitution of the United States was framed in 1787, and submitted to conventions of delegates in each of the States. The Massachusetts convention, composed of three hundred and sixty members, assembled at Boston in January, 1788, and ratified the Constitution by the small majority of nineteen votes. Capt. Joel Fletcher, the delegate from this town, voted against its adoption, as did also all of the other fifty delegates from Worcester County except seven.

The representatives from this town to the General Court have been : Jonathan Baldwin, 1774, 1775, 1786; Capt. John Richardson, 1776, 1777, 1785; Capt. Ezekiel Knowlton, 1778, 1779, 1783, 1784, 1787, 1788, 1789; Capt. Joel Fletcher, 1781, 1791, 1792; Col. Silas Cutler, 1793, 1798; Capt. Leonard Stone, 1795, 1800, 1801, 1806, 1809; Silas Hazleton, 1797; Lovell Walker, 1803, 1805, 1808; John W. Stiles, 1810–13; Moses Wright, 1814–16; Ephraim Stone, 1819, 1830; Benjamin Read, 1823; Dr. Josiah Howe, 1825, 1827; Col. Leonard Stone, 1828, 1829, 1831; Samuel Lee, 1830; Artemas Lee, 1832, 1833, 1834, 1836, 1847, 1861; Samuel Dadman, 1832, 1833, 1834, 1835; Moses Leland, 1837–39; Joseph Davis, 1838; John Boynton, 1839, 1840; Charles T. Fisher, 1842, 1843; Gilman Day, 1845; John W. Work, 1846, 1849, 1851; Dexter Gilbert, 1850; Edward Hosmer, 1852; Benjamin Hawkes, 1853; Frederick Parker, 1854; John Sawyer (2d,) 1855; Henry Smith, 1856; Leonard Stone, 1859; William Smith, 1865; George P. Hawkes, 1866; William Stone, 1871; William N. Walker, 1872; Edward Sanderson, 1874; Charles W. Davis, 1876; Otis D. Sawin, 1880; Charles S. Lord, 1882; Charles A. Perley, 1885; Percival Blodgett, 1889.

A change was made in the State Constitution in 1857, by which two or more towns were united to form one representative district in some cases. This town was, at one time, united with Hubbardston, then with Gardner, then with Hubbardston, Petersham and Phillipston, and now with Gardner, Winchendon and Ashburnham. In the foregoing lists only those representatives whose residence was in Templeton are included.

Under the former system, Templeton in fourteen different years voted not to send a representative, and in one year, 1844, there was no choice.

Political Parties.—The town of Templeton, in its relations to political parties, has usually been decidedly Federalist, Whig and Republican, successively, although there have been years and times when the vote was cast quite differently from the usual habit. A few instances selected from the vote for Governor in different years will reveal the usual division into parties. At the first election after the adoption of the State Constitution, John Hancock, Federalist, had fifty-one votes; his opponent, five votes. In 1807 Caleb Strong, Federalist, had one hundred and eighteen votes; James Sullivan, seventy-two. In 1816 John Brooks, Federalist, had one hundred and forty votes; Samuel Dexter, seventy-four. In 1835 Edward Everett, Whig, had two hundred and two votes; Marcus Morton, Democrat, twenty-eight. In 1845 George N. Briggs, Whig, had one hundred and forty-nine votes; Isaac Davis, Democrat, one hundred and twenty. It is interesting to mark the rise and progress of the anti-slavery sentiment in this town, as indicated by the vote for Governor in successive years. There were eight votes for the candidate which represented that party in 1843. The vote for successive years next following was seven, thirty-three, thirty-eight, thirty-seven, forty-six, thirty-nine, one hundred and fifty-four, one hundred and twenty-nine, one hundred and thirty-three, one hundred and thirty-two, one hundred and fifty-three and one hundred and forty-one in 1853. A political cyclone swept over the State and battered down all political fences formerly existing, and the Native American party had a very decided preponderance of votes for three years, beginning with 1854. In 1860 John A. Andrew, Republican, had three hundred and thirty-five votes; Erasmus D. Beach, Democrat, had one hundred and eight. In 1880 John D. Long, Republican, had three hundred and fifty-one votes; Charles P. Thompson, Democrat, one hundred and forty-eight. These selected votes will give quite as correct an idea of the division into parties as an average, computed from all of the years would give.

CHAPTER XIX.

TEMPLETON—(*Continued.*)

MILITARY AFFAIRS.

The Revolution—The Currency—Second War with England—A Militia Muster—The Civil War—The Sanitary Commission.

There is abundant evidence to prove that the inhabitants of the town of Templeton were fully informed of the nature and significance of the contest which was arising between the colonies and the mother country. They were thoroughly in earnest and filled with patriotic zeal for the proper maintenance of our rights and liberties. So zealous were they, that they had not patience or forbearance to endure the presence of those who criticised the course of the colonists or expressed sympathy for the royal government. In their opinion, the right of private judgment should not be extended so far as to cover the case of those who thought the Parliament of England was in the right. A Tory was a hateful object in their eyes. He had few rights that others felt bound to respect. Sometimes he was visited by a committee, and some confession was extorted from him. Sometimes others refused to have business transactions with him.

To a Tory in the time of the Revolution the atmosphere of this town could not have seemed congenial; neither would its inhabitants have seemed to him altogether lovely or possessed of all the milder virtues. If there was some intolerance in this, we must remember that it needed that full earnestness and intensity of feeling to carry us successfully through the contest. Any considerable indifference or lukewarmness would have left us still colonists of Great Britain.

In 1765 this town contained a population of three

hundred and forty-eight persons. In 1776 there were ten hundred and sixteen. In both cases Phillipston is included, that town having not yet been incorporated. The people had hardly cleared their farms and built their houses before the warning notes of the coming contest were upon them. The first settlers were not wealthy. Their strong muscles and stout hearts were their most valuable possessions. There was abundant opportunity to turn both of these to practical use. The inhabitants of the town conducted themselves with great spirit, patriotism and self-sacrifice during the whole of the war.

At a meeting held May 17, 1774, the town adopted some resolves concerning goods imported from Great Britain, as follows:

"Voted, first, that we will not by ourselves, or by any under us, directly or indirectly, purchase any goods, of any person whatever, that is or shall be subject to any duty for the purpose of raising a revenue in America. Voted, second, that we will not use any foreign tea, nor countenance the use of it in our families, unless in case of sickness, and not then without a certificate from under the hand of one or more physicians, that it is absolutely necessary in order for the recovery of their patient. And whoever in this town shall act contrary to the aforementioned votes shall be deemed an enemy to his country and treated as such."

A Committee of Correspondence and Safety was chosen by the town each year during the war. By means of such committees in the various towns the public were kept informed of the progress of events, maintained their interest in public affairs, and were ready to act with promptness in any emergency. There was at least one company of minute-men in this town. A committee was chosen by the town in March, 1775, to take care of the farms and families of the minute-men, if they should be suddenly summoned away. The selectmen were to procure fire-arms and ammunition at the expense of the town. A marble tablet on the walls of the town hall commemorates the services of Captain Ezekiel Knowlton and thirty-six soldiers, minute-men, perhaps, who promptly responded to the alarm sounded through this province on the morning of the 19th of April, 1775. The tidings borne from Charlestown by Paul Revere on the evening of April 18th probably reached this town at about noon of April 19th; and before the day closed, the soldiers from this town were on their march for Boston.

It is interesting to observe, in the public records, the changes in the mode of beginning the warrants for calling the town-meetings. From the earliest times until the time of the Revolution the warrant began: "In his majesty's name you are required to warn," etc. The warrant for a meeting on March 6, 1775, read in this way; but the warrant for a meeting on May 7th of that same year began: "Agreeable to the Late Charter of this Province and the Constitutional Laws of the Same." The warrant for a meeting on July 5th began: "By order of Congress." Each of these last-named forms was used in the next warrants. Next came one with this formula omitted entirely. "In the name of the government and people of Massachusetts Bay in New England," was then used, until after the adoption of the State Constitution. From the beginning of the year 1781 to the present time the warrant has been issued "in the name of the Commonwealth of Massachusetts."

It is known that Captain Ezekiel Knowlton, Captain Joel Fletcher and Captain John Richardson, all of this town, commanded companies some time during the war. The names of some of the soldiers serving under them are also known. The town records show that many times during the war the town provided beef and other provisions for the army, furnished clothing for the soldiers, paid bounties for enlistment, and chose committees to look after the families of soldiers during their absence. At a town-meeting held May 24, 1776, under an article, "to give Instructions to their Representative Respecting the united Colonies Declaring themselves to be in a state of Independancy, Separate from Grate Britain," it was "Resolved, that if the Continental Congress should, for the safety of the united Colonies, declare them Independent of the kingdom of Great Britain, we do solemnly engage with our lives and fortune to support them in the measure." This vote was passed a little more than a month before the Declaration of Independence was made by the Continental Congress.

Military stores were collected at Bennington, Vt., by the Continental authorities. Gen. Burgoyne sent a detachment of troops to capture them; but instead of that, his whole detachment was captured by the American troops in a battle which occurred August 16, 1777. The news of the approach of British troops to these western New England towns spread quickly in this vicinity, and on August 21st, Capt. Josiah Wilder, of this town, at the head of sixty-one men, set out for Bennington. But it was soon found that there was no further need of troops there, and the men returned to their homes after a very brief service.

THE CURRENCY.—There were great difficulties with the currency during the Revolutionary War. The paper-money had been made a legal tender. It had depreciated to an exceeding degree. As a matter of course, the prices of labor and merchandise were exceedingly high and unstable. Great confusion arose in business affairs. With the hope of affording relief from the extreme difficulties of the situation, the towns adopted the method of "stating prices"—that is, of determining at what prices articles should be bought and sold, hoping the people would see fit to conform to those prices. Sometimes a convention would be held to determine the prices for a whole county, or even for the State. Such a convention was held at Concord in October, 1779, and Thomas White was the delegate from this town. This convention voted to leave it optional with the towns to "state the

prices" for themselves. This town chose a committee of seven men to state the prices of such articles as they may think necessary and make report to the town. The committee performed the work assigned them and made their report to the town. It was adopted November 5, 1779, and is still plainly seen on the records. Doubtless the town came as near performing the impossible as is usual when such a feat is attempted. In spite of committee, town or convention, the paper-money would still go on depreciating and the prices would increase; and in 1780 it is said that the town paid six hundred pounds in Continental bills for twenty Spanish milled-dollars. This would be in the ratio of one hundred dollars for one. In the following year the town appropriated, expressed in terms of that depreciated currency, twelve thousand pounds for schools, and ten thousand five hundred pounds for repairs of the highways.

Second War with England.—The second war with England did not meet with favor from the people of New England, and this town shared fully in the general feeling of opposition to it. In 1808 the town voted to petition the President of the United States to suspend the embargo, in whole or in part. In the next year they petitioned the Legislature to urge upon Congress the repeal of the Embargo Law. When war was actually declared, in 1812, the town chose a committee of seven persons,—Rev. Elisha Andrews, Rev. Charles Wellington, Lovell Walker, Esq., Samuel Cutting, Esq., John W. Stiles, Leonard Stone and Deacon Paul Kendall,—who prepared a memorial to the President of the United States in opposition to the war, which was adopted by a vote of eighty-six to twenty-two. The memorial treats of the blockade, the Orders in Council, the impressment of American seamen and the alliance with France. It fills twelve pages of the town records, and is expressed in vigorous language. It is said to have been composed by John W. Stiles, then a merchant of this town.

Several persons from this town were in the army for a shorter or a longer period during this war. The town also voted "to provide, and keep constantly under the control of the selectmen, powder, balls and flints for the use and benefit of the soldiers in this town."

A Militia Muster.—A muster of the militia in former times must have been a very interesting affair, attractive both to boys and men. It must have been more than the equal of the modern cattle show and fair. There is something in military evolutions and display that appeals strongly to human feelings. Templeton abounded in these military gatherings. It was the central town in the group of six, from which was gleaned the material for one regiment of militia; it was well supplied with hotels; and especially was it desirable on account of the excellent parade-ground which its "Common" afforded. Gardner, Winchendon, Royalston, Athol and Phillipston were the towns united with Templeton from which to gather the regiment. Some towns furnished two companies. A day in later September or early October was selected for the regimental muster. On the previous day, perhaps, some officers would mark along the east side of the Common a line on which the soldiers were to arrange themselves. Early on the morning of the day appointed the companies from the other towns would approach the village and leave their horses and vehicles at some farm-house. They would then form into a column and march to the Common. In the forenoon there would be an inspection by officers appointed for that purpose; the soldiers being ranged in a straight line which frequently would reach as far as from the site of the hotel to the Library building. The privates were dressed in citizen's clothes; the officers had uniforms and a sword, usually. After the inspection would come a review which would end the forenoon's duties. In the afternoon came the time for a sham fight. Sometimes a fort would be constructed and a part of the troops assigned to its defence and another part to make the attack, simulating real warfare. Then the declining sun would find the soldiers wending their way to their homes. In these times the law of the State required that all male citizens between eighteen and forty-five years of age should perform some military duty. Hence the somewhat frequent "training" days for the companies and the annual muster of the regiments. And hence the reason why we find so many persons of the last generation bearing military titles. Quite a large number of persons bore the title of colonel from their service in the State militia in command of a regiment.

Previous to 1852 several military organizations had existed in this town. There was in the earlier part of the century a cavalry company, composed of about seventy-five men from Templeton and four neighboring towns. A rifle company existed from 1814 to about 1838. A volunteer company, called the Cadets, was formed in 1844, and existed for several years. But at the time just previous to the Civil War there was no military organization in the town.

The Civil War.—Massachusetts has ever occupied a foremost position in the chief military contests in which the nation has been engaged. She furnished much more than her proportionate share of troops in the War of the Revolution. She was more than ready to do her share of service in the War of the Rebellion. Her Governor Andrew was a tower of strength for the State and nation during the long years of that severe contest. Worcester County was not behind other parts of the State either in promptness or efficiency. Her towns that had kept up regular military organizations were among the first to offer their services to the government in the spring of the year 1861. The town of Templeton was ready and eager to do her part. She showed herself worthy of a place in the State and county to which she belonged. Party disputes and divisions were for a time laid

aside. All belonged to the patriotic party. The national flag was invested with a much greater depth of meaning. Its simple stars and stripes were looked at with a greatly increased regard and affection. It was freely displayed on private dwellings and in public places. It was common to have it represented even on one corner of the common letter envelopes. Public meetings were held and patriotic addresses were delivered in the town hall, which was filled to overflowing with eager and enthusiastic audiences. The pulpits glowed with patriotic sermons; the ministers were not lukewarm in this time of popular uprising. There were very few in the community who did not partake of the patriotic fervor. Those who feared lest the spirit of patriotism had died out were quickly assured of its continued existence.

Although this town in the later years had not kept up a military organization, there was not wanting a good degree of the military spirit. Templeton Common had been the field for the annual muster of the regiment. The sons of those who took an active part in those military displays had reached mature years. There existed an abundance of sparks of the military spirit which the daily tidings from the South fanned into a glowing flame. In the spring of 1861 a military company was formed which enlisted for five years in the Massachusetts Volunteer Militia, subject to the call of the government should their services be needed. Of this company, George P. Hawkes was chosen captain, and Charles W. Davis and John Brooks were chosen lieutenants. This was afterwards reorganized according to the rules of the United States service, and became Company A of the Twenty-first Regiment of Massachusetts Volunteers.

At a town-meeting held April 30, 1861, the town voted to pay each soldier for the time spent in military drill; to make an addition to the wages which the government allowed to soldiers; also to furnish each man a uniform and a "Colt's" or some other revolver. The uniforms were quickly made and furnished to the men. On further thought, it was not deemed best to supply the revolvers. This company left Templeton for the camp at Worcester July 19, 1861. The day of their departure was a great day in Templeton. In the morning the company assembled, and were drawn up in front of the hotel. The relatives of the soldiers and the citizens generally assembled in large numbers. Addresses were made to the men from the balcony of the hotel by several persons. Rev. Edwin G. Adams presented to each soldier a pocket Testament. The exercises were very interesting, but of necessity deeply tinged with sadness. The company marched to the railroad station, near Otter River Village. An exceedingly long train of carriages followed, bearing the friends of the departing soldiers. A collation was served at the station, and the men departed.

The Twenty-first Regiment of Massachusetts Volunteers was recruited mostly from towns in Worcester County, Company A being mostly from Templeton. It left the camp at Worcester August 23, 1861, and was first stationed at Annapolis, Md. It formed a part of the Burnside expedition; participated in the battles of Roanoke Island, Newberne and Camden; bore its full share of the disasters of Pope's campaign in Virginia, meeting with severe losses at Manassas and Chantilly. It bore an active part at South Mountain, Antietam and Fredericksburg. Then away to Tennessee and the siege of Knoxville, with several battles fought near by. The spring of 1864 brought the Ninth Army Corps, of which the Twenty-first Regiment formed a part, back to Virginia, and the names, The Wilderness, Spottsylvania, Cold Harbor and Petersburg suggest the reasons why the Twenty-first Regiment was so depleted in numbers as to be consolidated with the remnant of the Thirty-sixth. Fifty-six men from Templeton were connected with the Twenty-first Regiment during some portion of its career. Their names follow:

George P. Hawkes, lieutenant-colonel and brevet brigadier-general; Charles W. Davis, captain and brevet-colonel; Levi N. Smith, captain; Daniel D. Wiley, brevet brigadier-general, both in Commissary Department; John Brooks, Benjamin F. Fuller, Henry S. Hitchcock, Jonas R. Davis and John F. Lewis, lieutenants; J. Prescott Cutting and John W. Wallace, first sergeants; John F. Green, Levi Morse, J. Albert Osgood and Augustus Upton, sergeants; Moses A. Chamberlain, Ambrose P. Chase, Henry K. Marshall, William H. Mellen, John A. Merritt, James A. Miller, Otis P. Moore, Sereno Sawyer and E. Wyman Stone, corporals; Herbert Leland, musician; Mandell Bryant, wagoner; Samuel B. Adams, Henry N. Allen, Charles A. Blackmer, William A. Blackmer, George W. Bradish, Collins W. Chittenden, Charles W. Cobleigh, Charles H. Cummings, Charles H. Cutting, August Dabers, Charles J. Dunn, William Flint, George W. Jennison, George H. Lamson, Reuben Mann, William Marrar, Uriah Merritt, Harrison S. Pierce, Asa F. V. B. Piper, Wilbur A. Potter, George H. Sawtell, David H. Spear, Otis L. Sweet, George L. Thayer, John Thibeault and Eleazer S. Whitney, of Company A; James F. Delehanty, of Company D; Franklin Adams, Company E; James Lewis, Company F; and George D. Whitcomb, of Company D, privates.

The patriotic feeling of the town was not exhausted by the enlistment and departure of the before-named company.

The Twenty-fifth Regiment was recruited mainly from towns in Worcester County, and Templeton furnished thirty-four men, most of whom were in Company I, which was commanded by Capt. V. P. Parkhurst, of this town. The regiment left its camp at Worcester October 31, 1861, proceeded to Annapolis, joined the Burnside expedition and served in

North Carolina until October, 1863. It lost more than two hundred men at Cold Harbor. It took part in the siege of Petersburg. Many of its men had re-enlisted, and continued in the service until the end of the war. Dr. Joseph C. Batchelder, of this town was, for a time, assistant surgeon of this regiment. Following are the names of men from this town:

Varanus P. Parkhurst, captain; Amos Buffum, Thomas Saul, lieutenants; Joseph S. Moulton, Dwight M. Martin, George Trask, Lyman S. Wheeler, sergeants; George A. Jackson, Walter Lamb and Francis L. Moore, of Company I, with Gustave Kluge and Hermann Spindler, of Company G. corporals; George E. Potter, musician; George Baker, George D. Browning, Albert M. Cobleigh, Patrick Coffey, James H. Crocker, David B. Day, Theodore J. Dyer, George E. Evans, John Goodale, George F. Greenwood, Clarence W. Jennison, Artemas Jones, Ransom P. Kimberly, Benjamin R. Manning, Marcus S. Moulton, Leander N. Norcross, William Norcross, Charles W. Weller, Joel Whitney, Jr., and Christopher Myers, of Company C, privates.

The Thirty-sixth Regiment entered the service in the autumn of 1862. Its first engagement was at Fredericksburg. It was at the siege of Vicksburg. It took active part in the Virginia campaign of 1864 from the Wilderness to the siege of Petersburg. Templeton furnished thirty-one men for this regiment, mostly in Company D, which was under command of Capt. Amos Buffum. He had been active in the formation of the company. Christopher Sawyer enlisted in Company D, but was afterwards Captain of Company H. John A. Stearns was first lieutenant in Company D. Stephen F. Brooks, Charles B. Fisher, Levi H. Higley, Charles Underwood, Courtland A. Allen, Cyrus G. Buffum and James L. Brigham were corporals; Benjamin F. Brooks and Henry M. Cobleigh, musicians; George A. Brooks, Charles A. Cummings, James H. Day, Frank M. Fenno, Augustus A. Goddard, Chauncy N. Johnson, Edwin W. Lund, James A. Martindale, Irving L. Merritt, Martin Maynard, Stephen H. Patterson, William H. Perry and Charles M. Perry, of Company H; C. C. B. Sawyer, Ephraim Turner, Julius G. Upton, Charles Wheeler, Ezra L. Wheeler, Augustus S. Whitney and George S. Wright were privates.

The Fifty-third Regiment enlisted for nine months, but their period of service extended from October 17, 1862, to September 2, 1863. Their field of service was mainly in Louisiana, at Baton Rouge, on the Red River expedition, at Fort Bisland and the siege of Port Hudson. This regiment encountered hard service in a climate very unfavorable to health. Templeton furnished forty-three men for this service. Charles W. Upham was first lieutenant of Company G, and was much of the time in command of the company. D. Porter Stockwell, William L. Lamb and Rufus Stickney were sergeants; Marshall C. Mower, Castelly O. Norcross, Albert W. Kendall and Charles W. Trask were corporals of Company G; Thomas L. Addison, Benjamin F. Armitage, Leonard M. Baker, Danforth N. Baker, Lewis R. Briggs, Albert G. Bushnell, William T. Bronsdon, Dixie J. Crosby, Joseph B. Cummings, Ezekiel F. Divoll, Clark A. Earle, Emmons Fales, Charles B. Garfield, Edwin W. Greenwood, John W. Guile, S. B. Hildreth, W. P. Hunt, Franklin Jackson, Horace E. Jennison, Samuel W. Jennison, William G. Kilner, J. W. Leland, William L. Leland, Willard B. Maynard, C. C. Merritt, Howard L. Manning, Henry M. Mirick, George W. Newton, Russell D. Newton, C. J. Nourse, Emory Olney, Joel Richardson, J. H. Saul, Charles H. Searle and Edwin W. Wright were privates.

The soldiers from this town were mostly in the four regiments previously named; but a few were in other organizations. In the Second Regiment were Eugene C. Bushnell, musician and lieutenant; Alvin W. Day, corporal in Company F, and Cyrus C. Bryant. Elmer Parker was in Company D of the Thirteenth Regiment. Charles F. Lee was a lieutenant in the Eighteenth and afterwards a first lieutenant in the Fifty-fifth Regiment. Edward D. Lee was first lieutenant and adjutant in the Twenty-seventh. Amos W. Gray was a private in the Twenty-seventh. George H. Dudley was sergeant, and Wendall Eaton, James M. Lufkin, John Preston and Benjamin E. Thayer were privates in the Thirty-second Regiment. Charles Lynde served in the First Regiment of Cavalry, and P. D. Stratton and Rollin C. Williams in the Heavy Artillery. Edward L. Jones was a captain in the Forty-fourth Regiment of Infantry.

There were a few soldiers credited to the quota of the town in the last year of the war who are not included in the preceding lists. Most of these rendered little or no service. But, without counting these, Templeton furnished no less than two hundred men for the service in the great Civil War. Some served for a comparatively short period owing to wounds or other causes of disability. About one-fifteenth part of the men who entered the service were killed or mortally wounded in battle; more than twice as many died of disease or of ill treatment in Southern prisons. There were not less than thirty out of the two hundred who served either three or four full years without any serious wound or illness. Some few there were, even, who served during the whole war, taking part in every skirmish or battle in which their regiment was engaged, without receiving the slightest wound or encountering any sickness. Some, on the other hand, immediately fell a prey to fatal disease, or were slain in the first battle. Several lost their lives in consequence of insufficient food and ill treatment in Southern prisons; others survived with health permanently impaired. Nearly all the men entered the

service as privates; but, in addition to numerous subordinate officers, not less than six reached the rank of captain, and two left the service with the rank of brevet brigadier-general. The volunteers from Templeton were generally men of mature age, who were interested in the public welfare and were fully aware of the public need and danger. They entered the service of their country with a conscientious regard for duty. Without such men the Rebellion never would have been suppressed.

THE SANITARY COMMISSION.—The United States Sanitary Commission rendered a service of the very highest importance during the war. It expended more than twenty-five millions of dollars for the care and comfort of the soldiers in addition to what the government was able to do. An average of two thousand sick and wounded soldiers were each night supplied with shelter by its efforts, who otherwise would have been shelterless. The inhabitants of Templeton were interested in these efforts, and contributed freely to the Sanitary Commission, or sent articles directly to the soldiers in whom they had a personal interest. Large boxes containing clothing, towels, lint, bandages and articles useful in the hospitals were filled by the people in the different villages and sent to the Commission. Jellies, syrups, pickles, and articles for convalescent soldiers were also sent. Thoughtful minds and willing hands eagerly sought for means to alleviate the hardships and pains of the soldier.

CHAPTER XX.

TEMPLETON—(*Continued.*)

BUSINESS AFFAIRS.

Manufactures—Early Mills—At Baldwinville—On Trout Brook—At Partridgeville and East Templeton—At Otter River—Hotels—Stores—Savings Bank—Roads—Railroads.

BY a vote of the proprietors at a meeting held in Concord, Mass., January 24, 1735, a committee was chosen and authorized "to agree with any person or persons that will erect a mill or mills in said township." Mr. Samuel Sheldon, of Billerica, soon after made a contract with this committee to build a saw-mill and a grist-mill, and he gave bonds to erect the mills. He was to be the owner of the mills and was to have a grant of land for establishing them. The proprietors, at a meeting held in Concord, November 1, 1737, confirmed the contract, and "voted and granted to said Sheldon, his heirs and assigns, forever, eighty acres of land, to be by him laid out in one or two places, in a regular form, in any of the common land of the township, excepting the land reserved on account of the mine; the land drowned by his mill-dam to be accounted a part of the eighty acres; provided, that there be not more than twenty acres of meadow included in said pond and eighty acres of land; provided, also, he keep up a saw-mill and grist-mill in said township, according to his obligation and agreement made with him." Still, notwithstanding the contract and provisional grant of lands, Mr. Sheldon never built the mills.

Another meeting of the proprietors was held at Concord, September 6, 1739, when it was "voted that the Committee chosen to agree about mills in said township be directed, as soon as may be, to procure some suitable person or persons to build a good saw-mill and corn-mill in said township, and to give them such encouragement in any of the common lands or streams within said township as they can or may agree for; and to enter into obligation for the same in the name of the proprietors. Also voted that the Committee chosen to let out the mills in said township be fully empowered to put Mr. Samuel Sheldon's bond in prosecution as soon as may be; or the Committee may have a liberty to agree with Mr. Sheldon as they may see fit."

Another proprietors' meeting assembled at Concord, September 16, 1742, and under the article in the warrant, "to inquire whether there is a saw-mill erected in said township, or like to be;" it is recorded, "Inquired and there is no mill erected." At an adjourned meeting a little after this the committee were instructed to put Mr. Sheldon's bond in suit, but it seems never to have been done.

At a proprietors' meeting in 1743 they purchased Mr. Thomas Hobbs' right in the township, to secure the forty-acre lot, No. 91, already assigned to him, in order that they might use it for a mill privilege. This water privilege is said to have been the one recently occupied by Mr. A. S. Hodge. The price allowed to Mr. Hobbs for this lot and one share in all the then undivided lands was £26 10*s.*, to be paid in twelve months, without interest.

It seems that a bargain was made with Lieutenant James Simonds, Reuben Richardson and Oliver Richardson who were to receive the land in consideration of building the mill, which was probably erected in 1743. In November, 1743, a committee was chosen "to clear the road from the meeting-house place to the saw-mill in said township, and also to look out and mark a road from said mill across Otter River, into Narragansett No. 2," or Westminster. There were no permanent habitations here at this time, nor until a period of seven years later. Indian hostilities were prevalent, and probably the saw-mill was neglected; for we find that in 1749 the clerk was directed to notify Lieutenant Simonds and his partners "to rectify the mill, so that it may be in order for sawing, and for the benefit of the township; so that they may fulfil their contract." A committee was chosen, in 1755, by the proprietors "to take care of the saw-mill, and see that the owners perform according to contract."

In May, 1753, the proprietors voted "to build a corn-mill," and a tax of six shillings on each right

was laid to defray the cost of the mill. Mr. Thomas Sawyer, of Bolton, seems to have built the mill, and to have received, in 1755, in payment, therefor, the sum of £24 13*s.* 6*d.*, or about one hundred and twenty dollars. This sum seems to have been paid him in consideration of his building the mill and undertaking to do the grinding, he owning the mill all the time. It had been believed that this mill was erected at Baldwinville, on Otter River; but Captain Parkhurst, who has recently written a history of the town, thinks the evidence points to its having been located at "Goulding village," in Phillipston, near Phillipston Pond.

However this may be, it seems to be settled that at about this same date of 1754 a saw-mill and grist-mill was erected by this same Thomas Sawyer, of Bolton, in what is now the village of Baldwinville, on the site of the shop now occupied by the Waite Chair Company.

In 1763 the proprietors had an article in a warrant for a meeting, "to see if the proprietors will prosecute in law the bond against Thomas Sawyer, for his not grinding according to contract for the inhabitants of said town," and a committee was chosen to see that he fulfilled his contract.

Thomas Sawyer seems to have carried on the mills on this site at Baldwinville until about 1767, when they were sold to Jonathan Baldwin, Esq., an enterprising and public-spirited citizen from Spencer, Mass. He became a very large land-holder in the village of Baldwinville, owning a large tract on the north and west. Captain Eden Baldwin, son of Jonathan, succeeded his father in the ownership of the mills. He carried on the lumber business and also made bricks at a yard near where the house of C. M. Cummings now stands. In 1803 he rebuilt the mills and carried them on until 1829, when he rented them for five years to William Kendall and Edward Richardson, of Holden.

In 1836 Captain Eden Baldwin sold the mills to Colonel George W. Sawyer, who retained possession some two years and then sold the property back to Captain Baldwin, who retained it until his death, in 1839. In that year another Eden Baldwin, from Ashfield, a distant relative of the former, became the owner, and in 1840 he took down the former structure and built the eastern half of the "Red Mill," putting in a new grist-mill and a self-setting saw-mill. In 1842 he sold to Gilman Day, who received Charles Baldwin, a grandson of Captain Eden, as a partner in 1843. Edwin Sawyer bought Mr. Baldwin's interest in 1847. Day & Sawyer built the western half of the "Red Mill." They made wood-seat chairs, hat-cases, etc. The manufacture of chairs has been continued at this stand by different firms formed in successive years: Sawyer & Thompson in 1853, Sawyer, Thompson & Perley in 1856, Thompson, Perley & Waite in 1871 and the Waite Chair Company in 1887. On the death of Mr. Perley the firm was divided and Mr. Thompson became the head of a firm making chairs at the lower mill.

In 1843 Captain Warren L. Merritt began the hat-pressing business in the "Red Mill." But a mill was built at the north end of the dam in 1844 by Samuel D. Morley, and Captain Merritt moved his business there and continued it until 1850, after which the business was continued by John Stearns, and Lee & Stearns, who employed about twenty hands. In the recent years Baker & Wilson have a grist-mill here, at which they grind large quantities of Western corn, selling the meal in the neighboring villages.

In the early part of the century a number of persons in this village and in other parts of this town were engaged in the manufacture of wood-seat chairs. The work was done wholly by hand in small shops near to or connected with dwelling-houses. As the years went on, machinery was invented to facilitate the work, and that necessitated the concentration of the work in larger establishments.

In 1844 Albert Bryant and James Stimpson built a dam at what is now known as the lower shop. A shop was soon built at the north end of the dam, and in 1846 another at the south end by James Stimpson. In these shops various kinds of business have been carried on by different persons and firms. Hat-pressing has been carried on; different firms have manufactured matches; doors, sashes and blinds have been made; a shop was burned at the south end of the dam in 1862. Soon the privilege passed into the hands of Willard Baker and Sawyer, Thompson & Perley. The latter firm and their successors have occupied the southerly shop in the manufacture of chairs. A division of this firm was made in 1887, and this shop is now occupied by D. L. Thompson & Son, who continue here the manufacture of various kinds of chairs. The northerly shop has for some years been occupied by Baker & Wilson in the manufacture of children's carriages.

A tannery was carried on for several years previous to 1817 by Joel Hayden, and afterward by Henry & Joseph Newton, on the site recently occupied by the office and store-house of Thompson, Perley & Waite, west of the hotel. His mill for grinding bark by water-power was on the site now occupied by the machine-shop of William E. Nichols. Various kinds of business have since been done here. John & Hartford Potter made sofa frames; Bennet Potter put in a grist-mill; Kelton & Hollingsworth were machinists; Eden B. Sawyer, and afterward Buffum & Newton, made measures for measuring grain; Captain W. L. Merritt made window shades; James Stimpson made faucets. At the present time the privilege is used by William E. Nichols for the manufacture of band saw machines and various kinds of chair machinery.

In 1841 Captain Joseph Davis built a saw-mill at the most easterly privilege in Baldwinville. For

some years pails were made here and afterward doors, sashes and blinds; Sawyer & Patterson made matches; Robinson & Hersey made buckets, and James Stimpson clothes-pins. This mill was burned in 1856. The privilege was bought in 1869 by Charles A. Perley and Gilman Waite. In 1870 a stock company was formed and a large and commodious factory was put up which furnished accommodations for several firms. Smith, Day & Co. made chairs; L. Greenwood & Co. also made chairs; E. Sawyer & Co. made furniture. This mill was burned in 1885. It was rebuilt by Smith, Day & Co., who continue the manufacture of chairs at this stand. A part of the water-power at this place is used by Mr. H. M. Small in the manufacture of sheathing and roofing paper.

There were formerly two saw-mills on Beaver Brook, in the extreme western part of the town. There were also two mills in the northwesterly part of the town, on the Royalston road, one of which is still kept in operation. These were on tributaries of Otter River.

On Trout Brook there were formerly five mill privileges which were utilized. Only two or three of them are now used. The first privilege to be used was that now occupied by Bourn, Hadley & Co. Mr. Withington erected a saw-mill here not far from 1820. Deacon Benjamin Hawkes and his sons had made furniture by hand at a shop formerly standing on the present site of the Public Library. Later they made use of the water-power at this stand for some years. The present proprietors are extensively engaged in the manufacture of pine and ash furniture. Farther down on this stream toward Baldwinville is a saw-mill. Staves for pails are also prepared here.

The water from Phillipston Pond flows through the southwesterly part of this town, on its way to join the waters of Ware River. On this stream have been several mill privileges, which have been used for grinding grain, sawing lumber, and preparing chair-stock or staves for pails. On a stream tributary to this is a mill which has been variously employed, recently as a cider-mill; formerly, Mr. Leander Leland made shoe-pegs here with ingenious machinery which he had prepared.

Mill Brook is the name applied to a stream of water which rises in the southeasterly part of this town and flows through Partridgeville and East Templeton, falling into Otter River a short distance below the latter village. As this brook has quite a rapid fall, it furnishes several water privileges, two of which were in Partridgeville. On the upper one was a saw-mill, formerly owned by A. A. & G. W. Jones. This has been suffered to go to decay. A little way down the stream, and close by the highway, was formerly a grist-mill. Afterwards, for some years, H. & J. W. Partridge made chairs here. It is now owned by Dexter P. Merritt. Two reservoirs for the storage of water lie above the village of East Templeton. Below the dam of the lower one was a shop for the manufacture of chairs. The water-power was supplemented, in later times, by a steam-engine. The shop was built by Bennett Potter, and had been occupied by Potter & Jennison, Parker, Sawyer & Co., McLean & Dickerman, and others. It was burnt recently, and has not been rebuilt.

The chair manufactory of A. S. Hodge was burnt recently, and has not as yet been rebuilt. Chairs have been for many years manufactured on this site by different parties, using steam as well as water-power in later years. The shop now owned by Henry J. Wright seems to have been built by Bennett Potter. Various kinds of business have successively been carried on here. The grist-mill and saw-mill formerly owned by John Simonds was, in 1813, bought by Joel Fales, who enlarged the mills. He soon erected another shop near where the "Fales" shop recently stood, and carried on the manufacture of scythes for several years. He had a furnace and made small castings. He had a trip-hammer and manufactured hoes. His son, Otis P. Fales, was associated with him in this business. In later times the brothers, Otis P. and Joel G. Fales, under the firm-name of J. G. Fales & Co., made chairs, the seats of which were woven out of thin plates of wood split by a machine invented for this purpose. The chairs had a look not unlike the chairs of the olden time, and for some uses were quite popular. This shop was burned a few years since. On the next mill-site the manufacture of children's carts and wagons has been carried on since the year 1858, by Chester N. Johnson, who has made of it a very successful business. The tannery business had for many years been carried on at this site, earlier by Mr. Swan and later by Warren Simonds. At the next site, T. T. Greenwood's Sons continue the business of the manufacture of furniture, which their father had begun some years before. They also have a furniture store in West Gardner. A mill built by Artemas Brown formerly stood on the next site. At first it was a saw-mill; afterwards tubs and pails were made here, but there has been no shop here for some years. The last shop on the stream is that of the East Templeton Chair Company, a co-operative incorporated company, which has met with a good degree of success.

Otter River enters the town on its eastern side, from Gardner, and flows through the northerly portion of the town, furnishing an abundant water-power in the villages of Otter River and Baldwinville. The Otter River Blanket Mill occupies the first mill-site on this stream, having a location just over the Gardner line. Horse blankets in large quantities were quite recently the product of this mill. The first mill here was built by Cooper Sawyer. The manufacture of chairs has, in the past time, been carried on here. A little farther down the stream is what is known as the Templeton Blanket Mills, which, together with the factory last named, is owned by Rufus S. Frost, of Chelsea, Mass. On this site William Hunting built a saw-mill, which Col. Leonard Stone after-

wards bought and occupied for many years. William E. Nichols for a time had a machine-shop here, and Charles Everett a grist-mill. Going a little way down the stream, we come to the Woolen Mills. The first building on this site was erected about 1823 by Capt. Samuel Dadman, who began here the manufacture of woolen cloth. The Dadman Manufacturing Company, the Jones Manufacturing Company, and other firms have continued the business. A new building was erected in 1836. Some kind of woolen goods has been the manufacture carried on here. Near this site, in the earlier part of the century, and reaching back to about 1787, Edward Cambridge had a shop for dressing cloth. He performed the service of dressing and finishing the cloth made by the farmers at their own homes on the hand-looms. Just east of the present factory building, Nathan Smith had a shop, at which he used to receive wool from the farmers and card it into rolls, ready for spinning at home.

The manufacture of bricks has been carried on quite extensively by Charles C. Dyer, in the village of Otter River, at the yard which had been for many years occupied by his father, Horatio N. Dyer. These are transported by rail and sold in Worcester and other places.

The manufacture of stoves has for many years been an important industry in the village of Otter River. It was begun by Thomas Parker, who, about the year 1836, erected a shop on a tributary of Otter River flowing into the town from Winchendon. He carried on the business until 1843, when he was succeeded by his son, Daniel W. Parker, who, in 1851, received Otis Warren as a partner. Mr. Warren carried on the business alone until 1853, when he sold to Gates & Lord. Lord & Walker became the name of the firm in 1858, which became Lord & Stone in 1871, and Lord, Stone & Co. in 1887. During all of this time, in addition to the manufacture of stoves, a general foundry business has been done at this stand, and machinists' work also. The work, which was begun on a small scale, has gradually increased, giving employment at the present time to from thirty-five to forty hands. From five hundred to six hundred tons of iron are melted annually. The stoves are sold by traveling agents in various parts of New England.

Inventors.—The soil of Worcester County is certainly not favorable, as a general thing, for the production of agricultural crops; but it produces excellent mechanics. The very atmosphere seems to favor their growth. And Templeton, like its neighboring towns, has always abounded in good mechanics —good in the practical execution of work, and sometimes apt in the invention of new machines and processes. Indeed, these country towns would, many of them, have gone to early decay had it not been for their mechanical and manufacturing industries. The local market furnished by the manufacturing villages is the one thing that makes farming possible here.

Eli Bruce was one of the early settlers in the town, living in the village of Baldwinville, in the house now occupied by Mr. Hildreth. He was a very ingenious man. He made clocks, repaired watches and jewelry. He constructed a pipe-organ, which was said to have been a very fine one. He invented a machine for making pins out of wire, heading and pointing them ready for use. He also invented machinery suitable for the manufacture of wooden buckets. His was a versatile mind, ever ready to animate material things with a capacity to subserve human wants.

Asa Fessenden was another mechanic of unusual ingenuity. He lived first at Templeton Centre, making vehicles of various kinds at the shop afterwards occupied by Maynard & Fiske. In later life he lived in Baldwinville, in the same house formerly occupied by Eli Bruce.

James Stimpson, now living in Baldwinville, is the inventor of a machine of much utility in the manufacture of furniture. It makes with rapidity a strong joint for the fastening together of the sides of drawers for bureaus, and is generally used in furniture-making establishments. He secured a patent for the method of making the joint in 1857, and on the machine in 1859. Mr. Stimpson is also the inventor of a street lamp of much convenience. The lamp is lowered for lighting and care by an iron lever turning on an axis.

John Nichols, of Baldwinville, invented a child's chair that is very easily convertible into a carriage, and again into a play table. There were six different kinds of these chairs. He has also invented an ingenious form of street lamp, in which the lamp slides down through a hollow lamp-post for convenience of lighting and care. The draft of air for the lamp is also through the post, so that it burns steadily even when it is windy.

Hotels.—In the olden times country towns abounded in inns or taverns. On the principal lines of travel there seems to have been only a distance of two or three miles between them. The great number of loaded teams transporting merchandise from Boston to the interior towns created a necessity for numerous stopping-places. Perhaps there was also found some pecuniary profit in furnishing some form of liquid refreshment for thirsty travelers. But the taverns were numerous in our own town as well as in others; and tradition surrounds them with a kind of halo which could not have been visible to their immediate patrons. The "enchantment" doubtless results from the distance which time interposes. Most of them were farm-houses of a larger size. In the villages, however, were taverns of more pretension and importance.

It is not easy to ascertain the date of the opening of the first tavern in town. Doubtless the first ones were kept by persons who gave their chief attention to other pursuits. There was formerly a tavern kept

at the farm-house now known as the "Lambert Howe" place. There were three taverns at Templeton Centre. One was kept by Joseph Upham in the brick house at the northwesterly side of the Common. One by Joshua Wright, familiarly known as Landlord Wright, was kept in what has been known as the old "Hawkes" house, then standing where the public pump now is. But the chief public-house of the village seems always to have been the one on the site of the recent Templeton Hotel, which has been kept for some years by Charles E. Ellis. This building was burned in September, 1888. This house, in the earlier part of the century, was kept by Lipha French, Calvin Townsley and Levi Pierce. In later times Francis Twichell was very favorably known as the proprietor.

The house now owned by Mr. Lucas Baker in East Templeton, and that owned by Mr. Isaac Bourn in Brooks village, were both kept as taverns in the early part of this century, being on the line of through travel from Boston to Albany, which passed through Templeton. This town was also on a line of through travel from Worcester to Keene. On this line were two taverns at the Baptist Common,—the one kept in the house which is the present residence of Mr. John M. Brown, the other in a house directly opposite, on the other side of the Common. Baldwinville was also on this line of travel, and here, in several of the earliest years of the century, Capt. Eden Baldwin kept a tavern in the house now owned by Albert Bryant. In 1832 Capt. Joseph Davis built the hotel now known as the Narragansett House. In 1870 it was purchased by Mr. George Partridge, who has since been the proprietor. The building has at two different times been partially burned.

About 1847 Mr. J. G. Goldsmith built a hotel in the village of Otter River, on the present site of Mr. Le'and's store. This he kept for several years. After several persons had occupied it for brief periods, it was bought by Mr. Joshua W. Partridge and kept until the building was burned. In later times a hotel has been kept by different persons on the opposite side of the street from the former one.

STORES.—In the last century and the early part of this there was not much necessity for an abundance of stores, and where they existed at all there was little occasion for a large stock of goods. The families were not very numerous and were scattered about on the farms. They produced their own beef and pork, as well as fruits and vegetables. They were very sparing in the use of tea and sugar, and coffee was almost unknown. They spent very little money on luxuries of any kind. Their clothing was prepared with their own hands at their homes. The farmer himself, with his own team, carried any salable products of his farm to Boston, and brought back home supplies for his own family and sometimes for his neighbors. Gradually, as the population increased, it was found more economical to make a division of labor, and so permit some persons to devote their whole time to the work of making these exchanges. Hence the evolution of the country merchant and the country store.

In Templeton Centre, early in this century, a long building stood on the site of the "Lee" store. In the north end of this building John Bigelow kept clocks, watches and similar goods. Cyrus Brown kept a variety store in the middle of the building. In the southern portion was sometimes a shoemaker's shop. John Bigelow lived in the "Gilbert" house. Cyrus Brown afterwards had a farm in the westerly part of the town, which has remained in the hands of his descendants to this day. This store building was moved away, and a part of it was used to make the house now owned by Charles W. Upham. In 1829 Col. Artemas Lee erected the store and dwelling-house now standing on that site, and kept some connection with the store during the rest of his life. The names of the firms successively doing business there were Lee, Harding & Jones, Lee & Lincoln, Lee & Wood, Lee & Gambell, and afterwards Leland & Jones. Some time after the death of Col. Lee the store and other real estate was bought by Percival Blodgett, who, with a slight intermission, has carried on the business to the present time. He has added a stock of drugs and medicines. Col. Lee, before building on this site, had kept a store in the southerly portion of the hotel building, during a portion of which time he was associated with Lipha French.

On the easterly side of the Common, on the site of the "Brick" store, formerly stood a wooden one-story building, which was in after time moved away, and now forms the lower story of the Trinitarian parsonage. In this and the brick structure which succeeded it a store has been kept until quite recent times. In the early part of the century it was occupied by John W. Stiles, a prominent merchant of northern Worcester County, and later by Col. Ephraim Stone.

Several persons assisted in the work of the store, and among others Rufus Wyman, who afterwards became a partner. But Col. Stone was advancing in years, and Mr. Wyman was desirous of leaving town; so the store was given up. Not long after, a Co-operative Union store was organized and kept here for some years, under the management of Erastus O. Eddy. After this was given up, the store business was carried on here for several years, first by the firm of Dudley & Blodgett, and afterwards by Mr. Dudley alone.

A store was also formerly kept by George Howe in a building which stood northerly of the residence of Mrs. Batchelder. Another store was kept by Moses Bond, in the brick house now owned by Charles W. Stone.

The country store has been something more than merely a place for the convenient purchase of the family supplies. Men meet each other here and have an interchange of views on the political or social questions of the day.

It furnishes a partial substitute for the social enjoyments of the club and the attractions of the theatre.

The philosopher must take account of these informal and accidental meetings of persons who live in scattered dwellings as one of the forces which advance civilization, or at least as a force tending to hinder the lapsing into barbarism,—less potent than the town-meeting or the Sunday gathering, but still a force worthy of recognition.

Baldwinville next claims our attention in this matter of stores. But on the way thither, we may remark that, in the earlier times, there were two stores at the "Baptist Common," as well as two taverns and one church. Doubtless there were in Baldwinville, as elsewhere in the early times, persons who united to some other business that of furnishing family supplies, even before the erection of stores. But in 1824 Captain Eden Baldwin erected a store at a point northerly of the residence of Mr. Ray, and about where the road to the railroad station now passes.

Captain Moses Bond, who had previously kept a store at the centre of the town, carried this on for three years. Captain Joseph Davis then leased the store and placed it in the care of Mr. Valentine. On his removing to Baldwinville, in 1830, Captain Davis bought the store building and in 1840 removed it to a location in close proximity to his hotel, where it now stands. A store has been kept in the building until a period quite recent. The store now occupied by Louis Leland was also built in 1824. Joseph Raymond first carried on business here, and afterwards Lee & Raymond until 1837. Lee & Morley and Lee & Lincoln were the styles of firms until 1844; then M. H. Wood & Co., until 1856. Sundry persons kept a small stock of goods here for a time, after which there was a period of suspended animation, which was terminated by the appearance of the firm of Leland Brothers in 1870. Since 1872 Louis Leland has continued the business alone, Francis Leland retiring and giving his undivided attention to his store at Otter River. A store has been kept on the site of the Cady & Brooks block since 1844. It was first occupied by James Stimson and Mark W. Ray. A Protective Union store was afterwards kept here, with James H. Clapp as agent. It was occupied by Sawyer, Thompson & Perley as a store and office from 1861 to 1876. O. D. Sawin kept the store one year, continued by Sawin & Bryant to 1880, when the building was burned. It was rebuilt on a larger scale, with a spacious hall on the third floor. The stores on the lower floor were occupied by Dorr & Dickinson and Lehy & Goss. Rooms for the Templeton Savings Bank and also for a lawyer's office were in the second story. Fire consumed the whole structure again in 1882, and again it was rebuilt with offices as before in the second story, and the post-office and stores in the lower story. In one of these stores, drugs and medicines and furnishing goods are kept by C. S. Dickinson; in the other, groceries and miscellaneous goods by C. S. Dickinson & Co.

A small building to be used as a store was erected in 1857, just south of the bridge over Otter River. This has been occupied for brief times by different persons, sometimes as a shoe store, sometimes as a grocery store, but it is at present unoccupied.

In the village of Otter River the first store of importance was kept in the low, one-story building on the west side of the Main Street. Samuel D. Morley, Samuel M. Osgood and Francis Leland have successively engaged in trade at this stand; others have continued to occupy this store until the present time. In 1883 Francis Leland built, for the more complete accommodation of his business, the large and commodious brick store which he has since occupied. About 1847 Captain Joseph Davis, of Baldwinville, erected the large building for a store and dwelling-house on the eastern side of the street, and a store was kept here for about ten years under his supervision. Since, it has been occupied by Warner & Kirschner, and now by Frederick Warner.

Savings Bank.—The Templeton Savings Bank was incorporated April 19, 1871. Its place of business has always been in the village of Baldwinville. Up to the present time it has hired one of the upper rooms in the Brooks & Cady Block. This year (1888) the trustees voted to erect a new building suitable for the accommodation of the bank and containing rooms to rent for other purposes. The building is to be fifty by forty feet in size, and the work of construction is now going on. M. A. Wilson is president of the Savings Bank, and Asa Hosmer is treasurer. Its assets now amount to more than two hundred thousand dollars.

Roads.—Roads of some kind must be of prime importance to the people of a new settlement. We find that the proprietors of this town early gave attention to making them. The first roads were doubtless mere bridle-paths, in most cases suitable only for passing on horseback. From the formation of the town until now the building and repairing of roads has been a very large item in the public expenditures. During the first twenty years of the existence of the town the appropriations for mere repairs of highways, leaving out altogether the cost of building them, was from three to five times as much as the appropriation for schools; during the next twenty years it was from one and a half to three times as much; during the first forty years of this century a little more than twice as much. There was then a few years in which they were not very far from equal. For the last fifteen years the ratio has been reversed, and the appropriation for schools has been about twice as much as that for repairs of highways.

It will not be practicable to trace the origin and history of our roads minutely, although it would be a matter of interest to do so. A few details must here suffice. The proprietors, in 1737, paid a committee for "marking and clearing a road to the township," which perhaps was a bridle-path from Westminster. In 1740 a road was "marked and cleared

to Pequoiage" (Athol). Roads were also to be cleared to the settlers' lots, and also a road to Petersham. On May 13, 1752, the proprietors chose a committee of three persons to lay out roads through the township. In 1753 this committee was directed not to lay out the new roads until "the settlers have pitched on their house-spots." In 1754 the committee reported a road from the Common reaching halfway to Baldwinville, which was extended further in 1759, and in 1761 made to reach quite across Otter River.

The bridge over Otter River at Baldwinville seems to have been built by Noah Merritt in 1763. The bridge over the same river in the village of Otter River was probably built in 1778. The town records are abundantly sprinkled over with the reports of the laying out of roads.

At the second town-meeting after the town was incorporated it was voted "to give for work on the highways three shillings a man per day till the last of August, and then to the last of September two shillings, and that oxen have half as much, and a cart a quarter as much." This meeting granted forty pounds for mending highways, it being the first money granted by the town for any purpose whatever.

The building and repairing of roads was a severe tax on the inhabitants of these towns in the early times. The turnpike system afforded some moderate degree of relief. Companies were formed and incorporated with the design of making better roads than towns could afford to make, and toll was demanded by the company from those who traveled on them. The Fifth Massachusetts Turnpike Corporation was incorporated by the Legislature in 1799. Its route extended from Greenfield and Northfield, in two distinct lines, which united at Athol, thence through Templeton, South Gardner and Westminster to Leominster.

In this town it ran through Brooks village, Templeton Centre and East Templeton. Tolls, at differing rates for different vehicles, were established, and gates were set up at convenient places for its collection. Persons passing to or from public worship, and those on military duty, were exempt from paying toll.

Templeton was situated at the intersection of three stage-lines, in the time before the advent of railroads. It was on a through line from Boston to Albany; also stages running from Worcester to Keene and from Lowell to Springfield passed through here. So there were scenes of much activity as the stages arrived and departed. Exchanges of horses and providing for the wants of travelers made the taverns or hotels places of importance in those days.

Railroads.—The construction and improvement of the common roads received the early and constant attention of the settlers in these towns, and, relative to the means of the people, large expenditures were always made upon them. The people of this town have been forward and earnest in providing more extended and rapid means of communication. When the project was started for a canal from Boston to some point on the Hudson River, this town, in 1825, chose a committee to confer with the canal commissioners, and urge its being built through this section of the State, but it was soon seen that railroads were more desirable than canals. In 1835 this town favored a railroad through its limits, connecting Worcester and Keene. This town early became interested in the Vermont and Massachusetts Railroad, and, in 1844, chose a committee to favor its location here, and when, after the charter was obtained, an effort was made to divert the road from this town and build it through Winchendon, the plan met with the most determined opposition. The town appropriated money and chose a committee to resist the change. This committee acted with great vigor and earnestness; it was composed of earnest men: Col. Artemas Lee, Captain Joseph Davis, Joseph Mason, Esq., Gilman Day, Esq., and Col. Leonard Stone. They had surveys made, they employed counsel to defend the case; there were trials before the county commissioners, and hearings before the legislative committees. In 1845 the county commissioners gave a decision against the change of location. The railroad company again petitioned the Legislature for a change of location, the town again opposed it; the road was finally built here, and the first passenger-cars passed through this town in 1847. Some years after, the company renewed its efforts for a change in location, and again they failed to accomplish their purpose.

Not long after this road was built the project was formed of a railroad running across the State, to connect with the Boston and Albany. The valleys extended themselves in such directions as to promise easy grades. The Ware River Railroad was chartered in 1870. This town, in its corporate capacity, subscribed for two hundred and fifty shares of stock; it invested $25,000 in bonds. The road was graded; the construction company failed, and the stock became worthless. The town sold the bonds for one-half their cost, $12,500. The town lost its money, but gained further facilities for communication. A passenger-train first passed through on this road October 30, 1873.

CHAPTER XXI.

TEMPLETON—(*Continued.*)

Post-Offices—The Common — Cemeteries — Societies—Warning Out—The Great Load of Wood—Chaises—Bounties on Wild Animals.

At the present time Templeton has four post-offices, at each of which mails arrive and depart two or more times daily. We are only two and one-half

hours from Boston and seven hours from New York City. One hundred years ago the mail facilities were very meagre, not only for the country towns, but even for the largest cities in the colonies. At about the time of the American Revolution mails were despatched between Boston and New York three times in a week during the summer, and two times a week during the winter, taking from six to nine days in the passage from one city to the other. The bulk and weight of the mails did not exceed the capacity of a pair of saddle-bags. The mail between New York and Philadelphia was carried five times a week, usually by boys on horseback. Benjamin Franklin had been Postmaster-General for the colonies from 1753 to 1774, and had greatly increased the efficiency of the mail service. But Massachusetts had, at her own charge, established a postal system with fourteen post-offices within her own boundaries.

The mail routes which were established radiated from Cambridge, running north to Haverhill and Georgetown, in Maine; south to Providence and Falmouth; westerly to Great Barrington, through Worcester and Springfield. From Worcester mails were carried to Woodstock, Vt., and, very likely, this route passed through this town.

Soon after the government went into operation, in 1789, a general postal system was established for all the colonies. The rates established at the organization of the department, and continued until 1816, were: For a letter composed of a single piece of paper, under 40 miles, 8 cents; under 90 miles, 10 cents; under 150 miles, 12½ cents; under 300 miles, 17 cents; under 500 miles, 20 cents; over 500 miles, 25 cents.

The rates of postage have several times been reduced since 1816.

In the first years of this century probably the town of Templeton did not receive a mail oftener than two or three times a week. The records of the United States Post-Office Department, at Washington, do not show when a postmaster was first appointed for this town. The earliest records, however, show that Thomas Wilder was the postmaster on July 1, 1802. The following list contains the names of all the postmasters, and the date of their appointment, from 1802 to the present time: Lovell Walker, appointed October 1, 1803; Caleb Leland, appointed July 1, 1809; Lipha French, appointed September 28, 1810; Artemas Lee, appointed September 28, 1829; John Boynton, appointed October 14, 1843; George H. Jones, appointed April 20, 1848; Dexter Gilbert, appointed January 27, 1849; Addison J. Lincoln, appointed July 14, 1849; Dexter Gilbert, appointed May 3, 1853; Henry Smith, appointed March 19, 1861; Artemas Lee, appointed November 6, 1863; Henry Smith, appointed March 24, 1865; Julius A. Jones, appointed March 20, 1867; Percival Blodgett, appointed March 22, 1869; Delia Damon, appointed July 13, 1885.

The post-office at Templeton Centre was the only one within the limits of the town until the year 1830, when a post-office was established at Baldwinville, and that village has since then been known by that name. The names of the postmasters, with the date of their appointment, follows: Joseph Davis, appointed in 1830; James H. Clapp, appointed August 5, 1853; Edwin Sawyer, appointed June 24, 1861; Otis D. Sawin, appointed December 9, 1870; Ezra A. Lamb, appointed June 16, 1874; George E. Bryant, appointed August 27, 1885.

The post-office was established at Otter River Village in 1860, and the following persons have served as postmasters: Samuel M. Osgood, appointed 1860; Francis Leland, appointed 1867; Frederick Warner, appointed 1885.

The post-office at East Templeton was established in 1866, with Fitch L. Sargeant as postmaster, in which office he still continues to serve.

THE COMMON.—Templeton was one of those fortunate towns whose early inhabitants exercised a wise foresight in providing ample grounds for public use. The beauty of many New England villages is very much enhanced by such thoughtful foresight on the part of some persons. In this town a piece of ground was set apart for "Publick use" some years before the incorporation of the town. In 1754 the proprietors chose committees "to pitch upon burying places," and one site was selected near the meeting-house, the other in the west part of the town. On March 21, 1759, Charles Baker presented to the proprietors the plan of a piece of ground which he had surveyed for a Common and a burying-ground, containing eight acres and seventy rods. This survey was accepted by the proprietors on that date and the land devoted to the public use. The old meeting-house then stood on the southwesterly part of this Common.

At a meeting of the proprietors held at the meeting-house on May 3, 1786, they granted and appropriated the burying-place and Common to the use of the town forever. The plan of the two pieces of ground is contained in the "Proprietors' Records," Book II., Page 81, and embraces somewhat less than the area laid out in 1759—six acres and one hundred and nineteen rods. This Common extended on the north only to a line running irregularly across from the present residence of Dr. Tobien to the brick house owned by Charles W. Stone. At the southwest corner it included an area which has since been sold by the town to individuals for the sites of the two houses nearest the present Common. In 1791 the town purchased of Isaac Jones, for ten pounds and ten shillings, a triangular-shaped piece of ground lying between the house of Miss Twichell and the hotel, "to enlarge and extend the Common." In 1814 the town purchased of Joshua W. Whitcomb a long strip of ground containing about one acre, lying on the westerly side of the highway and extending from the Common to a point near the residence of J. Pres-

cott Cutting. In 1816 another similar piece of ground, lying on the easterly side of the road and extending from the Common to the corner of the roads near the residence of Colonel George P. Hawkes, was purchased of James F. Robbins and wife, for the sum of three hundred dollars. That made up the area of the Common to its present limits. At a somewhat recent date the Common was adorned with trees by the generosity of Colonel Artemas Lee. In the olden time the Common was much used for military trainings and musters. It furnishes an excellent play-ground for the school-children in modern times.

CEMETERIES.—The first ground set apart for a burying-place in this town was that adjoining the Common. The proprietors passed a vote devoting this lot to that purpose in 1754, caused it to be surveyed by Charles Baker in 1759, and granted it the town by a vote passed May 3, 1786. Very few burials have been made here since the laying out of the new cemetery. There is a burial-place at the "Baptist Common," lying close to the former site of the Baptist Church. No burials are now made here. In 1850 the town purchased ground for two new burial-places—the one at Baldwinville, the other in the valley lying westerly of the village at the Centre. The improvement and adornment of these places is going on from year to year, partly by individual effort and expenditure, and partly by appropriations made by the town. Cemeteries are no longer the dreary, neglected places which they once were. The town has made special provision for the safe keeping of money bestowed by individuals for the future care of their lots.

SOCIETIES.—There was formerly a lodge of Free and Accepted Masons in this town. It was dissolved in 1843, and its funds were given in trust to the town. This constitutes what is known as the Masonic Fund, the income of which is distributed, charitably, by trustees chosen annually by the town. A large number of persons were connected with the Know-Nothing Lodge in 1854. A post of the Grand Army of the Republic, Ericsson Post, No. 109, was organized in 1869, and holds its meetings at its hall in East Templeton. A lodge of Knights of Honor was formed in 1879. It has a place of meeting at its hall in the Centre Village. The same hall is also the place of meeting for Templeton Grange, No. 122, Patrons of Husbandry. This grange was organized in 1885. There have formerly been organizations of Good Templars in one or another of the villages of the town; one has been recently formed in Baldwinville. There are several organizations for literary and intellectual improvement, combined with more or less of entertainment and social enjoyment. These are more especially intended for young persons and are mostly conducted under the auspices of some one of the religious societies, as the Young People's Union in connection with the Unitarian Society; the Willing Workers in connection with the Trinitarian, both of the Centre. At Baldwinville there is the Social Temple in connection with the Baptist Society, and the Memorial Union in connection with the Memorial Society. There is also at East Templeton an association for literary improvement known by the name of the Round Table.

WARNING OUT.—A statute of the province existed before the American Revolution which provided that if persons were legally warned to depart from a town, they could not at once gain a legal residence there, and so the town would not be chargeable for their support in case they came to want. So the selectmen and constables were diligent in serving this notice upon newcomers, "warning out" all persons soon after their arrival. It was not a warm reception, but it was deemed a wise precautionary measure. When any inhabitants of the town received any persons from another town to dwell in their families, they immediately sent a written notice to the selectmen, informing them of the fact, and stating the age and circumstances of the persons and the town in which they last dwelt. The selectmen issued a warrant to the constable requiring him, "in his majesty's name," to warn these people to depart from the town forthwith. The early records of the town abound in copies of these documents.

THE GREAT LOAD OF WOOD.—The history of the town would not be complete without some mention of the "great load of wood." It was no uncommon thing for the minister of the olden time to receive gifts of firewood from his parishioners. In the month of January, 1822, Colonel Leonard Stone, who lived in the northerly part of the town and had a saw-mill on Otter River, was drawing a load of hard wood to the parsonage for his minister, Dr. Wellington. As the load passed across the Common, Colonel Ephraim Stone saluted his brother with the question, "Why don't you take your minister a load of wood while you're about it?" Colonel Leonard replies, "I've been sawing out lumber down't the mill, and there's any quantity of slabs. I will give the minister as big a load as you can draw." Colonel Ephraim stirred up the people to make a full acceptance of the offer. A sled was improvised with runners thirty or more feet long and placed eight feet apart, with a tongue for the attachment of oxen in front of each runner. The sled was taken to the mill. The slabs were eagerly piled on. Eighty pairs of oxen were attached and the load was easily drawn around through Baldwinville, up well upon the more level ground. Then with common sleds they brought and piled on more slabs until there were no more slabs at the mill. Night came on, but the morning brought the oxen and men to the load once more, and soon it was brought to the minister's door. It was a more huge wooden structure than that which came to ancient Troy, but yet, in this case, with no menace to the safety of the town. Many people came to see the immense load, as it remained for some days upon the sled in the minister's door-yard.

It is probably known to all that our ancestors were wholly ignorant of the luxury of a modern carriage with its cushioned seats and easy springs. It is not much more than half a century back to the time of riding on horseback. There came a time when a man of means might have a chaise. And the possession of one set a mark of distinction upon its owner. It was esteemed so much of a luxury that the United States imposed a special tax upon them. I subjoin a certificate from the tax collector.

This is to certify that A—— B——, of the town of Templeton, in the 6th Collection District of Massachusetts, has paid the duty of two dollars for the year, to end on the 31st day of December, for and upon a two-wheel carriage, for the conveyance of persons, hung on wooden springs, and called a chaise. This Certificate to be of no avail no longer than the aforesaid carriage shall be used by the said A—— B——, unless said certificate shall be produced to the Collector by whom it was granted and an entry made thereon, specifying the name of the then owner of said carriage and of the time when he became possessed thereof. Given in conformity with an Act of the Congress of the United States the 24th of July, 1814. Worcester, Jan. 21, 1814.

WM. EUSTIS,
Collector of Revenue, 6th Collection District of Mass.

BOUNTIES ON WILD ANIMALS.—In the earlier times the town sometimes offered a bounty for killing destructive animals. A bounty of thirty-four cents for each old crow and seventeen cents for a young one was offered in 1797 and on several other years, the last of which was in 1834. A bounty of twenty-five cents for old hen-hawks and twelve and a half cents for young ones was offered in 1801 and 1802. In 1783 and the three following years the town offered a bounty of forty shillings for each full-grown wolf's head, and it is known that at least one person actually received such a bounty. There is found no record of any bounty for bears, although it is believed that they existed here in the early times.

CHAPTER XXII.

TEMPLETON—(*Continued.*)

EDUCATIONAL AFFAIRS.

Schools—Private Schools—Public High Schools—Teachers—Graduates—Libraries—Boynton Public Library.

THE first settlers of a town whose farms are not fully cleared and dwellings not completed are not in a condition to give much thought to schools. There were no schools supported by grants of public money until after the incorporation of the town. There was a grant of a small sum for schools, by the town, for the first time, in the year 1763. Two "squadrons" for schools were formed in 1764, one in the easterly, the other in the westerly part of the town. In 1769 it was voted that each "squadron" should receive the same proportion of money for schooling that they had paid in taxes. In 1776 the school money was divided according to the number of children in each division between four and sixteen years of age. In 1779 it was changed so as to divide according to the number between four and twenty-one years of age. In 1835 the method was adopted of dividing one-half of the school money equally among the districts and the other half in proportion to the number of children therein. The town voted in 1805 to use the word "district" to designate the school divisions. Previously, the word "class" had been used, and earlier, the word "squadron." By a law enacted by the Legislature in 1789, towns were permitted to divide their territory into school districts. The districts were made corporations in fact in 1799, but not in name until 1817; and not until 1827 were the districts authorized to choose prudential committees. That was previously done in town-meeting. The district system prevailed in this town until 1869, when it was given up in accordance with a law of the State, and the town system was substituted. In 1787 the town apportioned its territory into seven "classes" or districts, for school purposes. District No. 8, Baldwinville, was formed from No. 6, in 1831. District No. 3 was divided in 1834, making District No. 9 at East Templeton. These nine districts formed the divisions for school purposes until the district system was given up. From 1815 to 1822 District No. 1 formed two districts, with two school-houses, the one standing on the site of the present one, the other standing near the present residence of Mr. P. M. Mirick. Afterwards, for a time, the two houses stood side by side on the present location. Both were moved away to make room for the present structure, and each is now made into a dwelling-house of the village.

In the early times the town did not build or own the school-houses. In some districts they were built by the voluntary contributions of the people. In some cases the schools were kept in private houses. There is no indication that the town appropriated any money for school-houses until 1787. A committee was chosen in that year to appraise the value of the school-houses then existing, and to purchase them of their owners. The appraised value of all was fifty-one pounds, or about one hundred and seventy dollars. The town then granted the sum of four hundred dollars for building and repairing the school-houses throughout the town, and a committee was chosen to determine their location. It was voted by the town in 1801 to allow each district which might build a school-house one hundred dollars, the town to own the house and keep it in repair. From 1814 to 1869 the school-houses were owned and kept in repair by the several school districts, each district raising money by taxation for the building and repairing of its own house. In 1869 the town again became the owner of all the school-houses, the appraised value of which was $11,846.88; and the school districts were numbered with the things of the past. A school-house for the north part of the town, and standing between the two villages, was built in 1801. A school-house

was built in Baldwinville by the district in 1850, and another one by the town in 1883. The Otter River School-house was built by the district in 1860, with an addition made by the town in 1877. A public hall was also secured over the school-room by contributions from the people of the neighborhood. The older school-house in East Templeton was built by the district about 1834; the newer one by the town in 1874. The town hall and school-house, in one building at the Centre, were built by the combined action of the town and district, in 1844.

Until the year 1826 the superintendence of the schools, in a legal point of view, seems to have been vested in the selectmen; but practically, the work was done chiefly by the minister. At the special request of Dr. Wellington, the town, in 1811, chose a committee to assist him in examining school-teachers. A committee consisting of one person for each district was chosen, in 1815, to assist in examining the schools, and to recommend "certain useful classical books." Similar committees were afterwards chosen at different times. But still the chief part of the work devolved upon the minister. In 1826 towns were required by law to choose three, five or seven School Committeemen; and ever since that time the superintendence of schools has by law devolved upon that body. In 1857 the number of School Committee was fixed at three, or some multiple of three, and the term of office extended from one year to three years, one-third of the number being chosen each year. In this town there have been several persons who have served the town for a long period in the care of the schools. Rev. Charles Wellington, D.D., partly by virtue of his duties as minister, and partly by special election of the town, gave fully thirty years of service. Rev. Lewis Sabin, D.D., was elected for thirty-two consecutive years. Rev. Edwin G. Adams had twenty-two years of service, and Rev. Gerard Bushnell sixteen years. Dr. J. W. D. Osgood served ten years; Captain Samuel Lee, eight years; Colonel Leonard Stone, Joseph Mason, Esq., and Gilman Day, Esq., each served six years, and Charles Church, five years. In times nearer the present, E. C. Farnsworth, Esq., has served five years, V. P. Parkhurst, Esq., seven years, and Francis Leland nine years. Of the present Board of School Committee, Mr. Ingalls has completed five years of service, Mr. Hosmer six years, and Mr. Blodgett nineteen years. Several other persons have served on the School Committee from time to time, for short periods of less than five years each.

The appropriations for schools were of necessity small in the first years of the existence of the town. There has been a somewhat steady increase in the amount from the earlier to the later periods. The first sum granted for schools was in 1763. A sum a little more than the equivalent of thirty dollars was granted in 1764. The amount of the grant had been increased to three hundred dollars at the end of the century and to one thousand dollars in 1841. It reached two thousand dollars in 1856, three thousand dollars in 1866, and for the last six years the sum has been four thousand and seven hundred dollars. It should be borne in mind that in the earlier times the school money was supplemented by gratuitous supplies of fuel and sometimes by the teachers boarding successively with different families in the district. In the original division of lands in the township one lot was reserved for schools. This school lot, which was No. 36, lying in the southerly part of the town and containing Cook's Pond, was sold at auction, by vote of the town, in 1769, for about one hundred and eighty-seven dollars. This, with some money to be obtained from the sale of "pew-ground" in the meeting-house, was to be kept as a school fund; but the money seems to have been used for other purposes. The town also received $3,337.74 as its share of the surplus revenue distributed by the United States in 1837, and it was voted to keep it as a fund, the income of which was to be applied to the support of schools. For some three years the income was so used, but the town had pressing need of money and even the principal of the fund was applied to other uses.

PRIVATE SCHOOLS.—Some public-spirited citizens of this town, impressed with the feeling that there was need of more ample provisions for higher education, formed an association and established a private high school in Templeton. The school met a public want and was largely attended. Many persons still live in the town who retain pleasant recollections of their connection with this school. The school was so fortunate as to begin its course under the instruction of an earnest, enthusiastic teacher, who had great skill in arousing the attention and compelling the pupil to think—the important aim of all true teaching. Jacob Bachelder was principal of the school from the time of his graduation from Dartmouth College, in 1830, to the year 1835. He was afterward principal of the Lynn and the Salem High Schools. He was for some years librarian of the Lynn Public Library. He was a man of unusual vigor of intellect and perfect integrity.

Mr. Martin Snow Newton and Mr. Daniel B. Parkhurst were successively principals of the school for a brief time. Mr. Sylvester Judd was the last principal of the school, coming here in 1836. He was afterward, for thirteen years, a Unitarian minister in Augusta, Maine, and the author of a well-known story of New England life, entitled "Margaret." The school was suspended in 1837.

In the twenty years next following there was no High School continuously kept; but some enterprising teacher, on his own responsibility, would keep a private High School for one or two terms in the town hall, or the school-room next the Common. Such a school was kept at one time by William Barrows, and at another time by William H. Earle.

PUBLIC HIGH SCHOOLS.—The Templeton High School was the first public High School in this town,

and was established in 1856. The first term was kept in the autumn of that year in the grammar schoolroom, at the Centre Village, with fifty-one pupils. The present principal of the school, H. F. Lane, began his long period of service with that first term, and has been the principal of the school, with the exception of one term, to the present time. The second term of the High School was kept at Baldwinville, in the spring of 1857, under the instruction of Mr. L. W. Russell, who has been for many years past the principal of a grammar school in Providence, R. I. An assistant teacher has been employed in terms when the attendance was largest, and thirteen young ladies have served in that capacity from one to three terms each; another, in these latest years, has rendered such assistance during twenty-one terms.

Until 1866 there were only two terms of the school each year; from that time to 1873 there were three terms each year; afterward there were four terms yearly. These terms were kept alternately in the different villages of the town.

It has been the aim of the High School, during all the years of its existence, to have its studies and training so arranged and administered as to promote activity of mind, self-control, self-direction, and a conscientious regard for duty. The persons who have been members of this school are scattered widely over the country. The country towns perform a service of great value to the community in preparing persons for lives of intelligent activity in the larger towns and cities to which they soon depart. About one thousand persons have received instruction in the Templeton High School.

In 1886 a High School was established at Baldwinville for the greater convenience of those living in the northerly part of the town. Mr. E. B. Vining has been the only principal of that school.

Teachers and Graduates.—Some of our teachers have had long periods of service in our schools. Mrs. Lucy Richardson spent nearly her whole active life in teaching, earlier in the public schools, and later in a private school which she had established at her own home near the Common. Miss Maria Cutting has completed thirty-nine years of service as teacher in the public schools of this town.

Miss Margaret Leland has had many years of experience in the public schools in different parts of the town. Miss Henrietta Sawyer, whose earlier years of service were in the schools of her native town, is a veteran teacher in Washington University, at St. Louis. The present teacher of the Templeton High School has just completed his thirty-second year of service in that school. Many other teachers have had quite long periods of service, and it would be a suitable tribute if their names could be included in this enumeration.

Many of the youth of this town, having sipped at the fountains of knowledge opened for them here, have taken deeper draughts elsewhere. In the later years a score of young ladies have completed courses of study at our normal schools. Several have availed themselves of the advantages offered by the Mount Holyoke Female Seminary.

The Worcester Polytechnic Institute was founded by a citizen of this town. George I. Alden, who was a graduate of the Lawrence Scientific School, has been a professor in this institution from its foundation in 1868. Charles Parkhurst, Samuel S. Jennison, Fred. L. Dudley, Charles H. Wright, William H. Kirschner and Fred. S. Hunting have pursued courses of study in this institution. George S. Stone is a graduate of the State Agricultural College at Amherst. George S. Gates received instruction at the United States Naval Academy, at Annapolis, Md., and entered the navy. Charles Wellington Stone graduated from Harvard College in 1874. He has a private school for boys in the city of Boston, and also conducts a summer school at his Templeton residence. Edward W. Chase is a graduate of Amherst College. He has been principal of High Schools in Ohio, and at present is teaching near Chicago. George I. Jones graduated from Harvard College in 1871, and has been engaged in the book publishing business in St. Louis and at present is employed in Chicago. George M. Bartlett is a graduate of Washington University, St. Louis, and is now secretary and treasurer of that institution. Lucas Lee Baker is a graduate of Harvard College of the class of 1883. He has ever since been engaged in teaching, and is at present principal of the High School in Holliston, Mass. His brother, Byron E. Baker, entered college in the same class, but died before the completion of his course.

Journalism has not often been chosen as a life-work by our young men. But Edmund Hudson has gone from the quiet life of his native village to mingle in the stirring scenes of the national capital, and make a daily record of the doings of law-makers and Presidents. In those days of stirring excitement, preceding the first election of Lincoln, he was just entering upon his studies in the High School. Too eager to begin life's work to wait for an over-long course of study, with much energy he set about learning the stenographer's art. He was for a time a reporter of news for different Boston papers. For several years he has led a very busy life as Washington correspondent of the *Boston Herald*, and editor and publisher of the *Army and Navy Register*. He also published a weekly paper at Washington called *The Capital*.

Most of these young men whose names have been enumerated as having obtained a higher education do not now count in the census lists for Templeton. The historian, however, rightly classes them among the products of the town, knowing, as he does, that these country towns are the perennial fountains whence come the supplies of physical energy and mental vigor for our cities.

In the earlier part of the century there were several

young men who were successful in obtaining a higher education. Oliver Baker was a graduate of Yale College, and engaged in teaching in some Southern State. His brother, Otis Baker, died before the completion of his course in the same college. Amos J. Cook was a graduate of Dartmouth College about the year 1801. He was an intimate college friend of Daniel Webster, and succeeded him as principal of the academy in Fryeburg, Maine, in which position he remained for more than thirty years. Charles Goodnow was a graduate of Amherst College, and was for a time principal of a school in Concord, Mass., and afterwards a lawyer there. Christopher C. Baldwin was the son of Capt. Eden Baldwin. He pursued his studies at Leicester Academy and Harvard College, and then studied law as his profession. He practiced law in Worcester, Sutton and Barre. But his mind was more satisfied with scientific and antiquarian research than with legal contests, and he gave much time to such investigations. In 1831 he was chosen librarian of Antiquarian Library at Worcester. Nothing could have been better suited to his tastes, and he was admirably fitted to perform the duties devolving upon him. In 1835, when on a journey for antiquarian research in the State of Ohio, he lost his life by the overturning of the stage on which he was traveling. He was only thirty-five years of age. His friend, William Lincoln, of Worcester, son of Gov. Levi Lincoln, delivered a very interesting public address, which was printed, commemorative of the life and work of Mr. Baldwin. Charles W. W. Wellington, son of Rev. Charles Wellington, graduated from Harvard College in 1846, and was a book-keeper in the city of Boston. He died in 1880.

This town has not been wholly wanting in those who have been skilled in the use of the pencil and the brush; artists have found at least a temporary abode among these hills. Lucas Baker had a natural aptitude for drawing and painting, and by careful and diligent cultivation has become highly skilled in the practice of those arts himself and in teaching them to others. He was for ten years instructor in drawing in the public schools of Boston. For the last few years he has been one of the instructors in the Art School of the Metropolitan Museum in New York City, but still keeps a home in Templeton.

Miss Adelaide R. Sawyer was for some years a resident of Baldwinville. She drew portraits in crayon. Afterwards she gave attention to the production of ideal designs in figure. Some of these productions became very popular and met with a large sale. "The Better Land," "Our Hope," "Our Joy," "The Empty Sleeve," "Myrtle Hazard," were titles of some of the most-widely known of these representations. For a time she was teacher of crayon drawing in the Boston Academy of Art. Sarah Goodridge had natural gifts and tendencies leading her to the work of an artist. She became noted as a painter of miniature portraits, had an office in Boston, and some of the most distinguished people of New England were her patrons. Elizabeth Goodridge (Stone), sister of the preceding, was also skilled in the same kind of work. Their early home was at the house now occupied by Mr. Briggs, near the Ware River Railroad station.

LIBRARIES.—Successful efforts have been made at various times to furnish a supply of reading matter through the agency of libraries. Quite early in the history of the town a private library was established by the Templeton Union Library Association, the books of which were distributed among the shareholders half a century ago. In the early part of this century there was a private library known as the Social Library. The Ladies' Social Circle, an organization connected with the First Parish, began to gather a library in the year 1835. This has gradually increased by yearly additions until it now numbers about twenty-four hundred volumes. Books are delivered only on Sunday to annual shareholders, who pay a yearly fee of fifty cents. For many years this has been a prosperous library, and it still continues to be such. The books are kept in a room specially devoted to that purpose in the chapel which adjoins the church edifice. A library society was organized in East Templeton in 1854, which has gathered a library numbering upwards of one thousand volumes. The several religious societies of the town have Sunday-school libraries containing books more especially adapted to the younger people. The books are generally carefully selected and diligently read. The State Board of Education, in accordance with an act of the Legislature of 1843, furnished each school district throughout the State with a school library. These contained many valuable books, but they soon ceased to be used, as there was no provision for keeping up a lively interest by the addition of new books. A fund was given by Miss Abigail Locke for the establishment of a ministerial library for the use of the minister of the First Parish, and to be kept at the parsonage. This library already contains books of much value. The income of the fund permits annual additions to be made.

In 1854, Dr. George C. Shattuck, of Boston, gave five shares in the Boston Athenæum to the town of Templeton, as a token of regard and affection for his native town. The terms of the gift as expressed by the donor are: "That the Selectmen of the town, for the time being, shall permit the use of the five shares, from year to year, by any five persons resident in said town, to be selected by them from the classes of clergymen, physicians, lawyers, and scientific farmers and mechanics; it being understood that the said shares themselves are to be forever inalienable." And further, Dr. Shattuck anticipated the annual assessment of five dollars a share, by paying a sufficient sum in advance to provide for that, and thus securing to inhabitants of Templeton the perpetual privilege of taking out books, on the shares, from the extensive and valuable library of that institution. For so val-

uable and lasting a gift, the town passed a vote of thanks in acknowledgment of "their grateful appreciation of his munificence in conferring this franchise upon the town, which has the honor of numbering him among her most distinguished and useful sons." This proves to be a very valuable supplement to the other reading facilities enjoyed by the town. Rare and costly books can thus be consulted which it might not be easy to reach in other ways.

The Boynton Public Library was first opened to the public in September, 1873. The fund for its support was the gift of David Whitcomb, Esq., late of Worcester, but formerly engaged in active business in this town. In 1868 he gave to the town of Templeton, in the name of John Boynton, who was his former partner in business here, the sum of four thousand dollars, to establish and maintain a Free Public Library, for the use of the inhabitants of the town, to be known and called the Boynton Library. In 1885, Mr. Whitcomb gave an additional sum of four thousand dollars for the same purpose. In the case of both sums, one-half of the annual income is to be applied to the increase of the principal, until each sum shall have reached the sum of five thousand dollars. The library fund will thus ultimately become ten thousand dollars. The income is to be wholly applied to the purchase of books and periodicals. By a provision in the deed of gift, the trustees of the library are the chairman of the Board of Selectmen, the town clerk, the School Committee, and three other persons elected annually by the town. H. F. Lane has been the librarian from the opening of the library. For twelve years the library was kept in some upper rooms connected with Mr. Blodgett's store. In 1885 the town appropriated two thousand dollars for the erection of a library building, which was completed and occupied in September of that same year. The library now contains thirty-three hundred volumes, and is increased by yearly additions. More than twelve thousand issues of books are annually made to six or seven hundred persons, scattered over the whole town. The Templeton Historical Society, in an upper room of the library building, has begun to gather a collection of books, papers and articles which would throw light upon the history of the town and community.

CHAPTER XXIII.

TEMPLETON—(*Continued.*)

ECCLESIASTICAL AFFAIRS.

The First Church—The Baptist Church—The Trinitarian Church—The Universalist Church—The Methodist Church—St. Martin's Church—Memorial Church—Ministers.

It should be borne in mind that in the towns of New England, in early times, the affairs of town and church were united. The church was one of the institutions of the town. The meeting-house was built and owned by the town. The minister was paid from the town treasury, the amount being voted annually in town-meeting. The meeting-house also was made to serve as a place for holding the town-meetings. The tithingmen were chosen at the annual town meeting with the other town officers. When there were about twenty families in this township they determined to build a meeting-house which should be fifty feet long and forty feet wide. It was placed on what is now the Common, a little southeasterly of the present church edifice, and was the first house of worship in the township, which then included Phillipston as well as what is now Templeton. This edifice was used for about fifty years, until the year 1811, when the present church edifice was built.

This first meeting-house was raised July 3, 1753, in the presence of a large number of people, some of whom had come from towns so far distant as Sterling. The frame of this house was of chestnut, and the trees of which it was made are said to have grown wholly on the spot of ground now known as the Common. At the time of building this house the region immediately about was a forest. The building of the meeting-house was performed by Mr. John Brooks, of Sterling. The timber was furnished by the proprietors, and also the glazing and pulpit. A few years later the town made an appropriation toward finishing it, and the whole cost of the structure to proprietors and town was about two hundred and twenty-five pounds—equivalent to seven hundred and fifty dollars.

The first church in this town was organized December 10, 1755, and on that day Rev. Daniel Pond was ordained as the first minister. He was a graduate of Harvard College of the class of 1745. Generous provision was made by the proprietors and people for the ordination. People came in large numbers from the neighboring settlements to attend the exercises. The newly-erected meeting-house was completely filled. It was a day of festivity and enjoyment for the people and their visiting friends. But the ministry of Mr. Pond was of short duration. Difficulties arose between him and the people. A council was called which, after two days' deliberation, recommended his dismission. In 1759 he removed to West Medway and engaged in teaching, receiving pupils at his house. Several persons preached as candidates, and among them the Rev. Ebenezer Sparhawk, who preached for the first time Nov. 29, 1760. After preaching a year both minister and people were so well satisfied with each other that his ordination took place Nov. 18, 1761. In 1764 he built and ever after lived in the house which in later years has been known as the "Wellington" house. He had a long and useful ministry of forty years, dying of apoplexy, November 25, 1805. He is reputed to have been a person of superior mental ability and exact scholarship, courteous and dignified in his manners and warm in his friendships. His funeral sermon was preached by the

Rev. Dr. Payson, of Rindge. During Mr. Sparhawk's ministry about twenty members of the First Church withdrew to form the Baptist Church.

Rev. Charles Wellington was ordained February 25, 1807. The old and first meeting-house was still in use, but efforts were now made to build a new one, and the work was entered upon in 1810. The new church edifice was dedicated September 18, 1811, Dr. Wellington preaching the sermon. And now for the first time a bell was obtained and placed in the belfry. Three new ones have been successively procured as the former ones became defective. The old meeting-house was then moved to the southwesterly corner of the Common, and for about thirty years was used as a town house and place for public meetings. In these early times the minister was expected to have some oversight of the schools, visiting them and examining teachers, and Dr. Wellington attended to these duties for many years, sometimes with the help of a committee chosen by the town for such purpose. The fiftieth anniversary of Dr. Wellington's settlement here was pleasantly and appropriately celebrated in 1857. He remained the minister of this church, respected and beloved by all, until his death, which occurred August 3, 1861.

The health of Dr. Wellington was somewhat impaired in his later years, and Rev. Norwood Damon was settled as his colleague, February 21, 1844. He remained only until November 1, 1845. Rev. Edwin G. Adams was a man of marked ability, who possessed some unusual traits of character which rendered his life one of much usefulness to the community in which he lived. He was born in the town of Ashby, Mass., December 24, 1821, and died in Templeton, May 10, 1877, after an illness of several months' duration. In boyhood he worked in his father's store and attended the schools and academy of his native town. In early life he formed the resolution to become a minister, and worked diligently to that end, graduating from the Divinity School, at Cambridge, in 1846. The First Congregational Church in Templeton invited him to become the colleague of Rev. Charles Wellington, and he was ordained January 13, 1847. On the death of the latter, in 1861, he became sole pastor, in which relation he remained to the day of his death. In 1855 the honorary degree of Master of Arts was conferred upon him by Harvard College.

In December, 1855, he preached an historical discourse, commemorative of the hundredth anniversary of the formation of the church. This was published with an appendix, forming a very valuable treasury of information concerning the earlier and later history of the town. The twenty-fifth anniversary of his settlement was pleasantly observed in 1872.

He was married, November 14, 1848, to Sarah L. Priest, of Littleton, and when, during his ministry, the people spoke or thought of their minister, they always felt that in some way Mrs. Adams was included in that designation. They labored together for the good of the society and the community, and the service of each rendered that of the other more effective. They were prudent advisers, wise counselors, highly valued friends. Their presence in a household brought sunshine and dispelled darkness.

As a minister and pastor, Mr. Adams possessed the esteem and affection of the members of his own society to an unusual degree. He was not content with rendering merely the usual professional services of a minister; every force was utilized, nothing was done at random, or without a settled purpose. The art of making social intercourse an elevating influence was understood by him. The sewing society and the social gathering were to be means for the improvement of character. His was a deeply religious nature; nothing less than a conscientious regard for duty, at all times, and in all positions, would satisfy him. He was glad always to find reasons for agreeing with other people and sects, rather than for disagreeing with them.

For twenty-two years he served on the School Committee, and rendered valuable service to the schools and the cause of education by his unwearied and painstaking labor, combined with prudence, good judgment and a wise foresight.

Mr. Adams had a natural aptitude for the mastery of legal and financial affairs, and came to have such a knowledge of their underlying principles and their application to practical affairs as to make his opinion and advice very valuable, even to those whose lives were spent in the management of such affairs. Few lawyers could excel him in unraveling a knotty legal question. To thread his way through these investigations was among his recreations.

A keen discernment, a well-balanced judgment, great prudence, far-reaching foresight, combined with the most perfect conscientiousness and integrity, made a combination of qualities which rendered his life a highly useful one.

His successor in the ministry was the Rev. Alfred C. Nickerson, whose pastorate was from 1878 to 1886. Rev. Nathaniel Seaver, Jr., was installed January 11, 1887, and is the pastor at the present time.

THE BAPTIST CHURCH.—The Baptist Church in this town was organized August 22, 1782, with twenty-one members, seventeen of whom—ten men and seven women—had withdrawn from the First Church for this purpose. These twenty-one persons met at a private dwelling, and, in the presence and by the advice of the council which they had called, formed "The Baptist Church of Christ in Templeton." The council consisted of the pastor and six delegates from the church in Royalston and the pastor of the church in Harvard. This church has had seventeen settled pastors; and there have been several intervals in which there was a stated supply. Rev. John Sellon, the first pastor, was ordained Nov. 19, 1783, and remained a year and a half. Rev. Joel Butler became

Edwin G. Adams.

pastor in 1787, and remained about four years. There was then a period of about ten years without any settled minister. Rev. Elisha Andrews became the pastor in 1800 and remained until 1813, when he was dismissed.

He also had a second pastorate, extending over the period from 1827 to 1832, making eighteen years in all. Mr. Andrews is spoken of as a man of strong individuality and commanding natural powers, as well as earnest religious zeal. The church enjoyed a time of comparative encouragement and strength. In the interval of Mr. Andrews' absence there seems to have been two pastors, whose terms of service, however, filled only a portion of the period,—Rev. George Phippen and Rev. James Parsons. Next after the final dismission of Mr. Andrews in 1832, Rev. Winthrop Morse was installed as pastor, and remained about two years. Rev. Isaiah C. Carpenter was ordained as pastor in 1837, and resigned in 1843. Rev. John Woodbury became pastor in 1844, and resigned in 1848, making four years of service. Rev. Sandford Leach was pastor from 1848 to 1851, followed soon in the same year by Rev. A. V. Dimock, who remained until 1857, nearly seven years, and the longest pastorate but one in the history of this church. Rev. John F. Ashley was ordained pastor in 1858, and remained about two years. Rev. A. H. Ball was pastor for six months, beginning in 1869. Rev. H. V. Dexter became pastor in 1871, and continued in that relation four years. Rev. Miles N. Reed became pastor in 1878, and Rev. N. B. Wilson in 1881. Rev. George Shepard is the present pastor.

The centennial anniversary of the formation of this church was celebrated at Baldwinville, August 22, 1882, with interesting and appropriate exercises. A sermon was preached by Rev. Heman Lincoln, D.D., of the Newton Theological Institution. Over five hundred people were in attendance, many coming from the neighboring towns and more distant places. Several former pastors of the church were present and took part in the exercises.

During the early years of the existence of this church the only place of meeting for religious services was at private houses. The dwelling-houses of Samuel Byam and Silas Cutler were most often used for this purpose, being larger or more centrally located. About 1796 there began to be a movement made to see about building a meeting-house, and one was finally erected and dedicated in the autumn of 1799, the Rev. Dr. Baldwin, of Boston, preaching the dedication sermon. This house was located at the "Baptist Common," thus giving a name to this neighborhood. It stood at the southerly end of the small cemetery now seen there. Near to the meeting-house, on the easterly side of the Common, was a tavern and a store. In 1840 the meeting-house was taken down, and removed to a site presented by Capt. Eden Baldwin, just out of the village of Baldwinville, on the road to Otter River. Here the house was again erected, its length increased and a steeple added. It was re-dedicated February 3, 1841. But the location between the two villages did not prove to be a permanently convenient one, and so once more it was removed, and placed on its present location. This time it was removed without being taken to pieces. A new and graceful spire was built, and the whole interior and exterior was refinished. It was dedicated for a third time in September, 1869. A chapel, containing a kitchen and conveniences for social meetings, was added in 1879–80. A few years after the removal to the present location a clock was placed in the tower, by the voluntary contributions of the people of the village.

THE TRINITARIAN CHURCH.—The Trinitarian Congregational Church was organized April 11, 1832, having at first twenty-four members. Its first pastor was Rev. Lemuel P. Bates, who was installed January 16, 1833, and dismissed April 19, 1837. Then came the long and highly useful pastorate of Rev. Lewis Sabin, D.D., who was installed September 21, 1837, and resigned September 24, 1872. Rev. Charles A. White was pastor from June, 1873, to June, 1876; Rev. C. M. Temple, November, 1876, to June, 1878; Rev. R. W. Haskins, December, 1878, to June, 1879; Rev. F. H. Kasson, October, 1879, to June, 1880; Rev. George Sterling, June, 1880, to June, 1881; Rev. Thomas O. Rice, December, 1881, to June, 1885; Rev. Roswell C. Foster, from 1885 to the present time.

Rev. Lewis Sabin, D.D., had a long pastorate over this church, and his other services are closely interwoven with the history of the town. He graduated from Amherst College with the highest honors of his class, in 1831; was installed over this church in 1837; received the honorary degree of Doctor of Divinity in 1857; was elected one of the trustees of Amherst College in 1862, and resigned his ministry in 1872. He died June 8, 1873.

Dr. Sabin was not only a faithful minister, but also a public-spirited and highly-esteemed citizen, interested and earnest in all measures that were deemed conducive to the public welfare. He was active in the temperance cause and earnest in the anti-slavery movement. For thirty-two years he served the town as a member of the School Committee, a longer service than that rendered by any other person. Here he rendered an intelligent, painstaking and conscientious service, highly beneficial to the schools.

THE UNIVERSALISTS.—A Universalist Society was organized in 1842. Its first meetings were held in the old Town House, and afterwards the meetings were held in the present Town Hall. No meeting-house was ever erected. Services were held on alternate Sundays, or at other stated intervals. Rev. Gerard Bushnell was the only pastor of this society.

THE METHODISTS. — The Methodist Episcopal Church of this town dates from 1843, although a

"class" had been maintained for about three years previously, and included in the charge of the preachers at Hubbardston. In 1843 a church of twenty-four members was formed. A meeting-house was erected in 1844, in the southerly part of the village at Templeton Centre, on what is now a vacant lot near the "Hudson" house. The ministers here were Rev. Willard Smith, 1843; Rev. Joseph T. Pettee, 1844; Rev. Simon Putnam, 1845, 1846; Rev. T. G. Brown, 1847. Rev. C. Perry supplied in 1849. Preaching in this meeting-house was discontinued in 1848, and the building was sold. The members of the society attended services at Hubbardston mostly from 1850 to 1859. A church edifice was erected in 1860 at East Templeton, in which the services of this society have since been constantly held, under the following succession of ministers: Rev. C. H. Harding, 1860; Rev. N. H. Martin, 1861; Rev. H. Satchwell, 1862, 1863; Rev. C. F. Newell, 1864, 1865; Revs. A. F. Mowry and A. B. Waters, 1866; Rev. W. B. Blackmer, 1868; Rev. D. K. Banister, 1869, 1870; Rev. J. M. Avann, 1871, 1872; Rev. J. W. Fenn, 1873, 1874; Rev. R. W. Harlow, 1875, 1876; Rev. F. M. Miller, 1877, 1878; Rev. W. H. Marble, 1879, 1880, 1881; Rev. E. Higgins, 1882, 1883; Rev. L. White, 1884, 1885, 1886; Rev. D. Atkins, 1887, 1888.

St. Martin's.—Saint Martin's Church is of the Roman Catholic faith and has its place of worship at the village of Otter River. The church edifice was erected in 1853 and consecrated in 1854. The priest who officiates at this church also has charge of one or more parishes elsewhere.

The Memorial Church.—The Goodell Memorial Church was organized at Baldwinville in 1874. Services were held in Union Hall for about nine years In 1882 the work of erecting a church edifice was entered upon. This was dedicated June 28, 1883. The ministers of this church have been Rev. L. Payson Broad, Rev. C. M. Temple, Rev. R. S. Haskins, Rev. J. F. Crumrin, Rev. M. A. Doherty and Rev. Roswell C. Foster.

Ministers.—The ministers of the churches in Templeton have none of them been natives of the town; but this town has furnished some ministers for other regions. Quite far in the southeast part of the town is the "Turner" farm, now owned by Mr. Lucien Gove. This was the birthplace and early home of Rev. Jonathan B. Turner, for years a professsor in the college at Jacksonville, Ill., and Rev. Asa Turner, both of whom were men of vigorous thought and earnest lives. The "Barrows" place is now the residence of Leonard M. Baker. This was the birthplace of Rev. William Barrows, of Reading, Mass., and Rev. Lewis Barrows. Rev. Emmons Partridge and Rev. Lyman Maynard were natives of this town and relatives of persons still living here. And at least one life-long missionary, Mr. Goodell, of almost world-wide fame, received his first inspiration from these hills and vales.

Rev. William Goodell, D.D., was born in this town February 14, 1792 and died in Philadelphia February 18, 1867. His studies were pursued at Phillips Academy, Andover, Dartmouth College and Andover Theological Seminary. The greater part of his life was spent as a missionary in the Turkish Empire, and an interesting volume has been published giving an account of his labors. He was of feeble bodily constitution, yet he was full of cheerfulness and even mirthfulness, which even his stern Puritan theology could not fully repress. He was an earnest man, thoroughly devoted to the performance of duty and entirely absorbed in his chosen work of being a faithful missionary.

CHAPTER XXIV.

TEMPLETON—(*Continued.*)

Lawyers—Physicians—Hospitals—Prominent Men.

Templeton was manifestly a better field for the exercise of the lawyer's profession in former times than in later years. In the earlier part of the century two lawyers had their offices near the Common, and seem to have found abundant employment. Hon. Lovell Walker was one of these lawyers. He seems to have enjoyed the public confidence in a very large degree. He was for two years Representative to the General Court, and for some years Senator for Worcester County.

He was born in Brandon, Vt., and was a graduate of Dartmouth College. He died in 1839. His place of residence was the house now owned by Miss Twichell. His office was in a small building, recently standing near the "Brick store."

Joseph W. Newcomb, Esq., was engaged in the practice of law here for a brief period of time just after Mr. Walker. The office of Samuel Cutting, Esq., was in a small building not very long ago standing on the corner where now is the residence of Mrs. Batchelder. He was a native of this town, a son of Jonathan Cutting, and a life-long resident here. Edward Kirkland was a lawyer here, removing afterwards to Louisville, Ky. Joseph Mason, Esq., now of Worcester, was an active, public-spirited lawyer of this town from 1837 to '47. He was town clerk for two years, served on the School Committee six years, and took a very active part in the affairs of the town and the religious society with which he was connected. He was afterwards for many years clerk of courts for the county of Worcester. In 1842 he was appointed one of the standing commissioners of bankruptcy for the Massachusetts District, and has held the office of master in Chancery.

Giles H. Whitney, Esq., a native of Boston, a graduate of Harvard University and its Law School, practiced law in Templeton Centre and Baldwinville from 1846 to '55. In the latter year he removed to

Winchendon, where he died January 12, 1888. He had been a member of both branches of the State Legislature, and was esteemed as an upright lawyer and trusted citizen.

Stillman Cady, Esq., was engaged in the practice of law at Baldwinville from 1858 to the time of his death, in 1884. In the last years of Mr. Cady's life Charles D. Burrage, Esq., now of Gardner, was associated with him.

If it be true that Templeton has imported nearly all of her lawyers, it is equally true that she has exported some of her own product for the benefit of other places. Leonard A. Jones, who has acquired a well-deserved reputation as the author of several valuable legal works, is a son of Templeton. He graduated from Harvard College in 1855, and the Harvard Law School in 1858, in which year he was admitted to the Suffolk bar, and has ever since been in the practice of law in the city of Boston. Mr. Jones is the author of the following legal works: "A Treatise on Mortgages of Real Property," two volumes; "A Treatise on Mortgages of Personal Property," one volume; "A Treatise on Pledges, including Collateral Securities," one volume; "A Treatise on Liens," two volumes; "Forms in Conveyancing," one volume; and "Index to Legal Periodical Literature."

Josiah Howe, son of Dr. Josiah Howe, was a lawyer in New York City. Thomas Greenwood, whose early home was in East Templeton, graduated at Yale College, and became a lawyer in New York City, where he still resides. Emory C. Sawyer, whose parents have their home in Baldwinville, gained a legal education, and is in the practice of law at Warren, Mass.

PHYSICIANS.—The members of the medical profession are engaged in a work which brings them into close intimacy with the lives of the people in their homes. Fortunate, indeed, is the town and community that enjoys the services of a well-educated, skillful, sympathizing physician. Such good fortune this town has experienced.

Benjamin Shattuck, the first physician of Templeton, was born in Littleton, Mass., November 11, 1742, and died of consumption in this town, January 14, 1794. He was a graduate of Harvard College of the class of 1765. He studied medicine with Dr. Oliver Prescott, of Groton, and settled in Templeton at the special invitation of the people of the town. He continued in extensive practice about twenty-five years, and became one of the most eminent in his profession. The community joined in a public funeral, the Rev. Mr. Sparhawk preaching a sermon in his eulogy. This sermon was printed, and copies of it may still be found.

Josiah Howe, M.D., was a physician of Templeton, who rose to eminence in his profession. He pursued his medical studies with Dr. Benjamin Shattuck, the first physician of this town, and on the death of the latter succeeded to his practice here. Dr. Howe was born in Milton, Mass., March 19, 1771, and died in Templeton, January 24, 1843. In his later life he gave attention to business affairs. He was at one time connected with the woolen-factory at Otter River. Several dwelling-houses at Templeton Centre were built under his direction and ownership. Among them were the "Hudson" house, Mr. Winch's house and that owned now by Dr. Tobien. At this house he last dwelt.

Dr. Marshall practiced medicine for some years in this town, having his residence at the Baptist Common.

Charles W. Wilder, M.D., was a native of Ashburnham, Mass. He graduated at the Medical Department of Dartmouth College in 1817. He practiced his profession for many years in this town. He was a skillful physician and an energetic and public-spirited citizen. About 1845 he removed to Fitchburg, and earnestly promoted the building of the Fitchburg and Worcester Railroad, of which he became the first president. The last years of his life were spent in Leominster, where he died February 12, 1851.

Mason Spooner, M.D., engaged in medical practice in this town for a good many years in the first half of this century. He was regarded as a skillful physician, and many persons are now living who remember his presence in their families. He died in 1853, in the eighty-second year of his age.

Jonathan W. D. Osgood, M.D., was the son of Jonathan Osgood, the first minister of Gardner. His studies were pursued at New Salem Academy, Williams College and Dartmouth College, from which he graduated in 1823, and from the Medical School of the same institution in 1826. He spent several months in attending lectures and in hospital practice in Philadelphia. He began the practice of medicine in Templeton in 1827, and continued here until 1858, when he removed to Greenfield. Here he lived until his death, which occurred May 15, 1885. His remains were brought to Templeton for burial. He was a good citizen, a skilled physician, affable and gentlemanly in his manners. Many persons still have pleasant recollections of him as their family physician. His place of residence in Templeton was in the house now owned by Mr. J. O. Winch.

E. E. Spencer, M.D., a native of North Kingston, R. I., received his diploma from the Eclectic Medical College of Cincinnati in 1860. He had also received the degree of M.D. from the Worcester Medical College in 1858. He was engaged in the practice of medicine in Templeton from 1861 to 1872, when he removed to Cambridge. He was active in promoting the formation of the Massachusetts Eclectic Medical Society, of which he has been treasurer and president.

J. B. Gould, M.D., was a native of Hillsboro', N. H. He was a student of medicine in the Medical

Department of Harvard University, and in the Medical College at Woodstock, Vt., of which he was a graduate in 1850. He has practiced medicine in Royalston, in Templeton, from 1862 to 1874, and since the latter date in West Somerville, Mass.

Joseph C. Batchelder, M.D., was a native of Topsfield, Mass. His medical education was received at Dartmouth College and at the Harvard Medical School. He practiced medicine in Lynn, Topsfield, Cambridge, and in Templeton from 1857 to the time of his death, in 1885. Dr. Batchelder was an enterprising and public-spirited citizen, as well as a very skillful physician and surgeon. He was the Representative from his native town in the Legislature of Massachusetts in 1846. He took an active interest in promoting the construction of the Hoosac Tunnel. In the Civil War he was assistant surgeon of the Twenty-fifth Regiment of Massachusetts Volunteers.

The physicians thus far named had their residences in the village lying around the Common. At the present time there are two physicians whose place of residence is at this village:—Dr. A. S. Tobien has been in practice here since 1874—and Dr. S. E. Greenwood since 1878.

George Jewett, M.D., was a native of Rindge, N. H. His medical education was received at Woodstock, Vt., and at the Berkshire Medical College, where he graduated in 1846. He began the practice of medicine at Baldwinville in 1847, removed to Gardner in 1852, and thence to Fitchburg.

Lucius W. Baker, M.D., received his degree from the University of the City of New York in 1880, and immediately began the practice of medicine in his native village. Dr. Baker was the projector of the Hospital Cottages for Children, and for five years the superintendent and physician, retiring in 1887 to devote his time more fully to the care of his Medical Home for Nervous Invalids, at Baldwinville.

A list of the names of physicians who have engaged in the practice of medicine at Baldwinville is subjoined. The first physician residing in the village seems to have been Dr. Barrett, who began practice in 1847; Dr. Jewett, in 1854; Dr. Jonathan A. White, 1854–63; Dr. John W. Bement, 1868–74; Dr. William F. Southard, 1873–78; Dr. J. S. Fogg and Dr. G. L. Perry remained a short time; Dr. L. W. Baker, 1880; Dr. E. N. Mullins has been in active medical practice since 1883.

Some persons who were natives of this town have engaged in medical practice in other places. The names of a few such now follow:

Dr. George C. Shattuck, son of Dr. Benjamin Shattuck, was born in Templeton, July 17, 1783, and died at his residence in Boston, March 18, 1854. He was eminent for his professional skill and for his munificent public and private charities. He graduated from Dartmouth College in 1803, and from the Medical Department in 1806, receiving also a medical degree from Harvard College in 1807. He was possessed of much wealth and became noted for his public benefactions, giving liberally to Dartmouth College, Harvard College and various public institutions. From him the town of Templeton received the liberal gift of five shares in the library of the Boston Athenæum. Dr. Shattuck was a very popular and skillful physician of the city of Boston. His son, of the same name, was for many years a professor in the Harvard Medical School.

James Lloyd Wellington, M.D., son of Rev. Charles Wellington, graduated from Harvard College in 1838, and from the Harvard Medical School in 1842, since which time he has been a physician in active practice in the town of Swansea, Mass.

Edward Sawyer, M.D., a physician of Bridgewater, Mass., was a native of Templeton, and received his early education in her schools. He graduated from the Harvard Medical School in 1865, and began the practice of medicine in the autumn of that same year. In addition to his general practice he has for more than twenty-two years been physician to the State Institution at Bridgewater. Besides his busy activity in professional work, he serves the community in various positions of responsibility and usefulness.

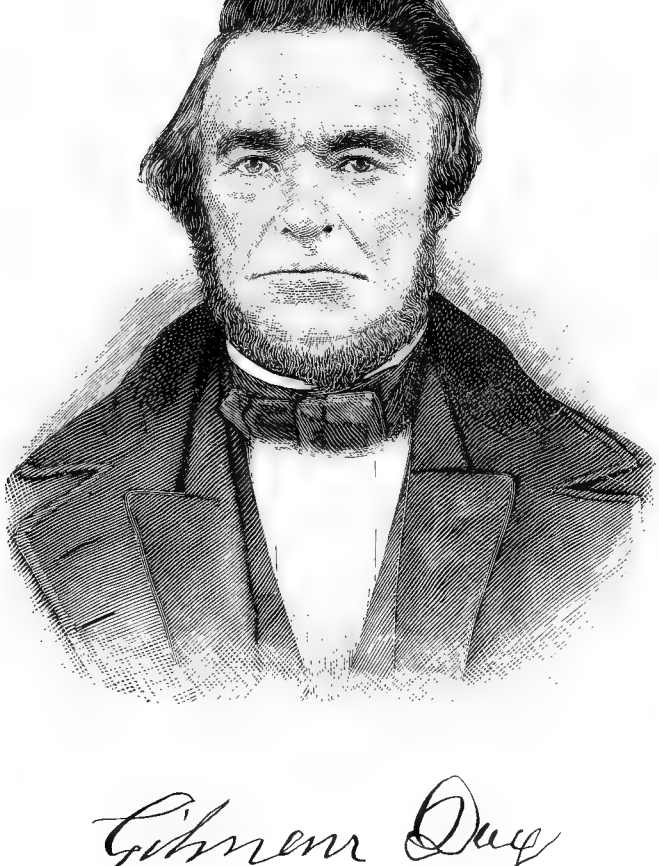
Dr. Charles Whitcomb, for many years past a physician of Barre, Mass., was a native of this town.

Very few women from this town have engaged in any other professional work than that of teaching. Miss Salome Merritt, however, has received a medical education, and is in the active practice of her profession in the city of Boston.

HOSPITALS.—The Hospital Cottages for Children, organized and incorporated in 1882, are located at Baldwinville. They are arranged on the cottage plan, and are designed for the treatment of children affected with chronic diseases. Their country location makes it possible to have fresh air, sunlight, outdoor exercise and wholesome food, as well as careful nursing and medical care. The idea of the institution originated with Dr. L. W. Baker. His father, Deacon Willard Baker, gave liberal aid by furnishing buildings, rent free, for some years, and in other ways. Mr. J. W. Coolidge has earnestly labored for the institution from its first inception, and has been very efficient in placing it upon a good financial basis. A lady board of visitors, including ladies of prominence living in different parts of the State, has from the first rendered very valuable assistance in support of the institution. This board has also erected a third building with funds which it has gathered. The Legislature of Massachusetts granted ten thousand dollars to the institution in 1887. The institution now has three buildings under its control, and has accommodations for about fifty children.

Dr. Baker's Medical Home for the treatment of nervous diseases, including the alcohol and opium habits, and the nervous disorders of childhood, is located in Baldwinville. It was established in 1885.

PROMINENT MEN.—Towns and communities natur-



Gibbons Dug

ally range themselves under the leadership of individuals who are possessed of an unusual degree of energy, persistence or intelligence. These they appoint to act for them on important occasions either at home or abroad. Such men in the last century were Mr. Thomas White, Captain John Richardson, Captain Joel Fletcher, Captain Ezekiel Knowlton, Colonel Silas Cutler and Captain Leonard Stone. Captain Fletcher was the delegate from this town to the convention which ratified the Constitution of the United States in 1787. Jonathan Baldwin was the first Representative from this town to the General Court in 1774. He is also believed to have been the first justice of the peace in this town. He was an enterprising citizen of that portion of the town now known as Baldwinville. His son, Captain Eden Baldwin, was a man of great vigor, enterprise and influence, engaging actively in various business enterprises. From him his native village takes its name.

As the next century advances new names come into prominence in different sections of the town. Captain Joseph Davis was for many years a very prominent citizen, living in Baldwinville. He came from Northboro' to this village in 1830 and opened a store. In 1832 he built the hotel. He bought Stephen Knowlton's farm on the east of the village and built a dam at the water privilege there. He was very active in various kinds of business. He labored earnestly and effectively to secure the location of the Vermont and Massachusetts Railroad through this village. He was a very active, energetic, public-spirited citizen. He died November 5, 1868. His son, Thomas W. Davis, has been for several years city surveyor for the city of Boston.

Gilman Day, Esq., was a prominent citizen of Templeton during the greater part of a long life, which extended from April 1, 1802, to August 11, 1877. The neighboring town of Winchendon was his birthplace. For a large part of his life he was engaged more or less actively in the lumber business and some form of manufacturing. His saw-mill was on Trout Brook, southwesterly of Baldwinville, and is still known as the "Day" Mill. For a period of some three years, beginning with 1836, he was associated with Levi Pierce in conducting the hotel at Templeton Centre. He was also owner, in part, of the stage-line connecting Worcester and Keene, which line passed through this town. He was frequently called to fill places of trust and honor by the votes of his fellow-townsmen. He held in successive years various town offices. He served for one term, in 1846, as Representative from this town to the General Court. He was also chosen as the delegate from this town to the convention which assembled in 1853 to revise the Constitution of the State. He held a commission as justice of the peace and trial justice from 1861 to the time of his death.

It is hardly necessary to state that he was deeply interested in the public affairs of the county, State and nation. He was earnestly in favor of the division of Worcester County and labored to promote it, in opposition to some of his prominent fellow-townsmen. He occupied a very prominent position among those who labored to retain the location of the Vermont and Massachusetts Railroad so as to pass through the northerly part of this town, instead of being diverted to Winchendon, and his labors were successful. The greater part of his life was spent in Baldwinville, and here his widow and sons still live.

Thomas Fisher was a farmer living midway between Baldwinville and Otter River. He was frequently chosen to serve the public in matters where good judgment and integrity were required, and was a prominent citizen in the earlier part of the century. His son, Dea. Charles T. Fisher, lived upon the same farm on which his father had dwelt, and likewise possessed the public confidence.

Col. Leonard Stone lived in what is now the village of Otter River, on the farm which his father, Capt. Leonard Stone, had occupied before him, and on which his sons have since dwelt. He possessed the public confidence in a high degree, serving for several years on the School Committee and the Board of Selectmen. He was also for several years the representative to the General Court. He took an active part in the contest for the location of the Vermont and Massachusetts Railroad. He was an influential citizen, trusted and honored.

Capt. Samuel Dadman was another enterprising and influential citizen, engaged in the woolen manufacturing business at Otter River. He was four times chosen as representative to the General Court, and received other marks of the public confidence.

Col. Ephraim Stone lived at Templeton Centre, and was for many years connected with mercantile business there on the site of what has generally been known as the "Brick Store." He was a man of great energy of character and activity in affairs, and was frequently chosen to positions of trust and responsibility.

John W. Stiles was, in the early part of the century, a merchant whose place of business was on the east side of the "Common." He is said to have been a man of much vigor and mental ability, and he certainly took a deep interest in public affairs. He it was who composed the memorial sent by this town to the President of the United States in opposition to the War of 1812.

Col. Artemas Lee was for many years a leading mind in the business and political affairs of northern Worcester County. He was born in the neighboring town of Barre, November 2, 1793. He came to Templeton in 1810, in his seventeenth year, and for some time served as clerk in the store of John W. Stiles, who was then a merchant of prominence in this region. After some years he formed a partnership with Lipha French, and opened a store in the southerly part of the hotel building. This partnership was dissolved

in a few years, and he continued the business alone. In 1829 he erected the dwelling-house and store situated at the southerly side of the Common, and now owned by Mr. Percival Blodgett. Here the main part of his life was spent. He kept a country store with all its great variety of goods. In later times various persons were associated with him in his mercantile affairs at this place of business. Lee, Harding & Jones, Lee & Lincoln, Lee & Wood, Lee & Gambell were the styles of successive firms. He engaged also in mercantile business in Baldwinville, in Athol and in Gardner, having partners in each of these places. He was an earnest, enterprising business man, and met with success in his business pursuits.

Colonel Lee was always deeply interested in public affairs, and entered upon them with earnest zeal and abounding energy. He opposed the division of the town when that project was entered upon. Again and again it fell to his lot to oppose the division of Worcester County. It did not need a large number of such opponents as he was to defeat a measure. When it was proposed to change the location of the Vermont & Massachusetts Railroad, so that it would not pass through this town, he vigorously opposed the change, and was one of a committee of five appointed by the town, who labored earnestly and successfully in opposition to the change of location. He was first elected to the Legislature in 1832, serving in the House of Representatives for four consecutive years. He was again elected as Representative from this town in 1847, and also in 1861. He also served for three or four years in the Massachusetts Senate as a member from Worcester County. Senators were then chosen by the counties.

He was always deeply interested in the affairs of this town; the numerous shade-trees upon the Common bear testimony to one form of this interest. He was interested in the militia of the State, realizing that emergencies might arise when their trained services might be essential to the public welfare. He acquired his title of colonel from having been commander of the local regiment of militia. Two of his sons lost their lives in the late Civil War Colonel Lee was a man of uncommon intellectual vigor and force of character. His life was one of ceaseless activity in business and public affairs. He died in 1870.

If he could communicate his ideas to us, he would not consider this notice complete without some recognition of her who for many years was his efficient counselor and helper. Mrs. Lee, whose married life began June 10, 1830, still lives in the city of Boston, furnishing a home to grandchildren whose father's life was given for his country.

John Boynton, Esq., spent his active business life in Templeton. Here he accumulated the fortune which enabled him to give ten thousand dollars for the benefit of the schools of his native town, Mason, N. H., and one hundred thousand dollars for founding the Worcester Polytechnic Institute. He came to this town in 1825, and began the manufacture of tinware, employing peddlers who traveled about the country and sold it or exchanged it for paper stock. The business increased in volume, and proved to be profitable. In 1830 the late David Whitcomb, Esq., of Worcester, came to live in this town, and became a partner with Mr. Boynton in the tin business. He here laid the foundations of a fortune which has enabled him in later years to bestow gifts to religious and charitable purposes to the amount of a full million of dollars. Mr. Whitcomb gave the money which constitutes our Library Fund, requesting that the library should be called the "Boynton Library." Mr. Boynton was the first president of the Miller's River Bank at Athol. He was always thoroughly devoted to his business affairs, and gave less thought to other matters. He died in 1867. Mr. Whitcomb removed to Worcester in 1854, and was engaged in business there until his death, in 1887.

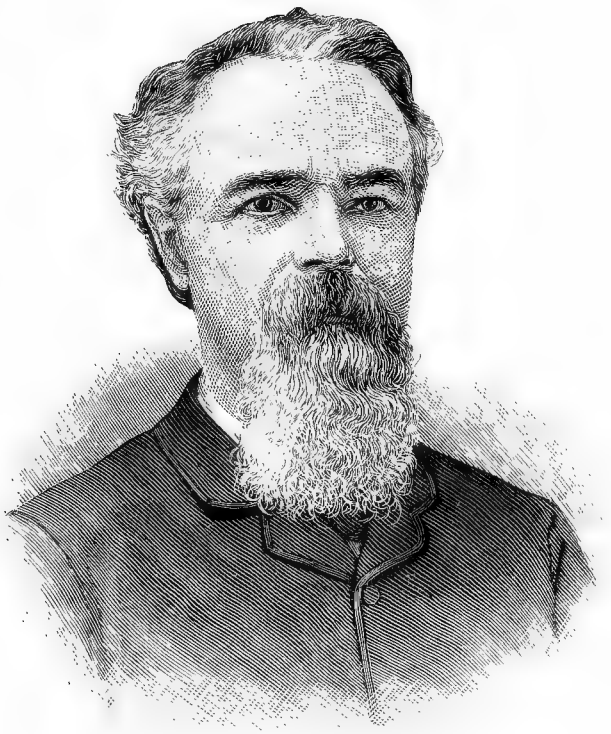
John Bigelow held the office of town clerk for twelve consecutive years, beginning with 1823. He lived in the "Gilbert" house, and kept clocks, watches, and jewelry in a store which formerly stood on the site of Mr. Blodgett's store. His son, Joshua R. Bigelow, gained wealth in mercantile business in Boston, and pleasantly remembered his native town by the gift of the public clock which is in the tower of the Unitarian Church. Dexter Gilbert was a prominent citizen, who was postmaster for eight years, and held the office of town clerk for twelve years, consecutively, beginning with 1842. Rev. Gerard Bushnell was much trusted in the management of public affairs, having served for sixteen years as a member of the School Committee, for twenty-two years, beginning with 1854, as town clerk, and was, for one year, a representative to the General Court.

T. T. Greenwood was actively engaged in manufacturing enterprises in East Templeton for more than forty years. In 1841 he began the manufacture of chair-seat frames. In 1849 he erected the present furniture-shop, and, taking Mr. F. L. Sargeant as a partner, they entered upon the manufacture of tubs, pails, churns and other wooden-ware. In 1860 they began the manufacture of pine and chestnut furniture. Mr. Sargeant retired in 1863, and, from that time until his death, Mr. Greenwood carried on the business alone, making additions to his factory and supplementing water-power with steam-power as his business increased. Mr. Greenwood was a pioneer in the utilization of the pith of the rattan. This pith was then regarded as waste merely, and burned in bonfires. He bought it of the American Rattan Company, of Fitchburg, and made it into baskets. It has since been turned to a great variety of uses.

In 1883, in company with one of his sons, he established a store at West Gardner, for the sale of furniture at retail. Two of his sons continue the business at this store, and two others carry on the manufacturing operations at East Templeton.

T. T. Greenwood

Henry Smith



C. A. Perley

Percival Blodgett

Isaac Bourn

In addition to his business enterprises, Mr. Greenwood was a public-spirited citizen, ever on the alert for improvements in the condition of his native village and town. He liberally assisted in the establishment of a village library, in 1854, and of a public hall, in 1872. With others, he labored earnestly and effectively for the establishment of the village post-office, in 1866. He was foremost in urging the construction of the new road to West Gardner, and caused the preliminary surveys to be made chiefly at his own expense. With others he joined in an effort to secure the location of the Ware River Railroad through East Templeton.

He was interested in schools and public education. It was no uncommon thing for him to visit the schools. When the High School was established, in 1856, we find him among those who were earliest, laboring to secure such a result, and he ever maintained a lively interest in its welfare.

The village of East Templeton was the scene of his life's labors. Here he was born, March 25, 1817, and here, on July 10, 1885, he died.

Charles A. Perley was born in Gardner, September 15, 1826, and died February 2, 1887. His life was mainly spent in the chair manufacturing business in the village of Baldwinville. After spending four years in the southerly part of Winchendon, he came to this town in 1856 and engaged in the manufacture of chairs, as a member of the firm of Sawyer, Thompson & Perley, afterwards Thompson, Perley & Waite. This firm manufactured a variety of cane-seat chairs and in later times large quantities of the child's folding chair, an ingenious contrivance for the comfort of children.

Mr. Perley was always active in promoting the business prosperity of the village in which he lived. He was the prime mover in the formation of the Baldwinville Mill Company, which erected a new shop on the site now occupied by Smith, Day & Co. He had been for some years the president of the Templeton Savings Bank. He took an active part in the formation of the Memorial Church and the erection of its church edifice. In 1885 he was the Representative from this district in the Massachusetts House of Representatives.

Colonel Henry Smith was born in Shrewsbury, Vermont, in 1826 and died in Boston in 1881. He married Abby Boynton Whitcomb, daughter of David Whitcomb, Esq., of Worcester. In 1849 he engaged in the manufacture of tin-ware in Templeton, in company with Mr. Whitcomb and continued the business in the later time in company with his brother, until 1865. Their traveling agents were accustomed to sell their tin-ware in various parts of New England. He was also interested in the same business with partners in Springfield, Lowell, Albany and New Haven. In 1865 he removed to Boston and engaged in the banking business, being instrumental in the establishment of the Home Savings Bank, of which he became president, and the Central National Bank. His latest business enterprise was the establishment of the International Trust Company, of which he became president.

He served one term in the Massachusetts House of Representatives and three terms in the State Senate, the last term after removing to Dorchester. He served at one time on the staff of Governor Banks as one of his aids. He was an active, enterprising and public-spirited citizen. He had accumulated wealth in his business and was liberal in contributing to religious and philanthropic enterprises.

Percival Blodgett spent his early years in North Orange, Mass., where he was born in 1841. He received his education in the public schools of his native town and at Andover Academy. He came to Templeton as a teacher in the public schools in 1861, and taught for several terms. He began his mercantile career in 1865, as a member of the firm of Dudley & Blodgett, whose place of business was at the "Brick store." From 1870 to the present time he has been in business alone, at the stand formerly owned and occupied by Colonel Lee. He became the owner of this establishment in 1877 and carries on here a prosperous business in the sale of various kinds of merchandise usually kept at a country store. Mr. Blodgett has for several years been one of the selectmen, has held the office of town treasurer for twelve years, and has been a member of the school committee for twenty years. He is chosen a representative to the Legislature of Massachusetts for the year 1889, from the Second Worcester County District.

Isaac Bourn is a native of Potton, Canada, having been born there November 24, 1821. He came to Templeton in 1845, working for wages for the first two years. He was engaged in the lumber business from 1847 to 1849, in company with Jonas Brown, and from the latter date until 1879 in company with John Brooks. He is at present senior partner in the firm of Bourn, Hadley & Company. They manufacture large quantities of pine, chestnut and ash furniture at their shop, near the Ware River Railroad station, and are also dealers in all kinds of lumber. Mr. Bourn is still actively engaged in the business in which he has manifested so much energy and enterprise.

Some persons who were natives of Templeton have become conspicuous for their business capacity or philanthropic efforts in other fields. One such was George Partridge, who engaged in business in Saint Louis, Mo., was prosperous in his affairs and gave large sums for the benefit of Washington University in that city. Thomas White is extensively engaged in the manufacture and sale of the "White" sewing-machine, in Cleveland, Ohio. He began the business on a small scale in this town. The White family was one of the old and worthy families of this town and Phillipston. Moses W. Richardson leads an active business life in the city of Boston, in which he has

been prosperous. His early life was spent here. He learned his first lessons of business affairs as clerk in the store of Colonel Lee. His name represents two families of prominence in this town. His grandfather, Moses Wright, was for ten years the town clerk, and three years a Representative to the General Court. The Richardson family has ever been prominent in numbers and influence.

The first settlers of a town, with rugged hills completely covered with forests, must have been persons of vigor and steadfastness of purpose. Among the early inhabitants of this town there were men of more than ordinary ability and strength of character. They were also men of sterling integrity. They directed the currents of thought and action into good channels. The influence of such men extends beyond the limit of their own lifetimes, frequently exerting a powerful influence on their successors. There has been in this town a permanence and stability in its affairs which has greatly inured to the public benefit. Many things have worked together in the past to make the influence prevailing in a New England town a very favorable environment for the development and improvement of a human being. May it be long before these towns shall have lost the essential features which have been characteristic of the best of them!

CHAPTER XXV.

UXBRIDGE.

BY GEORGE W. HOBBS.

THIS town is beautifully located in the "Blackstone Valley," about twenty miles south from the city of Worcester.

On the west the gently-sloping hills are covered with the fine dwellings of its prosperous citizens, overlooking a diversified scenery of meadows, rivers, ponds and busy workshops. On the east the plains stretch out to the lofty Mendon hills, whose westerly slopes form the water-shed for the "West River," which furnishes the water-power for the "Wacantuck" and "Elmdale" Mills; while gently meandering through the valley, the "Blackstone" and "Mumford" Rivers beautify the plain and furnish the power for the numerous other mills which add to the business and prosperity of this lively and enterprising town.

Its natural beauty, fine roads, excellent hotel, secluded drives and cool retreats make it a desired haven of rest for the numerous "summer boarders" who, in increasing numbers, annually make their pilgrimage hither. From the pleasant drive on "Lawler" hill, just west of Main Street, away in the dim distance,—thirty miles as the crow flies,—the blue peak of old Wachusett can easily be seen on a fair day, and the view, once seen, is long remembered. From the opposite side of the town, on the hill near the residence of Mr. T. W. Giles, a bit of scenery is unfolded which has no equal even on the canvas of a Turner. As far as the eye can reach, the beautiful valley of the Blackstone is spread out in all its enchanting loveliness. Here and there, above the abundant foliage, rises the spire of some distant church; the hillsides dotted with neat houses, green fields, teeming orchards, lowing herds; handsome villas, cool groves, glimmering lakes; rivers looking like threads of silver, lofty hill-tops crowned with perennial pine, rich meadows fragrant with new-mown hay and golden-hued flowers; farms, villages, factories, tall chimneys, and all the concomitants of a thriving valley meet the eye and fill the mind with a never-tiring pleasure. The native to the manor born, as well as the stranger within its gates, pause upon this favored spot and involuntarily exclaim "How beautiful!"

A gentleman from Providence, while riding up this hill with the writer, exclaimed: "Stop! In all my travels at home or abroad, I never saw a finer scene than this. I would like to build a house right on this lot before us and have that view always before me." For an hour we lingered, and with a deep sigh, he took his leave with regret, saying: "I did not suppose there was so fine a view this side the White Mountains, and I don't believe your townspeople appreciate it as they ought."

The facility with which this town can be reached by the numerous trains upon that model railway, the "Providence and Worcester," causes such an influx of seekers after rest and ozone, that the hotel and boarding-houses are taxed to their utmost during the vacation season, and those who come one season are pretty sure to engage rooms for the next.

There are several mineral springs near the centre of the town, and the water furnished by the Uxbridge Water Company proves, upon analysis, to be about absolutely pure, being nearly equal to that of the famous Poland Springs, and pronounced by local physicians to be nearly as effectual in the cure of kidney and urinary troubles. At no distant day these springs will be appreciated, and a *sanitarium* will invite the health-seekers to come and be cured. Uxbridge ranks among the older towns of the county, having been incorporated three years before the county itself.

Originally a part of Mendon, the history of the causes which led to its separation from the mother town may not inappropriately be recorded here.

In 1716 it seems that the western part of the town of Mendon and the eastern part had a disagreement about the road to be built to Taft's bridge, over the Great River (Blackstone), which led to the appointment of a committee of conference. This difficulty having been adjusted, the next recorded difference

which arose was in 1720, when, as appears by the "Mendon Annals," "the inhabitants of the west part of the town (now Uxbridge) began to agitate the question of dividing the town, or of being allowed to be a precinct by themselves; but upon their petition to that effect, the town took no action."

In 1722, October 16th, at a town-meeting held in Mendon, the inhabitants of the western part of the town objecting to being assessed for repairs to the meeting-house, the town "voted, that if they would pay, the town would reimburse them, *provided* they are set off as a precinct or a town within the space of three years."

December 14, 1726, more than the stipulated "three years" after the last difficulty, the town, "in answer to our western inhabitants petitioning to be set off as a town or a precinct, voted in the negative." But the said western inhabitants were becoming more determined to secede; and therefore, at a meeting held in Mendon March 31, 1727, the town "voted, after the reading of the petition of the western inhabitants of the town for a division of the town, that the boundaries should be as follows, viz.: Beginning at the south-west corner of the town, at the Province line, thence east four miles with said line; thence turning north and running parallel with the west line of the town, until it comes to a small brook running westerly between West and Misco Hills; thence down said brook to the West River; thence up said river to Andruss's Brook; and thence up Andruss' Brook to the township line"

The western inhabitants lost no time in taking the benefit of the vote, doubtless feeling that a reconsideration might blast their hopes, if opportunity were given; for it appears from the records in the Massachusetts Archives, "Towns, vol. 113, p. 714," that in an almost incredibly short time, considering the distance to Boston and the roads and conveniences or inconveniences of travel, the petition and vote was presented to the General Court for its approval and the incorporation of the new town. The act of incorporation passed both houses (*i.e.* the House of Representatives and the Council) and became a law June 23, 1727, which is the *birthday* of the town of Uxbridge. To show the mode of procedure in such matters at that early day under colonial government, I transcribe the act of incorporation entire:

Anno Regni Regis Georgii Decimo Tertio.

An act for dividing the town of Mendon and erecting a new town by the name of Uxbridge.

Whereas, the westerly part of the Town of Mendon, in the County of *Suffolk*, is completely filled with Inhabitants, who labour under great difficulties by their remoteness from the place of Public Worship, &c., and have thereupon made application to the said Town of Mendon, and have likewise addressed this Court that they may be set off as a distinct and separate town and be vested with all the powers and privilege of a town; and the Inhabitants of Mendon having consented to their being set off accordingly;

Be it therefore enacted by the Lieutenant-Governor, Council and Representatives in General Court assembled, and by the authority of the same, that the westerly part of said Town of Mendon is hereby set off and constituted a separate Township by the name of Uxbridge; the bound of said Town to be as followeth: That is to say, Beginning at the South West corner of the town of Mendon, at the Province South Line; thence to run four miles east with the Province Line; then North a parallel with the West line of the said Town, until that line meets with a small Brook that runs between West Hill and Misco Hill; then ye said Brook to be the bounds to the West River; then the West River to be the bounds to a brook known by the name of Andrew's Brook, which brook shall be the bounds to the north line of the Township.

And that the Inhabitants of the said Lands, as before described and bounded, be, and hereby are, invested with the powers, privileges and immunities that the Inhabitants of any of the Towns of this Province, are, or ought by law to be invested; Provided the Grant of the said Township be not construed to Affect the Rights and privileges of any Persons to lands within the same.

Provided also, that the Inhabitants of the said town of Uxbridge, do, within the space of two years from the Publication of this Act, Erect and finish a suitable House for the Public Worship of God, and procure and settle a learned Orthodox Minister of good conversation, and make provision for his comfortable and honourable support; and that they set apart a Lot of not less than One hundred acres of Land in some convenient place in said town near the meeting-House, for the use of the Ministry; and likewise provide a School Master to instruct their youth in writing and reading.

In Council June 21, 1727. Read.

J. WILLARD, *Sec'y.*

Passed to be Engrossed.

In the House of Representatives June 23, 1727. Read a first time; The 24th—Read a second time and passed in concurrence with amendment.

Dele. * Sent up for concurrence.

WM. DUDLEY, *Speaker.*

Agreed.

The amendment referred to by the record as passed by the House was the striking out of the following clause, which, in the act as approved by the Council, was after the word reading, in the last sentence of the act, viz.:

And that thereupon they be discharged from any further payment for the maintenance of the Ministers and Schools in the said Town of Mendon, for any estate lying within the said Town of Uxbridge.

The people of those early days had queer ideas of density of population, when they allege, as recited in the preamble to the act above quoted, "the westerly part of the town of Mendon, etc., is *completely filled* with inhabitants," etc., for it must be remembered that Mendon township at that time comprised about *sixty thousand acres*, and embraced what is now Mendon, Milford, Uxbridge, Blackstone and Northbridge, with a total population then of some twelve hundred people, and now the same territory is populated by nearly twenty-five thousand people, with plenty of room for more. Moreover, the reason set forth by the aggrieved inhabitants of the west part, that "they laboured under great difficulties, by their remoteness from the place of public worship," etc., indicates that the population of the old town of Mendon was rather scattered, and had plenty of room to spread towards the centre.

It appears from the records of the old, and the new town that the boundary line, as set forth in the vote of Mendon, and in the act aforesaid, was rather indefinite and little understood even by the parties to the same. For at the very first meeting of the new town, a committee was appointed "to run and settle ye Line between Mendon and Uxbridge;" and at different dates up to 1754, nearly twenty-seven years

afterwards, there were repeated attempts on the part of the two towns to settle the dispute concerning the boundary line; and it was finally settled to the satisfaction of all parties, after an appeal to the General Court, pending which the two towns came to an agreement; and the appeal was duly dismissed.

Uxbridge is supposed to have received its name from Henry Paget, Earl of Uxbridge, at the time a member of the King's Privy Council. Its Indian name is Wacantug, or Wacantuck; and this name is perpetuated by the "Wacantuck House," and the "Wacantuck Woolen-Mills" hereinafter referred to. The first town-meeting in Uxbridge was held at the house of Cornet John Farnum, July 25, 1727. The members of the first Board of Selectmen were Robert Taft, Ebenezer Read, Woodland Thompson and Joseph White. The first town clerk was Edmund Rawson, an accomplished gentleman, an excellent penman, and a methodical recorder of the doings of the new town. To-day, after the lapse of more than one hundred and sixty years, his records of the meetings of the town are as clear and plain as though recently written; and for brevity and good language would be appropriate models for town clerks of the present decade. Solomon Wood, the first town treasurer, received for the responsibilities and arduous duties of that office for one year, the munificent compensation of *five shillings;* and at the same time the town voted this compensation, they "voted to pay Lieut. Joseph Taft *seven shillings* for a barrel of cider." The record does not tell for what purpose the town purchased the cider, but inasmuch as they, a year or two later, voted that the committee who had charge of building "ye meeting House purchase fifteen gallons of good rum for the raising," it is probable that the town fathers were a little afraid to drink the water which nature had furnished in such abundance.

The town clerks and town treasurers have been men of such ability and worth, that in the one hundred and sixty-one years of its corporate existence the town has had only eighteen different town clerks, and about as many town treasurers. The attraction to these offices could not have been the compensation, for it is matter of record that, considering the amount of responsibility, the pay of these officials has been, and is to-day, grossly inadequate. That at least one of these gentlemen groaned in spirit under his burdens is manifest from these poetic verses, copied *verbatim* from the fly-leaf of the treasurer's account-book of 1767. I have called it by the appropriate name:

THE TREASURER'S LAMENT.

A strong Desire pervades the 'spiring Mind,
To their own care to have this book assigned;
But whosoever shall this book obtaine,
Will find *the profit pays not half the paine.*
I long have labored on this servile Charge,
I've found the profits small, the trouble large,
With true exactness all accounts I trac'd,
And then the Names & sums in order plac'd;
But all the methods I could e'er invent,
Ne'er to my Neighbors would it give content.
So I'm resolved, I'll soon this book forsake,
That those who long have sought, may now partake.

For nearly one hundred years after its organization Uxbridge remained simply an agricultural town, with the usual amount of such mechanical business as was carried on in the rural towns of New England. When it was incorporated it was a part of the county of Suffolk; but when Worcester County was created, in 1730, just three years afterward, Uxbridge became a part of it, and is so well satisfied with the connection, that no voice can be heard in favor of severing the old tie, or forming a part of any new county whatsoever. It is a part of the Blackstone Valley, and, with the other valley towns which constitute Worcester South, it has a local pride in the old county, and a desire to remain in it and of it.

The diversified topography of this town is one of its principal charms. Hill and valley, meadow and upland, lakes and rivers all contribute to make the picture perfect. Comprising nearly twenty-eight square miles of territory, with about seventeen thousand acres taxed, with over eighty miles of well-kept highways and town-ways, many rivers and streams crossed by stone, iron and wooden bridges, its handsome churches, fine hotel, imposing town hall and other elegant buildings reared by its thrifty population, now numbering about thirty-five hundred, Uxbridge sends out its invitation to the rest of old Worcester County to present to the readers of the "County History" a better record than she has made. Her adopted son, who writes this history, regrets that the limited space allowed him, prevents his doing justice to her; for, do the best he may, the half cannot herein be told.

The rivers of Uxbridge are the Blackstone, the West and the Mumford. Its larger brooks, furnishing water-power, are the Ironstone, the Emerson, the Rivulet and the Drabble Tail.

The Blackstone River has its source in North Pond, in the city of Worcester. From this pond flows a small but beautiful stream called Mill Brook. This stream, in its course through Worcester, Millbury, Sutton, Grafton, Northbridge, Uxbridge and Blackstone, where it leaves the Slate, receives the waters of several affluents, is called the Blackstone River, and its constantly increasing size and volume furnishes, by the time it reaches Uxbridge, a seldom-failing power, which gives to the town its great prosperity as a manufacturing centre.

The West River has its origin in the town of Upton; and, although it runs through the easterly part of Uxbridge, it retains the name "West River," which was given it when it was the western boundary of Mendon. It empties into the Blackstone about half a mile south of the Hecla Mills, and about a mile southeasterly of the railway station. Like the

Blackstone, it contributes power to run the machinery of several factories, which will be described farther on.

Mumford River has its rise in "Douglas Woods," in Douglas; being increased by streams from Badluck Pond and Manchaug Pond, in Douglas, and by springs and rivulets, and the vast reservoirs in Whitinsville. It enters Uxbridge just south of the Linwood Mills at Whitin's Station; thence through North Uxbridge, furnishing power to the great cotton-mills there located; thence southeasterly to Uxbridge Centre, joining the Blackstone about three-quarters of a mile southeasterly of the railroad station, at what is called the "Forks of the River." The Capron Mills are located upon this river.

The Ironstone Brook, formerly called "Forge Brook," and so designated in the early records of the town, rises in the extreme southwesterly part of the town, near the Rhode Island line; forms the Ironstone Pond; thence flows under the New York and New England Railroad into the village of Ironstone; and thence about a mile easterly to the Blackstone River. It was very early used for furnishing power for various mechanical enterprises, a dam and forge having been erected upon it nearly one hundred and fifty years ago by Benjamin Taft, one of the original settlers in the town.

The Emerson Brook rises in Douglas, flows easterly, and enters Uxbridge in what is called "Scadden;" it thence flows southeasterly, under the various names of "Shove Brook," "Tucker Brook" and "Emerson Brook," until its confluence with the Blackstone, on the farm of Millins Emerson. Its course is about five miles long, much of the way a very rapid, turbulent stream, and has fall enough, if its waters could be stored and used to advantage, to run all the machinery now in use in the town. It supplies the power for Lee's Mills and the mills of Zadok A. Taft & Co., and, in former years, the Shove and the Richardson saw and grist-mills. It is also one of the finest trout brooks in this section, and for several years Seth P. Carpenter, of Milford, an enthusiast in pisciculture, spent time and money in the erection of hatching houses and spawning-tanks; which, since his death, have fallen into "innocuous desuetude" and decay. The old gentleman was sanguine of success, and there is no doubt that if the vandal fishermen and surreptitious *hookers* of *trout* had left his breeding trout and hatchlings alone, he would have realized his fondest dreams.

The Rivulet Brook rises in the westerly part of the town, flows easterly through the farm of the late John S. Taft, to the pond at the Rivulet Mills, owned by Richard Sayles & Co., furnishing power for that prosperous establishment, and thence to the Mumford River, a short distance south of the Uxbridge Cotton-Mills. One of the earliest mills in town was built upon this stream; and the second distillery for the manufacture of gin and cider brandy emptied its nauseous refuse into its waters, on the Taft farm. In 1815 a woolen-mill was erected upon this brook, and since that date it has never ceased to furnish power for some manufacturing enterprise. Drabble Tail Brook is a small stream formed by the union of Croney Brook and Shuttle Brook, two smaller streams, or rivulets, arising from springs in the hills, just westerly of the centre of the town, and runs through the central village, crossing the highway near the Blackstone National Bank, and emptying into the Mumford River just below the dwelling-house of the late John W. Capron. This stream runs the water-wheel at the Shuttle Shop, and is capable of doing more damage in a sudden thaw than all the other water-courses in town. Less than one-eighth of a mile from the Shuttle Shop Pond to its outlet in the Mumford, it has repeatedly overflowed its banks, made a pond of Mechanic Square, a race-way of Main street, and a host of good citizens indignant at the negligence which allows this insignificant stream to kick up such a muss every three or four years. In 1824 excavations were begun for the Blackstone Canal, a project which had been agitated at various times from 1776 to the time when the Canal Company was incorporated, 1822. This canal was to be the great means of communication and trade between Providence and Worcester, and designed as an avenue for the transportation of heavy freight up and down the Blackstone Valley, which hitherto had been carried, at great expense and delay, by wagon-teams. Uxbridge was one of its important stations, and the locks and banks of the old canal can be seen to-day, though the canal ceased to be used in 1848, when it was superseded by the Providence and Worcester Railway.

These several water-courses have each and all contributed to the prosperity and comfort of the inhabitants of Uxbridge, and are the source whence has sprung that almost miraculous power which has kept the wheels of local industry in motion. While they have benefited the people, they have also added to the beauty and attractiveness of the town; so that they may well claim from the pen of the historian their full meed of praise. Uxbridge, like most other manufacturing towns, is divided into villages; each manufacturing establishment building up around it comfortable homes for the employés, and schools for the education of their children.

As these different villages will be commented upon, in connection with the history of manufacturing, which follows in another chapter, it will suffice for the present to give their names.

Uxbridge Centre (where are located the Town Hall, Unitarian, Trinitarian, Methodist and Roman Catholic Churches, Capron Mills, principal stores, post-office and railway station) comprises about one-third of the population; North Uxbridge (also a post-office village) contains the Uxbridge Cotton-Mills and the Baptist Church. The next largest village is the

Calumet, for many years known as the "New Village." Next in size and importance is the Hecla village, formerly known as "Shank-bone," a nickname given to it (more than fifty years ago, it is said) on account of the frequency with which shank-beef was served at the mill boarding-house. A letter from Ireland, addressed to an employé of the mill, was directed to "Shankbone, Mass., U. S." How the post-office clerks ascertained the location of this village by that name is one of the unanswered conundrums.

Wheelock's village (formerly called "Crackerville," probably on account of crackers being too prominent an article of diet, on some remote occasion) is the next in size. It is one of the prettiest, best-conditioned villages in the town, and its inhabitants are justly proud of it, and of the public-spirited gentlemen whose kindly interest in their welfare has made their homes and surroundings so pleasant. Elmdale (formerly Squaw Hollow), one of the oldest villages in the town, situated about half a mile easterly of the Hecla village, is the home of the proprietor and employés of Scott's Satinet Mills. Ironstone (at the south part of the town, three miles from the centre, on Forge Brook) was once the largest village in Uxbridge. In the early history of the town it was famous for the first mechanical business, established over one hundred and fifty years ago. For many years a large business was done there, and it was a post-station and general trading-place for the surrounding country. Ironstone Factory was built in 1815, by a stock company, and was burned in 1832. Subsequently rebuilt, it was operated with varying success by different parties till 1865, when it was again burned, and the property and the village have fallen into ruin.

The Rivulet village, on the south side of the old Boston and Hartford Turnpike, owned mostly by Richard Sayles & Co., is an illustration of what the energy and business enterprise of a live, intelligent man can accomplish. When Mr. Sayles took the property, it was sadly out of repair; the street was narrow and inconvenient for travel; the tenements dilapidated, small and few in number, and the surroundings unpleasant. In a few short years wonders have been accomplished. New houses have been erected, the old ones repaired and enlarged, the street widened, a new bridge put in, the factory buildings enlarged, modernized and improved; the grounds, lawns and fences made neat and handsome, and the entire village renovated and beautified.

Happy Hollow is the happy name of a small village which has grown up around and in the vicinity of the woolen-mills erected by Zadok A. Taft and D. M. Lee, on the Emerson Brook.

These constitute all the factory villages, but there are several of the agricultural sections of the town known by local names, which can have no general interest, as they are not strictly villages.

The minerals of Uxbridge are iron, lead, silver, in small quantities, while quartz, beryl and smoky topaz in crystals are frequently found. Vast quarries of gneissoid granite furnish material for buildings, curbing, monuments and general cemetery work. It is of excellent quality and fineness, and capable of taking a high polish, some of it being in color and quality nearly equal to the imported Scotch granite. The Uxbridge Silver Mine, located in the southwest part of the town, on land now owned by C. R. Thomson and others (formerly the Chileon Tucker farm), was opened about fifty years ago, and for awhile gave promise of considerable richness. But after sinking two shafts to a depth of nearly fifty feet, and working a cross-cut on the vein, it was found that the vein, instead of increasing in width, as was hoped and expected, was, if anything, even smaller than at the surface—about three-fourths of an inch of metal, in a hard, refractory gangue of quartzite. The metallic vein was a true galena, carrying a good per cent. of silver, but the immense expense attending its excavation, reduction and purification requiring, in the language of the day, "a gold mine to work the silver mine," caused a suspension of all work, and for about fifty years not a dollar's worth of ore has been taken from the mine. Its shafts are filled with water, and abandoned to the nymphs of the thick woods, whose spreading branches hide the place where fond hopes much expense and bitter disappointment lie buried. There are several small beds of limonite, or bog ore, and at the south part of the town, near Ironstone, the dark-colored rocks, which there abound, contain considerable quantities of specular iron, so that the stone is called "ironstone," and the village takes its name, "Ironstone," from that fact.

It is believed by some that the yellow-colored quartz, which is found in quite large quantities in the western part of this town and the adjoining part of Douglas, contains gold, but if they will take pains to weigh it they will find its specific gravity insufficient to indicate the presence of gold. It is undoubtedly a kind of jasper—an opaque, yellow quartz colored by iron, or ferruginous clay,—possessing no value whatever. The western and southwestern parts of the town are well wooded, nearly every farm having several acres of wood and sprout land, for market and domestic wood. Pine, chestnut, oak and birch are the principal woods, with occasionally a small lot of walnut.

The taxable valuation of the town in 1821—which is the earliest tax record which has been preserved—was about $113,116; the number of polls, 366; and the amount raised for State, county and town purposes, $1,986.37; rate, $1.75 on each $1000 of valuation. In 1830—nine years later—the valuation had increased to $786,592; 483 polls. Amount raised, not including school district taxes, about $4500; rate, $2.90 per $1000 of valuation.

In 1860, thirty years later, the number of polls had increased to 818; the valuation to $1,566,458—a gain

of over 99 per cent.; the amount raised for State, county and town purposes to $19,158, not including highway taxes—a gain of over 100 per cent.; and the rate of tax to $5.06 per $1,000—a gain in rate of 75 per cent.

In 1888, twenty-six years later, the number of polls have increased to 885; the valuation to $2,032,725; the amount raised for State, county and town purposes, including highway taxes, to $28,696—a gain of over 300 per cent.; and the rate to $13.50 per $1,000—a gain in rate of 266 per cent. It is worthy of note that the State tax for Uxbridge, in the year 1860, was $495; while in 1888 it has increased to $2,475—a gain of just 500 per cent.

This town believes in the axiom "pay as you go;" and although it raised over forty thousand dollars for war purposes during the Rebellion, took possession and paid for over twenty thousand dollars' worth of school district property in 1870, when school districts were abolished, built a new town hall in 1879 at a cost of over fifteen thousand dollars, and has recently expended over fifteen thousand dollars more in new school-houses, widening Mendon Street, and building new bridges and annually appropriates over twenty thousand dollars for town charges and expenses, *it is all paid up*. It owes no debt, and its excellent roads, good care of its unfortunate poor and its unsurpassed schools attest the wisdom of its course. In 1879, after years of agitation, a fine brick town hall building, containing a concert hall, voting hall, rooms for the Free Public Library and all the town officers, was erected by the town, at an expense of a little over fifteen thousand dollars. This sum was all raised by taxation and paid in three years—five thousand dollars and interest being raised each year in addition to the regular taxes for town purposes.

Taken as a whole, Uxbridge is one of the brightest in the galaxy of stars that form the crown of municipal glory which makes old Worcester County famous.

> "I fain would pause to name her every charm,—
> The sheltered cot, the cultivated farm,
> The never-failing stream, the busy mill,
> The decent church that topt the neighboring hill."

CHAPTER XXVI.

UXBRIDGE—(*Continued.*)

RELIGION.—One of the conditions upon which the new town was chartered, which is expressed in the act of incorporation, was that within two years from the publication of the act the said inhabitants should "erect and finish a suitable House for the public worship of God, and procure and settle a learned Orthodox Minister of good conversation," etc.

We find, therefore, that at a town meeting held August 25, 1727, the inhabitants passed the following vote, copied *verbatim* from the records:—"Voted, That they would Sett ye meeting House on ye South side of Drabble Tail Brook. But seeing it would be inconvenient to Set the meeting House where the First Vote Specified, they recalled s^{d} vote and passed a vote that They would Sett ye meeting House within the Fence of Eben^{r} Read's Pasture, on a place which they had Viewed for, and Judg'd convenient for that purpose."

October 1, same year, "voted that they would maintain the public preaching by way of Rate, till our next annual meeting." Also voted at same meeting, "that they would accept of Mr. Terry's proffer of preaching to us for *twenty shillings* a sabbath, till ye next annual meeting; and also that all the money that should be put in unmarked, should be looked upon as given gratis."

It is a matter of some interest, that the pay of a minister to occupy the pulpit in 1888 is about four times greater than in 1727, or twenty dollars per Sunday, instead of twenty shillings; and it also seems that the good people of that early day might off-set against the parish tax any money put into the contribution-box, which they were careful enough to *mark*, probably meaning marked with contributor's name, and claimed as paid in anticipation of tax.

It was also voted at said meeting, "that they would build said meeting house forty feet in length and thirty-five feet in *breadgth*, and twenty-nine feet between joynts."

How acceptably Mr. Terry preached to our hard-headed forefathers is matter of some doubt, for at the annual meeting in March, 1728, his name is not mentioned in the records, and the town voted "that a committee be chosen to provide some suiteable person for to preach unto us." That they sadly needed some *suiteable* person to preach unto them is manifest from the succeeding votes relative to church and meeting-house, viz.: "Voted at said meeting that they would not *free the Quakers*," which means that all those unhappy followers of George Fox who had settled in this town should be taxed the same as the orthodox believers, to sustain orthodox preaching, even though (as now) they had conscientious scruples against it; a system of religious intolerance which the progress of a century and a half has, in a great measure, corrected.

It was also "voted, that there be fifteen gallons of *Good Rum* provided for ye raising of ye meeting-house." A *suitable* minister in that early time might, and undoubtedly did, approve of this strong auxiliary force, then considered necessary for the proper and successful raising of even an orthodox meeting-house, whose huge timbers, rough hewn and unseasoned, should stand against storm and flood and Indian foes, monuments of the people's devotion to the living God.

So lately as twenty-five years ago, in this same town, the writer has seen the prodigious effect which a few quarts of "*good rum*" has had in *raising* some

of the dwelling-houses and barns which grace the hillsides, and it is a question fit for the decision of the prohibitionist of 1888 whether churches and dwellings raised by the strong aid of strong drink are more prone to decay and destruction, and more the object of divine wrath than those raised upon cold water? At all events the religion of 1728, and many years since, recognized without serious criticism the use of intoxicating liquors upon all important occasions; while the religion of the present day, thanks to a more enlightened public opinion, has not only ceased to approve, but severely condemns its use. The next record concerning preaching is of the meeting held November ye 8th, 1728, when the town voted "that they would continue preaching this winter amongst them;" but January 13th, following, they voted "not to do anything at present about settlement of a minister;" though on the 28th of the same month they voted "that there be five men chosen to be a committee to see about providing one to preach among us, and that said committee shall provide a *suiteable* person to preach to us by the first Sabbath in April next, and that said committee shall stand while (until) there is a minister settled among us." For more than a year following no mention is made in the records, concerning the success of the committee or the building or completion of the "meeting-house." So it may be presumed that the spiritual needs of the people were satisfactorily provided for.

May 4, 1729, about two years after the town at its first meeting voted to build a meeting-house, the record says, "the freeholders and other inhabitants met att ye *meeting-house;*" so that now, for the first time, we are certain that the town complied with the conditions of its act of incorporation, and did, "within two years from the publication of the act, erect and finish (?) a suitable house for the public worship of God;" but the other condition of said act "procure and *settle* a learned Orthodox Minister of good conversation," etc., was not fulfilled for some time after, though they evidently tried to make literal compliance.

July 13, 1729, the town voted "that they are willing to settle Mr. Othniel Campbell to be their minister, and that if he will settle amongst us as our minister, that they will give him 70 pounds a year for his *sallary, and* 100 *pounds settlement for encouragement.*"

It must be remembered that it is pounds sterling herein referred to, and that to a new people in a new country, dependent on the earth for their living and burdened with the expense of building for themselves houses, and developing their farms from the wild woods and rocky hillsides around them, the payment of a sum equal to nearly five hundred dollars, as "*encouragement*" to a minister of the Gospel to settle among them, and an annual stipend or salary of about three hundred and fifty dollars, was an undertaking which shows more than anything else in the early history of this town what sterling, loyal, public-spirited and religious men these first citizens of Uxbridge proved themselves to be—a lesson which the wealthy and independent citizen of to-day may study with pleasure and profit.

Mr. Campbell seemed to have trouble in getting dismissed from his previous pastoral relations to some other town, for Uxbridge voted February, 1730, "to pay not exceeding 100 pounds per year if he could get to preach for us by the first Monday of March next."

May 4, 1730, it appears of record that Mr. Campbell couldn't come, for the town "voted for Mr. Webb and Mr. Wales, and Mr. John Wales had y^{e} major vote," and on May 7th it was "voted that if Mr. Wales will accept of their call and settle among them as their minister, that they will confer on him y^{e} sum of one hundred pounds in good passable money for his settlement, and *ninety* pounds a year in good passable money for his *sallery.*" In May of the same year Mr. Campbell comes to the front with a demand for payment of his services for supplying the pulpit; for on the 29th of May the town "voted to give Mr. Campbell y^{e} sum of five pds. for y^{e} 7 Sabbaths he has been absent from y^{e} town since we had y^{e} Minister's advice for y^{e} hearing of others, and for y^{e} damage he has sustained since he preached to us or had a call from us;" and also "voted that they do dismiss Mr. Campbell from any tie that the town has upon him for preaching among us;" "and likewise voted that they will have preaching continued among us."

Mr. Campbell is not so easily disposed of. Like some ministers of the present day, he knew how to stick, and about how much he wanted for the *privilege* of *going;* for in June, same year, after demanding further satisfaction for damages sustained, the town voted "not to do anything further in respect to Mr. Campbell's request for satisfaction for getting off from his obligations when he was called to Uxbridge." At the same meeting it was "voted to follow the minister's advice and give Mr. Nathan Webb a call, or *renew Mr. Campbell's call.*" That some of the town did not take kindly to the proposition to "*renew Mr. Campbell's call,*" appears from the vote passed. July 9th, "Voted that they will give Mr. Nathan Webb a call in order to settle with us as our minister, and that they give him for encouragement ye same for settlements and salary as were voted Mr. Wales, when they voted to give him a call." This is the first intimation given in the records that Mr. Wales had declined the call.

September 4, 1730, Mr. Campbell carried his point, and received from the town the sum of twenty-one pounds for all his damages, for dismissal, etc.; and his receipt, recorded at length on the records of the town, gives evidence that a legal mind advised, and a careful hand drew up, an acknowledgment that held this litigious minister of the gospel so tightly that his name does not again appear upon the records of the town-meetings.

Mr. Nathan Webb was the *first settled* minister in Uxbridge, and his ordination took place the 3d day

of February, 1731; so that it was nearly four years, instead of two, before the other condition in the act of incorporation was fulfilled. Mr. Webb died March 16, 1772, after a ministry of over forty years. He was deeply lamented, and goes down to posterity as a faithful preacher, an earnest, true-hearted man, whose influence upon the minds and hearts of the early inhabitants of Uxbridge was extremely beneficial and conducive to that growing prosperity which made Uxbridge one of the leading towns of Provincial Massachusetts.

The second settled minister was Hezekiah Chapman, who was settled January 27, 1774, and was dismissed April 5, 1781. It is a lamentable fact that the cause of Mr. Chapman's dismissal was intemperance.

The third settled minister was Rev. Josiah Spaulding, who was settled September 11, 1783, and was dismissed at his own request October 27, 1787. After the dismissal of Mr. Spaulding, Mr. Samuel Mead preached for some time; and in December, 1791, the town voted to concur with the church in giving Mr. Mead a call to be settled over them in the ministry; but it does not appear upon the records what answer Mr. Mead made to the call. It probably was not *loud* enough in a pecuniary sense. The fourth settled minister was the Rev. Samuel Judson, who was settled October 17, 1792, and dismissed in 1832, and died in November of the same year. The First Congregational Society was incorporated in the year 1797; and from this time all connection between the town and the "Congregational Society" ceased. The town occupied the meeting-house for town-meetings and business purposes until it was taken down for the purpose of building a new church, in 1834. Many of the present residents of the town attended church in the time of Mr. Judson, and can bear testimony that "he was a man of remarkable conscientiousness, rare good nature, much native common sense, and deep in the love and confidence of the people of his charge." At the dismissal of Mr. Judson the elements of religious opinion came to an open rupture, and those who had formerly been united under his ministrations formed themselves into separate societies, and the two houses for religious worship which now stand upon opposite sides of the Common were erected, and the members of the two societies, who unitedly had paid Mr. Judson a salary of $400 a year, settled the Rev. Samuel Clarke at a salary of $600 a year, and the Rev. David A. Grosvenor at a salary of $600, and from that time to the present, when the salaries of the ministers of these two churches aggregate $2600, both societies have been exceedingly prosperous.

The new church of the First Congregational Society was dedicated in January, 1835, the pastor, Rev. Samuel Clarke, preaching the sermon. This building, still standing, was thoroughly repaired in 1864, at a cost of about $4500; and again in 1878 it was remodeled inside, new pews put in, and the walls and ceiling elegantly frescoed, at a cost of some $4000, and to-day it is one of the finest country churches in the State. During the present year a new and elegant organ, costing some $3000, has been put in at the right of the minister's desk, and its full, deep, musical tones would astonish the early choirs who, at the other end of the church, succeeded in drowning the accompanying music of the little organ which Mr. Rogerson so artistically played.

The meeting-house of the Evangelical Congregational Society was built in 1833 and dedicated in the autumn. It has been several times repaired, has been lately remodeled and fitted with handsome furniture and a new pipe-organ, and, like its neighbor across the Common, is a fine, convenient and comfortable church.

Referring to the records of the town, we find that the original meeting-house, though erected within the limit prescribed by the act of incorporation, was not finished till long after; for a vote was passed in February, 1733, "that they will have but *one pew* built in ye meeting-house, and that they will have ye men's seats on ye one side of ye alley, and ye women's seats on ye other side;" and in August, 1735, "the sum of one hundred pounds was appropriated to finish ye meeting-house." So it appears that for several years the people met in a cold, uncomfortable, barn-like structure, sat upon hard benches or cushionless seats without backs, and listened to the word of God under circumstances that would appal the stoutest heart and chill the marrow of the most consistent and earnest Christian of the present generation.

We wonder, as we sit in our comfortable, steam-heated, electric-lighted, soft-seated, floor-carpeted, well ventilated churches of the present day, and listen to the rich music of the modern pipe-organ, and the operatic warbling of our thousand dollar quartette singers, how those old pioneers and great-grandfathers of ours could possibly have lived through such hardships as they endured, and enjoyed the blessings of religion obtained under such discouraging circumstances as attended them.

The pastors who have served God and the people in the First Congregational (Unitarian) Society since its incorporation have been: Rev. Samuel Clarke, who was installed January 9, 1833, and died November 19, 1859, "a faithful and beloved pastor for nearly twenty-seven years;" Rev. Charles Taylor Canfield, ordained and installed October 12, 1860, and resigned March 31, 1862; Rev. Rushton D. Burr, installed November 12, 1862, and resigned May 4, 1868; Rev. Samuel R. Priest, ordained and installed January 20, 1869, and resigned January 2, 1871; Rev. James F. Lusk was hired March, 1872, and resigned July 1, 1875; Rev. George Bremner, ordained and installed November 16, 1875, and resigned December 28, 1883; Rev. L. M. Burrington, installed September 28, 1884, and resigned July 25, 1886; Rev. W. R. G. Mellin, installed April 6, 1887, and remains pastor of the church.

The pastors of the Evangelical Congregational Society have been: Rev. David Adams Grosvener, ordained and installed June 6, 1832, and dismissed at his own request June 15, 1842; Rev. John Orcutt, installed December 18, 1842, and dismissed May 1, 1849; Rev. Jacob Jackson Abbott, D.D., installed in 1850, and resigned in 1862; Rev. J. B. Johnson, installed December 15, 1864, and dismissed February 6, 1868; Rev. Thomas C. Biscoe, installed December 2, 1868, and dismissed May 25, 1876; Rev. George H. Johnson, hired for one year from May 1, 1877, and served faithfully till the year expired; Rev. William H. Cobb, installed September 18, 1878, and dismissed October 1, 1887; Rev. F. L. Bristol, installed May 1, 1888, and now remains pastor of the church.

The Baptist Church.—The Baptist Church, located at North Uxbridge, was organized June 22, 1842; and on the same day Rev. Austin Robbins was ordained and installed pastor of the new church. The church rapidly increased in numbers, receiving forty-seven members during the first year of its existence. Mr. Robbins resigned in 1850, after a successful pastorate of eight years. For the next four years the pulpit of this church was supplied by Rev. Job Boomer, Rev. Joseph Smith, Rev. Joseph Tillinghast and Rev. S. S. Mallory, each officiating about one year. Rev. James W. Russell became pastor of the church November 11, 1854, and resigned in 1864; Rev. Joseph Barber became pastor in April, 1865, and resigned in November, 1868, and was followed by Rev. J. W. Dick, in April, 1869, who continued his ministry here until July, 1871. In October, 1871, Rev. J. H. Tilton was installed pastor, and remained six years, closing his labors October, 1877. In November, 1877, Rev. B. H. Lane was installed, and resigned May 30, 1882; Rev. T. M. Butler was installed November 1, 1882, and resigned in June, 1888.

This society has recently erected a fine church building at North Uxbridge, opposite Chase's Corner, with a convenient parsonage close by, and is rapidly growing in membership and is free from debt.

Methodist Episcopal Church.—The first Methodist preaching in Uxbridge Centre began about September 1, 1874. Some of the citizens, desiring to reach a class that was not hearing the Gospel, made arrangements with Rev. Mr. Merrill, then pastor of the M. E. Church in Whitinsville, to preach in Taft's Hall on Sunday evenings; and Mr. Merrill continued his services up to February 7, 1875.

Mr. F. T. Pomeroy, of Shrewsbury, a local preacher of the M. E. Church, a young man of excellent ability and pleasant address, succeeded Mr. Merrill, and remained here until April, 1877. His appointment was considered a mission of the church. The mission was formally organized as a church with eight members December 19, 1875, by Rev. Dr. Haskell, presiding elder of the Worcester District. Mr. Hunter, of the Boston University, succeeded Mr. Pomeroy, but soon left. He was succeeded by Rev. John W. Collier, who began his labors, June 9, 1877, and closed them June 23, 1878, to go as a missionary to Peru, South America. For the remainder of the Conference year Mr. J. H. Thompson supplied the pulpit.

Mr. Thompson was returned to Uxbridge for the Conference year 1879–80, which was the first appointment made here by the Conference. Mr. Thompson was succeeded by Rev. Charles Perkins, who was in turn succeeded by Rev. J. W. Rodgers. The present pastor is Rev. J. T. Kennedy.

In March, 1878, the society purchased of the town, as a site for a church edifice, a part of the old burying-ground in the centre of the town. Subscription papers for the church were opened in January, 1879, which were very generously signed by the members of other congregations (notably the Unitarian), and on April 1st the amount pledged was three thousand five hundred dollars. The church, which cost about six thousand dollars, was completed early in 1880, and was dedicated with appropriate ceremonies. It stands nearly opposite the railway station, just north of the new town hall, and is a fine specimen of church architecture. This church has grown rapidly, and has a membership, at the present time, of about sixty.

The Friends, or Quakers.—It appears by the town records that at the time the town was incorporated, or very soon after, several families of Friends or Quakers were living within its limits, and, as is their custom, objected to paying the rates or taxes for the support of ministers or preachers, then settled, and paid by tax; and the matter was brought before the town at a meeting held in March, 1728. At this meeting "they voted that they would not free the Quakers." This is the first information given by the town records concerning the fact that a part of the settlers of the town were members of that society. Mr. L. C. Wheeler, a member of the society, furnishes the following account of this sect, which is of great interest:

At the date of the organization of the town, the Quakers were a part of the Smithfield Monthly Meeting, and undoubtedly held meetings, in individuals' houses, till 1770, when the Monthly Meeting authorized "the building of a meeting-house in Uxbridge, near Moses Farnum's." The meeting-house stands at the junction of the roads from Millville and Ironstone to Uxbridge Centre, and is constructed of brick, with a tablet bearing the date of its erection, 1770, in the gable.

The following account of its construction is taken from old records in the possession of the clerk of the "Quarterly Meeting:"

In the 4th month, 1770, the Smithfield Monthly Meeting ordered a meeting-house to be built a little Southerly of Moses Farnum's, by the side of the Great road. In the months following the house was built, thirty-five feet long and thirty feet broad. During the 5th month, 1771, Adam Harkness, William Buffum and David Steere do report yt they find the whole cost of building the brick meeting-house to amount to £206 8s. 1d.

The house has been in use to the present time, and notwithstanding its age of one hundred and eighteen

years, its walls show no signs of weakness or decay, and its plain roof, without jets or ornamental finish of any kind, is in an excellent state of preservation. The window-sashes contain the same small panes of glass, and the same doors swing on leather hinges, as formerly. The internal arrangements of the house are also left in their original style, having been simply kept in repair.

A few years previous the Monthly Meeting had authorized the erection of a meeting-house in Uxbridge, and in 1766 one was erected in what was then the north part of Uxbridge, and which is now Northbridge, that town having been set off from Uxbridge in 1772. This house stood very near the location of the present meeting-house,—about half a mile south from Riverdale in Northbridge.

The meetings held at Uxbridge and Northbridge were a part of the Smithfield Monthly Meeting, till 7th month (July), 1783, when the several meetings held in Uxbridge, Leicester, Northbridge and Richmond, N. H., were set off, and formed a separate Monthly Meeting under the name of the Uxbridge Monthly Meeting, which has continued till the present time, except that the Richmond Meeting has been dropped, and the meeting formerly at Leicester removed to Worcester. In addition to the above, a meeting at Pomfret, Conn., and one at Douglas have been made a part of the Uxbridge Monthly Meeting.

The approved ministers of Uxbridge Monthly, as far as ascertained, have been Daniel Aldrich, Richard Mowry; Job Scott, approved 12th month, 1783; Israel Sabin, approved 1790; and Royal Southwick, Daniel Clapp, Timothy K. Earle, John B. Daniels and Salome C. Wheeler. In addition to the above, the following have moved into the Monthly Meeting from other places, viz.. Stephen Cortland, Lydia Haight and Susan A. Gifford.

Only two of the above-named ministers were natives of Uxbridge, and spent their whole lives in the town, ministering semi-weekly to the congregations that gathered in the "Old Brick," viz.; Richard Mowry, who died 1st month 23d, 1835, aged nearly eighty-six years, and Royal Southwick, who died 11th month 30th, 1840, aged eighty years. Job Scott, whose ministry was approved in 1783, and whose journal giving a history of his labors in the ministry has been published, spent only a few years of his life in the town, and Israel Saben lived here in 1770, at the time of his marriage, and for several years afterwards.

There are now but four approved ministers of the denomination in the Monthly Meeting; and only one of these, Mrs. Salome C. Wheeler, is a resident of the town. Her labors in the ministry are usually at the Northbridge Meeting, but her influence in our schools —of which she is one of the Board of Examiners— her interest in temperance work, her kind sympathy and labors for the sick and afflicted, are all gratefully appreciated by the people of Uxbridge, who are proud to claim her as one of our most respected citizens.

The membership of this denomination is not large, but they make up for lack of numbers by their intelligence and Christian zeal.

In the words of the Quaker Poet of Amesbury:

> "The last of his sect to his fathers may go,
> Leaving only his coat for some Barnum to show;
> But the truth will outlive him, and broaden with years,
> Till the false dies away, and the wrong disappears."

The Roman Catholic Church.—The earliest account of any Roman Catholic Church service in Uxbridge is that a service was held for the few Catholics then in town, in 1850, by the Rev. Patrick McGrath, of Hopkinton, in one of the laborer's tenements owned by Joseph Thayer, Esq.

In 1853 Uxbridge was erected into a parish by Right Rev. J. B. Fitzpatrick, Bishop of the Diocese of Massachusetts, and Rev. E. J. Sheridan was appointed pastor, August, 1853. The parish then included the towns of Grafton, Millbury, Northbridge, Douglas and Uxbridge. St. Mary's Church in Uxbridge was dedicated in 1855, the sermon on the occasion being preached by Rev. James A. Healy, afterwards Bishop of the Diocese of Maine.

In May, 1867, Rev. Dennis O'Keefe was appointed pastor and remained one year, when he was removed to Clinton, in this county.

In May, 1868, Rev. Dennis C. Moran was appointed pastor, and the church in this town being insufficient to accommodate all the Catholics of Uxbridge and Northbridge, so rapidly had their numbers increased, that this pastor caused St. Patrick's Church in Whitinsville to be built in the year 1870, and thus gave relief to the overcrowded St. Mary's.

In 1871, Rev. Henry L. Robinson, a gentleman of great erudition and eloquence, was appointed pastor, and is still occupying that position, loved and honored by his congregation, and highly respected and appreciated by Christians of other denominations. So highly have his labors in this field been valued by the head of his Church, that the additional title of "Doctor of Divinity" has been accorded to him, and is, we know, well deserved and modestly worn.

In the year 1876 St. Mary's was repaired and handsomely frescoed at an expense of over two thousand five hundred dollars. The present parish includes the towns of Uxbridge and Northbridge, with St. Mary's as the parish church. Dr. Robinson has charge of both churches and congregations, and is assisted by a curate. The number of souls belonging to the parish is over two thousand, and its average Sunday attendance is very much larger than any other congregation in the town.

CHAPTER XXVII.

UXBRIDGE.—(*Continued.*)

Schools and Libraries.—It will be observed that the act of incorporation of the town required not only

that there should be maintained public worship, but also required to be maintained "a school-master to instruct their youth in writing and reading." The schools in Uxbridge rest upon this foundation.

In January, 1732, the town voted "that they will sett up and keep a school in ye town of Uxbridge," and "voted to have a school-dame for ye 1st 7 or 8 months, to keep a school in each part of the town proportionable," and "voted that ye selectmen shall provide a school-dame, and state ye places that she shall keep ye school att."

There must have been some difficulty in providing a *school-dame*, for on March 7th the town voted "to make choice of a school-*master* to keep a school in town, and that John Read, Senior, be the school-master."

Whether some doubting Stephen considered the employment of a school-dame an evasion of the requirement in the aforesaid act, that "a school-*master* be maintained," etc., and caused the town to reconsider its first vote, or no female teacher could be persuaded to bury herself in the wild-woods of this then thinly inhabited town, is an open question. But it is of record that the first school was taught by John Read. What salary he received, and how many weeks in a year his school was in session, is not recorded. His successor, George Woodward, was chosen May 3, 1733, and the town voted to board him and to give him twenty pounds for his year's services. Mr. James Emerson boarded the teacher, and was allowed seven shillings a week. January 7, 1734, the town chose Edmund Rawson teacher, and increased his salary to twenty-five pounds. The same year we find mention made of school districts as "squadrons," and each squadron had the liberty of choosing its teacher—a woman—and the selectmen were to approbate the teachers.

In 1736 John Rawson was elected teacher, and was allowed forty-five pounds for teaching school. The expenses of maintaining the schools up to the year 1756 seem to have been met from the income derived from the grants of land made to the town by the General Court, one of which was a grant of five hundred acres, in the northerly part of the province, in what is now New Hampshire; though in what part of that State it is difficult to determine, though it is said to be in Coos County. In the year 1756 the town began to raise money for schools by direct tax, helped out from time to time by sale of the school lands, and the use of the proceeds for school purposes.

The first mention made of a school-house is in the month of December, 1738, when the town "voted to build a school-house." Tradition says the meeting-house was previously used for this purpose; but as we have seen, the primitive meeting-house had but poor accommodations for use on the Sabbath, and it is hardly probable that it was made use of for school purposes in its then unfinished and uncomfortable condition. It is more probable that the schools were kept in private houses, as the selectmen were required to open schools in different parts of the town. The school-house erected in 1738–39 must have been almost as crude and uncomfortable, in many respects, as the meeting-house, for the town voted October 17, 1740, "to allow forty-four pounds, three shillings and three pence for what had been done and for what was to be done to the school-house"—a sum equivalent to a little over two hundred dollars, which in these days of plenty would pay for a very uncomfortable barn, if it was not too large. In 1760 the town voted to divide the town into districts, and each district was to enjoy the privileges of schooling in proportion to the money raised by them. The division took effect in 1761, and the town was divided into thirteen districts; the children of specified families were to attend specified schools, and each district was to have a sum of money allotted it, in proportion to the number of scholars in that district. The sum of sixty pounds was raised for schools each year from 1762 to 1771, in 1776 forty pounds, in 1777 sixty, in 1778 one hundred and twenty, and in 1779 *three hundred* pounds, showing by this sudden increase the effect and the purchasing power of the depreciated currency in the time of the Revolutionary War. In 1783–84 the appropriation again fell to forty pounds, the money value of the currency having improved by the emission of a new and better national promise to pay.

In 1788 we find the first mention made of a grammar school, the town having then "voted that three pounds, thirteen shillings and six pence, raised at the last meeting, should be applied to a grammar school the present year." In 1796 the town was redistricted and divided into eleven school districts and substantially remained so divided up to 1825. In 1797 the town voted to raise two thousand dollars for building school-houses in the several districts, and in case the inhabitants of the district were unable to agree where their school-house should be placed, the committee were to fix upon a proper site. For a good description of these old school-houses I am indebted to Hon. Charles A. Wheelock, who speaks from personal experience in the following language:

"The old school-houses! What queer buildings they were when compared with the modern school-house! The writing-desk was a plank running round three sides of the room; the seat was a slab, its flat side uppermost, with holes bored in it in which were driven cart-stakes for legs. The scholar had no back to his seat unless he should turn round and face the centre of the room, when his back might rest against the edge of the plank writing-desk. The big stone fireplace was filled with blazing logs in winter and the child must roast and freeze by turns. The dungeon—that dreadful place—to which the unruly ones were consigned sometimes to regale themselves upon the good things the prudent had brought to sustain themselves in their arduous labors while delving among the mysteries of the three R's, and the heavy

ruler was there and that never-to-be-forgetten birch which was so quickening to the mental faculties when properly administered."

Gradually but surely the expense attending the schooling of the children increased, so that while in the year 1800 the amount appropriated was only about four hundred dollars; in 1835 it had increased to one thousand dollars. With the increased appropriation better school advantages were secured. The average wages of female teachers in 1835 was only $5.73 per month, and male teachers $13.93, exclusive of board. The schools were kept twenty weeks in a year, women teaching summers and men in the winters; and, therefore, it is to be presumed that the ten weeks of summer school were principally for the benefit of the younger children, while the grown-up sons and daughters, whose labors were essential to the family support in summer, attended school ten weeks in the winter, and were taught by a man, on account of the necessity of having some one who could *handle* them and compel obedience. As the town increased in population, as it did rapidly after 1835, it became necessary to provide better accommodations for the school-children. The appropriations gradually increased, new school-houses were erected to take the places of those so graphically described by Mr. Wheelock, and more and better teachers were employed.

In 1855, it having been ascertained that the town had a population sufficiently large to bring it within the provisions of the statutes requiring a high school to be kept, the town voted that the School Committee should procure a place and open such a school, and six hundred dollars was appropriated for the support of the school until the next March meeting. The committee subsequently employed Mr. Nathan Goldthwaite as principal of the school, which was opened in the old academy building on the northerly end of the town's common. This "old academy building" was erected in 1819 by Solomon's Temple Lodge of Free Masons and the citizens of the town by contribution, the citizens building the lower story and the Masons the upper. In February, 1819, this article appeared in the town warrant: "To see if the town will permit the erection of a private school-house on the north end of the Common, between the cartway leading to widow Fanny Willard's back-yard, and the wall south of where the old blacksmith shop stands; provided said building can be erected by private munificence."

On March 3d (annual town-meeting) it was voted that liberty be given to build a school-house on the town common—of certain specified dimensions—provided it be built within three years from this date. The Masonic Lodge, recently formed in the town, which had been holding its meetings in the hall at the Spring Tavern, in the north part of the town, desired better accommodations and effected an arrangement with the committee of citizens by which the Masons and the citizens should erect the building at joint expense, the Masons completing and occupying the upper story and the citizens the lower part for private school purposes. The building was of brick and was so far completed December 25, 1819, that the Masons occupied their new hall. The private school, which was afterward known as the "Uxbridge Academy," was opened by Mr. Abiel Jaques, a Harvard graduate, in the fall of 1820, and was used for an academy and select school for young ladies under several different teachers of both sexes, until about the time the town took it for a high school room in 1855.

In 1865 a three years' course of study was arranged for the high school, which, in 1869, was changed to one of four years. The schools and school system of Uxbridge have always been its especial pride. The town has freely voted its money for their support, and, notwithstanding the carping criticisms of a few, who, if they knew more about the schools, would use better judgment, they are excellently and economically managed, and are producing grand results. The wages of teachers at the present time average as follows: Female teachers, thirty-five dollars per month; male, high school only, one hundred and ten dollars, for ten months only. There are now seventeen common schools and the high school, and the average length of the schools is thirty-three weeks for common schools, and thirty-eight for the high school.

In 1869 the Massachusetts Legislature passed a law abolishing school districts, and requiring the towns to take possession of all the school-houses and other school property owned by the several districts in their corporate capacity, within one year thereafter, and pay the districts for the same such sum as a committee agreed upon by the town and the districts should appraise the property at—the same to be paid to the several resident and non-resident tax-payers of the districts, in proportion to the amount of property liable to taxation therein, by deducting from such tax-payer's annual town tax for that year the amount apportioned to him for his interest in the school property.

By this law Uxbridge bought of the several school districts property aggregating, by the appraisal of the committee, something over $23,000. Since 1870, therefore, the school district system has ceased to exist, and all the schools and school property is in the charge and control of the general School Committee, consisting of twelve members, and instead of repairs and expenses attending the building of new houses being now paid by direct tax upon the inhabitants of the district, where the school-house may chance to be located, as was formerly the case, all the school expenses, inclusive, are assessed in one sum to the inhabitants of the town, as other town charges are assessed. This, of necessity, makes the per cent. of increase of money raised for town purposes since 1860 appear larger, in proportion to the increase of the previous period referred to in the first chapter, than it otherwise would; for the amount of money usually

required annually for repairs of school-houses is quite an item in the list of school expenses, and liable to mislead the careless critic who attempts to show the extravagance of school management to-day over the management of twenty years ago. A careful examination of the records and the other items of town expenses will show conclusively that the percentage of increase in school expenses has only kept pace with the increase in population, valuation and general progress of both town and State.

No town in the county can show better schools or better accommodations for the scholars for the amount expended. The grading of the schools is comparatively higher than obtains in many of the neighboring towns, and applications are frequently received from pupils in adjoining towns for leave to attend the grammar and high schools in Uxbridge. The schools for the past three years have been under the charge of school superintendents, whose personal attention to the minutest details of grading, instruction and discipline has done much to produce the good results obtained. Cheap, unskilled labor in any business is dear at any price; and a poor teacher, more than a poor laborer in any other vineyard, can do immense damage, and should never be intrusted with the education of the young, even though she is willing to work for small wages. The success of a school, like the success of a woolen-mill or a machine shop, depends upon the degree of skill possessed by the managers, and the consensus of public opinion is in favor of that kind of management which produces good results and makes the business a success.

We have neither time nor space to give an account of the different private schools which, since the inauguration of Uxbridge Academy, have met with varying success. At the present writing not a single private school is in existence in the town, nor has there been for several years. The broad and liberal instruction given in the public school seems to meet the requirements of all classes, and no occasion offers for the establishment of schools for private emolument and gain.

From small beginnings, under most discouraging and disheartening circumstances, the public-school system of Uxbridge has constantly advanced, until it has become one of the proudest monuments to the good sense, sagacity and philanthropy of her people.

Libraries.—The earliest circulating or public library in this town, of which there is any record, was called the "Uxbridge Social and Instructive Library," and was kept and managed by George Southwick, who was born in 1747, and died in 1807. A book was found many years ago by Jonathan F. Southwick, which contained the name Uxbridge Social and Instructive Library, with the number 103, and the date 1775. Mr. Southwick (now deceased) said that he remembered a meeting of the stockholders, for the purpose of dividing up the books, and closing the affairs of the library, in 1812. So that it probably existed some thirty-five or forty years.

It is not easy to trace the history of libraries in the town, prior to the establishment of the "Uxbridge Free Public Library," by vote of the town in April, 1874; as they, and the records concerning them, have passed out of existence. Hon. C. A. Wheelock remembers that there was a "Social Library" in the town in 1821, and how much earlier he is unable to tell. As its name was "Uxbridge Second Social Library," it is very probable that it began its existence soon after the year 1812—the date of dissolution of the Uxbridge Social and Instructive Library.

Another library was formed as early as 1830 or 1831, which continued to live with varying degrees of usefulness until the establishment of the "Free Public Library." As many as a thousand volumes may, at one time, have belonged to it, as we have seen volumes which were numbered as high as nine hundred and fifty. In the forty years of its existence it was used by a large number of persons. From a report of the Hon. Benj. Adams, dated January 11, 1836, it appears that this library was formed in January, 1828. In 1865 the name of this library was called "Uxbridge Library Association," and for several years the writer of this history had charge of the same as librarian, it being then in the room occupied by him as an office in the Union building. In the spring of 1873 the Library Association offered the books belonging to the association to the town as a nucleus for a public library; provided the town will establish such a library. About the same time the "Uxbridge Agricultural Library Association," an association of farmers, who for several years had been contributing books and funds for an agricultural library, and who owned a few hundred volumes and pamphlets, made a similar offer, with the same condition.

At the annual town-meeting in March, 1874, there being an article in the warrant for the consideration of the subject, the town voted to establish a Free Public Library, appointed a committee to report a plan, etc., of the same at an adjourned meeting to be held in April, and voted to appropriate the "Dog Fund," amounting to about $275 to the uses of the library. At the adjourned meeting, April 6, 1874, the report of the committee and its recommendations and rules for the management of the public library were accepted and adopted, and a board of trustees was chosen, as provided by law.

The Free Public Library thus established went into operation for the delivery of books January 20, 1875, and had on its shelves six hundred and eighty-nine volumes. In thirteen years the library, under the judicious management of Hon. Chas. A. Wheelock and his associates on the board of trustees, and the generous annual appropriations of the town, has become one of the best in the county; is patronized by all classes of society, has a catalogue containing nearly *five thousand volumes* of the best literary and standard

works, suited to all ages and conditions of life, and has so nearly outgrown its present quarters in the north end of the new town hall that, at no distant day, it will be necessary to move to a building by itself, which we hope some public-spirited citizen will build, and present to the town for that purpose.

The advantages of a Free Public Library cannot be overestimated—it reaches the homes of the poor as well as the rich, and furnishes the means of a home education and culture, otherwise unattainable by many. To the scholars in the public schools, who have frequent occasion to consult the valuable reference books and encyclopædias; to the mechanic and the farmer, seeking scientific demonstration of their respective theories; to the professional man, and the average reader, it has proved a real blessing and source of constant gratification and enjoyment. If it adds something to the burden of taxation, all pay it cheerfully, feeling that it is money well invested, and its rapid growth and constantly increasing use proves that the projectors of the "Free Public Library" made no mistakes when they induced the town to take its action of 1874. At the present rate of increase, averaging some four hundred volumes per year, the "Uxbridge Free Library" will soon be entitled to honorable mention on the records of the National Library at Washington.

CHAPTER XXVIII.

UXBRIDGE—(*Continued.*)

MANUFACTURING.—While Uxbridge takes no inferior rank as an agricultural town, she ever points with becoming pride to her manufacturing establishments, which, more than anything else, have been the means of increasing her population and her valuation.

At an early date in her history the ingenuity of her mechanics began to manifest itself in the production of better facilities for carrying on of mechanical business. More than one hundred and fifty years ago dams were built across the water-courses, and the giant "*aquæ fluentes*" was harnessed to the forge, the saw-mill, the grist-mill, the wheelwright-shop and finally the factory, until to-day, the busy whir of the spools and spindles, the rattle of the loom and the clatter of the bobbins, on every stream, fill the air with their music and tell the glad story of a happy, prosperous and intelligent people.

Hon. Charles A. Wheelock, one of the oldest and most intelligent manufacturers now living in the Blackstone Valley, to whom I am indebted for many valuable hints and facts in the preparation of this history, gives me the following account of the manufacturing industries of this, his native town.

It is well known that Samuel Slater, about 1790, was the first to manufacture cotton goods in this country; but it is not so generally known that John and Arthur Schofield, who came from England in March, 1793, introduced the manufacture of woolen goods.

In 1810 Daniel Day built his first mill in Uxbridge; size, twenty by forty feet, two stories high, and located where now stands the mill of S. W. Scott. In the same year he put into the mill a billy, a jenny with thirty spindles and a hand-loom. In 1812 he added four looms, making five in all. Everything except the picking and carding was then done by hand, and no looms were run by water-power, until a number of years after.

In the same year the first movement was made towards the manufacture of cotton goods in Uxbridge. This was seen in the building of the works of the "Uxbridge Cotton-Mills" in that year by Mr. Benjamin Clapp.

The next attempt at woolen manufacturing was made by the Rivulet Manufacturing Company, which was incorporated in 1816, although the company was formed, the buildings erected, and the business of manufacturing begun in 1814. This company used a billy and jennies, which were built in this town by John & George Carpenter, and the mill was superintended by Jerry Wheelock, a practical mechanic, well acquainted with the construction and operation of machinery. The weaving was all done by hand-looms, and the goods were chiefly satinets, although some broadcloths and cassimeres were made.

Cotton manufacturing kept pace with woolens, and this same year, 1814, the Ironstone Mill was built on Forge Brook (now Ironstone Brook), in the south part of the town, by William Arnold and others.

After this time, for a few years, there were no mills erected in this town; but important improvements were made in the construction of machinery. The next mill built was the Capron Mill, thirty-three by sixty feet, and three stories high, in the year 1820, and went into operation in the winter of 1821–22. It was started with one set of cards, one billy of forty spindles, two jennies of one hundred and twenty spindles each, two cotton-spinning-frames of sixty-four spindles each, with the preparations, and a warper and dresser for making satinet warps, and twelve power satinet-looms,—the first satinet power-looms ever built, it has been said, and they were built on the premises by Luke Jillson, of Cumberland, R. I. In 1824 an addition was made of a set of cards, a billy of fifty spindles and a jenny of one hundred and twenty spindles, built by the Messrs. Carpenter; a jenny of one hundred and fifty spindles, built by Jerry Wheelock; eight satinet-looms, two cotton-cards and two spinning-frames of sixty-four spindles each, built in Woonsocket.

In 1837 sixty feet were added to the length of the Capron Mill, and in 1855 forty feet more were added. At first it ran two sets of machinery; now it runs six. This factory has been a remarkably lucky one

for its owners and lessees; has never been burned, and has made money for every one who has occupied it. In 1851 Moses Taft and J. W. Day, under the firm-name of Taft & Day, hired this mill and conducted the business for several years, when Wm. C. Capron, one of the owners of the mill, was admitted to the firm, making it Taft, Day & Co. J. W. Day shortly afterwards withdrew, and Taft & Capron continued till about 1861, when R. & J. Taft bought them out and carried on the business until the close of the war, when their lease expired. They were succeeded by Henry and Charles C. Capron, under the name of H. & C. C. Capron. Mr. Charles C. Capron soon withdrew from the firm, and was succeeded by William E. Hayward, when the firm became Capron & Hayward; they in turn being succeeded by the Capron Woolen Company, composed of Henry Capron, Charles C. Capron and Royal C. Taft, of Providence, R. I., who now run the mill.

In the autumn of 1824 the dams were built for the Luke Taft Mill,—now the Wacantuck, owned and operated by C. A. & S. M. Wheelock,—and the Uxbridge Woolen, now the Hecla; also to carry the water of the West River to the mill of Mr. Day,—now Scott's. The next year, 1825, witnessed the erection of the Luke Taft Mill, thirty-four by sixty feet, three stories high; the Uxbridge Woolen-Mill, thirty-six by eighty feet, three stories high; and an addition to the Day Mill, making it forty by forty-five feet, three stories high. New and improved machinery was put into these mills, and they were soon in operation. Taft's and Day's Mills were started on satinets in the winter of 1825, and the Uxbridge Woolen-Mill on cassimeres, late in the fall of 1826.

In August, 1828, the Uxbridge Woolen-Mill, the largest of all the mills in town, was destroyed by fire, and within a week a woolen-mill was burned in Milford, and another in East Douglas. As this was contemporaneous with the remark of the British Minister that "he would not allow America to make a hob-nail," and also at a time when the country had become much excited on the subject of duties for the protection of domestic industry, many persons expressed the opinion that the English manufacturers had emissaries here who were to burn the woolen-mills, and in that way accomplish the object of defeating the effect of the protective tariff.

The Uxbridge Woolen-Mill was immediately rebuilt of brick, forty by eighty feet, three stories high. Since the erection of the former mill, John Goulding, of Dedham, had invented and obtained letters patent for improvement in carding and spinning wool, and his new machinery for that purpose was coming into general use, so that the new Uxbridge Woolen-Mill was supplied with it, to the great advantage of all concerned. The Uxbridge Woolen Manufacturing Company was a corporation, receiving its charter in the winter of 1826–27. Its corporate existence continued until about the year 1848, when the property passed into the hands of Josiah Seagrave and M. D. F. Steere, who operated the mill for about ten years. In 1850 the mill was greatly enlarged, the machinery increased to twelve sets, with about fifty Crompton fancy looms. In 1852 the mill was again destroyed by fire. It was soon rebuilt, and filled with the most improved cassimere machinery then known. In 1857, Mr. Steere went to Amesbury to take charge of the Salisbury Mills, and Mr. Seagrave operated the mill alone. In February, 1859, the devouring flames again seized upon this unlucky property, and destroyed the finishing-mill and dye-house. This last loss was too much for the proprietor, who had so long been harassed and troubled with misfortune, and, though he rebuilt the destroyed buildings with the insurance money, he was unable to continue the business, and soon after died. The property then passed into the hands of the mortgagees, J. C. Howe & Co., of Boston, who soon sold it at auction to William D. Davis, of Providence, R. I., who took it just in time to receive the advantages the Civil War gave to manufacturers. About 1868, Mr. Davis sold the mill to Robert & Jacob Taft, who made extensive repairs, additions and improvements, operated it two or three years, then resold it to Mr. Davis, who again operated it for several years. In 1884 the Calumet Woolen Company, then owning the mill at New Village, bought of Mr. Davis the entire Uxbridge Woolen property, including mills, tenements, machinery, farm, etc., and have since expended upon it, in permanent improvements, additions and new machinery, over eighty thousand dollars, making it by far the finest manufacturing property in the town, and the finest woolen-mill in Worcester County. It has all the modern improvements, is lighted with electricity, has telephone connection with the other mills owned by the corporation, and has started out to redeem itself from the reputation its former bad luck has given it, and under the charge of its present managers will certainly succeed.

The old Day Mill, the first mill built in the town, was burnt in 1844, and was rebuilt in the course of a year or two by his son, Joseph Day. Afterwards it was operated by J. W. Day, son of Joseph Day, for four or five years, or until 1849 or '50, when Samuel W. Scott took a lease of it for a term of years, and manufactured satinets on contract. In 1859 Mr. Scott bought the mill and farm of Mr. Day, and has continued to operate it to the present time; the past ten years in company with his brother, J. R. Scott, the firm now being J. R. Scott & Co., who lease the mill of S. W. Scott. The mill was burned to the ground in the summer of 1878, but was rebuilt in an enlarged and greatly improved manner, with first-class machinery in every respect for making satinets. The village is now appropriately named Elmdale, and its genial proprietor is entitled to great credit for the determination and courage he has manifested in

achieving victory over his troubles, and accomplishing his deserved success.

The mill built by Luke Taft, on the West River, in 1825, seems always to have been a lucky mill, with a single exception.

Luke Taft operated the mill alone, until his son Moses Taft was taken into the concern, about the year 1833. In 1840, J. Wheelock & Son—C. A. Wheelock—bought one-half of the Luke Taft Mill, taking into the business Silas M. Wheelock, making the firm J. Wheelock & Sons. The other half of the mill was run by Moses Taft, till he sold out, in 1846, to C. A. & S. M. Wheelock, Mr. Jerry Wheelock, the father, retiring from the business. The mill originally built by Luke Taft was burned in the winter of 1837–38, but was immediately rebuilt upon a larger scale, and supplied with new and improved machinery. C. A. & S. M. Wheelock named their mill, which they greatly enlarged and improved, "the Wacantuck Mills," the name Wacantuck being the Indian name of the town. They manufactured satinets and plaids until 1852, when they also made cassimeres. Since 1855 they have made cassimeres exclusively, and have ever since continued to produce an excellent quality of these all-wool goods, which find a ready sale in the market, and keep this mill constantly at work. Many of the help at this mill have grown gray in its service and, like the proprietors themselves, take great pride in the success of the mill and the beauty of its village. Several of the employés own their homes, and, as a rule, all the employés are well-paid, contented and happy, and have an unbounded respect for their neighborly employers.

In 1852, Moses Taft laid the foundation for the mill formerly known as the Central Mills, now the Calumet. It was completed the next year, and leased to Israel M. Southwick and Richard Sayles, under the name of Southwick & Sayles, who continued to operate the mill till 1859, when they sold out their lease to Bradford, Taft & Co., of Providence, R. I., Mr. Sayles continuing to superintend the mill and act as agent till January 1, 1864. Daniel W. Taft then took charge of the mill as superintendent, and continued in charge until he took the lease in his own name in 1869. Mr. Moses Taft sold the mill to R. & J. Taft in 1865, and these gentlemen made great additions and improvements thereto, and by building a new dam at Rice City, in the northerly part of the town, and flowing about one hundred acres of land, greatly increased the water-power, and made it more permanent. These enterprising gentlemen also put in an eighty horse-power steam-engine as extra power in dry weather, and thus became sure of constant operation of the mill in all seasons. At the conclusion of Mr. D. W. Taft's lease, in 1883, the Calumet Woolen Company was incorporated, with Isaac Fenno, of Boston, for president; S. M. Wheelock, of Uxbridge, treasurer; and Arthur Wheelock, agent and general superintendent, and purchased of Messrs. R. & J. Taft, all the mill estate, inclusive, and of Mr. D. W. Taft certain machinery and fixtures owned by him. This corporation immediately expended over twenty thousand dollars in new machinery and improvements, widened the canal, raised its banks and increased its capacity largely, and are to-day turning out handsome, high-grade cassimeres, the best ever manufactured in the town. As hereinbefore stated, this corporation also owns and operates the Hecla Mill, about one-half a mile easterly of the Calumet; the two mills being connected by telephone and under the charge of Arthur Wheelock, agent and general manager. The purchase and enlarging of these two mills by this corporation, at an expense of over two hundred and fifty thousand dollars, has given an impetus to the prosperity of the town which it has never known before. Employing more help, the population of the town has increased from three thousand and fifty in 1880 to three thousand five hundred in 1888. The weekly payments of the corporation amount to about twenty-five hundred dollars, and this amount is added to the trade accounts of all the retail dealers in town, making business in all branches correspondingly better. About one-third of the capital stock is owned by residents of the town, so that the town not only gets the benefit of the large tax upon the real estate, but also gets a large return from the State, in the shape of corporation taxes, returned to the towns in which the stockholders reside. The gratitude of the town is due to Hon. S. M. Wheelock, by whose efforts this corporation was established and located in this town.

In 1864 Richard Sayles and D. A. McBride bought of Dea. Chandler Taft the old Rivulet Mill and water-power, which had been idle for a number of years, made extensive repairs, and manufactured shoddy till 1866, when Mr. Sayles purchased Mr. McBride's interest, and soon after sold it to Israel M. Southwick, taking Mr. Southwick as his partner. The next fall Sayles & Southwick put in steam-power, enlarged the property, and fitted it up to receive new machinery, on an extensive scale, for the manufacture of shoddy. In November, 1866, Mr. Southwick sold out to Mr. Sayles, and Mr. Sayles soon after sold one-half interest in the property to Zadok A. Taft; and Messrs. Sayles & Taft put in the shoddy machinery and ran the mill till 1869, when they leased the mill to E. S. Bradford & Co., of Providence, R. I., for the manufacture of knitting yarn, and it was run on this work until the mill was burned in October, 1872, a few weeks before the great Boston fire. It was rebuilt the next year in a much improved manner. At first cotton machinery was put in, but it soon gave place to woolen machinery, with which Mr. Sayles was better acquainted. Messrs. Sayles & Taft ran the mill until October 1, 1878, and then leased the mill and machinery to Sayles, Taft & Co., the company being Henry S. Morse; then in January, 1882, Taft left the

manufacturing firm, and it became Richard Sayles & Co. These gentlemen operated the mill with great success until the death of Mr. Sayles, in 1887. The property is now owned by the three sons of Mr. Sayles, who carry on the manufacture of satinets under the same name as the old firm—Richard Sayles & Co.

About the year 1834 Alvin Cooke purchased a small building on the Emerson Brook, which was formerly used for a cabinet shop. He enlarged it, and put in woolen cards, spinning machinery and looms, but no finishing machines. He operated the mill under contract for Effingham L. Capron, who was then operating the Capron Mill, making satinets. In 1837 Mr. Cooke was obliged to succumb to the financial pressure, and never again engaged in manufacturing. From 1837 to 1879 the mill has been practically idle and unoccupied. Since 1880 Mr. D. M. Lee has utilized it for the purpose of a shoddy-mill. Mr. Lee has greatly improved the property, built a new dam and reservoir on the stream, and is determined to make it a success.

In 1865 or '66, Mr. Zadok A. Taft bought the property on the Emerson Brook which was formerly known as the Leonard Taft Saw and Grist-Mills. These mills had not been used for many years and had fallen into decay. Mr. Taft erected a new mill, into which he at first put machinery for making cotton warps. Subsequently he removed this and substituted satinet machinery. Mr. Taft operated the mill for several years and then leased it, and it has been operated by several different firms for that purpose till the present time.

In 1832 the Ironstone Mill—built in 1814 as a cotton-mill—was burned. It was rebuilt by Jonathan F. Southwick, fitted with woolen machinery, and operated by Fairbanks & Messinger for the manufacture of Kentucky jeans. In 1865 fire again visited this property and destroyed the factory. Subsequently a roof was put over the basement walls, which remained standing, making a one-story mill, which for several years was used by Joseph C. Keith & Co. for a shoddy mill. It afterwards passed into the hands of Abijah Esty, of Millville, and at his decease it ceased to be used for manufacturing purposes, and the mill and the brick tenements and store-houses which once denoted a prosperous village are fast becoming dilapidated ruins. About the year 1880 Mr. Charles C. Capron erected in the mill-yard of the Capron Mills a well appointed shoddy-mill, and in a few years his largely increasing business occasioned the building of another mill near to the other, into which he put, in addition to shoddy cards and pickers, two sets of yarn machinery for making woolen yarn for carpets. This part of the business was subsequently given up, and the entire plant devoted to the manufacture of shoddy. In addition to the water-power of the Mumford River, these mills and the Capron Satinet-Mills are supplied with adequate steam power, and under the management of the Messrs. Capron are, as usual, successful.

The old Shuttle Shop on Drabble Tail Brook was at one time devoted to manufacturing purposes, cotton yarn and shoddy being among its principal productions. The machinery was operated by Zadok A. Taft and B. Stetson, and afterwards by J. C. Keith.

One of the principal industries of Uxbridge from an early date was the manufacture of cotton goods. The first factory erected for that purpose was erected in 1810, by Forbes & Benjamin Clapp, at what is now known as Rogerson's Village, in North Uxbridge. They sold out in 1815 to Harvey & Mellen, and they soon after sold to Robert Rogerson. The mill was a small building, which was afterwards removed and converted into a factory tenement-house. There they manufactured cotton thread until about the year 1816, when the venture proved a failure. They had been stocked by Mr. Robert Rogerson, who was at that time a merchant in Boston, and upon the failure of Harvey & Mellen the property passed into his hands. Mr. Rogerson continued the business then until about the year 1825, when he removed the Clapp Mill and began the erection of his first stone factory. Near it, and in accordance with his original plan, he erected a second stone factory, and the two mills have since been united. He expended thus, in buildings and machinery, the sum of two hundred and fifty thousand dollars. He laid out a village, which at that time had more of the quality of perfection than almost any other manufacturing village in New England. It is laid out with great taste, and the stone work of the dams, canals, bridges and arches under the mill are marvels of good workmanship, which constant use of more than fifty years has not detracted from. These mills and this beautiful village will long stand, built as they are in lasting stone and brick, a fitting monument to the genius and public spirit of Robert Rogerson. In the financial troubles of 1837, Mr. Rogerson was obliged to give up the property, and it passed into the possession of the mortgagees. A new corporation was formed, called the Uxbridge Cotton-Mills, and the mill is still called by that name, although the original incorporators have nearly all died or sold their interest in the property. In 1851 the Whitin Brothers, of Northbridge, were the principal owners and managers of the corporate stock and property, and under their excellent management, which has continued to the present time, the property has continued to improve, and is now a first-class cotton-mill in every respect. This is the only cotton-mill in town, and with the single exception of the mill at Ironstone, originally built for a cotton mill, is the only one ever erected here solely for cotton goods.

There have been several other manufacturing establishments started, continued for a short time and then given up; which, as they did not contribute materially to the prosperity of the town, will not be noticed at length. Among these were the Uxbridge

Card Clothing Co., the Bay State Arms Co., and the Wilder Screw Machine Co., neither of which met with success, and none are now in existence.

One of the industries of the town, of which brief notice should be given, was the carriage manufactory of Theodore B. Whiting, in Mechanics' Square, on Drabble Tail Brook. About the year 1850, Mr. Whiting purchased the cluster of buildings formerly used for a tannery and cooper shop, etc., in rear of Union Building, and began the manufacture of carriages and harness, and also did a general wheelwright and blacksmithing business. Many excellent carriages were made by Mr. Whiting, and they were so well made that some of them are in use to-day, after more than thirty years of service. The style, of course, is somewhat antiquated, but the carriages are good for the balance of the century. A thoroughly good and honest man himself, his reputation suffered no injury from his handiwork. It needed no warranty, and none was asked by those who knew the genial, upright, dignified gentleman who received their orders. At his lamented death, which occurred in 1866, the business was divided, the wheelwright, the blacksmith, the painter, and the harness-maker each striking out for himself; and as a result, the business of manufacturing carriages soon became a business of carriage repairing. Prentiss Whiting several years before had started a carriage factory at the Rivulet, but it did not prove a success, and a man named Gardner is said to have manufactured carriages for awhile in the old shop now owned by Merrill Greene, on North Main Street.

BANKS.—*The Blackstone Bank* was incorporated August 27, 1825, with a capital of $100,000, divided into one thousand shares. It was originally, and until 1865, a period of forty years, a State bank, and was the only bank of discount and circulation in this part of the Blackstone Valley.

In 1865 it became a National Bank, under the banking-laws of the United States, and its name was changed to the Blackstone National Bank. Its capital remained the same, and, under its excellent management, it has always had a surplus, so that its capital stock has seldom been obtainable in the market for less than $120 per share. It has had but four presidents since 1825, and only three cashiers—Jonathan Gregory being cashier from 1825 to 1836, E. W. Hayward from 1836 until his death, in 1875, a continuous service of nearly forty years. Moses Taft, Esq., has been president of the bank since 1865, and, although nearly eighty years of age, is hale and hearty and a shrewd and capable financier. The bank occupies a room in Robert Taft's block, under a very peculiar lease. The advantage of having a bank in Uxbridge was of such moment to the then owners of the old brick store, which has since been remodeled into the modern business block, that, as an inducement for it to locate here, the room was fitted up, and a long lease given, in which the stipulated rent was "one barley-corn per year," and this singular rent is all that the bank has been required to pay for the use of its banking-rooms to this date. Whether the *rent* has actually been handed over each year, and what the landlord does with it, are open questions, which no one seems able or willing to answer.

The Uxbridge Savings-Bank was incorporated June 3, 1870, and elected for its president Moses Taft, Esq., who still holds that position.

In the eighteen years of its existence this bank has grown in the confidence of the people, and its deposits now amount to over $335,000. As its management is rather conservative and its loans made at low rates of interest, its dividends are not, as a rule, quite up to those paid by city banks, but are generally satisfactory to depositors. A little more public spirit exhibited by the management, in the way of a banking-house built and owned by the bank, would give it better facilities for doing business, and, as an investment, would pay full as well as loans on mortgages at five per cent., and the general public would be highly gratified.

A good first-class business block on the site just south of the National Bank, arranged for stores, banking-rooms and offices, would supply a much-needed want, and would be occupied at good rent as soon as completed.

CHAPTER XXIX.

UXBRIDGE—(*Continued.*)

THE REVOLUTION.—In the year 1774, on the 6th day of July, the town, at a meeting called to consider the difficulties existing between the colonies and the mother country, passed a vote to appoint a committee of nine citizens and freeholders, "to correspond with committees that now or shall be chosen by any towns in this province for the purpose, on any *matur* that may respect the present difficulty, that now or may subsist between Great *Britton* and North-*america*."

In October, 1774, it was voted in town-meeting, "to purchase five barrels of powder, and as much shot as was proper;" and a committee was chosen "to provide for soldiers who may be called to march." In January, 1775, the town voted "to carry the resolves of the Continental Congress into execution;" and a committee was appointed "to see them strictly adhered to in this town." At this meeting Mr. Benjamin Green was elected a delegate to the Provincial Congress to be held at Cambridge; and in May, of the same year, Mr. Abner Rawson was chosen to attend the Provincial Congress at Watertown.

The fires of patriotism now burned brighter and steadier, and the increasing military ardor of the citizens of this town, was made manifest, in the unanimity with which they voted to stand by the action of the Continental Congress.

At a meeting of the inhabitants held in May, 1776, in the spring previous to the Declaration of Independence, an article of which the following is a copy was voted almost unanimously in the affirmative: "To see if the town will vote, if the Honorable Congress should, for the safety of the United Colonies, Declare themselves Independent of the Kingdom of Great Britain, whether that they will solemnly engage with their lives and fortunes to support them in the measure."

In July, 1776, it was voted, "to grant six pounds to each person who shall Enlist in behalf of this town to go to Canada, or the Northern Department agreeable to the late act."

In May, 1777, there were evidently some *Tories* living in Uxbridge; for the town chose, "by written votes," Seth Read "to procure and Lay before the Court the evidence that may be had of the *Inimical disposition of any Inhabitant of this town* towards this or any of the United States, who shall be charged by the freeholders and other inhabitants of said town, or if their residence within this State *is lookt upon to be dangerous to the public peace and Safety.*"

That the inhabitants of Uxbridge had pretty determined ideas as to what sort of government the new nation needed and should have, is apparent from the fact that in said meeting they voted "to instruct our representative not to vote for the proposed form of constitution and form of government;" but as the record gives no information as to the form of Constitution and government they did desire, we must suppose, in view of their very decided opposition to Great Britain, that the form of government, etc., proposed by Congress was not sufficiently antagonistic to the mother country.

In March, 1778, it was voted "to send to the soldiers now in actual service in the Continental Army, in behalf of the town of Uxbridge for three years or during the war, two shirts, one pair of tow breaches, two pair of stockings, and one pair of shoes;" and "that a committee be chosen to procure s'd cloathing and a man to carry it to them;" this last being no slight undertaking, when it is remembered that there was no public conveyance of any kind, and a journey of even a few miles was attended with great danger and fatiguing labor.

In 1778 two thousand pounds were raised "to provide for soldiers in the Continental army," and in the same year "men were sent to Rhode Island, and men as guards to Rutland."

The sending of substitutes into the army was allowed, for in January, 1779, the warrant for the town-meeting contained this article: "To see what sum of money the town will give or *allow to such Persons as have Procured a man to do a turn for them* in the Continental Service for three years, or during the war." No action appears of record upon this article. In April, 1779, two thousand five hundred pounds were appropriated "to carry on the Continental War." In June, 1779, the town voted "that the Committee for Hireing Soldiers for s'd Town be Directed to Engage to Such Soldiers as they may hereafter Procure to Engage in the present war, in Consequence of orders Received for that purpose (for the Hire of such Soldiers), either Continental Currency, or the produce of the land Raised amongst us, Acting *Deferentionarily* in Engaging either Money or produce as to the sum of Money or Quantity of produce, and at what price as they with such soldiers may agree."

In November, 1780, one thousand pounds were raised to supply the army with beef; also in January, 1781, *twenty-three thousand pounds* (probably Continental currency) were appropriated for the same purpose; also fifteen "hard dollars" (probably silver) were voted to hiring "Continental men," and on August 28, 1781, the town voted "to raise one hundred and fifty pounds 'hard money' for the supply of beef called for by the General Court."

The following is a true copy of an original document now in the possession of the writer. The paper is yellow with age, but the writing and the original signatures of the members of the committee are as plain and legible as though recently written:

COMMITTEE CHAMBER, Boston, March $\frac{17}{18}\frac{84}{}$

These Certifie that Nathan Tyler Sr. and Others Selectmen of Uxbridg Procured for the Use of this Commonwealth, in the year 1779:

thirty Nine Shirts @ £6 each	£234 0
thirty Nine Pr Shoes @ £7—4 pr pr	280 16
thirty Seven Pr Hose @ £4—pr pr	148 0
Selectmen allowance for Trouble	25 —
Do Transportation	15 —
Total	£702 16

which sum of Seven hundred & two Pounds Sixteen Shillings was allowed by the Committee on accounts on the 11th of March 1780.

Attest

SETH WASHBURN, CHARLES TURNER, J. BARNUM, EZRA SARGEANT, JOSEPH HOSMER } Committee on Accounts

The signatures are the genuine signatures of the members of the Committee of the General Court of 1784, so that it is probable that the account, which was allowed in March, 1780, was not paid to the selectmen until after a renewal of the approval in 1784, as above set forth. Money, or what represented money, was of such small value in 1780 that we may suppose the delay was occasioned by a disagreement as to the kind of money the bill allowed was to be payable in. To show how great a depreciation must have taken place in the value of the currency, the town records state that in November, 1780, the town, at a regular meeting held to provide for town charges and expenses, "voted to raise (25,000) *twenty-five thousand pounds*, to defray town charges," and the same year they voted the sum of *ten thousand pounds* to buy beef for the army.

The records of the town do not contain a list, or anything that purports to be a list, of its citizens who served in the Revolutionary army. But from actual votes passed and recorded, I find the following names

referred to as having served in the different divisions of the service as volunteers or substitutes. It is probable that there were many others.

Capt. Edward Seagrave.
Lieut. Abner Taft.
Lieut. Bezaleel Taft.
Lieut. Robert Taft.
Sergt. Noah Taft.
Sergt. Paul White.
John Prentice.
Nathan Dowse (or Druce).
Joseph Cleaveland.
Peter Sibley.
Nathaniel Fish.
A. Aldrich.
Jeremiah Chillson.
Oliver Murdock.
Joseph Rawson.
John Falkner.
Oliver Thayer.
Samuel Hayward.
Moses Taft.
Jabez Thayer.
Oliver Taft.
John Hall.
Charles Philips.
Benjamin Cogswell.
Capt. Simeon Wheelock.
James Hall.
Aaron Brown.
John Beals.
James Keith.
Ichabod Keith.
John Seagrave.

An interesting episode of the Revoluionary period was the visit of General George Washington to Uxbridge, in the year 1789, on his journey from Boston to Hartford. General Washington, then President of the United States, passed a night at a tavern kept by the father of Warner Taft, at North Uxbridge, and was so well pleased with the attention he received, that at Hartford, on the 8th of November, 1789, on his way home, he wrote the following letter to Mr. Taft, near Uxbridge, Mass. :

Sir,—Being informed that you have given my name to one of your sons, and called another after Mrs. Washington's family, and being moreover much pleased with the modest and innocent looks of your two daughters, Patty and Polly, I do for these reasons send each of these girls a piece of chintz; and to Patty, who bears the name of Mrs. Washington, and who waited on us more than Polly did, I send five guineas with which she may buy herself any little ornaments she may want, or she may dispose of them in any other manner more agreeable to herself. As I do not give these things with a view to have it talked of, or even to its being known, the less there is said about the matter the better you will please me; but that I may be sure the chintz and money have got safe to hand, let Patty, who I dare say is equal to it, write me a line informing me thereof, directed to "The President of the United States, New York." I wish you and your family well, and am your humble servant. G. WASHINGTON.

This house is still standing, and in a good state of preservation, retaining its same style as when the father of his country honored it with his presence. It is now owned and occupied by some of the heirs of Warner Taft, and should be long preserved for its historical associations. A desk once owned by the Tafts, and at which Gen. Washington is said to have sat and written a dispatch or letter to be sent to Boston, is now owned by the writer of this history, and is most highly prized.

THE CIVIL WAR.—The record of Uxbridge in the War of the Rebellion was one of which she may well be proud, having furnished two hundred and ninety (290) soldiers, seventeen more than her quota, as called for by the State. The first "war meeting" was held in the basement of the Unitarian Church, then occupied for town-meetings, on the 11th day of May, 1861, which was addressed by several spirited and eloquent speakers. At the close of the speaking it was unanimously voted to give each volunteer belonging to the town twenty-one dollars a month while in service, and one dollar a day for drilling previous to enlistment, not exceeding twenty days of eight hours a day. Fifteen hundred dollars was appropriated to purchase uniforms, and one hundred dollars to defray the expenses of forming a company of riflemen. On May 3, 1862, the town appropriated two thousand five hundred dollars to pay State aid to families of the volunteers, and a committee was chosen "to ascertain the names of the soldiers belonging to the town, that their names may be preserved to posterity, by causing the same to be entered upon the records of the town." On July 23d the town voted "to give a bounty of one hundred and fifty dollars to each volunteer for three years, who should be accredited to the town's quota." On August 23d the same amount was voted to those who entered the service for nine months, to be paid when the town's quota was full; if not filled by volunteers and a draft was made, then no bounty was to be paid.

March 2, 1863, the town voted to raise four thousand dollars for aid to be paid to the families of volunteers during the year. September 28th the aid was extended to the families of drafted men.

On May 25, 1864, a bounty of one hundred and twenty-five dollars was voted to be paid to the three years' volunteers who should enlist upon the quota of the town, whether residents of Uxbridge or otherwise. As before stated, the town had no difficulty in filling its quota at these liberal bounties, and the voters were not sorry that the number furnished was so many in excess of the calls.

The whole amount of money expended for war purposes was twenty thousand two hundred dollars ($20,200); for State aid to families about fourteen thousand six hundred dollars ($14,600). About ten thousand dollars was contributed by citizens in addition to the above. Large quantities of clothing, stockings and shoes were also contributed by the Ladies Soldiers' Aid Society and other patriotic workers, and many hundred dollars' worth of articles intended for the comfort of the boys at the front were forwarded, of which no estimate can be made.

The following list contains the names of soldiers in the army of the United States engaged in putting down the Rebellion and preserving the Union, who enlisted as *residents* of Uxbridge. The list does not include, therefore, those who helped to fill the quota, but who resided in other towns; as their names are no doubt honored in a fitting manner by the towns which were honored by them. Those whose names are marked with a (*) died either in actual service or as prisoners of war. Let all unite to do honor to these brave sons of old Uxbridge!

All honor, then, to him whose humble name
Is here emblazoned on the rolls of fame.
Ages to come, and children yet to be,
Inheriting our priceless liberty,
Shall sound the praises of these boys in blue,
Who bravely fought, to self and country true;
Of these brave men who stand recorded here,
All future times in history shall hear,
And bless their memories with a sacred tear.

CHAPTER XXX.

UXBRIDGE—(*Continued.*)

MISCELLANEOUS—*Representatives to Congress.*—In 1820 and 1822 Benjamin Adams was elected Representative to Congress and served his district and State with great fidelity and ability. He is the only citizen of Uxbridge who ever had the honor of a seat in Congress.

The Representatives to the General Court since 1750 have been as follows: Daniel Read, 1755; Nicholas Bayliss, 1758; Solomon Wood, 1760–62; Ezekial Wood, 1766–71; Joseph Read, 1772, '74; Abner Rawson, 1775, '76; Joseph Read, 1777; Nathan Tyler, 1778–80; Nicholas Baylies, 1781; Bezaleel Taft, 1783; Seth Read, 1784–86; Samuel Willard, 1787; Nathan Tyler, 1789–91; Bezaleel Taft, 1794–97, and 1802–4; Joseph Richardson, 1805; Bezaleel Taft, 1806; Peter Farnum, 1808; Benjamin Adams, 1809–13; Samuel Read, 1814; Daniel Carpenter, 1815; Samuel Read and John Capron, 1816; Samuel Read and Bezaleel Taft, 1817, '18; Samuel Read and Daniel Carpenter, 1819; Samuel Read and Bezaleel Taft, 1820; Bezaleel Taft, Jr., 1821–23; Joseph Thayer, 1824, '26; Bezaleel Taft, Jr. (Senator), 1828; Joseph Thayer and Daniel Carpenter, 1829; Samuel Read and George Willard, 1830, '31; Samuel Read and Joseph Thayer, 1832; Effingham L. Capron and Joseph Thayer, 1833; Joseph Day and Samuel Read, 1834; John W. Capron and George Willard, 1835, '36; John Carpenter and Ellery Holbrook, 1837; Asa Thayer and Samuel Read, 1838; Francis Deane, Jr., and Gideon Mowry, 1839; Jonathan F. Southwick, 1840; Otis Wilcox, 1841: Chandler Taft, 1842; Henry Chapin, 1844; Moses Taft, 1845; Cyrus G. Wood, 1854; Charles E. Taft, 1855; Jacob Taft, 1856; Samuel W. Scott, 1857; Joshua Garside, 1858; Scott Seagrave, 1859; Newell Tyler, 1860; William C. Capron, 1861; Scott Seagrave, 1863; R. D. Burr, 1865; Harrison C. Whitmore and A. A. Sherman, 1870; Charles A. Wheelock, (Senator), 1869, '70; George W. Hobbs, 1871, '72; George W. Taft, 1873; Charles C. Capron, 1875; Zadok A. Taft, 1877; Charles E. Seagrave, 1881; James

Daley, 1883; Michael Reilly (2d) 1885; Daniel W. Taft, 1887; Silas M. Wheelock (Senator), 1887, '88. During the next decade Uxbridge will be represented only every third year.

Post-offices.—The first post-office in Uxbridge was established in the village of Ironstone, then the largest village in the town. In 1810 an office was established in North Uxbridge, in the house of Samuel Read, on the Boston and Hartford turnpike, where it remained until 1852, when it was removed to Rogerson's Village, near the Mills, where it remained until 1885, when it was removed to Chase's Corner, near its original location.

The postmasters of this office have been Samuel Read, George Adams, C. E. Whitin, A. S. Sweet and H. C. Chase, the present incumbent. This office accommodated for many years the towns of Northbridge and Douglas.

In 1825 a post-office was established at the Centre Village, in the brick store then owned by the Messrs. Capron. John W. Carpenter was the first postmaster, and his successors have been Sullivan, Thayer, Thomas Aldrich, R. D. Mowry, Charles B. Rawson, Charles A. Taft and Henry S. Farnum, the present incumbent. This office is now the principal post-office in the town and pays its postmaster an annual salary of about twelve hundred dollars, an increase of about four hundred dollars in the last eight years.

In 1872 *a District Court* for Uxbridge, Blackstone, Northbridge and Douglas was established for civil and criminal business, having jurisdiction of all civil actions, when the *ad damnum* in the writ does not exceed three hundred dollars. Court is held every week-day alternately in Uxbridge and Blackstone; on Mondays for civil business in Blackstone and on Saturdays for civil business in Uxbridge. A. A. Putnam, Esq., was appointed justice of the court and still presides over it. The associate justices are Francis N. Thayer, Esq., of Blackstone, and W. J. Taft, Esq., of Mendon, the latter gentleman having an office in Uxbridge.

The members of the legal profession who have resided in the town and assisted in building up its prosperity are as follows:

Nathan Tyler, Benjamin Adams, Bezaleel Taft, Jr., George Wheaton, Joseph Thayer, Francis Deane, Henry Chapin, Lucius B. Boynton, George S. Taft, George W. Hobbs, Frederic B. Deane, George F. Bancroft, A. A. Putnam, O. B. Pond, George S. Taft (2d).

Uxbridge has also had good reason to be proud of its medical profession, for its physicians have been uniformly men of skill and excellent character, who have done much for the health and prosperity of the town. Among them are the honored names of Dr. Wood, the first physician to settle in the town; Dr. Samuel Willard, Dr. George Willard, Dr. Augustus C. Taft, Dr. Smith, Dr. A. W. Bennett, Dr. J. W. Robbins, Dr. J. M. Macomber, Dr. Chauncey A. Wilcox, Dr. Wm. L. Johnson, Dr. L. D. White, Dr. W. L. Sanders and Dr. Benj. Joslyn. Dr. A. W. Fuller and Dr. F. J. Partridge have recently moved into town. It would be a pleasing task to write the biographies of many of these professional laborers of both the professions, but the space allotted to Uxbridge in the history of the county peremptorily demands brevity and condensation; so their many friends "must take the will for the deed."

Newspapers, etc.—The first and only newspaper published in Uxbridge was started by Geo. W. Spencer, a printer who had formerly published the *Douglas Herald* and conducted a small job-printing office in East Douglas. Mr. Spencer, believing Uxbridge a better field for his labors in the newpaporial line, removed his presses and type to this town, and in August, 1872, issued the first number of his paper, which he called *The Worcester South Compendium*, Spencer Bros., proprietors. The firm consisted of Geo. W. Spencer and Charles A. W. Spencer, the elder brother being the editor and general manager of the paper, while the younger took charge of the job-printing, which soon grew to quite a business. The paper was a well-edited, spicy little weekly, Republican in politics and progressive in its ethics. In 1877 C. A. W. Spencer retired from the firm and Mr. L. H. Balcome suceeded him; the firm then became Spencer & Balcome. In 1879 Mr. Balcome bought out his partner and became and has since been sole proprietor. In July, 1880, Mr. Balcome finding the old name too long and desiring to make his paper still more a local organ, changed the name of his publication to *The Uxbridge Compendium*—which name it still retains—and was issued as an eight-page paper. For several years Mr. C. W. Greene was the editor, but Mr. Balcome for the past two years has been sole editor and manager, and, with a good corps of reporters to gather up the news, would have the credit of publishing a good country weekly. The old presses used by Spencer Bros. have been thrown out and new power-presses run by steam-power have been substituted. One of the busiest places now to be found in the centre of the town is the *Compendium* office. If the increasing business of the office will warrant it, *The Daily Compendium* will at no distant day be welcomed in every household.

The Uxbridge Water Company was incorporated in 1881, for the purpose of supplying the inhabitants of Uxbridge with pure water for domestic purposes. Its reservoirs, on Lawler Hill, are fed by springs, and will contain half a million gallons. Pipes are laid through the principal streets, and the water supply is excellent and sufficient. A number of hydrants placed at convenient distances furnish adequate protection against damage by fire, and the company is entitled to great credit for its service to the public.

The Judson Memorial.—In the year 1869 Deacon Willard Judson, an esteemed citizen of the town, and a son of Rev. Samuel Judson, formerly pastor of

the Orthodox Church, desiring to manifest his great interest in the town in a quiet, unassuming manner, instructed his attorney, Geo. W. Hobbs, Esq., to purchase of the Howard Watch and Clock Company, of Boston, one of its best tower clocks, and ask the town, at its annual meeting, then soon to be held, to accept the same, as a gift from one who preferred that his name should not be made known until after his decease, imposing as the only condition that the town should keep the clock in running order.

Mr. Judson also desired that the clock should be placed upon the Unitarian Church, as it could be seen more generally than if placed elsewhere. When the matter was brought before the town, great interest was manifested by the citizens, and the gift was accepted without a dissenting voice. The knowing ones, of course, knew who gave the clock, and many different gentlemen were named, but not a single guesser guessed aright. Mr. Judson died in May, 1882, and then, for the first time, his name was published by his attorney, as the donor of the clock. For nearly twenty years it has faithfully recorded the passage of time, and its resounding strokes, upon the sweet-toned church bell, marking the hours as they fly, serve to remind the people of their benefactor, and call attention to this unique memorial of a public-spirited citizen.

Farmers' Club.—In the year 1878 the farmers of Uxbridge and Mendon formed a Farmers' Club, and gave annual exhibitions for about five years, when, the Worcester Southeast Agricultural Society, located at Milford, having surrendered its charter, the Farmers' Club was discontinued, and its members applied for, and received, a charter as an agricultural society, to be located at Uxbridge, under the name of the Blackstone Valley Agricultural Society.

The new society purchased extensive grounds, and erected cattle-sheds and pens, and built a track for the trial of farm and family carriage horses only, horse-racing for purses being expressly prohibited.

It has started out with the intention of being a *farmers'*, and not a jockeys' society; and thus far has proved by its success the wisdom of its plans.

The fame of its fairs, and exhibitions of cattle, second to none in the State, calls to its annual exhibitions the best flocks and herds in the county, and so great is the demand for space that new sheds and pens must soon be erected. The fall exhibition is always exceptionally fine, and attracts great crowds of visitors. It is an institution of which the farmers of the Blackstone Valley may well be proud.

No other town, of the size and population of Uxbridge, had been more successful in bringing up a large number of active and energetic business men than this. Of those who have left behind them pleasant memories, I may name the following: John Capron, Daniel Day, Ananias Gifford, Jonathan Whipple, Samuel Read, Ephraim Spring, Alpheus Bayliss, Frederick Taft, Eastman Taft, Jerry Wheelock, Amariah Chapin, Jonathan Gregory, Abiel Jaques, George Willard, Deacon Daniel Payne, Adolphus Spring, Daniel Carpenter, Cato Willard, Daniel Farnum, Peter White, Manley Scott, Bezaleel Taft, Joseph Thayer, Orsmus Taft, Willard Judson and numerous members of the families of Taft, Thayer, Seagrave, Spring, Wood, Farnum, Thompson, Williams, Wheelock, Sayles and others, whose names are household words. Uxbridge has also sent such men as Stephen C. Greene, Josiah, Royal and Amory Chapin, Jacob, Josiah, Edward and Geo. W. Seagrave, John, Paul, Peter, Moses and Welcome Farnum, Sylvanus Holbrook, Effingham L. Capron, Asa Newell, Joseph Carpenter, Daniel Day, Royal C. Taft (now Governor of Rhode Island), Caleb Farnum, David F. and Cyrus G. Wood, Geo. T. Murdock, Stephen and Jason Emerson, Newell Tyler, Daniel Seagrave, Dr. William Bayliss, Nicholas Bayliss, Willard Preston, D.D. and a host of others whose names are preminent in the professional and commercial world, and who are proud to acknowledge themselves children of Uxbridge to the manor born.

There are larger and older towns in Worcester County than Uxbridge, but there are none more beautiful, healthy and delighful to live in than this.

With no debt, and light taxes, with pleasant, sociable neighbors and townspeople; with fine churches, excellent schools, no license and high morality, surely we may be pardoned for the pride we take in claiming a place in the front rank of Worcester County towns.

BIOGRAPHICAL.

MOSES TAFT.

Moses Taft, who is well known as having been, for more than half a century, largely engaged in the manufacture of woolens, was born in Uxbridge, Mass., January 26, 1812, near where Daniel Day, in 1810, built the first woolen-mill in this town.

His father, Luke Taft, the fifth in descent from Robert Taft, the Puritan ancestor, who came from England and settled in Mendon, Mass., about 1680, was born in Uxbridge June 3, 1783, and was brought up as, and followed the occupation of, a farmer till about 1816, when, probably attracted by the hum of the spindle and the thud of the loom of the near-by Day Mill, he was led to procure a jenny of twenty spindles and a hand-loom (there were no others at that time), which he set up in his house and began the manufacture of satinets.

This machinery in the house gave Moses, at an early age, an opportunity to observe some of the processes of manufacturing, and, at the age of seven

Moses Taft

years, was given his first work in the business,—that of winding bobbins for the weaver. This was the extent of his manufacturing experience till his father, in 1821, hired room and power in the Day Mill, when he was inducted into the mysteries of piecing rolls and tending carding-machines.

In 1824 his father bought a water-power on the West River, with land suitable for factory, dwellings and other necessary buildings, and built his dam and canal in the autumn of that year and his factory the next year. The factory was put into operation in the fall of 1825, with two sets of cards and twenty power-looms,—the goods made being satinets.

Moses was here employed in the various departments suitable to his age, attending the usual short terms of the winter schools, with an occasional term in the academy in this town, till 1827, when he received the advantage of a term at the Friends' School, then a popular school, in Bolton, Mass., of which Thomas Fry was the instructor.

The few advantages the district schools afforded with those named above, together with the application made by him to obtain an education, and the practical advantages received in the business life he followed in his younger days, has enabled him to discharge, in an efficient and highly satisfactory manner, most important duties, as will be seen as the narrative proceeds.

On his return from Bolton he again took his place in the mill till the spring of 1829, when he took up the occupation of clerk in the store of John Capron & Sons. The business of that company having been closed up by failure, Moses returned to his home, and entered at once upon the business of manufacturing in his father's mill,—making himself expert in every department, from the ability to make a proper selection of stock for the goods that were to be made, to the putting up the finished goods for market.

At eighteen years of age he was competent to take full charge of the mill, after which time his father devoted his time principally to his farm and other business interests.

In 1837 Mr. Taft entered into partnership with his father and brother-in-law, Caleb T. Chapin, under the style of "The East River Manufacturing Company."

From this time Luke Taft practically left the business of manufacturing – simply holding his estate and giving his sons the advantage of his advice and credit.

If any manufacturer *remembers* as far back as 1837, it will be with almost a shudder, as it comes back to him, as to how he lived through that year of trial and failure on all sides of him, and yet contrived to pay one hundred per cent. on all his bills.

This company, though severely tried, as every one was in that year from the integrity of its members, never compromised any of its debts, but paid in full all claims against it.

In 1840 Luke Taft sold one-half of his manufacturing real estate and power to J. Wheelock & Son, and retired entirely from the risks and cares incident to manufacturing,—his son, Moses, taking the other half of the property and machinery,—Mr. Caleb T. Chapin giving up his interest in the "East River Manufacturing Company," and taking the superintendency of a cotton-mill in Northbridge.

From this time (1840) till April, 1846, Moses Taft ran his half of the mill successfully. At this last period he sold his share of the estate and machinery to C. A. & S. M. Wheelock.

Soon after the sale to C. A. & S. M. Wheelock, he, in company with Mr. Samuel W. Scott, who had been in his employment several years, hired a mill in Burrillville, R. I., where the present Mohegan Mill stands, and engaged in the manufacture of satinets, under the style of Taft & Scott, which continued till the burning of the mill, in the winter of 1849–50, when the business of this firm was closed up and the firm dissolved.

In 1849 he entered into partnership with James W. Day, a grandson of Daniel Day, the pioneer woolen manufacturer of Uxbridge, under the style of Taft & Day, and hired the Capron Mill, in this town, and commenced there the manufacture of satinets.

After a few years' successful business in the Capron Mill, Deacon Wm. C. Capron became a partner, when the firm took the style of Taft, Day & Co., which was shortly changed to Taft & Capron by the withdrawal of Mr. Day from the company.

The firm of Taft & Capron continued till about 1862, when the business and unexpired lease of the mill was sold to Messrs. R. & J. Taft, and the firm of Taft & Capron was dissolved.

Before selling his interest in the factory built by his father to C. A. & S. M. Wheelock, Mr. Taft had conceived the idea of building a factory on the west side of the Blackstone River, above the dam of the "Uxbridge Woolen Company."

To do this it would be necessary to secure all the interest of the "Blackstone Canal Company," in water and canal together, with a release from each individual owner on the river of the right to divert the water and to procure all necessary land for the erection of factory, tenements and other conveniences required for such an establishment.

Having obtained all the necessary titles and releases to the estate in 1852, he laid the foundation for the mill, which was built the following year, with tenements and other necessary buildings.

This mill, which was known for some thirty years as the "Central Woolen Mill," was leased first to Messrs. Southwick & Sayles, till 1859, then to Messrs. Bradford, Taft & Co., of Providence, R. I.

In 1865 Mr. Taft sold his "Central Mill" estate to Messrs. R. & J. Taft, who, in 1883, sold the property to the "Calumet Woolen Company," a corporation that now holds the estate.

Since retiring from the "Capron Mill" Mr. Taft has been, and now is, interested in several woolen-mills, namely—the "Caryville Mill," in Bellingham, Mass., with seven sets of machinery; the "Douglas Woolen Mill," in East Douglas, Mass., with five sets of machinery; the "Chattanooga Mill," in Ashland, Mass., with five sets of machinery; besides an interest in the "Putnam Woolen Company," in Putnam, Conn., and the "Calumet Woolen Company," in this town.

Not alone as a manufacturer has Mr. Taft been known. Since 1865 he has been president of the "Blackstone National Bank of Uxbridge, Mass.," besides being a member of its board of directors for several years previous to that date. He has also been president of the "Uxbridge Savings Bank" from its organization, in 1870.

Nor has he been negligent of his duties as a citizen or failed to receive the confidence and honors in the gift of his fellow-townsmen, having been elected and served several years on the Board of Selectmen of the town and as chairman of the board. In 1845 he represented the town in the General Court for that year. He has served "Uxbridge Lodge, No. 120, I. O. O. F.," some fifteen years as its treasurer.

In the parish of the "First Congregational Society" he has often been called upon to discharge the duties of various committees and to assist in matters of great importance.

In all the affairs of business life, in all the various duties of social life, as citizen, as neighbor, as friend, he has been conscientious, faithful and considerate, helping where help has been needed, and giving good advice where advice was the best thing to give.

When Moses Taft is withdrawn (may it be long before it shall be!) from the business and duties of life, it may be truly said *a man* will be missed.

JERRY WHEELOCK.

Jerry Wheelock, born in Uxbridge, Mass., September 19, 1784, was well known in this vicinity (Uxbridge, Worcester County, Mass.) as an ingenious mechanic, both as a builder and operator of woolen machinery in the early days of woolen manufacturing.

He was of the sixth generation from the original immigrant of the race, Ralph Wheelock, who was born in Shropshire, England, in 1600. He was educated at Clare Hall, Cambridge, was a dissenting preacher, and came from England in 1637, when the tide of persecution ran highest. After remaining in Watertown one year, he removed to Dedham at the time of its settlement, and was active in the formation of the church there; was a freeman in 1639. He was the founder of Medfield, which was set off from Dedham in 1650, and received the first grant of a house-lot in that town.

Simeon Wheelock, the father of Jerry, was born in 1741 in Mendon, Mass. The first we hear of Simeon is on a memorandum book kept by him as an orderly at "Crown Point, dated Aug. 4, 1760; then under the command of Christopher Harris, Colonel of the R. I. Regiment."

He came to Uxbridge probably in 1763, as he appears in the registry November 28, 1763, as declaring intention of marriage with Miss Deborah Thayer, of Mendon.

He was a blacksmith by trade, and bought the land now owned by the heirs of Royal Jefferson and others, a little north of the "First Congregational Society's Meeting-house," of John Harwood in 1768, and built the house now standing there, and where most of his children were born. His blacksmith-shop is said to have stood opposite his house, and about where the academy building now stands. He was town clerk of Uxbridge from 1773–77, and was also a soldier in the War of the Revolution.

He joined the government forces in suppressing the Shays' Rebellion, and died at Springfield in consequence of injuries received from a fall on the ice in descending Arsenal Hill, leaving a widow and eight children; Jerry, the youngest, being in the third year of his age.

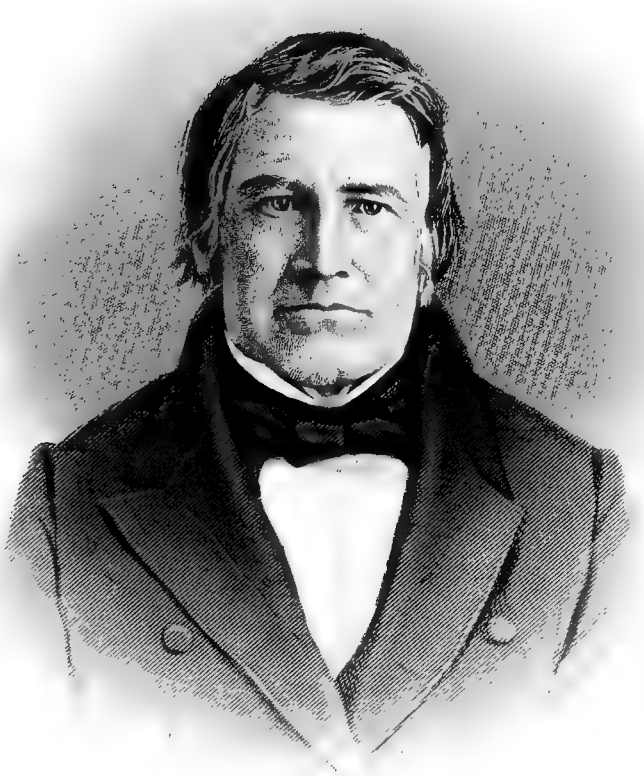
The family was left in somewhat straitened circumstances, and the more so from the fact that the father had sold his estate in the centre of the town, and bought a place some three miles away, which, after his death, was found to be mortgaged; and to save what had already been paid, nearly as much more was paid by the widow.

At this time it is evident that Jerry, at the age of a little more than two years, was left to the care of a mother in straitened circumstances, with other children of tender age, who were likewise dependent on the same over-burdened care.

We, whose children find everywhere the best appliances for obtaining an education, can scarcely conceive of a time when the best means for obtaining *any* education was to lie on the hearth before a fire of blazing pine-knots with such books as those times afforded; or, when attending the schools of that day for the short time they were kept, to be told "You must give up your seat to ——. You pay nothing for your schooling, and he pays."

After a discussion in a town-meeting on the subject of appropriating money for educational purposes, in which the writer took a part, his father said to him, and with more feeling than he ever saw him manifest on any other occasion: "Charles, I never want any child told as I have been—'You pay nothing for your schooling, therefore you must give your seat to ——, who pays.'"

His education, and it was *good* for the times, must have been principally obtained from his mother, who, from papers in my possession of her preparation, must have had a superior education for a woman of those times.



Jerry Whelock

S. M. Wheelock

At a suitable age he learned the trade of a "Set workman," a trade now made entirely *obsolete* by the large factories that by power machines turn out hundreds of cedar pails and tubs daily.

He next took up the trade of turner, and made bobbins and spools for John Slater. Afterwards he took up the business of chair-making, which he followed for several years.

In 1810 Daniel Day built the first woolen-mill in this vicinity. The first machinery was put into the mill in 1811.

Jerry Wheelock having married the eldest daughter of Mr. Day, became a member of the manufacturing firm of Daniel Day & Co. Having natural taste for mechanics and tact in the management of machinery, after a few years he left the company and went into the employment of Artemas Dryden, Jr., of Holden, Mass., who was then, and for many years after, noted as a builder of woolen-carding machines, and was engaged, principally, in setting up and putting into operation machines of his make in various places; and was setting up machinery in Falmouth, Mass., in 1814, during its bombardment by the British ship-of-war "Nimrod."

In 1814 the association—afterwards incorporated—known as the "Rivulet Manufacturing Company" was formed. Jerry Wheelock became a member of the association, and was the mechanical manager and superintendent of the mill till the spring of 1819, when he gave up the place and returned to his old home and immediately commenced the building of woolen machinery.

This business he continued till 1834. He was well known, not only in this immediate vicinity, but in parts of Connecticut, New Hampshire and the eastern part of New York, as a thorough workman and as making great improvement in the machinery he built, both in its workmanship and in the ease and perfection of its operation.

In 1834 he abandoned the building of machinery and went into manufacturing in company with his sons, which he continued till 1846, when he retired from active business.

Strict integrity and the most perfect workmanship possible with the means possessed for doing work, it is believed, are the characteristics that would be ascribed to him by those best acquainted with him.

Of the former, when advised by his sons that, considering the risks of business and his age, it was best for him to withdraw from business, after considering the matter with regard to reflections that might fall on him in case of failure of his successors, he said to the writer: "Charles, I am not going to shirk any responsibility or have it said I left the business to escape from it; and I want you to remember all my interest in this property must be considered as much at stake as if my name stood as a member of the firm."

Fortunately, by good luck or good management, no risk was incurred and no call was made upon his property to make good the failure of his successors.

Of his workmanship, the greatest fault ever found with it, was that the unimportant with him, was just as important as the most important in the eyes of others; and at times many careless persons would consider time thus spent to be spent to a useless purpose.

Whether, in view of the great inclination to slight work without regard to consequences that may follow, this should be written down against him as a grievous fault is left for others to judge.

As a citizen he was honored by his townsmen with the various municipal offices of the town, the duties of which he discharged with the same faithfulness as he did all other works.

As a neighbor he was trusted, respected and loved.

As a husband and father he was not only beloved, but was deserving of all the love and honor they could give him.

He died October 10, 1861, after a distressing sickness of more than five years, lamented by all who knew him.

SILAS MANDEVILLE WHEELOCK.

Mr. Wheelock, well known as a manufacturer and business man for some fifty years, was born in Uxbridge, Mass., November 11, 1817, at the time his father, Jerry Wheelock, was superintendent and mechanical agent of "The Rivulet Manufacturing Company." He has always been a resident of the town of his nativity, and never lived without the limits of the school district of his early boyhood.

He early manifested an ability for the management of affairs, and whatever work he was called upon to perform, he was always able to find playmates ready to assist him in his work while he did the planning and superintending; and it may safely be said, and, as his life will show, this faculty has never been lost.

His opportunity for obtaining an education was very limited. The district school of about ten weeks of a male teacher in winter, and about the same length of time of a female teacher in summer, to which was added three or four terms to a select school in this town, taught by young college graduates, among whom were Mr. E. Porter Dyer, afterward Congregational minister in Shrewsbury, in this county, and Mr. C. C. Jewett, afterward Prof. Jewett, librarian of "Smithsonian Institute" and of the "Boston Public Library."

Early in life, in his ninth year, he began work in a woolen-mill at almost the only work that children of that age could be employed,—piecing rolls.

From that time he has been constantly connected with woolen manufacturing in some form,—as workman in its various branches, as superintending in some of its departments, and as manager and financier of private companies and corporations, and in having

charge of the woolen department in a commission house in Boston and New York.

In 1846 the business firm of C. A. & S. M. Wheelock was formed, the business being the manufacture of satinets, plaid linseys and tweeds. This business was continued till 1855, when, after making a very considerable enlargement of its factory and putting in steam-power, it entered upon the manufacture of fancy cassimeres, giving up its other manufactures. This business has been continued to the present time, now nearly forty-three years, during which time S. M. Wheelock has been the general business manager and financier.

In 1870 he bought the Harriss Woolen Company's property in Putnam, Conn., consisting of a factory, twelve sets of woolen machinery, water-power, one-fourth of the Quinnebaug River at this point, together with dwelling-houses and other property.

This purchase, in connection with business men, was organized under an act of incorporation by the Legislature of the State of Connecticut as "The Putnam Woolen Company." After an increase of the capital stock in 1880, a second factory with machinery power, one-fourth of the Quinnebaug houses and other property, was bought and added to the previous purchase. S. M. Wheelock was chosen treasurer of the company and business manager, which position he maintained till the fall of 1887, when other business occupied so much of his attention as to make it expedient for him to resign the treasurership of this company.

In 1883 he purchased the Central Mill property in this town, consisting of factory, machinery, power, the whole of the Blackstone River at this point, houses and other property. A company of business men being formed and incorporated under the general corporation laws of Massachusetts as the "Calumet Woolen Company," took the property, and after making extensive repairs and changes and additions, began the manufacture of fancy cassimeres, S. M. Wheelock being the treasurer and principal manager of the company.

In 1886 he purchased the property known as the Uxbridge Woolen Factory, which included buildings, machinery, power, the whole of the Blackstone River at this point, dwelling-houses and other property. The Calumet Woolen Company, after an increase of its capital stock, took this property, and after making very great alterations and additions, have put it into operation as "The Hecla Mill."

Since this last purchase and putting into operation of the Hecla Mill, he has continued, as before, the management of the Calumet Mills, and also the Wacautuck Mills, by which name the mills of C. A. & S. M. Wheelock are known.

S. M. Wheelock has manifested but little ambition for political life, although he has discharged the duties of one of the Board of Selectmen of this town for some three or four years, and served on various committees appointed for temporary purposes.

In 1887 his friends thought his age and practical ability fitted him for the discharge of the duties appropriate to a member of the Massachusetts Legislature.

At a Republican convention held for the purpose of nominating a candidate to represent the Second Worcester Senatorial District in the then next General Court he received the nomination for that position, which was duly confirmed by his election in November following to the Senate of Massachusetts by a majority that showed him and his immediate friends that it was not merely as a partisan he owed his election, but for his qualities as a man of practical ability.

He has this year—in accordance with the general rule of the political parties in relation to Senators—been again elected to the same position by a gratifying majority.

It is not as a politician on which the reputation of S. M. Wheelock is to stand, but as a thorough, practical business man, for which he early in life manifested a striking ability; for stern integrity in business matters, worth more than millions obtained by fraud and chicanery. For more than fifty years of business life, during which time revulsions in business have been encountered that have swamped those apparently the most strongly prepared to endure the storm, he has been able to fulfill all his engagements, never paying less than one hundred per cent. But in doing this it has sometimes been felt as a hardship to be obliged to compete with those who, after settling their obligations for fifty per cent. or less, still continued to meet him in the business mart.

RICHARD SAYLES.

Richard Sayles was born September 13, 1819, at Gloucester, R. I., situated in the northwestern part of the State, in Providence County. Here he lived with his parents, attending school until eleven years old; he then went to live with a farmer a few miles distant from his home, receiving for the first year a compensation of eleven dollars and board, and during the winter months a few weeks of schooling. Out of this sum he clothed himself and saved nearly one-third of it. He was well liked by his employer and continued with him on the farm until sixteen years of age, each year receiving an advance in wages and saving a large part. At sixteen he left the farm and entered a grocery-store in Providence, R. I., as clerk, retaining the position about five years. In 1840 he came to Uxbridge and attended school in the Old Academy building for one year, having earned and saved the money to pay his tuition while a clerk at Providence. He was a diligent student, and, with characteristic energy and industry, employed his time in a profitable manner outside of school hours: in company with a fellow-student of his own age, he hired a piece of land, from which they raised a large crop and disposed of it at a profit, all the work of cultivation

Richard Sayles

Daniel Drummond

being performed out of school hours. At the end of his year's schooling at the Old Academy he entered the employ of the Uxbridge Woolen Company, and remained with them about three years. He then returned to Providence and bought out his former employer in the grocery business, at the corner of Charles and Randall Streets. The business proved successful, and he continued in it three years, and then returned to Uxbridge again and entered the employ of the Uxbridge Woolen Company as book-keeper, filling the position some six years with great credit to himself and to the entire satisfaction of the company, who offered him an interest in their business to remain with them. January 1, 1846, while in the grocery business, in Providence, he was married to Sarah Eddy McBride, who was born at Bolton, Mass., October 14, 1822, at the time of her marriage residing at Northbridge, Mass. Her parents were members of the Society of Friends. April 1, 1853, Mr. Sayles entered the employ of Mr. Moses Taft, of Uxbridge, and superintended the building and equipment of the Centreville Woolen-Mill, now known as the Calumet Mill, on the completion of which, in the summer of 1853, he, in company with his brother-in-law, Mr. Israel M. Southwick, hired the mill, and, under the firm-name of Southwick & Sayles, commenced the manufacture of a fine grade of fancy cassimeres, which they continued successfully until July 1, 1859. They then sold out to Messrs. Bradford, Taft & Co., of Providence, R. I., Mr. Sayles remaining with the new firm in the capacity of agent and superintendent, and Mr. Southwick as master-mechanic. Messrs. Bradford, Taft & Co. were succeeded by Messrs. Taft, Weeden & Co. Mr. Sayles remained with them until January 1, 1864. During a part of the time, from July 1, 1859, to January 1, 1864,—that is, from the breaking out of the War of Rebellion,—the mill was engaged in the manufacture of a fine grade of indigo blue goods for officers' overcoats and suitings, all of the product being contracted direct to the United States Government, and receiving the highest commendation. The mill for a time was run day and night upon this line of goods, requiring sixteen blue vats for the coloring of the wool. During this period of manufacture for the army the duties devolving upon Mr. Sayles were excessive, often requiring his presence at the mill until late at night; this close application to business proved too severe a strain upon him and resulted, January 1, 1864, in a severe shock of paralysis, from which he did not fully recover for several months. After a partial recovery, having severed his connection with Messrs. Taft, Weeden & Co., he leased, about April 1, 1864, the Laurel Ridge Woolen-Mill, in the town of Burrillville, R. I., and village of Pascoag, operating it for one year in the manufacture of satinets, residing during the time with his family in Uxbridge. May 28, 1864, in company with David A. McBride, a brother-in-law, he bought of Mr. Chandler Taft the old Rivulet Mill property, situated in the north part of the town. After moderate improvements and repairs, they commenced the manufacture of shoddy, supplying Mr. Sayles' mill, in Pascoag, and also manufacturing for the market. They continued this business successfully for about two years. On February 9, 1866, Mr. Sayles purchased Mr. McBride's interest in the property and sold the same to Mr. Israel M. Southwick, his former partner at the Centreville Mill. Immediately they commenced extensive additions to the property with the intention of manufacturing fancy cassimeres; but owing to the great depression in the business, which soon followed, the project was given up, and the property remained unoccupied for several months.

November 13, 1866, Mr. Sayles purchased Mr. Southwick's interest, and soon after sold it to Mr. Zadock A. Taft, of Uxbridge, a copartnership was formed under the firm-name of Sayles & Taft, and the manufacture of shoddy was commenced on an extensive scale, and was continued with success until July, 1869. They then leased the property to Messrs. E. S. Bradford & Co., of Providence, R. I., who commenced the manufacture of fine and medium grades of woolen yarns; this firm was succeeded by Messrs. Pierce & Paine, of Providence, and they continued the business until October, 1872, when the mill was burned to the ground, making a total loss. The following year Messrs. Sayles & Taft commenced the rebuilding of the property on an enlarged scale, and when completed began the manufacture of cotton warps and yarns, and continued the business for about one year, and then sold the cotton machinery and replaced it with machinery for the manufacture of satinets, which business they commenced and continued under the firm-name of Sayles & Taft, until October 1, 1878, when they associated with them Mr. Henry S. Morse, of Uxbridge, the firm-name becoming Sayles, Taft & Co., the manufacture of satinets being continued. January 1, 1882, Mr. Taft retired from the firm, and Mr. Sayles and Mr. Morse continued under the firm-name of Richard Sayles & Co. The various business interests of Mr. Sayles in his connection with the Rivulet Mills property have proved successful, as is reflected in the appearance of the village, its improved streets and lands, substantial mill buildings, neat and comfortable houses, all of which point to the enterprise, industry and integrity of Mr. Sayles, its projector, who, in every respect, was a self-made man; broad and progressive in his views, his aim was to have his village and its people surrounded by the best influences, and to that end contributed liberally of his means and effort. Largely to his influence was due the erection of the handsome Baptist Church near his village, he being elected and serving as chairman of its building committee, and contributing generously to its fund and also to its support. In his religious views he combined those of the Universalists and Unitarians; in

politics a stanch Republican and strong advocate of protection to American labor and American industries. He several times refused public office, devoting all his time to his business and improvements in his village. He was a strictly temperate man, and a man of very decided opinions, always expressing them in a straightforward and honest manner. As an employer, he was kind and generous, doing all in his power for the comfort and welfare of his employés, always kind-hearted and genial, ever ready to lend a helping hand and speak a word of encouragement. It was a pleasure to meet and converse with him. He was a man in every sense of the word, a man of the strictest integrity and sterling honesty.

May 23, 1887, after several weeks of extremely painful illness, he passed away in the sixty-eighth year of his age, although in appearance a much younger man. He leaves a wife, three sons and a large circle of friends. He was a lineal descendant from John Sayles and Mary Williams, daughter of Roger Williams. John Sayles was a native of England, and Mary Williams was born at Plymouth, Mass., in August, 1633.

Esek Sayles, the grandfather of Richard Sayles, was born at Gloucester, R. I., November 26, 1753, and was married, January 9, 1788, to Mary Harris, his second wife, who was born at Gloucester, R. I., October 16, 1763, by whom he had eight children,—six sons and two daughters,—all born at Gloucester. Amasa Sayles, the oldest child, was born November 18, 1788. and was married November 22, 1811, to Mary Keach, who was born at Gloucester, R. I., January 10, 1794, and were the parents of Richard Sayles, he being the fifth of seven children,—six sons and one daughter,—all born at Gloucester. But two of the family survive—Mrs. Israel M. Southwick and Rensselaer Sayles, both residents of Uxbridge.

DANIEL FARNUM.

Daniel Farnum was of the fifth generation in descent from John Farnum, an early settler at the ancient town-seat in Mendon, and a little later in the southerly part of Uxbridge.

The lineage is John, Moses, Moses, David, Daniel. His grandfather Moses was an eminent minister in the Society of Friends, whose memory is still fragrant in many bosoms. Mr. Farnum lived through all the mature part of his life in Northbridge, near the border of Uxbridge. He was the oldest son of a large family, and is survived only by his youngest brother, Samuel J., now a resident in or near Poughkeepsie.

Daniel Farnum was born with a good constitution, which he preserved well by regular and temperate habits, experiencing but little sickness, and retaining his faculties in remarkable vigor till within the last year of his life. His was emphatically a sound mind in a sound body; he was characterized for sound common sense, a strong sentiment of justice and honesty, insistence on his own rights, and respect for those of others; economy, simplicity and hospitality in domestic affairs; was provident, faithful and kind in the family circle; a serviceable, judicious and trustworthy townsman, honored with the principal municipal offices, including those of selectman and Representative in the Legislature; a reliable counselor in financial matters; a lover of his country and its liberties; a firm opposer of slavery and oppression; sparing in religious professions, of broad tolerance toward all denominations; liberal in theology, and a steadfast hoper in the final triumph of good over evil. These were qualities and characteristics which in Mr. Farnum overshadowed the incidental imperfections common to human nature. He was warmly attached to the interests of the town, and was a constant attendant on town-meetings, the last one he attended being in 1878, when in his ninety-fourth year. Among the positions of public financial trust he occupied was that of director in the Blackstone Bank, of Uxbridge, over twenty years. He had been expecting his departure for three years, expressed his entire resignation to the Divine disposal, and passed away in the confident assurance of the life everlasting, December 10, 1879, aged ninety-five years and eighteen days.

CHAPTER XXXI.

AUBURN.

BY REV. S. D. HOSMER.

TOPOGRAPHICAL.—Auburn lies on the map an irregular pentagon in form, its eastern boundary and base line touching Millbury, with Worcester on the north, Leicester on the west and Oxford on the south. Its area covers about 10,000 acres, with a diameter of five miles in its extreme length. The centre, or the Congregational Church, lies five miles distant south by west from Worcester City Hall. The Norwich and Worcester Railroad threads the eastern side of the town, with depots at Auburn and Stone's Crossing; the Boston and Albany Railroad runs through the western part. It has no station, but Jamesville and Rochdale depots are respectively within a half-mile and a mile of the town line. In 1885 the Webster Branch was opened, whose junction with the Albany road is in Auburn. This branch has a station at West Auburn. Thus railroad facilities are good.

The surface is hilly, though without very high summits. The water-courses, trending northerly and easterly, join their channels to make the southern branch of the Blackstone River. These brooks and ponds are frequented by anglers, and three water privileges serve manufacturing uses and have for nearly a century. Pakachoag Hill extends two miles in the easterly part of Auburn, passing into Worcester, where it is crowned by the College of the Holy

Cross. From its broad plateau one gets a fine view of Stoneville, Leicester steeples on the western horizon, Millbury, Grafton and Shrewsbury, Mt. Asnebumskit and blue Wachusett. Grassy Hill borders on West Millbury, Prospect Hill stretches from West Auburn across the Oxford line, Crowl and Beer's Hills rise in the northwest corner. We find our Auburn not the "loveliest village of the plain." The population is fairly distributed, the factory precinct of Stoneville being the more thickly built up. Pondville lies east of the centre. The inhabitants generally are farmers whose great barns show the tons of hay produced and the quantity of stock raised. Towns adjacent have a larger territory and population, and, with the exception of Millbury, a more ancient record. Our history narrates the origin, the doings and the present condition of an average New England rural community.

CIVIL HISTORY.

In Council, June 19, 1773, ordered that Gershom Rice, Israel Stevens, David Bancroft, Jonathan Stone, Daniel Boyden, Jacob Stevens, Thomas Drury, Thos. Drury, Jr., Henry Gale, Wm. Bancroft, Jas. Nichols, Darius Boyden, Jas. Hart, Thos. Baird, Jas. Hart, Jr., Thos. Baird, Jr., Oliver Curtis, Comfort Rice, Elizabeth Boyden, Phebe Bancroft, Jno. Boyden, Daniel Bancroft, Chas. Hart, Jas. Nichols, Peter Boyden, of Worcester; Benjamin Carter, Chas. Richardson, Timothy Carter, Phineas Rice, Benjamin Carter, Jr., Rachel Buck, Daniel Roper, Gershom Bigelow, Gershom Bigelow, Jr., Peter Hardy, Daniel Cummings, Charles Richardson, Jr., of Sutton; Samuel Eddy, Levi Eddy, Peter Jenison, Ruth Stone, Jesse Stone, Isaac Pratt, Abraham Fitts, Alexander Nichols, David Gleason, of Oxford; John Crowl, Jr., Andrew Crowl, Jonathan Phillips, John Hart, Thomas Scott, William Yong, Jonathan Stone, of Leicester; be and hereby are, with their Families and Estates, erected into a Precinct, and shall enjoy all the powers and privileges which other Precincts in this province by Law enjoy; and it is further ordered that all other persons (with their Families and Estates) living in the towns of Worcester, Leicester and Oxford, not further than three miles (as the roads are now trod) from the Place hereinafter fixed for building the meeting-house upon, together with all such others in Sutton that live not further than one mile and a half from said place, who shall signify their desire to belong to said Precinct by lodging their names in the Secretary's office within nine months from this date, be and hereby are Incorporated and made a part of the Precinct aforesaid—ordered that the spot for erecting the meeting-house upon be at the following place (viz)., at an Oak stump with stones upon it, Standing on the Westerly side of the County road leading from Worcester to Oxford, near the centre of two acres of Land which Thomas Drury conveyed to Jonathan Stone, Daniel Boyden and David Bancroft; the said two acres of land lieth on the gore of land that was annexed to the town of Worcester.

The gore of land above named lay originally in Leicester, and had been annexed to Worcester in 1758.

These persons expressed their wish to join the new precinct, and did accordingly: Samuel Holman, Gershom Rice, Jr., Israel Stone, Wm. Parker, Joseph Phillips, Samuel Learnard, Israel Phillips, Jacob Work, Jonathan Cutler, David Stone, John Harwood, Thomas Gleason, William Phips, Isaac Putnam, Joseph Gleason, Jonas Bancroft, Elisha Livermore, Gardner Chandler (for my land within the limits), Nathaniel Scot, David Bates, Nathan Patch, David Richards.

July 27, 1773, the precinct was organized and chose its officers; among others, Jacob Stevens, clerk, and Jonathan Stone, treasurer. The freeholders met at the tavern of Thomas Drury, Jr., inn-holder. The principal doings of the South Parish of Worcester, as it was called, will come in review under matters ecclesiastical, which mainly occupied attention during the five years of precinct municipality. One fact, however, deserves notice. On the proprietors' book stands, in the clear hand-writing of William Phips, the Declaration of Independence, with the subjoined order from the Council of Massachusetts:

That the Declaration be printed and a copy sent to the ministers of each parish of every denomination within this State, and that they severally be required to read the same to their respective congregations, as soon as Divine Service is ended in the afternoon, on the first Lord's Day, after they shall have received it, and the town or district clerks are then required to record the same in their books, to remain as a perpetual memorial thereof.

April 10, 1778, the precinct became an incorporated town, named Ward, in compliment to Major-General Ward, the commander of the colonial forces, at Cambridge, till Washington arrived. Heath, Gardner and Warren similarly commemorate other Revolutionary officers. Road-making, parish affairs, with the patriotic furnishing soldiers and supplies for the army, occupied our townsmen. In 1780 a committee reported on the adoption of the proposed State Constitution, favorably on the whole, yet suggesting their decided preference for legislative representation as towns, rather than based on the number of polls, and emphatically disapproving the proviso that the Constitution should not be amended for fifteen years. In 1795 the town voted thirteen to seven in favor of a revision of that instrument. September, 1786, "Voted not to take any notice of the petition or address of the town of Boston;" but what the metropolis desired of the country cousins, to be treated so curtly, is not apparent.

Ward, like other towns, was considerably implicated in the uprising of Shays' Rebellion. Taxation was oppressive; Middle and Western Massachusetts was in a ferment. A company of armed men from Ward, under Captain Goulding, joined other insurgents, gathered at Worcester to prevent the sitting of the court. Some days later, after a chilling snow-storm, the insurrectionary soldiers indulged quite freely in stimulants from merchant Waldo's stock of liquors, but detected a queer taste that suggested to some the thought of poison. Fortunately, Dr. Green, of Ward, being at hand, relieved their fears and imaginary pains in the discovery that the favorite fluid had been plentifully seasoned with snuff.

The town addressed several petitions to the General Court, Governor and Council, and Major-General Lincoln, in behalf of their misguided brethren, who became amenable to justice, particularly craving pardon for Henry Gale, under sentence of death as a rebel. He finally obtained life and liberty through the pardon granted by the executive to the condemned insurgents. The town expressly affirmed "that the hostile measures adopted and pursued by sundry persons to oppose known laws were unjustifiable in their nature and tendency." These

petitions were able papers and proved to be in the line of governmental policy.

Captain Samuel Eddy was chosen representative to the General Court in 1787, and in a long document received the explicit instructions of his constituents. I quote some of them: "The setting of the General Court, in the town of Boston, is a matter which the citizens of this Commonwealth are not generally satisfied with, as in transacting the business of an Infant Nation, imbarassed with debts, it is highly incumbent to study economy and dispatch, for which great purposes the town of Boston is by no means adapted." The next section demanded the abolition of the Court of Common Pleas; they also asked for a convention to revise the Constitution, and that inn-holders and retailers be licensed by the selectmen of their respective towns. Article thirteen complains "of the pernicious practice of the Law, as tending to the imbarassment, perplexity and expense of the people. If the general prosperity and happiness of the people can be effected by proper checks and restraints on the practitioners of the law, we do not insist upon the total annihilation of the order, but if upon investigation it should appear conducive to the happiness of the people, that the order be annihilated, you will act conformably, for it is better that a few suffer than a People to sink beneath oppression."

Sometimes the town voted not to send a Representative to the Legislature. Two of its ablest men, at the same town-meeting elected representatives, each in turn refused the honor. In 1794 Joseph Stone, surveyor, was empowered to take a map or plan of the town, agreeable to a resolve of the Legislature. Next year the town agreed to help Joseph Stone against a loyalist's claim to certain property. In May, 1796, "Voted unanimously that, alarmed by the reports current, that ye Treaty lately concluded between the United States of America and the Government of Great Britain, and duly ratified by the Constituted Authorities, meets with impediments and delays in carrying into effect, on the part of these States by the Majority of the Hon. House of Representatives of the Federal Congress; it is the wish and desire of this town, that the said Treaty be fully carried into effect without further delay." This vote was sent to the Hon. Dwight Foster, Representative in Congress.

During Jefferson's administration Ward by vote sustained the government in ordering the embargo, so unpopular in New England. John Clark, Esq., was the delegate to the convention for the revision of the State Constitution in 1820. Fifteen years later manufacturing was starting on a larger scale than the smithies, saw and grist-mills, home-looms and spinning-wheels of earlier times. That fact, with the construction of the two railroads, brought in a foreign element of population which is now mainly Canadian French. Church records chronicle with refreshing simplicity sixty years ago the death of an Irishman, a black woman, a foreigner from Sweden, the merely naming the race or nationality affording sufficient personal identification. Tything-men were chosen as late as 1839.

The name of our town, Ward, because of confusion with Ware, was changed in 1837 to Auburn, proposed, we think, by Joseph Stone, Esq., who served as town clerk twenty-four years. Indeed, the recording the town's doings fitly belongs to the clan of Stones, the most frequent family name from the first; the present capable town clerk, Emory Stone, having filled that office thirty-two years. In 1850 the Legislature annexed to Auburn certain estates, which, by their owners' choice, in virtue of the act of incorporation of Ward, had paid taxes and exercised suffrage in the towns adjoining. Our growth has been slow but sure, without the rush, inflation, depression and crash that have scathed some communities. Probably more building went on from 1865 to 1875 than in any other decade. The population was in 1790, 473; 1810, 540; 1830, 690; 1850, 879; 1880, 1317. State census of 1885, 1268; the number of polls, 316; and the valuation, $487,421.

CHAPTER XXXII.

AUBURN—(*Continued.*)

ECCLESIASTICAL.—The first settlers took prompt action in church affairs; for in August, 1773, they voted "to begin Preching as soon as may be," and planned to build the meeting-house. The pews were dignified, and taken by families in 1775, though the church was not finished until ten years were gone. It was a nearly square structure, standing more on the Common than at present. The proprietors' book shows the plan of the floor with large square pews against the wall, gives the pew-owners' names and prices paid. Various ministers were heard, and three unsuccessfully called. The church was formed with the presence and sanction of Rev. David Hall, of Sutton, Rev. Mr. Maccarty, of Worcester, and Rev. Mr. Chaplin, of Sutton Second Church (which is now the first of Millbury), Thursday, January 25, 1776. Eleven men and as many women made up its original membership. Rev. Mr. Hall officiated at their first communion observance, June 9th. The first pastor, Rev. Isaac Bailey, a native of Sterling, graduated at Harvard College in 1781, and was ordained here November 4, 1784. He had studied divinity with Rev. Daniel Emerson, of Hollis, N. H., whose daughter, Elizabeth, he married. His was a useful pastorate of thirty years. He died April 10, 1814, and sleeps with his deacons and congregation in the old church-yard.

March 1, 1815, Rev. Enoch Pond (Brown University, 1813) was ordained pastor, who labored diligently and successfully till 1828. He then became editor in Boston of the periodical *Spirit of the Pil-*

grims; and somewhat later began his life-work, at Bangor Theological Seminary, where he died, full of years, service and honor, in 1881. This church greatly flourished during his ministry, more than doubling its membership in two extensive revivals. He published sermons, reviews, lectures, beside preparing young men for college. Anecdotes are told by those who remember him showing his pleasant and, at times, jocose disposition and ready wit. His dwelling looks to-day very much as when he abode there, and the long school-room and study, now two chambers, is our veneration, as is Luther's home and study to the residents of Wittenberg.

Rev. Miner G. Pratt preached twenty years. He married Caroline, daughter of Maj. Thos. Drury, afterward resided at Andover, and died at Rochester, N. Y., 1884, aged eighty-four years. He organized a parish library, and was also postmaster. In 1887 the church building was moved back fifty feet, and the belfry and spire added.

Several clergymen came with shorter terms of stay, among whom was Rev. L. Ives Hoadley, a relative by marriage of Dr. Pond. Rev. Elnathan Davis, from Fitchburg, a graduate of Williams College in 1834, began labor in November, 1869. He did noble work as a citizen as well as preacher. The church was raised up, galleries removed and the interior quite remodeled. The church's centennial was joyfully celebrated in January, 1876; but the only printed record is the newspaper column. Mr. Davis' ministry of ten years greatly strengthened the church. Sincere was the sorrow at his funeral, April, 1881. Rev. N. A. Prince preached two years; and the present incumbent, Rev. S. D. Hosmer, of Harvard, 1850, began his labors January 1, 1883. The chapel near to the church has served at times as a school-room. In it hang three portraits of former pastors—Rev. Dr. Pond, Rev. Charles Kendall and Rev. Elnathan Davis.

On the town records we catch glimpses of persons not in accord with the standing order ecclesiastically. In 1779 provision was made to supply the deficiency caused by "taxes sunk by being laid on several of the Baptist persuasion in a late Ministerial Rate." Ten years after the selectmen were empowered "to abate Minister's taxes set to those who bring Certificates of their Congregating otherwheres besides in this town, as they may think proper." Liberty was given Elder Rathborn (at the desire of Jas. Hart) "to preach in the meeting-house at any time when they may not have occasion to make use of it themselves." March, 1812, the town "allowed the Dissenters from the Congregational Society the Privilege of occupying the Meeting-House on Week Days for Lectures; when the aforesaid Congregationals do not want to occupy the said house themselves."

A church was erected through the efforts of Colonel Goulding and Samuel Warren in West Auburn, next the burial-ground, in 1814. This was the Baptist house of worship. When that society migrated to North Oxford, this building, bought by the Warren Brothers, and moved to the site of their tannery, was used for business purposes till it was burned, about 1863.

The Baptist Church in Sutton called a council of elders and delegates, who met April 9, 1815, and constituted the First Baptist Church of Ward, with eleven male and seventeen female members. Elder Pearson Crosby, of Thompson, Conn., preached the sermon text (Matt. 16: 18), and Elder Thomas L. Leonard, of Sturbridge, gave the right hand of fellowship to the new church.* Deacon Jonah Goulding, Samuel Warren, David Hosmer and several persons of the Jennison and Gleason families were original members. Elder Dwinel seems to have been the first pastor, afterward Elias McGregory, and Rev. John Paine was the preacher from 1830 till 1837, when the larger part of the church, which counted near one hundred members, were transferred to become the Baptist Church in North Oxford. Also in 1837 Rev. Jonah G. Warren was chosen to prepare the history of this church. The Oxford Church and congregation to-day are largely composed of Auburn families.

The Roman Catholic Church at Stoneville began as a mission in 1870. It is now under the pastoral supervision of Father Boylen, who lives in Oxford. They have a neat sanctuary on the hill, with a fine view of the Holy Cross College in Worcester, distant less than two miles.

EDUCATIONAL.—In 1779 two hundred pounds were given for schooling, and the town divided into five squadrons or districts, "Each squadron to draw their money, and it to be a free school for the Town." The first committee chosen in 1780 were Jonathan Stone, Darius Boyden, Jesse Stone, John Prentice and Andrew Crowl. In November three thousand pounds were added to the sum granted last year for schooling. It must have been the depreciated currency of the day, for soon after thirty pounds became the annual appropriation. Who were the school-dames or masters then, we know not. Joseph Stone may have been one. In 1784 Ward refused to allot any part of the school-money "to be held in the Center for the sole purpose of teaching Large Scholars." Two years later the committee were seven in number, viz., James Hart, Jr., Joseph Dorr, Esq., Lieutenant Thomas Drury, Jonah Goulding, Levi Eddy, Deacon Ezra Cary and Abel Holman. The apportionment of the school-tax on the lands of non-residents in 1789 names the Sutton Squadron, Leicester Squadron, North and South Squadrons on Prospect Hill, Bogachoge and Deacon Stone's Squadron. November, 1790, Lieutenant Thomas Drury was annexed to the southeast squadron, provided said squadron shall erect their school-house on the height of land south of Messrs. Cary & Green's

Potash; and a new squadron was formed; the families of Abel Holman, Richard Bartlett, Eliphalet Holman and Paul Thurston set off from the southeast district. In June of the next year the three western districts were consolidated, and preparations made to build a school-house. A little later forty pounds was the usual annual appropriation. Like other towns fifty years since, a prudential committee looked after the school finances and a visiting committee attended to the literary attainments of teachers and pupils. The pastors have generally served with others on the School Committee, and the town has a few times recognized their merit by placing ladies on the educational board. A report of the School Committee was accepted at town-meeting in 1843; but the earliest printed school report I have seen came out in 1851.

A school of a higher grade was held in the fall of 1875, whose pupils enjoyed the thorough instruction in High School studies of a Yale graduate, resident still in town. We have two hundred and forty children between five and fifteen years old, six school-districts, with seven schools; the Stoneville building, erected in 1872, housing two schools, with an annual appropriation of $1,300, added to which is the State school fund and the dog-tax.

Rev. Mr. Pond taught a private school some seven years in his own house. He fitted many young men for college, took rusticated collegians into his family, and, with wonderful diligence and versatility, heard lessons, directed his scholars, wrote sermons and articles for the press at the same time. He prepared a new arrangement of Murray's English Grammar. At times there were thirty or forty pupils. Hon. Albert G. Wakefield, of Bangor, Maine; Rev. Artemas Ballard, D.D., of St. Louis; Virgil Gardiner, from the South; Mr. Burrill, of Providence, R. I.; and Rev. Gideon Dana were of those who studied here. Since Mr. Pond's departure select schools have at different times been kept in the chapel.

Some of the elders here in their youth attended Leicester Academy, whose centennial was kept in 1884. At present our young people take advantage of the nearness and excellence of Worcester's varied institutions of learning.

A paper-covered little book is still preserved with Jonathan Stone's autograph as owner in 1760. His son, Joseph Stone, Esq., who died in 1835, had a good library for the time. Among his varied capabilities he exercised the craft of a bookbinder. Traces exist of a social library about 1830; Joseph Stone, Abijah Craig, Oliver Baker and others being share-holders. There was, too, a parish library in Rev. Mr. Pratt's day, of which he was custodian. Mr. William Craig willed to the town one thousand dollars, provided the town added another thousand to establish and maintain a free public library, only the interest to be expended. He was a man eccentric in dress, economical in his habits, of bright faculties, quick at repartee, an active Whig. He died in 1871. The library was opened in October, 1872, with two hundred volumes, and was for several years in charge of Miss Hannah Green, at her residence; thence moved to an ante-room of the town hall. It has outgrown its present quarters. A portion of the library, mostly theological works, of the style read by our devout grandfathers, once belonged to Joseph Stone. The residue (fifteen hundred volumes) are a well-selected collection, diligently conned by the young people of Auburn. Miss Lucy P. Merriam is the trusty librarian. A catalogue was printed in 1885. We need for our library a copy of every book and pamphlet written in or about this town or its vicinity; and then a commodious hall for their use, preservation and increase. The town also owns a large case, filled with law works and the public documents of the State.

CHAPTER XXXIII.

AUBURN—(*Continued.*)

MANUFACTURES.—In the last century every housewife was skilled, like Solomon's virtuous woman, in seeking wool and flax, and deftly handled the spindle and distaff. The whirr of the spinning-wheel and jar of the loom made the home music. On early records the potash of Dr. Green and Recompense Cary is named as the starting-point of a new road. An official document in 1794 mentions two grist-mills, four saw-mills and one fulling-mill. A wind-mill, too, caught the breezes upon Prospect Hill. Charles Richardson's mill utilized the water privilege, now called Pondville, known as Rice's mills fifty years ago. From Mr. Rice the property passed through several owners to Otis Pond, who changed the business from a saw and grist-mill to the making of yarn. Then, with his brother as partner, it became a satinet-mill. At this time, 1862, Mr. B. F. Larned took an interest in the business, which, at first with others, and then alone, he sustained till 1883. The Auburn Mill was widely known for its woolen goods, sold through Boston and New York commission houses. By a freshet causing the reservoir to give way, the mill was damaged in 1873. Mr. A. Henry Alden was drowned in the flume by the bursting in of the bulkhead gates June 18, 1879. A six-families tenement-house, office and store-house were built, and a set of cards put in, making five sets in the mill, in the spring and summer of 1880. Three times has the plant been wholly burned,—in 1865; August 25, 1870; and August 21, 1880. Each rebuilding was a marked improvement. A very pleasant festival and charitable gathering of towns-folk and friends from abroad, with a bright speech by Hon. John D. Washburn and a poem by Rev. E. Davis, celebrated

the completion of the new mill in the month of February, 1881. Mr. Larned sold the property in 1883 to L. J. Knowles & Brother. The mill is now managed under the firm of Kirk, Hutchins & Stoddard as the Auburn Woolen Mill.

The Drury family, for three generations, owned a grist and saw-mill at the outlet of the pond near the Southbridge and Stoneville roads. Colonel Alvah Drury built the house now Mr. Hilton's residence, and prospered in his business. The site afterward became known as Dunn's Mill. Albert Curtis and B. F. Larned bought the water privilege, and Dunn's shoddy mill, owned by B. F. Larned, was burned, with a loss of over four thousand dollars, May 2, 1877. Mr. James Hilton carried on the same business, and his premises were burned in 1887, but immediately rebuilt and enlarged.

Dark Brook, the outflow of Eddy's Pond, at two points has turned the wheels of manufacturing industry.

Plows, scythes, wooden-ware for farmers' tools and shoes were made here from 1820 to '40. Ichabod Washburn, the wealthy and liberal wire-maker of Worcester, served his apprenticeship with Nathan Muzzy, whose blacksmith-shop stood behind the church. He received his freedom suit of clothes, made by Mrs. Muzzy, at the expiration of his service.

In 1837 Auburn could show one woolen mill, a paper mill, a card factory, three shingle mills, a lath mill and a sash and blind factory. Daniel Haywood's paper mill, a four-story structure on the stream above Stoneville, was swept away by a flood in 1856. John Warren & Sons carry on the tannery in West Auburn. This industry has been successfully prosecuted on the same spot, and kept in the family since Jonah Goulding started that business nearly a century ago.

In 1834 Jeremy Stone began to improve the water-power on Young's Brook by erecting a brick mill and houses for the operatives. He died at the South before his plans were completed, but the village at Stoneville marks his business foresight. Edward Denny, of Barre, next owned the property. About 1850 Mr. A. L. Ackley bought him out, changing the woolen to a cotton mill. John Smith, of Barre, took it in 1858, whose sons, C. W. and J. E. Smith, coined money by shrewd business operations in the war-period, from 1861 to '65. At C. W. Smith's death, a few years since, the mill lay idle awhile. Mr. George H. Ladd acted as superintendent till the last sale of the property and his removal to Clinton. Mr. Hogg, the carpet manufacturer at South Worcester, is present owner, the business-name being the Stoneville Worsted Company, making yarn for the Worcester Carpet Mill.

When the Lynde Brook reservoir broke loose, the damage at the Stoneville dam and bridge cost the town alone three thousand dollars. The dwellings of the operatives under the maple's shade, the neatly-kept pine grove on the near hillside, its height crowned by the Catholic Church and the public school, form as attractive a New England factory village as you may find.

The Darling Bros. (Messrs. D. W. & J. T.), contractors, reside on the Rochdale road in Auburn. Specimens of their skill, fidelity and success as builders are seen at the Polytechnic, Worcester, and public edifices at Ware and Springfield. Through the influence of James Alger, a veteran engineer on the Boston and Albany Railroad, some twenty of our young men are firemen and engineers on several railroads.

AGRICULTURE.—Rev. Peter Whitney writes of this town in 1793: "The soil in general is fertile, rich and strong, suitable for orcharding and all kinds of fruit; well adapted to pasturage and mowing, and produces large crops of rye, oats, wheat, barley, Indian corn and flax. It is not very rocky, but affords stone sufficient for fencing in the farms." And Major Gookin, a century before, noted the famous crops of Indian corn at Pakachoag, the Indian civil plantation, and translated the significance of the aboriginal word, the village named from "a delicate spring of water there."

I suppose wool-raising in the olden time was profitably pursued. Different ear-marks of the stock-owners are recorded by the town clerk. The minister's glebe counted its acres by the scores, and the good parson, like his congregation, was expert in using the plough, scythe and sickle. There must have been double the amount of woodland. In recent times the supply of railroad ties, and hundreds of trees cut down for fuel, explains the lesser area of the forest. For a mile one rode along a shaded avenue a few years since on the Southbridge road; alas! that the fact should be but a pleasant memory now. Some farms still belong to descendants of their first owners. Our yeomen quite generally are busied in supplying milk to the neighboring city. Mr. A. S. Wolf conducts a well-managed market produce farm, and finds a ready disposal for all he raises. He employs, winter and summer, a number of men, and his fruitful acres remind one of the Arlington and Belmont market-gardens. Other persons cultivate the small fruits and realize, we hope, the pecuniary profits a well-known novelist gave as his experience on the banks of the Hudson. The yearly harvest exhibition shows an attractive display of flowers, vegetables and fruit.

The Auburn Grange, No. 60, P. of H., was organized July 2, 1874, with twenty-three charter members. It now numbers over one hundred, and is in a flourishing condition. A few years since the grange spent a bright May-day, before Arbor Day was recognized, in the adornment of the public green by setting out thrifty young maples to grow beside the half a dozen lofty elms, the bequest to us of our thoughtful predecessors a century ago.

We note some of the chief agricultural results in Auburn, found in the tables of the State census in 1885 for the year previous:

Milk, gallons	250,716
Value of dairy products	$47,164
Hay, straw and fodder	30,927
Vegetables	19,391
Animal products	9,152
Wood products	7,368
Poultry products	6,874
Aggregate of agricultural products	$132,032

There were ninety-one farmers, with eighty-five additional farm laborers.

A sentence from the town's instructions to its representative, in 1787, might serve well as a grange motto: "The industrious husbandman, on whom this commonwealth will probably ever depend for its greatest strength." True of the United States to-day, though not as applicable to Massachusetts as when originally penned.

CHAPTER XXXIV.

AUBURN—(*Continued.*)

MILITARY AFFAIRS.—Military titles abound in the names of the first residents. Some had seen service in the French and Indian Wars. The commission of Comfort Rice as first lieutenant in the Third Company of Foot, Micah Johnson, captain, in the regiment of militia in Worcester County, whereof John Chandler is colonel, signed by Governor Hutchinson, June, 1773, is yet preserved. Two companies marched from Worcester on the Lexington alarm, April, 1775. Captain Timothy Bigelow led the minute-men. A few in his company and one certainly in Captain Flagg's were from this South Parish. The State archives contain the muster-roll of Captain John Crowl's company from this place, twenty-six men in all. They were attached to Colonel Larned's regiment, and marched to Roxbury in the alarm of April, 1775. They were paid for a hundred miles' travel and from six to twelve days' service. Total amount allowed for this company and receipted for by their captain January 24, 1776, £28 2*s*. 7½*d*. When the parish became a town its records attest its earnest loyalty to freedom, in offering good bounties for army recruits, in forwarding beef, grain and clothing to the soldiers in service. The following document is a sample:

To Capt John waight, Agent for Solder clothing for the county of Worcester, we the Selectmen of Ward have apprised and sent the following artikels, viz.:

28 shirts at 48*s* per shirt	£67 4 0
14 pair of shoes 48*s* per pair	33 12 0
14 pair of Stockings 36*s* per pair	25 4 0
Total	£126 0 0

Ward, Nov. 30, 1778.

CHAS RICHARDSON, NATHAN PATCH, JONATHAN CUTLER } Select Men

The town also purchased five guns and ammunition. There must have been a home company, as its officers were associated in 1780 with the town's Committee of Correspondence.

The part Ward took in Shays' Rebellion has been already told. October, 1796, a quarter of a pound of powder was allowed each soldier for the muster at Oxford that shall bear arms on said day. Next year the records state, "Voted to give One Dollar to each of the men called for from the military Company in this town, who shall be Volunteers to fill the Levy; also to such of the Cavalry and Artillery, who are inhabitants of this Town, who may be detached from their respective Corps, in proportion to the Levy on the Infantry; also that the town will make up the pay to each and every of said Soldiers, including whatsoever they shall be entitled to receive from the public equal to $10 per month they may serve, after they shall be called into actual service, consequent to said Levy."

The town's powder was stored in the attic of the church until a powder-house was built on the hill-top south of the old burying-place. Men still living, in their younger days trained with their townsmen on the Common, or went through the military evolutions in a field near Major Drury's house; marched to Leicester, Oxford or Worcester, joining other companies for regimental review. Gradually the military spirit died out in the piping times of peace, till the black war-cloud looming up on the Southern horizon summoned the citizen soldiery of the North. Auburn enlisted seventy-seven men; three of these entered the navy. The Twenty-fifth Regiment Massachusetts Volunteer Militia received the most of these of any one regiment, but Auburn had soldiers also in the Fifteenth, Twenty-first, Thirty-fourth and Fifty-first, and scattered individuals in yet others. A few joined the Heavy Artillery. Three were killed; four more died of wounds or sickness in the hospitals. On the soldiers' monument, raised in 1870, are inscribed the names of fifteen soldiers, deceased. The little fluttering flags mark the resting-places of these and others since mustered out from life's march and bivouac.

John A. Logan Post, No. 97, G. A. R., was organized with thirty-six comrades and was largely efficient toward the erection of the soldiers' monument. But so many of its members left town that after three years the post disbanded. No uniformed soldier is met on our quiet streets; the nearest approach to the stormy times of '63 is the distant boom of the holiday salutes of Battery B in Worcester or the crack of the sportsman's rifle intent on shooting sly Reynard or a harmless rabbit. The grandson of the first pastor became distinguished as Prof. Jacob Whitman Bailey at West Point. Would that one of our tall forest trees might stand as a flag-staff on the Common to display on fit occasions the Stars and Stripes above the greenery of those towering elms.

CEMETERIES.—In January, 1775, a committee was chosen "to pick upon a buruing yeard." They reported "upon a Diligent and faithful tryal of y°

Ground near the Senter of the parish, the most Sutable place on the Rode from the meeting-house to oxford, on the Southerly Corner of Mr. Thomas Drury's Cleared Land," eleven rods each way, containing three-quarters of an acre. This old burying-ground joins the Common and is thickly planted with the memorial stones of our predecessors. The oldest bears the date April 13, 1777—the stone of Mrs. Deborah Thurston, aged nineteen years. The epitaphs chronicle the family genealogies of the town to a large extent, as for forty years here was the only burial spot, and till 1846 the principal one. Our forefathers' tomb-stone poetry was usually alarming in its address to the living; but these lines on the stone of a four-years-old child answer darkly the mooted question, Is life worth living?

> When the archangel's trump shall blow,
> And souls to bodies join,
> What crowds shall wish their lives below
> Had been as short as mine.

An ancient graveyard beside the thronged city's street seems terribly out of place, only interesting to some Old Mortality of an antiquarian; but in the country the open fields around, singing birds loving its tree-tops, wild flowers and creeping vines bordering its stone walls, the sunset glow of a summer evening lighting up its glades, give a tranquil beauty and serenity better felt than told. The poet's matchless elegy could have been written only of a country church-yard.

For seventy years the graveyard near School-House Number Four has been the burial-place for the west part of Auburn. The first interment was that of Mr. Gleason in 1814. Colonel Goulding's tomb is here. A small enclosure on Prospect Hill near the Oxford line has one monument and several graves. It belonged to the Cudworth family. The Burnap field, on land of Thomas S. Eaton, is where that family buried their dead, but the stones have been all removed.

The new cemetery, laid out in 1846, occupies about six acres midway from the church to the depot. A simple plinth and marble shaft, resting on a granite base, the soldiers' monument, crowns the crest of the slope opposite the gateway. For forty years this garden of the dead received the faithful care of, and nearly every grave was dug by, the sexton, John G. Stone, from whose broad acres this land was purchased. Our town name recalls the designation of that first extensive garden-cemetery, Mount Auburn, near Boston. As our necropolis has never been named, from its fair prospect over the near water to the distant hills, let us designate this beautiful spot our Mt. Pisgah.

The Old Tavern.—The residence of Otis Pond, at the Common, is perhaps as old and as little changed as to the interior, as any house in town. This was the tavern, with swinging sign-board between the two supporting timbers, suggesting accommodation for man and beast. It was kept by mine hosts Drury, Sturtevant, Cary and Wiser, and not on a temperance platform, as stories of the older inhabitants assure us. Here reined up the stages from Worcester to Norwich, which, in 1831, left Worcester every Wednesday and Saturday at 3 A.M., the passengers reaching Norwich the same afternoon, and, by the steam packet "Fanny," New York the next morning. The summer arrangements for 1838 read: Monday, Wednesday and Friday the stage leaves for the Norwich boat at 6.30 A.M., but on Tuesday, Thursday and Saturday on the arrival of the first train from Boston. The Southbridge stage also passed through this town. A town-meeting, awaiting a committee's report, would take a recess at the inn so accessible. The first parish-meeting convened there, and its best room, I fancy, witnessed Sabbath worship, till the church was ready for use. Dr. Pond speaks of a memorable ball at the tavern, which was the precursor of a great revival. The post-office and store were at the Common, but years since left the geographical centre of the town for its travel centre—the depot. But the sign "Groceries" remains,—an epitaph on business departed, perhaps capital buried beyond resurrection. Like an old palimpsest, too, it carries an older inscription of the store-keeper's name, easily decipherable beneath the last-painted word.

Personal Sketches.—We glance at a brief outline of some whose lives have shaped our local history. All that occurred before 1773 belongs to Worcester's chronicles or the other mother towns. Yet a word of some then active where now lie our farms may not prove amiss.

September 17, 1674, Rev. John Eliot and his coadjutor, Major Daniel Gookin, visited Pakachoag (Lincoln's "History of Worcester" gives thirteen ways of spelling that name), preached and appointed civil officers among the Indians. John Speen, a Natick convert, had already preached and taught here two years. Gookin locates this Indian village seven miles from Hassanamesit,—*i. e.*, Grafton,—and three miles from the Connecticut Path, which led westward. That way ran just north of Lincoln Square, in Worcester. Wattasacompanum, as ruler among the Nipmucks, aided Eliot and Gookin. But next year the wily Philip seduced the natives from their loyalty to the English, when they burned deserted Quinsigamond, and were present at the Brookfield disaster. Wattasacompanum, or Captain Tom, as he is called, paid the penalty of his weakness at his execution on Boston Common. Matoonas, who had been chosen constable at Packachoag, met a similar fate.

Col. Timothy Bigelow, who served in the French and Indian Wars and led Worcester's company of minute-men on the Lexington alarm, was born in what was Worcester, but soon became included in Ward. His beautiful memorial column on Worcester Common records his soldierly service.

Rev. Wm. Phips, of the colonial Governor Sir Wm. Phips line, lived near the Oxford bound-

ary, east of Prospect Hill. Born at Sherborn and a graduate of Harvard College in 1746, he preached at Douglas till dismissed in 1765. We find no trace of him as a minister here, but he was active in church, precinct and town matters, a capable man and a firm patriot. His daughter Sukey married Wm. Craig and was the mother of Abijah and William Craig and their as peculiar sister, Miss Patty. Mr. Phips died in reduced circumstances at Oxford in 1798.

A resolution passed at town-meeting in 1787 rings out its sweeping "Woe unto you lawyers!" Nevertheless, even in those troublous days, one of the most useful and honored citizens was the Hon. Joseph Dorr, born in Mendon, graduated at Harvard, 1752. Leicester and Brookfield also claim him as a resident. His services are conspicuous on our annals from 1786 to 1795. Having assisted in framing the State Constitution and filled already the position of State Senator, he was exceedingly valuable here in drafting petitions for clemency to those engaged in Shays' Insurrection, and was sent as the town's intercessor to lay their appeal before the Governor and Council. His youngest son, Edward, born in Ward, was a large land-owner in Louisiana and died there. Two older sons became eminent in mercantile and financial circles in Boston. Joseph Dorr held the office of justice of the Court of Common Pleas twenty-five years and was judge of Probate for Worcester County eighteen years. He died at Brookfield in 1808.

Deacon Jonathan Stone, of the third generation from Deacon Simon Stone, of Watertown, the immigrant ancestor and the third successively named Jonathan, came from Watertown about 1753, and settled on lands then in Leicester. In 1757 he and others asked to be joined to Worcester, which took place next year. Still later his acres fell into the new parish, soon becoming the township of Ward. His descendant, Emory Stone, Esq., owns the ancestral possessions, the venerable homestead standing till within forty years. Jonathan Stone's name occurs as owner of pew No. 47 in the Old South Church, Worcester, in 1763. He marched with Captain Bigelow to Cambridge, April, 1775, his son, Lieutenant Jonathan, going with Captain Flagg. Most of the family name here now are descended from Deacon Jonathan. He was active in the organization of the church and served as its first deacon. As appears in the original plan of the edifice, he bought pew No. 15, on the right of the pulpit, and paid the best price (sixty pounds) of any proprietor. The school District where he lived is named as Deacon Stone's District. After his day that section was known at one time as New Boston. Old family Bibles record his three marriages and the goodly array of his nine sons and daughters. He lived to be over eighty years and his stone stands near the cemetery wall close by the chapel.

His son, Joseph Stone, Esq., has been already spoken of. As teacher, surveyor, bookbinder, and even occasional printer, he was variously and largely useful. Fond of reading and study, he gathered quite a library, and the annotations in his pamphlets and almanacs afford many a desired fact to the antiquary. Specimens of hymns and tunes he composed are preserved. In 1793, with Abraham Wood, he published a singing-book, which circulated widely. The town records, in his clear chirography are a feast to the eye and a delight to the investigator. Some of our elders remember the cloaked figure of this aged worshipper at church. He had been often chosen to public office, and faithfully discharged every trust. He outlived his wife sixteen years, and died childless, at the age of seventy-nine, February 22, 1835. He gave some of his property to Bangor Seminary, and a memoir of him was written by Dr. Enoch Pond.

Jonah Goulding settled in the west part of the town, coming thither from Grafton. He became noted as the captain of the Ward company, that joined Shays' forces. One Boyden was the lieutenant. After the rebellion collapsed he was arrested at his home and confined forty days in Boston Jail. His business was that of a tanner, and he built the mansion occupied by his grandsons, the Messrs. Elbridge and John Warren. He filled the place of school committeeman and selectman. Naturally firm in purpose, keen in judgment and outspoken in speech, he acted with emphatic earnestness. He was the principal mover in the formation of the Baptist Church, and its life-long strong pillar. He died in 1826.

Rev. J. G. Warren, D.D., his grandson, and son of Samuel and Sally Goulding Warren, born September 11, 1812, fitted for college at Leicester Academy and graduated at Brown University, 1835, Newton Theological Institute, 1838. He was ordained at North Oxford, September, 1838, and had pastorates at Chicopee and North Troy, N. Y.; but his chief service was done as a secretary of the American Baptist Missionary Union from 1855 to 1872. At a critical period he filled this position with marked capacity and success. He retired in enfeebled health, and died in Newton, February 27, 1884. He was a trustee of Brown University and Newton Theological Institute.

For seventy years and four generations the Drury family were important persons; but none of the name are now resident. They owned a large estate, at one time two hundred and fifty acres, reaching from the church site well up on Pakachoag. Thomas Drury, the elder, probably came from Framingham. His name appears, in 1772, on the Worcester records among those eligible for jury duty. His grave-stone dates his death November 3, 1778, in the fifty-ninth year of his age. His son, Lieut. Thomas, had gone forth with Captain Bigelow's minute-men on the Lexington alarm. He deeded to the town, in 1781, the land around the church, two and one-half acres; improved the water-power, long known as Drury's Mills, and died, aged ninety-one, in 1836. His daughter,

Phebe, married, in 1799, Rev. Z. S. Moore, then pastor in Leicester. Soon he became a professor at Dartmouth College, then the second president at Williams, and died while first president of Amherst College. She is well remembered as a lady of fine character and dignity, a widow many years, and at her death her property was left to Amherst College.

Major Drury, often named as Thomas, Jr., well sustained the family reputation. His residence, from its high location, commands fine views to the north and east, from Cherry Valley across the southern part of Worcester. Rev. Mr. Davis owned the place recently, and the old-time hospitable mansion is now owned and occupied by Mr. John J. Holmes. The worthy major's twin daughters, Almira and Caroline, greatly resembled each other, occasioning amusing mistakes of personal identity. Miss Caroline married Rev. M. G. Pratt, for twenty years pastor of the Congregational Church.

Colonel Alvah Drury (each generation has a separate military title) showed remarkable business enterprise. He built the house just above his mills, now Mr. Hilton's, and was much relied on by his townsmen for his capability and public spirit. He died in his prime, the result of an accident in his mill, and with the removal of his family that well known and oft-spoken name passed out of Auburn annals.

For so small a town, Ward, in its early days, was favored with skilled physicians. Dr. Thomas Green, from Leicester, settled here, probably at the time of Dr. Campbell's removal. Dr. Green had served as surgeon's assistant during the Revolution. He was town clerk in 1784–85. This branch of the Green family, for a century and a half, have manifested aptitude for the study and practice of the healing art, which Dr. Thomas followed in Ward for twenty-five years. He died in 1812, and was succeeded in his profession by his half-brother.

Dr. Daniel Green, also of Leicester, was born November 9, 1778, a son of Thomas Green, and grandson of Rev. Thomas Green, a noted physician and surgeon, as well as pastor of the Baptist Church in Leicester. Dr. Green was of the sixth generation of those who came to Massachusetts from England in 1630. About 1811 he established himself in Ward, and for over fifty years was the esteemed and successful physician, with a practice extending into all the neighboring towns. A man of excellent judgment, with keen powers of observation, and integrity of purpose, he was the trusted practitioner till over eighty years of age. He was an active worker in the anti-slavery cause in its earlier days, as well as an earnest advocate of temperance. He married, January 13, 1814, Elizabeth, daughter of Ralph Emerson, of Hollis, N. H. June 1, 1861, he died, aged eighty-three years. "He was closely identified with the best interests of the town through all these years, and is remembered accordingly."

John Mellish, Esq., was born at Dorchester in 1801, came to Auburn in 1839, was a justice of the peace thirty-five years, held the office of school committee-man until advanced in years, having held the same position in Oxford and Millbury, and was employed as school-teacher, generally in the winter season, for many years. He took the census of Auburn in 1840 and 1850. His son, John H., graduated at Amherst College in 1851; Andover Seminary, 1854; was ordained at Kingston, N. H., February 14, 1855; is now preaching at North Scituate, R. I. Another son, David B., learned the printers' trade; became an expert reporter and stenographer, in New York City; had an office in the Custom House, was elected Representative in Congress and died while filling that post in 1874 at Washington, D. C. A daughter, Mary Louisa, married Rev. Franklin C. Flint, of Shrewsbury, and died in 1881.

The Eddy family have held a prominent place in town for a hundred years. A recent death removes this landmark, and the widow and children have migrated. A boy, Samuel, is the ninth in successive generations bearing that name.

These then form the annals of our quiet neighborhood. Less in area and population than places adjacent, less of the factory element and more of the yeoman's toil, Auburn follows the even tenor of her way. Its century and a decade of municipal life have been in general uneventful years, aloof from the swirl and roar of the city's whirlpool, yet growing, though slowly. In other States the name Auburn marks thriving cities; here it best comports with rural scenes. Still-life one might disdainfully count this, if restless and ambitious as most Americans are. But a town so accessible to Worcester will some day share its growth, and number residents by thousands. Upon the creditable past may our citizens plan for and attain future thrift, growth and the common weal.

CHAPTER XXXV.

ASHBURNHAM.

BY EZRA S. STEARNS, A.M.

ORIGINALLY the town of Ashburnham included about one-third of each of the adjoining towns, Ashby and Gardner. It is situated in the northeast corner of Worcester County, and is bounded on the north by New Ipswich and Rindge in New Hampshire; on the east by Ashby, in Middlesex County, and by Fitchburg; on the south by Westminster and Gardner, and on the west by Winchendon. Since 1792, except the addition of two farms, the gift of Westminster, the boundaries and area of the township have remained unchanged. The present area is about twenty-four thousand five hundred acres, including about one

thousand five hundred acres of ponds and reservoirs. Situated in the line of the water-shed between the Connecticut and Merrimack Valleys, the course of numerous streams is outward; the only waters flowing into the town are a few small brooks which have their source in Rindge and New Ipswich on the north. There are eight natural ponds in the town; four are tributary to the Connecticut and four to the Merrimack River. Here the Souhegan and Squannacook and important branches of the Nashua and Miller's Rivers have their source. The altitude exceeds that of the surrounding country on the east, south and west. The summit on the line of the Chesline Railroad, one and one-half miles northwest of station at South Ashburnham, is one thousand and eighty-four feet above tide water, while the old burial-ground on Meeting-House Hill exceeds the summit by two hundred feet. The rounded form of Great Watatic on the dividing line between Ashburnham and Ashby, towers to the height of one thousand eight hundred and forty-seven feet. In the north part of the town are several lenticular hills with rounded outlines and arable to the summit. These remarkable accumulations of hill are also found in Rindge, Ashby and Gardner, but only a small proportion of Ashburnham falls within the area of this glacial drift. The soil is that common to the hill towns of Worcester County. When placed in comparison it is stubborn and rocky, yet generally arable and productive. The subsoil is clay retentive of moisture, and numerous springs gushing from the hill-sides are the perennial source of brooks and rivulets winding through the valleys, and supporting the crystal lakes nestled among the surrounding hills. The fauna and flora of the locality are topics discussed in the general history of the county.

Lunenburg, including Fitchburg and a part of Ashby, and Townsend, including a more considerable part of Ashby, were originally granted 1719, and within those grants numerous settlements were made in rapid succession. For several years the territory at the west of the new settlements was unbroken, and the future town of Ashburnham remained the border of the wilderness on the line of the settlements. In 1735 six grants of land, containing three thousand eight hundred and fifty acres, were located within the present township, and are minutely described in the "History of Ashburnham," recently published. Also in 1735, and while these individual grants were being located and surveyed, the General Court made grants of several townships to the surviving soldiers or the heirs of those deceased who served in the expedition to Canada in 1690. The companies from Dorchester, Ipswich, Rowley and other towns each received the grant of a township, and preserving at once the names of the towns in which the soldiers resided and the military service in which they had engaged, the new grants which were located in this vicinity were called Dorchester Canada (now Ashburnham), Ipswich Canada (now Winchendon), and Rowley Canada (now Rindge). The township of Dorchester Canada was surveyed in January, and the grant confirmed by the General Court June 1, 1736. For nearly twenty years and until the date of incorporation, the government of the township was proprietary. In accordance with the conditions imposed by the General Court, three sixty-thirds were reserved in equal shares for the first settled minister, for the ministry and for the support of public schools. The remainder was divided from time to time equally among the sixty proprietors, who individually made sale of their land to speculators and to settlers.

The early roads and mills and the first meeting-house were ordered and controlled by the proprietors, and by them the call was extended to the first settled minister. Between 1736 and 1744 considerable progress was made in the settlement. A saw-mill was built in 1738, and in 1739 or 1740 the first meeting-house was erected. The number of families residing in the township during these years is not known, and the names of only a few of the settlers have been preserved in the records. At the outbreak of the French and Indian War two houses were fortified, but before the close of the year 1744 the settlement was deserted. During the ensuing five years there were no meetings of the proprietors, and no family remained within the township.

In 1748 active hostilities between England and France were suspended, but during that and the following year parties of Indians, accompanied by French soldiers, continued to menace the exposed and poorly-defended line of the settlements. The northern part of Worcester County was wholly deserted, or continually in a state of alarm and anxiety. Not until 1750 did a feeling of security invite an occupancy of the frontiers. One by one the hardy pioneers founded homes in the town, and through the efforts and encouragement of the proprietors, the settlement of this town slowly increased until the return of peace opened the door to an increasing tide of immigration to the towns in this vicinity. It appears that during the first twenty years of effort and danger, dating from 1735, there were a considerable number of temporary residents in this town, and that among these, on account of the insecurity of the times, there were not over a half-dozen families who settled here previous to 1755 and became permanent inhabitants of the town.

Deacon Moses Foster, of Chelmsford, and James Colman, of Ipswich, cleared land and built houses in the northeast part of Dorchester Canada previous to the permanent renewal of the settlement. The sites of these early homes are now in Ashby, having been included within the limits of that town when incorporated in 1767. In times of expected danger they removed their families to Lunenburg, and prosecuted their labor in this town with many interruptions. About 1750 Deacon Foster removed to the centre of the town, and subsequently was an inn-holder many

years. He died October 17, 1785, aged ninety-four years. Mr. Colman was a prominent citizen, and was a member of the first Board of Selectmen. He continued to reside at the scene of his early labor in this town, but, after 1767, he was a citizen of Ashby, where he died August 15, 1773. Elisha Coolidge removed from Cambridge, 1752, and settled at Lane Village. He was a mill-wright, and a useful citizen. He died August 29, 1807, aged eighty-seven years. Jeremiah Foster, from Harvard, and a native of Ipswich, removed to this town with his family in 1753, and settled on the Gamaliel Hadley farm. He was a man of character, and influential in the new settlement. He died December 12, 1788, aged seventy-eight years. Next in order appear John Bates, Zimri Heywood and Benjamin Spaulding, an enterprising trio in the northeast part of the town, who were subsequently included in Ashby. Enos Jones, from Lunenburg, at the age of nineteen years, settled on a farm in the north part of the town, on the Rindge road, which still perpetuates a name that remains prominent in the annals of Ashburnham. Omitting mention of several families that removed from town after a few years' residence, to the settlement was added Jonathan Samson, a native of Middleborough, who removed from Harvard in 1762, and settled on the Merrick Whitney farm. He was a useful citizen, and late in life he removed to New Hampshire, where he died at an advanced age. Ebenezer Conant and Lieutenant Ebenezer Conant, Jr., from Concord, settled near Rice Pond in 1763. Both died in this town. Their descendants have won a merited distinction in several scholastic callings. In the midst of these arrivals several German families settled in the eastern part of the town, in a locality which still bears the familiar appellation of "Dutch Farms." Soon after their arrival in the colony, and while temporarily living near Boston, Henry Hole, Christian William Whiteman, Jacob Schoffe, Simon Rodamel, Peter Perry, John Rich and John Kiberling, in 1757, purchased one thousand acres of land, and early the following year removed hither, except Peter Perry, whose name does not again appear. At the same time, purchasing land of them and locating among them, came other Germans, Jacob Constantine, Jacob Selham, Andrew Windrow, Henry Stack and Jacob Barkhardst, while John Oberlock and Philip Vorback settled near the site of Cushing Academy. A few years later Jacob Wilker settled on the farm still owned by his descendants. These were born in Germany, and nearly all of them were married in their native land. They were educated, intelligent people, and in full sympathy with the settlement in religion and in hatred of tyranny. By assimilation and intermarriage, in language and manner of living they quickly became equal and common factors in the body politic, and in social relations. No traces of caste, or prejudice of race, appear in the records or the traditions of the town. In the second and subsequent generations the name of Hole was written Hall; Kiberling or Kiblinger became Kibling; the Oberlocks assumed the name of Locke; Rodamel was changed to Rodimon, and later to Dimond, while Windrow was Anglicized in Winter. After the Revolution, in which they manifested a conspicuous patriotism, members of the second generation of several of these families removed to Northern New Hampshire.

Among the non-resident proprietors, who were most active in forwarding the settlement, appear many names familiar in the annals of a former century. Timothy Tilestone, of Dorchester, was the first petitioner for the township and for several years a ruling spirit of the organization. He was ably supported by Judge Joseph Wilder, of Lancaster, the Sumners, of Milton, and by Benjamin Bellows and Edward Hartwell, of Lunenburg. The fortunes of the second or permanent settlement of the town were supported and encouraged by Richard and Caleb Dana and Henry Coolidge, of Cambridge, Colonel Oliver Wilder and the brothers, Joseph Jr., and Captain Caleb Wilder, of Lancaster, Jonathan Dwight and Hezekiah Barber, of Boston, Rev. John Swift, of Framingham, Hon. Isaac Stearns, of Billerica, and many others whose association with these primitive affairs of the town adorn the early pages of its history.

Ashburnham, hitherto known as Dorchester Canada, was incorporated February 22, 1765. The proprietors and inhabitants in a joint petition for incorporation, expressed a desire that the town be called Ashfield, but the General Court, with an accommodating regard for an assumed prerogative of the royal Governor in the act of incorporation, left a blank, in which Governor Bernard caused to be written the euphonious name of Ashburnham in honor of an English earl.

At the first town-meeting, holden March 25, 1765, William Whitcomb was chosen town clerk, and Deacon Samuel Fellows, Tristram Cheney, James Coleman, John Rich and Jonathan Gates selectmen. A long list of minor town offices were selected with unanimity, and certainly with a rare measure of impartiality, which bestowed an office upon nearly every citizen. From this date to the Revolution the town was prospered in its internal affairs and made considerable advance in population. The more prominent settlers who arrived immediately preceding and subsequent to the date of incorporation were: Jonathan Taylor, Jonathan Gates, Nathan Melvin, Stephen Ames, David Clark, John Conn, Samuel Salter, John Adams, William Benjamin, Joshua Billings, Amos Dickinson, Jacob Harris, Joseph Metcalf, Abijah Joslin, Samuel Nichols, Ephraim Stone, Oliver Stone, Caleb Ward, Samuel Wilder, John Willard, Jacob Willard, Oliver Weatherbee and Phinehas Weatherbee.

ECCLESIASTICAL.—Very early in the proceedings of the proprietors a committee was selected to locate a tract of land for a burial-ground and the site of the

future meeting-house. The committee promptly reported November 10, 1736, that the meeting-house lot, containing ten acres, had been located "on a hill 180 rods south of a great pond (Upper Naukeag), and has a very fair prospect." To the present time the original boundaries on the southwest and north sides have suffered no change, while on the east side a narrow strip has been severed from the public grounds and added to the farm now of Benjamin Cushing. The first meeting-house, erected 1739 or 1740, was not injured during the years the settlement was abandoned, and it silently invited occupancy twenty years before the organization of a church and the settlement of a minister. During the later years of this period several sums of money were appropriated for the support of preaching, but the amount raised for this purpose clearly indicates that the meeting-house was occupied only a small part of the time. A considerable number of the settlers were members of the church in Lunenburg, and there many of the children born in Dorchester Canada previous to 1760 were baptized. In 1759 a more liberal appropriation was made, and Mr. Jonathan Winchester was here during a considerable part of the year. A call was extended November 27, 1759, and he was ordained April 23, 1760. The same day a church was organized. The covenant bears the signature of Mr. Winchester and of twelve male residents of the settlement, six of whom were Germans. The membership during the first eight years was above fifty. The peaceful and successful ministry of Mr. Winchester was abruptly ended by his death, after a brief illness, November 26, 1767. Rev. Jonathan Winchester was of the fourth generation of his family in this country. He was born in Brookline, April 21, 1717, and was graduated at Harvard University, 1737. He was a son of Henry and Frances (White) Winchester, grandson of John and great-grandson of John, the emigrant ancestor. He was a teacher in his native town twenty years, and entering the ministry late in life, his first and only settlement was at Ashburnham. The superior merit and character of the man are clearly reflected in the records and traditions of the town. In him firmness was softened with mercy, and the ministerial austerity of his time was tempered with mildness of manner and gentleness of heart. With these qualities of mind and of heart he secured the willing love and confidence of his parish. He married, May 5, 1748, Sarah Crofts, of Brookline, where six of their ten children were born. Mrs. Winchester died in this town July 27, 1794.

The second minister was Rev. John Cushing, D.D., who was ordained November 2, 1768, and who conducted a successful ministry until his death, April 27, 1823. These many years of service were crowned with the rewards of faithful labor and a peaceful administration of parochial affairs. From the "History of Ashburnham" the following lines are borrowed:

In stature, Mr. Cushing was tall and portly; in bearing dignified and erect. He moved with precision and with the incisive mark of strength and vigor. As the infirmity of age grew upon him, his step was slower but never faltering; his form became slightly bowed but lost none of its original dignity and commanding presence. His mild blue eye and the serenity of his countenance were undimmed even when his whitened and flowing locks were counting the increasing furrows of age in his face.

As a preacher he adhered to the fundamental doctrines of his creed and supported them with frequent quotation from the Scriptures. The plan of his discourse was lucid and his methods of reasoning direct and logical. If he was tenacious in the use of set terms and forms of speech, he invariably applied them with aptness and precision. He did not rely on the abundance of words or the exhibition of emotion, but upon the weight and sequence of the central truths which formed the theme of his discourse. His voice was clear, strong and pleasing. He read his sermons closely and without gesture. In delivery he was moderate, earnest and impressive.

He was pre-eminently a minister of the olden time. His parish was his field of labor and no one was neglected. His charge was his constant thought and duty, and while he watched for the fruit of his labor, he toiled on with unfailing hope and courage. Even in the decline of life and under the weight of nearly eighty years his service was acceptable and his parish united in their love and respect for their venerable teacher. At every fireside the serenity of his countenance, the wisdom of his speech and the purity of his life and example were continually deepening the impression and enforcing the influences of his public ministrations.

It seems that the affection of his parish increased as he paled and grew feeble in their service. And when death came and stilled the pulsations of his warm and generous heart, his people paid a fitting tribute in the lines of sorrow engraved on every countenance. From that hour the voice of tradition began to assert that his genius was solid; his understanding clear; his judgment strong; his memory faithful; his emotions cool and restrained, yet his sympathies tender and his affections warm; that his resolution and perseverance were unusual, that he was faithful to every trust and that his heart was so honest, his friendship so sincere and his tongue under such control, that his smile was a benediction and his speech a sermon.

Rev. John Cushing, D.D. (Harvard University, 1764), was born in Shrewsbury, August 22, 1744. He was the son of Rev. Job and Mary (Prentice) Cushing, and a lineal descendent of the Cushing family of Hingham. He received the degree of Doctor of Divinity from Harvard University, 1822. He married, September 28, 1769, Sarah Parkman, daughter of Rev. Ebenezer and Hannah (Breck) Parkman, of Westborough, who died in this town March 12, 1825. Until near the close of the pastorate of Rev. Dr. Cushing the churches, not only in this vicinity, but in a more extended circle, were closely allied in doctrinal views and declarations of covenant. In many places there were dissenters and here and there independent churches, but a large majority assented to the doctrines of the "standing order." In the midst of more diversity of creed during the past half-century or more, the first church in Ashburnham has remained in full relations with the orthodox or Trinitarian Congregationalists. Since the death of Mr. Cushing nine ministers have been installed over the church, and six have supplied about thirty years. The ministry has been continuous, and no serious contention has arisen between the pastor and the people. In presenting the names of these many pastors the limits of this sketch will preclude extended notices.

The third minister was Rev. George Perkins, son of Dr. Elisha and Sarah (Douglas) Perkins, born in Plainfield, Conn., October 19, 1783; ordained at Ashburnham, February 25, 1824; dismissed at his re-

quest July 3, 1832; died at Norwich, Conn., September 15, 1852. Rev. George Goodyear, born in Hamden, Conn., December 9, 1801, son of Simeon and Hannah (Beadsley) Goodyear; installed October 10, 1832; dismissed November 16, 1841; died at Temple, N. H., November 18, 1884. Rev. Edward Jennison, son of William and Phebe (Field) Jennison, born in Walpole, N. H., August 26, 1805; installed May 12, 1842; dismissed May 12, 1846; died in Conway, Mass. Rev. Elnathan Davis, son of Ethan and Sarah (Hubbard) Davis, born in Holden, Mass., August 19, 1807; installed September 16, 1846; dismissed May 21, 1851; died April 9, 1881. Rev. Frederick A. Fiske, son of Rev. Elisha and Margaret (Shepard) Fiske, born in Wrentham, Mass., April 15, 1816; installed December 30, 1851; dismissed April 17, 1854; died at North Attleborough, Mass., December 15, 1878. Rev. Elbridge G. Little, son of Joseph and Rebecca (Webster) Little, born in Hampstead, N. H., November 11, 1817; installed August 22, 1855; dismissed May 13, 1857; died at Wesley, Mass., December 29, 1869. Rev. Thomas Boutelle, son of James and Abigail (Fairbanks) Boutelle, born in Leominster, Mass., February 1, 1805; supplied from the spring of 1857 to January, 1863; died in Fitchburg, Mass., November 28, 1866. Rev. George E. Fisher, son of Rev. George and Mary (Fiske) Fisher, born in Harvard, Mass., January 22, 1823; installed May 21, 1863; dismissed September 2, 1867. Rev. Moody A. Stevens, son of David and Elizabeth (Ryder) Stevens, born in Bedford, N. H., February 7, 1828; supplied from 1867 to 1870. Rev. Leonard S. Parker, son of William and Martha (Tenney) Parker, born in Dunbarton, N. H., December 6, 1812; supplied 1870 to 1876. Rev. Daniel E. Adams, son of Rev. Darwin and Catherine (Smith) Adams, born in Hollis, N. H., June 22, 1832; supplied from July 16, 1876, to July 5, 1885. The past three years has been an era of temporary supplies.

At intervals between the pastorates, Rev. Josiah D. Crosby has supplied a longer time than several of the pastors named. During the last forty years of a useful life, with brief interruptions, he resided in this town. He was a son of Fitch and Rebecca (Davis) Crosby, and was born in Ashburnham, March 1, 1807. He died June 8, 1888. The second meeting-house, built 1791, was located on the Old Common, and near the site of its primitive predecessor. The third and present church edifice was erected in Central Village, 1833, and dedicated February 19, 1834.

In the autumn of 1793 Rev. Jonathan Hill preached the first Methodist sermon in this town, and a society was gathered the following year. Rev. Lorenzo Dow, Rev. John Broadhead, a presiding elder, and Bishops Whatcoat and Asbury are included among the early preachers at the house of Silas Willard, Esq. In 1831 the Ashburnham and Westminster Societies were united, and constituted a station. A meeting-house was built on Main Street, and dedicated July 4, 1832. This building is now owned and occupied by the Catholic Society. The present commodious edifice was built 1870. Previous to 1832 sixty-five preachers were assigned to the station to which the Methodist Church in Ashburnham belonged, and since that date thirty-six appointments have been made by the Conference. From the first the organization has been perpetual, and a vigorous society has been maintained.

To accommodate families in that portion of the town, a meeting-house was erected at North Ashburnhan, 1842, and a church with Evangelical proclivities was embodied February 21, 1843. At no time has the membership been large, and public ministrations have not been continuously sustained. In 1860 the church was disbanded, and the "Second Congregational Church of Ashburnham," with an amended creed, was organized.

The Catholics of Ashburnham held services in the town hall several years, and since 1871 have owned and occupied the edifice erected by the Methodists in 1832. The church is under the spiritual direction of Father John Conway, who is also in charge of the church in Winchendon.

Military History.—That the inhabitants of a typical New England town were patriotic during the Revolution can safely be assumed; that they met the trials of the times with heroism and uncomplainingly assented to the severest exactions of their country can be asserted without fear of contradiction. The Revolutionary sketches of towns which crowd the pages of the *Gazetteer* laboriously demonstrate that which never has been denied. Many of these local histories of the Revolution written upon the suggested plan are interchangeable. Each possesses so many features common, to them all that the conventional sketch, with a change of local terms, with equal truth would apply to any other town. The repeated requisition of the government for men, for money, for food and for clothing were demands alike upon all the towns of the infant Commonwealth, and quotas were distributed with equal impartiality. The volume varied with the population of the several towns, yet the demand was applicable to them all. The scene and the players were new in every town, yet the drama was universal and everywhere the same.

The population of Ashburnham in 1776 was five hundred and fifty-one. On account of the immigration from the older and more exposed towns near the seaboard, there was a considerable increase in population in this and other towns in this vicinity during the war, yet probably the number of inhabitants did not exceed eight hundred during the years of the Revolution. The records of Ashburnham do not contain the names of any who were in the army. The record of service presented in the following paragraphs has been compiled from the archives of the State, from papers filed in the Department of Pensions and from

papers in the possession of societies and individuals. As early as 1773 the under-current of public sentiment found expression in a warrant for a town-meeting, "To see if the town will consider the general grievances that are laid upon us by acts of Parliament, and disposing of our monies without our consent." Whatever debate ensued, there is no record of a vote at this time; but in July, 1774, the town was again assembled, and it was then voted, "that the Covenant sent from Boston be read, and accordingly it was read; then a motion was made for an alteration and that Doctor Senter, George Dana, Elisha Coolidge, Samuel Nichols and Jonathan Samson be a committee to alter said Covenant, and adjourned said meeting for half an hour, and then said Covenant was altered to the acceptance of the town. Voted that Elisha Coolidge and Samuel Nichols be a committee to keep the Covenant after it is signed." The covenant which was sent to all the towns for signature was a solemn pledge that those who subscribed would abstain from the purchase and use of specified articles of British merchandise, and that at the risk of life and fortune they would resist the officers holding commissions under the oppressive acts of Parliament. About this time the town was represented by Jonathan Taylor at the memorable Worcester Convention, which recommended the several towns within its influence to immediately appoint military officers, to organize minute-men, to procure arms and ammunition, and to provide for any emergency that may arise. In September of this year, and in harmony with the vote of the surrounding towns, it was voted to indemnify the officers in the event they were harmed for not returning a list of jurors, as required by Parliament. At the same meeting Jonathan Taylor was chosen a representative to the Provincial Congress, which assembled October 11th, at Concord.

Following the recommendations of the Worcester Convention the town, September 3, 1774, voted "to buy half a hundred of powder, one hundred of lead and ten dozen of flints as a town stock." At this meeting Abijah Joslin was chosen captain, Deliverance Davis lieutenant and Ebenezer Conant, Jr., ensign, of the minute-men. A committee of Safety and Correspondence was also chosen; they were Samuel Nichols, Jonathan Samson, Deliverance Davis, Abijah Joslin and Jonathan Taylor. With these preparations for the future, the town awaits the events of another and a more eventful year. Early the following spring Deliverance Davis and Jonathan Gates were captains of the companies in this town, but there is no record of their election or appointment. A prominent, and subsequently an honored, citizen is not named in these initial proceedings, and there is a tradition that Samuel Wilder was a little tardy in espousing the cause of American independence, and that he was waited upon by a self-constituted committee. His hesitation, if any existed, was of brief duration, and his subsequent opinions and conduct were approved by his townsmen, who frequently elected him to office during the war and many succeeding years. Swiftly following these measures of preparation, the sudden intelligence that a detachment of British troops had left Boston and were marching inland, was brought to Ashburnham in the afternoon of April 19th, and an alarm was immediately sounded. A company of thirty-eight men quickly assembled, and marched that afternoon under the command of Captain Jonathan Gates. Other men from the remoter parts of the town continued to assemble on the old Common, and with hasty preparations awaited the dawn of another day. In the gray of the morning a second company, containing thirty-three men, and commanded by Captain Deliverance Davis, hastened forward to scenes of anticipated danger. These companies, in connection with many others simultaneously summoned to the field, marched to Cambridge and remained there with the gathering army about two weeks, and until they were discharged. When these companies were disbanded, nineteen by re-enlistment continued with the army and the remainder returned to their homes. The rolls of the two companies contain the following names:

Jonathan Gates, captain; Amos Dickinson, lieutenant; Ezra Atherton, lieutenant; George Dana, William Wilder, Joseph Metcalf and Ebenezer Burgess, sergeants; Daniel Hobart, Peter Joslin and Francis Lane, corporals; Joseph Stone, drummer; Amos Lawrence, Phinehas Wetherbee, Moses Russell, Nathaniel Parker, Henry Gates, Samuel Joslin, Jonathan W. Smith, David Robinson, Jacob Kiblinger, Henry Hall, Amos Kendall, Henry Winchester, Samuel Willard, Philip Locke, Aaron Samson, Samuel Salter, John Gates, Jonathan Winchester, Daniel Edson, Joseph Wilder, Nathaniel Harris, John Whitney, Joshua Holt, Ebenezer Wood, Philip Winter, David Clark, Jr. Deliverance Davis, captain; Ebenezer Conant, Jr., lieutenant; John Conn, lieutenant; Oliver Stone, John Adams and Samuel Cutting, sergeants; Shubael Hobart, Timothy Wood and Oliver Whitcomb, corporals; Elijah Edson, drummer; Isaac Merriam, Oliver Willard, Uriah Holt, William Whitcomb, William Benjamin, Jacob Constantine, Caleb Ward, Enos Jones, Nathan Melvin, Nathaniel Hastings, Samuel Mason, Ephraim Wetherbee, David Clark, Isaac Blodgett, Joshua Hemenway, John Hall, John Kiblinger, John Putnam, Jacob Willard, Joshua Holden, Jonathan Taylor, Jonathan Taylor, Jr., Joseph Perry.

In the organization of an army from the companies at Cambridge, a company was recruited from the men from this vicinity. They were under the command of Capt. David Wilder in Col. Whitcomb's regiment. In this company Jonathan Gates was lieutenant, Francis Lane and Peter Joslin were sergeants. The other men from Ashburnham were:

Joshua Holt, Jacob Kiblinger, Philip Locke, David Robinson, Samuel Salter, Aaron Samson, Henry Hall, Henry Winchester, Samuel Willard, John Whitney, Ebenezer Wood, Philip Winter, David Clark, Jr., Joshua Hemenway, John Farmer, Joseph Smith, Jr., Jonathan Gates, Jr., Isaac Blodgett, John Locke, Jacob Winter, Daniel Edson.

Other Ashburnham men who enlisted at this time were David Clark, Uriah Holt and Thomas Dutton. These men participated in the siege of Boston, and remained in the service until the close of the year. It is probable that the whole of Colonel Whitcomb's regiment was not called into action at the battle of Bunker Hill, but it is certain that Captain Wilder's company of that regiment was warmly engaged on

that memorable day. Clark, Holt and Dutton were also in the battle, and several others who subsequently removed to Ashburnham, but at the time were residents of other towns, shared the danger and glory of the engagement. Upon the discharge of Captain Wilder's company, after a service of eight months, there was a call for men to serve a short term, while recruits for a longer term of service were being enlisted. Among these recruits appear the names of Jonathan Gates, Jr., Jonathan Samson, Jr., Joseph Metcalf, his son, Ezekiel Shattuck Metcalf, and David Merriam. At the annual March meeting, 1776, Jonathan Taylor, John Willard, Jonathan Samson, Abijah Joslin and Ebenezer Conant, Jr., were chosen a Committee of Correspondence, The selectmen who were active agents in the prosecution of the war were William Whitcomb, John Kiblinger and Oliver Willard. In May, 1776, the General Court adopted an order calling upon the people to express an opinion concerning a formal separation from Great Britain. The citizens of this town were promptly assembled in town-meeting. The article in the warrant and the vote of the town are transcribed from the records:

Article 2. To see if the Inhabitants of said Town are willing to stand by the Honorable Congress in declaring the Colonies Independent of the Kingdom of Great Britain with their lives and fortunes to Support them in the measure.

June 28, 1776. Pursuant to the above warrant the town being met made choice of Mr. Elisha Coolidge, moderator.

Voted. We the Inhabitants of the Town of Ashburnham, in Town meeting assembled being sensible of the disadvantage of having any further connections with the Kingdom of Great Britain and are willing to break off all connections with them and it is our Resolution that if the Honorable Congress shall declare the Colonies Independent of the Kingdom of Great Britain that we the said Inhabitants will stand by them with our lives and fortunes to support them in the measure.

The foregoing motion being put was voted unanimously.

In due course of time the Declaration of Independence, which was foreshadowed by similar votes in other towns, was received in printed form by the patriots of this town. It was formally read from the pulpit by Rev. Dr. Cushing, and subsequently transcribed upon the records of the town. Other men who were called into the service during the year 1776 were Ebenezer Bennett Davis, Daniel Putnam, Uriah Holt, Thomas Ross, David Taylor, John Kiblinger, Jacob Kiblinger, John Hall, William Ward, Jacob Rodiman, David Stedman, Nicholas Whiteman, Peter Joslin, Philip Winter, Daniel Hobart. Of these, Peter Joslin died while returning from the army, Philip Winter died in the service, and Daniel Hobart was killed at the battle of White Plains, October 28, 1776. For the year 1777, the selectmen were Samuel Wilder, John Willard, Jonathan Samson, Jonathan Taylor and Abijah Joslin; and the Committee of Safety and Correspondence were Samuel Foster, William Wilder, Enos Jones, Joseph Metcalf and Francis Lane. In the rolls of the Massachusetts Regiment, raised for the defence of Rhode Island, appear the names of John Kiblinger, Jacob Rodiman, Samuel Metcalf, Jonathan Coolidge and William Ward.

To avoid the inconvenience experienced during the preceding two years, on account of the short term of enlistment, and to create a more stable and a better disciplined army, orders were given early in 1777 to establish the regiments on the Continental plan, and recruit their decimated ranks with men, enlisted for three years, or during the war. For this purpose the quota of Ashburnham was sixteen, and an earnest effort was made to supply the required number. Thirteen men enlisted and were mustered into service May 26, 1777, for three years, as follows: Ebenezer Bennett Davis, David Clark, David Clark, Jr., John Winter, Thomas Pratt, Samuel Mason, John White, Paul Sawyer, Jacob Lock, Thomas Ross, Joshua Holden, Timothy Johnson and Adam Rodiman.

The town hired Francis Lee, of Pepperell, Andrew Foster, of Andover, and Josiah Fessenden, of Boston, to complete the quota. The summer of this year was a season of unusual excitement and alarm. The intelligence of the loss of Crown Point and Ticonderoga, and the uninterrupted advance of General Burgoyne created a widespread sentiment of the most painful apprehension. There was an imperative call for troops, and immediately followed the startling tidings that the enemy were invading Vermont and threatening the western counties of Massachusetts. The town was promptly in arms, and Captain Jonathan Gates with a company of men marched to Charlemont. Other companies from the neighboring towns had manifested equal diligence and were in the immediate vicinity. In the mean time the American army opposing Burgoyne had retreated into New York, and the theatre of war had been removed. These hastily-formed companies were then dismissed, and returned home after an absence of three weeks. It was an unorganized expedition, and no rolls of the companies are found. Scarcely had these men returned to their homes and the labor of their fields, before a renewed and equally imperative call was heard. An engagement was imminent, and the militia was ordered to the support of the American army. Again Captain Gates called out his company, and, hurriedly equipped, they marched again to Charlemont and to Williamstown, and thence to Bennington, Vt., arriving there the second day after the victory of General Stark. Thence they marched to Fort Edward, N. Y.; here a part of them remained until discharged, while others were engaged in the battles of Stillwater and Saratoga.

The Ashburnham company and the Fitchburg company, and possibly others from this vicinity in this service, had no regimental organization, and were attached to a New Hampshire regiment, commanded by Col. Bellows, of Walpole; but the rolls of the companies do not appear in the roster of that regi-

ment. Only the names of a few of the Ashburnham soldiers of this company, found in miscellaneous papers and records, can be stated. They are—John Adams, David Merriam, William Ward, Jonathan Samson, Jr., and in all about thirty. In August of this year there was a draft, and David Chaffin being drawn, was assigned to Col. Cushing's regiment, in the army of Gen. Gates. He was discharged on account of sickness, three months later; and of the soldiers in the Continental Army, Jacob Locke and Samuel Mason died in the autumn of this year.

In the year 1778 William Ward, Jonathan Benjamin and Benjamin Clark were among the nine months' levies for the Continental Army, and in the service at Boston appear the familiar names of Jonathan Samson, Jr., John Hall, Nicholas Whiteman, David Stedman and William Ward, while Ezekiel Shuttuck Metcalf, John Chamberlain, David Chaffin and Simon Rodiman were among the recruits for the expedition to Rhode Island. The theatre of the war having been transferred to the Middle and Southern States, there were no subsequent calls upon the militia or minute-men to meet sudden emergencies, but the demand for men to recruit the decimated ranks of the Continental Army was often renewed. In this service the subsequent enlistments were: Ebenezer Conant, Jr., Jacob Constantine, John Kiblinger, David Bond, William Ward, Samuel Metcalf, David Chaffin, Edward Whitmore, Elijah Mason, Simeon Rodiman, Jacob Rodiman, Isaac Merriam, Reuben Rice, Andrew Winter, Jr., Phinehas Hemenway, Jonathan Merriam, David Clark, Jr., Jonas Benjamin, John Coolidge, James Legget, Peter Rodiman and William Ward. This was the seventh enlistment of William Ward. An increasing burden of taxation attended the progress of the war, and requisitions for money for beef and for clothing were often renewed, making heavy drafts upon the impoverished resources of the people of Ashburnham. Long before the close of the war they were compelled to meet their pressing liabilities with pledges of future labor and the ungarnered fruits of their toil. In a season of financial extremity, in 1781, the town gave a vivid expression of failing resources in the following entreaty for recruits:

> Voted that each man that will engage to serve in the army for three years shall have eighteen head of three years' old cattle given him when his time is out, and if he be discharged in two years then said cattle are to be but two years old, or if he serve but one year they are to be but one year old, all to be of middling size.

In other words, the soldier was to receive a bounty of eighteen calves, and the town was to keep them of middling size as long as the soldier remained in the service.

Another vote about this time also reflects the poverty and distress of the time. In the dignified expression of a town-meeting, the citizens of Ashburnham declared their inability to compensate "Jonathan Samson and Mrs. Hemenway for sending two small deer to the army." The vote was negative, but in the record of a generous deed the town, perhaps unconsciously, extended to the generous donors a more liberal reward. Often during the Revolution the soldier in the distant army was cheered by the presence of a father, a brother or a son, bearing from the scanty store of his home some articles of food or clothing. All were patriots, and whether at home or in the army, they labored for and served their country. Equally meritorious and contributary to the achievements of the Revolution were the arduous service of the soldier in the field and the self-denial and accumulating burden of the patriot citizen in his home experience.

For the information and profit of the present and future generations, a large majority of towns, following the commendable example of a few, will eventually give a full and authentic account of the names and the service of its patriotic citizens who were enrolled in the War of the Rebellion. It is a labor due to the surviving comrades and to the memory of the heroic dead. The limits of a chapter of local history will admit little more than a summary of numbers, or at best the lists of names and the duration of service. These skeletons, however accurate in outline form, are without the flesh and blood of personal exploit and the breath of individual experience and suffering. That the inhabitants of Ashburnham nobly performed their part in crushing the Rebellion and in preserving the Union is seen in the following aggregates: The whole number of enlistments credited to the quota of the town, including thirty re-enlistments of veterans, is two hundred and forty-three. In addition to this patriotic record, about thirty residents of Ashburnham enlisted on the quota and are counted among the soldiers of other towns.

In the spring of 1861 the Ashburnham Light Infantry, under the command of Capt. Addison A. Walker, was a well-organized company and in a good state of discipline. Amidst the echoes of falling Sumter came to the loyal North the proclamation of President Lincoln for seventy-five thousand men. The service of the company was promptly tendered. But it was the policy of Governor Andrew to reserve many of the disciplined companies to be distributed among the regiments subsequently recruited. This reservation of the Ashburnham company, complimentary to its discipline, produced a considerable measure of discontent and embarrassment, and several of the men, impatient of delay, enlisted into organizations that were already under orders. The ranks of the company, however, were promptly filled, and an excellent discipline was maintained. With the organization of the Twenty-first Regiment the expected summons was received. This company, subsequently known as Company G, containing forty men from this town, entered Camp Lincoln, at Worcester, July 19th, and with the regiment was ordered to the front

August 23, 1861. In the mean time there had been fourteen enlistments from this town into the regiments previously organized. Immediately after, twenty men joined the Twenty-fifth Regiment, and nine men, who served in miscellaneous organizations, completed the patriotic record of the year.

In 1862 the number of enlistments was fifty-seven. Of these, five were assigned to the Thirty-fourth Regiment; twenty-three to the Thirty-sixth Regiment, twenty-seven to the Fifty-third Regiment, and two recruits joined the Twenty-first Regiment. To this date every call for men had been promptly met, and at times the town was credited with several men in excess of its quota. These repeated calls had borne hardly upon the community, and the number of men of suitable age was greatly depleted. Everywhere the quota of 1863 remained unfilled, and the government, to fill the decimated ranks of the regiments in the field, resorted to conscription. Sixty-four men from this town were drafted. Of these, some were exempted on account of disability, others furnished substitutes or paid commutation, while a small minority—fourteen, including substitutes and five recruits hired by the town—entered the service and were assigned to the regiments already in the field.

From January 1, 1864, to the close of the war, fifty-three enlistments and thirty re-enlistments of veterans were credited to the quota of the town. About one-fourth of these were strangers to the town, who were ready and willing to accept the proffered bounty, and with an equal alacrity they deserted at the first opportunity. In this constant stream of men to the front, and in the gallant service of her sons, the loyal impulse and the firm patriotism of the town are clearly revealed. By the voice of the town, all needed sums of money were promptly raised and a generous provision was made for the families of the soldier. The Aid Society, sustained by the women of Ashburnham, and the comprehensive liberality of the citizens, are apparent features of a noble record. In addition to several natives of the town who, at the time, were residing elsewhere, eleven residents of Ashburnham were commissioned officers in the service. Lieutenant-Colonel Joseph P. Rice was commissioned a captain at the organization of the Twenty-first Regiment and assigned to the command of Company H. In February following he was promoted major, and, in May, lieutenant-colonel. He was killed at the battle of Chantilly September 1, 1862. At the organization of the Fifty-third Regiment, Lieutenant-Colonel George H. Barrett was commissioned captain of Company I, and promoted lieutenant-colonel. He was in command of the regiment on its departure from the State, and, with the regiment, was mustered out September 3, 1863. Captain Addison A. Walker, commissioned captain at the organization of the Twenty-first Regiment and assigned to the command of Company G; resigned May 13, 1862. Captain Samuel A. Taylor was promoted from lieutenant to captain May 28, 1862; resigned January 13, 1863. He was subsequently a lieutenant in the Fourth Heavy Artillery. Captain Asahel Wheeler, promoted from lieutenant to captain January 14, 1863; resigned April 25, 1863. Subsequently he was commissioned captain in the Sixty-first Regiment. Lieutenant Alonzo P. Davis, commissioned first lieutenant at the organization of the Twenty-first Regiment; resigned in January, 1862. Lieutenant Charles H. Parker, commissioned lieutenant May 28, 1862; resigned March 2, 1863. Lieutenant George E. Davis, commissioned first lieutenant April 26, 1863; honorably discharged August 30, 1864. Lieutenant Joseph H. Whitney, commissioned lieutenant October 30, 1862; resigned February 23, 1863. The seven last named were assigned to Company G, Twenty-first Regiment. Lieutenant Charles H. Heald was commissioned lieutenant July 3, 1865, and was honorably discharged with the Second Regiment July 14, 1865. Lieutenant Charles W. Whitney, commissioned lieutenant November 13, 1864; honorably discharged with the Thirty-sixth Regiment June 8, 1865.

Beginning with the close of the Revolution and continuing a little more than fifty years, a company of militia, ordered and maintained by the laws of the Commonwealth, regularly appeared at the annual trainings and musters. Until a general revision of the militia laws, about 1835, this service of able-bodied citizens of suitable age was compulsory. At a very early date the citizens of Ashburnham gave evidence of dissatisfaction with this feeble expression of a military spirit. In response to an earnest petition, in June, 1791, the General Court adopted the following resolve:

Resolved, That His Excellency the Governor be and he is hereby empowered and requested to issue orders for forming a Company of Light Infantry in the town of Ashburnham, provided they do not reduce the standing company of militia in said town to a less number than sixty privates of the train band; the officers of said Light Infantry company to be appointed and commissioned in the same way and manner as is provided by law for the appointing and commissioning other military officers. Said company when so formed to be under the command of the Colonel or commanding officer of the fourth regiment of the second brigade in said division.

The organization of the Ashburnham Light Infantry immediately ensued, and the first officers—Joseph Jewett, captain; Caleb Kendall, lieutenant; and Charles Hastings, ensign—were commissioned July 13, 1791. From this date the company was vigorously maintained with full ranks and manifested a genuine military enthusiasm, until the War of the Rebellion, with the exception of five or six years, about 1850. In 1866 the organization was revived, and, complying, with the general militia laws of the Commonwealth, it constitutes a company of Massachusetts Volunteer Militia, and at present forms a part of the Sixth Regiment. In the War of 1812 the Ashburnham Light Infantry was ordered into the service and was stationed at South Boston and Dorchester fifty-one days. They were discharged Octo-

ber 30, 1814. At this time the officers were Ivers Jewett, captain; Timothy Crehore, lieutenant; and Walter R. Adams, ensign. There were forty-eight non-commissioned officers and privates.

EDUCATIONAL.—"Voted to Keep a School and voted Eight Pounds for y^e^ School and Voted for y^t^ y^e^ School Should be a moveing School, voted to leave it to y^e^ Selectmen to make y^e^ Quarters where y^e^ school shall be Cept and voted it bee a free School." These votes, adopted in 1767, are the beginning of the educational history of Ashburnham. From this date public schools have been maintained, the orthography of the town clerk has been improved and general results have kept pace with the progress of the age. Seen in the light of the present, the sums raised for school purposes in the early history of the town were limited, but they were not less than the appropriations made in other towns of equal ability. With the exception of the years 1768, 1769 and 1776, in which no appropriation was made for this purpose, the town raised twelve pounds annually until and including 1777. During the later years of the Revolution a large nominal sum in depreciated currency was appropriated, and for several succeeding years the annual appropriation was fifty pounds. The substantial and increasing sums raised for school purposes in this town are given in each decade: 1800, $300; 1810, $400; 1820, $500; 1830, $500; 1840, $900; 1850, $1400; 1860, $1700; 1870, $3000; 1880 and to 1888, $3000. From 1872 to 1875, $3500 was appropriated. For a considerable number of years the town was divided into three school districts, and while under this arrangement, a school was maintained at the centre of the town, another at the Dutch Farms, in the east part, and the third in the south part of the town; there were no school-houses until immediately after the Revolution. At the close of the past century there were nine districts, and in each a comfortable school-house. In 1829 the Tenth District, including Lane Village, was organized mainly from the old Seventh District, and in 1850, by a division of the First District, the Eleventh District was created.

In other respects the boundaries of the several school districts, with a few temporary and minor changes, have been preserved to the present time. The early settlers of this town divided themselves into communities of convenient proportions many years before the State vested school districts with corporate powers, and a committee "to visit and inspect the schools" was annually chosen by the town several years before a committee of supervision was authorized by the laws of the State. Beyond the slender support of the town the public schools in their infancy were spontaneous in the several neighborhoods, and were not the creation of public legislation.

The school system originated with the people, and the perfection of our school system rests in the fact that it has not been creative, but has seized and solidified with the authority of law the established methods created and approved by the people. From the first the schools have been in advance of the statutes. It is true that law has given uniformity and symmetry to our school system, but all its features originated with and were first approved by the communities which make up the people of the Commonwealth. In 1878, after considerable discussion, the school district organization was abolished, and the prudential affairs of the schools were referred to the Committee of Supervision.

During the past twenty years the town has maintained a high school. The early terms were held in the basement of the armory and in the school-houses in the central village. Commencing with the inauguration of Cushing Academy in 1875, a department of that well-ordered institution has given the town a permanent and excellent high school, and for its support an annual appropriation is made.

Cushing Academy bears the name of its founder. Thomas Parkman Cushing, a native of Ashburnham and a son of Rev. Dr. John Cushing, through the active and later years of his life was a merchant and resident of Boston, where he died November 23, 1854. Immediately after his decease, and in accordance with the provisions of his will, the Cushing Academy Fund was safely invested.

At the time of the organization of the academy corporation, in 1865, the sum of ninety-six thousand dollars was transferred to the corporation, which was left at interest until the accumulation was sufficient to meet the cost of a school edifice, and leave the principal unimpaired.

In the mean time George C. Winchester presented the corporation an ample and eligible lot for the site of the academy. Mr. Winchester is a great-grandson of Rev. Jonathan Winchester, the first minister of this town. The grounds accommodating the institution received the name of "Winchester Square," perpetuating at once, through the liberality of their descendants, the memory and names of the first and second ministers of Ashburnham.

The present commodious and attractive building was promptly erected, and dedicated September 7, 1875. The cost of the building, including furniture, was $92,611.75, and the permanent fund in round numbers is one hundred and twenty thousand dollars, of which the income is annually appropriated for the support of the school.

A spacious dwelling, known as "Jewett Hall," and occupied by teachers and pupils, was presented to the corporation by Charles Hastings, and the Crosby house, on Central Street, was presented by Rev. Josiah D. Crosby, who was the first clerk of the board of trustees, and who manifested an unwearied interest in the work and mission of the school. From the first this institution has been eminently successful, and under its present able management it commands

confidence at home and a lfberal support from the surrounding towns.

Edwin Pierce, A.M., was the first principal. He remained in charge four years, 1875–79. He was a son of Dana and Diedema (Paul) Pierce, and was born at Barnard, Vt., June 25, 1826; graduated at Dartmouth College, 1852. He was formerly professor of Latin and Greek at Yellow-Stone Spring College, Iowa, and principal of other educational institutions.

Professor James E. Vose succeeded Mr. Pierce, and remained in charge until his death, May 30, 1887. He was a son of Edward L. and Aurelia (Wilson) Vose, and was born at Antrim, N. H., July 18, 1836. Previous to his labor here he had secured a merited reputation, and had been in charge of several academies of New Hampshire.

H. S. Cowell, A.M., was appointed principal in June, 1887. He is a son of Rev. David B. and Christiana B. (Coffin) Cowell, and was born at West Lebanon, Me., October 10, 1855; graduated at Bates College, 1875. He was principal of Clinton Grove Seminary, Weare, N. H., 1875–76; of Francestown (N. H.) Academy, 1876–83; of Arms Academy, Shelburne Falls, Mass., 1883–87.

The first president of the board of trustees was Rev. Francis Wayland, D.D., who died 1865, and was succeeded by Hon. Alexander H. Bullock, who resigned 1876, when Abraham T. Lowe, M.D., was appointed. He died July 4, 1888, and his successor has not been chosen. Hon. Amasa Norcross, the only remaining original member of the board, is vice-president. Hon. Ebenezer Torrey, Hon. Ohio Whitney and George F. Stevens, Esq., have filled the office of treasurer. Mr. Stevens died November 15, 1887, and his successor, George W. Eddy, was appointed November 30, 1887. Rev. Josiah D. Crosby was clerk of the board from 1865 to '76; upon his resignation he was succeeded by Colonel George H. Barrett, who has been continued in office to the present time.

Mechanical Industries.—There are fifty mill-sites in this town where at some time the water-power has been utilized for mechanical purposes. This unusual number of mill privileges found in a single town have invited the farmers of Ashburnham from the cultivation of a rugged soil to engage in a variety of manufactures. Succeeding the primitive saw-mills, which were numerous in this town and whose only product was boards and other coarse lumber, there have been in times past a large number of small shops in which has been manufactured a great variety of wares. Thread spools, friction matches, knife trays and many other articles of wood-ware have been made here. Tubs and pails were formerly manufactured at several mills and still are made in considerable quantities by George G. Rockwood at the centre of the town. From the first, and independent of the manufactures named, the leading industry of this town, both past and present, is the manufacture of chairs. In this respect it is the second town in New England. This business, either in the production of chair stock or finished chairs, has been conducted in all parts of the town; but experiencing the fortunes of the times, the industry has become centralized in a few large establishments. Beginning with 1842, when Charles Winchester purchased the mill and business of Philip R. Merriam, the growth of the business in this town was rapid. In 1848 the firm of Charles & George C. Winchester was formed. They conducted an extensive business and erected new mills and many dwelling-houses. In 1870, when the firm was dissolved by the retirement of the senior brother, they were giving employment to two hundred men. George C. Winchester was succeeded in 1880 by the Boston Chair Manufacturing Company with a capital stock of $150,000. The company own and occupy for manufacturing purposes thirty-four buildings, presenting a total flooring of 300,000 feet, or about seven acres. The number of men employed is about 200, beside affording employment to an equal number of persons in filling the cane chairs. The number of chairs annually made and sold approaches one-half a million.

There have been many firms and individuals engaged in this manufacture in South Ashburnham. The more familiar names are Burgess, Glazier, May, Matthews, Flint, Merriam, Allen, and at present Orange Whitney, Benjamin E. Wetherbee, Irving E. Platts and Luther B. Adams. An extensive plant is owned and conducted by Wilbur F. Whitney, who has been engaged in the manufacture in this town since 1865. His factory was burned six years ago, and immediately he purchased land at Ashburnham Depot and erected the capacious buildings now occupied by him in the business. The two main factories are respectively 172 by 40 and 150 by 40 feet. This manufacture includes rattan and over 600 patterns of modern styles of cane-seat chairs. Mr. Whitney gives employment to 250 hands, demanding a monthly pay-roll of $9,000. The annual product is $350,000. The number of cane-seat chairs annually produced is nearly 400,000.

Cotton-spinning by power, and the manufacture of cloth completed in hand-looms, was begun in this town in 1811 or 1812. This industry was established at Factory Village. The mill was burned in 1846, and a larger mill was built on the same site, which was also burned in 1877. It has not been rebuilt. The cotton factory on Water Street in the central village was built by a home corporation in 1849. It has been continuously operated, and has contributed to the material interests of the town. The property is now owned and conducted by George Blackburn & Co.

Boundaries.—According to the surveys when the original township was severed from the wilderness, there were included in the boundaries then established twenty-seven thousand one hundred and ninety acres. The early measurements were extremely liberal, and the actual area of Dorchester

Canada at this time was about thirty-one thousand acres. Encroachments upon these fair proportions has been a favorite occupation of the surrounding towns. Four considerable tracts of land have been taken from the original area, and other attempts have been successfully resisted.

By the adjustment of the province line in 1741, eight hundred and seventy-seven acres now included in Rindge and New Ipswich were severed from the town. Both the original and amended boundaries of the town on the north were right lines, but they were not parallel. The course of the original line was north 78° west, while the amended province line was established north 80° west, with the intention of running a line due west with an allowance of ten degrees for variation of the needle. The area taken from this town in form was a trapezium extending across the northern border, and about ten rods in width at the eastern, and one hundred and ten rods at the western extremity. The incorporation of Ashby in 1767 severed about one thousand five hundred acres from the northeast part of the township. Ashby was not an original grant, but was composed of parts of Townsend, Ashburnham and Fitchburg. In the same manner Gardner in 1785 was taken from the towns of Ashburnham, Templeton, Westminster and Winchendon. The area severed from this town was nearly three thousand acres. Again in 1792 another tract of land in the northeast part of the town, containing about one thousand and four hundred acres, was severed from Ashburnham and added to Ashby. The town, still containing an ample area, could afford the land, but the loss of several valued and useful citizens by each of the last three dismemberments was a more serious consideration. Again the spectre of disintegration appeared in the southeast part of the town. Beginning with the close of the Revolution and continued for twenty years, the adjoining portions of Westminster, Fitchburg and Ashburnham made an earnest effort to become incorporated as an independent town. At times the measure was prosecuted with considerable energy, and at all times it was strenuously opposed, and finally defeated by the remainder of the towns at interest. With the exception of slight changes to correspond with the line of a few farms, no subsequent curtailment of the area of Ashburnham has occurred.

Ashburnham became a post-town in 1811, and from that date a post-office has been continuously maintained at the central village. Since 1850 there has been a post-office at or near the depot for the accommodation of South Ashburnham. The post-office at North Ashburnham was established in 1854.

The First National Bank of Ashburnham was organized in 1873. Under conservative and judicious management, it has been successful. The population of the town in 1885 was two thousand and fifty-eight; in 1855 the population was two thousand two hundred and eleven, and this number has not been exceeded by any enumeration of the inhabitants. In May, 1887, the number of ratable polls was five hundred and fifty-five, the assessed value of real estate was eight hundred and eighteen thousand eight hundred and ninety-four dollars, and of personal estate one hundred and seventy-four thousand eight hundred and ninety-eight dollars. The rate of taxation was sixteen dollars per one thousand dollars.

PERSONAL NOTICES.—Many useful citizens who have been prominent in municipal affairs, and whose lives refresh and enliven the annals of Ashburnham, the greater number of natives of the town who have won an honorable measure of fame in other fields of labor and the descendants of many of the Ashburnham families distinguished in many callings will receive notice, and their good works will constitute a part of any present or future review of the town.

Samuel Wilder, Esq., was a resident of the town at the date of incorporation. Until his death his career was coeval with the town. A man of good judgment and of marked ability, he received a continuous measure of honor from his townsmen, to whose service a great part of his life was devoted. Mr. Wilder was a captain of the militia, a magistrate many years, a deacon of the church, and several years a member of the Legislature. He was town clerk twenty-two years, a selectman fifteen years, an assessor twenty years and frequently was chosen on important committees. The current records during the years of his useful life assert the merited esteem of his associates and an appreciation of superior mental endowment. He was the son of Colonel Caleb Wilder, a prominent proprietor of Dorchester Canada. He was born in Lancaster, May 7, 1729, and died in this town, May 9, 1798. Among his children were Caleb Wilder, a noted school-teacher in this town; Thomas Wilder, a respected citizen of Ware; Dr. Abel Wilder, a distinguished physician of Blackstone. Hon. A. Carter Wilder, son of Dr. Abel Wilder and grandson of our Samuel Wilder, was a member of the Thirty-eighth Congress from Kansas, and subsequently mayor of the city of Rochester, N. Y. Hon. D. Webster Wilder, another son of Dr. Abel Wilder, is an accomplished journalist and many years State auditor of Kansas. Dr. Charles Woodward Wilder, an esteemed citizen and physician of Templeton and Leominster, was a son of Caleb Wilder, Jr., and a nephew of Samuel Wilder.

Colonel Joseph Jewett, son of Edward Jewett, was born in Stow, May 10, 1761. He was a soldier in the Revolution, and at the close of the war he removed to Ashburnham. Like many of the active men of his time, his energies were enlisted in a variety of pursuits. Colonel Jewett was prominent in military affairs, was a merchant, a farmer, a dealer in cattle and lands, and succeeding Mr. Wilder, he was the squire or magistrate. He represented the town in the Legislature eight years, was a selectman fifteen years, an

assessor fifteen years, and was ten times chosen to preside over the annual March meeting. He died May 3, 1846. His son, General Ivers Jewett, born in this town May 7, 1788, was a gentleman of ability, of attractive personal appearance, tall and commanding in presence and popular and esteemed by his associates. At the age of thirty-four years he had been promoted step by step from the command of the Ashburnham Light Infantry to the rank of general of the State Militia. Few men in a rural community have been equally honored or more widely known. In 1827 he removed to Fitchburg and was there interested in several business enterprises, some of which were not wholly fortunate for him and his business associates. Subsequently he removed to the South and died at Mobile, Ala., April 26, 1871. Rev. Merrick Augustus Jewett, another son of Colonel Joseph Jewett, was born in this town August 26, 1798, was a graduate of Dartmouth College, 1823, and subsequently an able Congregational minister at Terre Haute, Ind. He died April 3, 1874.

Jacob Willard, Esq., was a prominent citizen in this town many years. He was cotemporaneous with Deacon Wilder and Colonel Jewett and divided honors with them. He was bold and aggressive, and his loyalty during the Revolution and the troubles attending the open revolt of Daniel Shays was conspicuous. He was the first Representative to the State Legislature under the Constitution, and four subsequent terms. He was frequently elected to town office and other positions of trust, and exercised at all times a commanding influence. He was a son of Henry Willard, and was born in Harvard July 20, 1734, and removed to this town about 1768, where he died February 22, 1808. His daughter Emma, born December 18, 1777, married Rev. Thomas Skelton, and died November 3, 1881, aged nearly one hundred and four years.

Silas Willard, Esq., son of Deacon John Willard, and a nephew of Jacob Willard, Esq., was born in this town October 8, 1768, where he died June 14, 1855. He was a selectman and an assessor twenty years; delegate to the Constitutional Convention, 1820; a magistrate twenty-eight years and prominently associated with the affairs of his time.

Rev. Elijah Willard, a brother of Silas Willard, Esq., was born in this town April 19, 1782, was a Methodist clergyman and died at Saugus September 5, 1852.

John Adams was born in Cambridge (now Arlington), January 22, 1745. He was a son of Captain Thomas Adams, who removed to this town late in life. The son, John Adams, settled in the east part of the town, 1766. He was a soldier in the Revolution and subsequently was considerably employed in municipal affairs. He was an intelligent, active man and was held in high esteem by his townsmen. He died with faculties unimpaired February 26, 1849, aged one hundred and four years, one month and four days. His descendants are numerous in this town and elsewhere, and are an industrious, active race. Amos Adams, a son of Jonas R. Adams, and a grandson of John Adams, was a successful lawyer in Chicago, Ill., and subsequently was a judge in California. Samuel G. Adams, the popular and able superintendent of police of the city of Boston; Ivers W. Adams, formerly a successful merchant of Boston and now general manager of the American Net and Twine Company; and Melvin O. Adams, a successful lawyer of Boston and several years assistant district attorney for the district of Suffolk, through different lines of descent are great-grandsons of John Adams, the centenarian.

Dr. Abraham Lowe, son of Jonathan Lowe, was born in Ipswich (now Essex), February 11, 1755. In his infancy the family removed to Lunenburg. He read for his profession under the tuition of Dr. Abraham Haskell, of Lunenburg, and came to this town, 1786. He was a skillful physician and a useful and honored citizen. He died October 23, 1824. Dr. Abraham Thompson Lowe, son of Dr. Abraham Lowe, was born in this town August 15, 1796; graduated at Dartmouth Medical College, and after a few years of professional labor in this town he removed to Boston, 1825, where he was engaged in the wholesale drug trade many years. He was prominently connected with several railroad corporations and monetary institutions. He was the author of several school-books of good repute. He died July 4, 1888.

William J., George and Edward W. Cutler, of the firm of Cutler Brothers, wholesale druggists of Boston; Abraham L. Cutler, of the firm of A. L. Cutler & Co., paints and oils, Boston; and Charles H. Cutler, of Chicago, Ill., are sons of Dr. William H. Cutler, an esteemed physician and citizen of this town, and maternal grandsons of Dr. Abraham Lowe.

John Conn, son of a Scotch-Irish immigrant, was born in Harvard, 1740, and removed in early life to this town. He was a lieutenant in the Revolution and was a prominent citizen of the town. His son, John, and grandson, John Conn, Jr., were men of character and ability in this town. Susannah, a daughter of John Conn, Sr., married David Wallace. They are the grandparents of Hon. Rodney Wallace, of Fitchburg.

Deacon Jacob Harris, a native of Ipswich and a former resident of Harvard, removed to Ashburnham, 1767. He was a selectman, and for fifteen years an assessor, a deacon of the church and a conservative, useful citizen. He died September 26, 1826. His son, Rev. Samuel Harris, was a Congregational minister and labored in Alstead, New Boston and Windham, N. H., where he died September 5, 1848.

Jacob Constantine, a son of German immigrants, born 1752, was a good citizen and a Revolutionary soldier. He died March 8, 1814. Lieutenant-Governor Fuller, of Vermont, is a great-grandson.

Capt. David Cushing and his brother, George R. Cushing, Esq., were natives of Hingham, were prom-

inent factors in the business and municipal affairs of this town. The former died May 3, 1827, and the latter February 2, 1851. Joseph Cushing, son of Capt. David, established the Farmers' Cabinet of Amherst, N. H., and with him Hon. Isaac Hill learned the art of printing. In 1809 he removed to Baltimore, Md. He was a member of the city government many years and member of the Legislature. Joseph Cushing, a prominent business man of Fitchburg, is a grandson of Capt. David Cushing.

Stephen Cushing, remotely related to the preceding family, removed to Ashburnham, 1830. He was a man of exalted character, and in many capacities faithfully served his townsmen. Rev. Stephen Cushing, his son, born March 13, 1813, has been a successful preacher and officer of the Methodist Conference.

Col. Enoch Whitmore, son of Isaac Whitmore, was born in this town September 8, 1796. He was a farmer and manufacturer. He was a man of clear convictions and decided opinions, a radical, but not a fanatic. In politics he was an Abolitionist, and for many years his well-known opinions were a bar to political preferment, and yet, while in a minority, his worth and recognized ability secured a frequent election to office. Living until his views were endorsed and accepted by a large majority of his townsmen, he died September 13, 1860.

Jerome W. Foster, son of Joel Foster, and a descendant in the fourth generation of Jeremiah Foster, an early settler in this town, was born September 15, 1810. He was a civil engineer, a justice of the peace, and often employed in the conduct of town affairs. He was town clerk eighteen years, and in all his faithful service to the town he was aided by good judgment and ability.

Capt. Silas Whitney, son of Samuel Whitney, was born in Westminster October 20, 1752. He removed to this town, 1778, and became the most extensive land-holder in the town. He was an active citizen and influential in town affairs. He died November 14, 1798. His descendants are numerous. Ohio Whitney, son of Capt. Silas Whitney, born March 22, 1789, was a man of ability and great force of character. Affable in manner, upright in character and honorable in all his relations with his townsmen, he commanded the respect and esteem of all. He died March 3, 1870. Hon. Ohio Whitney, son of Ohio Whitney, born June 9, 1813, was much employed in municipal and State affairs. He was a selectman and an assessor many years and a moderator of the annual March meeting eighteen years. He was a trustee of several monetary institutions and a director of the First National Bank of Ashburnham. In 1856 he represented this district in the Legislature, and the following year he was a member of the State Senate. He died February 6, 1879. Francis A. Whitney, Esq., a brother of Hon. Ohio Whitney, born in this town August 2, 1823, died April 28th, 1887. He was a successful school-teacher, many years a member of the School Committee, selectman and assessor. He was a public-spirited, useful citizen. Milton Whitney, Esq., son of Capt. Silas Whitney, Jr., and a grandson of Capt. Silas Whitney, was born in this town October 9, 1823. He was an eminent lawyer and several years a county attorney of Baltimore, Md. He was a brilliant advocate, and won many laurels in his profession. He died September 3, 1875. Rev. William Whitney, son of William Whitney and grandson of Capt. Silas Whitney, was born in this town July 22, 1829. He resides at Granville, Ohio, and for many years was financial agent of Dennison University and treasurer of the Baptist Educational Society. Rev. Quincy Whitney, of Cambridge, is a son of Samuel Whitney and a grandson of Capt. Silas Whitney.

Hon. Isaac Hill, a distinguished journalist, Governor of New Hampshire, Comptroller of the Treasury and United States Senator, was a well-remembered youth of this town, being nine years of age when the family removed hither. His younger brothers, George W. and Horatio Hill, were born in this town.

Hon. Phinehas Randall was born in Ashburnham, June 5, 1787, and resided here until he began his collegiate study. He was a lawyer, and for several years a presiding judge of Common Pleas of Montgomery County, N. Y. Hon. Alexander W. Randall, Governor of Wisconsin, member of President Grant's cabinet and Minister to Rome, and Hon. Edwin M. Randall, chief justice of Florida, are sons of Hon. Phinehas Randall.

General Harrison C. Hobart, an eminent lawyer of Wisconsin, was born in this town January 31, 1815. He won a brilliant record in the War of the Rebellion, and has exercised a commanding influence in civil and political affairs.

BIOGRAPHICAL.

JOHN AND ELINOR WHITNEY.

John and Elinor Whitney, the emigrant ancestors of a numerous family, sailed from England in the "Elizabeth and Ann," Roger Cooper, master, in April, 1635. At this date he was aged thirty-five, and his wife thirty years. He settled in Watertown, where he became a considerable landholder, and was admitted freeman March 3, 1635–6. He was a selectman eighteen successive years, and his name is conspicuous in the records of his time. He died June 1, 1673; his wife, Elinor, died May 11, 1659.

John, eldest son of John and Elinor Whitney, was born in England, 1624; admitted freeman, 1647. He married Ruth Reynolds, daughter of Robert Reynolds, of Boston, and resided in Watertown. He was a selectman several years, and a prominent citizen. He died October 12, 1692, leaving five sons and five daughters.

Nathaniel, son of John and Ruth (Reynolds) Whitney, was born in Watertown, February 1, 1646–7.

W. F. Whitney

Nathaniel Jewett, M.D.

He married, March 12, 1673–4, Sarah Hagar, born September 3, 1751, daughter of William and Mary (Bemis) Hagar, of Watertown. His homestead was included in Weston, where he died January 7, 1732–3; his widow died May 7, 1746.

William, third of the seven children of Nathaniel and Sarah (Hagar) Whitney, was born May 6, 1683, and resided in Weston. He married, May 17, 1706, Martha Peirce, born December 24, 1681, daughter of Joseph and Martha Peirce, of Watertown. He died January 24, 1720–1.

Samuel Whitney, son of William and Martha (Peirce) Whitney, was born in Weston May 23, 1719. He married, October 20, 1741, Abigail Fletcher, and was one of the early settlers of Westminster, and is a prominent character in the annals of that town. He died January 1, 1782. Capt. Silas Whitney, of Ashburnham, was a son of these parents.

Abner, son of Samuel and Abigail (Fletcher) Whitney, was born in Westminster May 18, 1748. He married, May 14, 1770, Elizabeth Glazier, daughter of Jonas and Eunice (Newton) Glazier, of Shrewsbury, who died April 3, 1778; he married (2d), April 22, 1779, her sister, Levina (Glazier) Ward, widow of Jonas Ward. He died in Westminster, 1811.

Joseph G., son of Abner and Levina Whitney, was born June 22, 1783. He married, 1805, Levina Dunn, and resided in Westminster and in Ashburnham, where he died July 31, 1868.

John, son of Joseph G. and Levina (Dunn) Whitney, was born in Westminster September 12, 1806. He was a pioneer manufacturer of chairs in Westminster and in Ashburnham. He was a man of ability and character, commanding the respect and confidence of his associates. He died May 4, 1873. His wife, whom he married May 9, 1832, was Eliza Cushing, daughter of Stephen Cushing, Esq., a prominent citizen of Ashburnham. She died September 1, 1882.

WILBUR F. WHITNEY.

Wilbur Fisk Whitney, son of John and Eliza (Cushing) Whitney, and of the ninth generation in America, was born December 9, 1839, and from early manhood has been closely identified with the material interests of this town. From an industrial standpoint the town of Ashburnham occupies a prominent position among the manufacturing towns of the State. Here the manufacture of chairs was an early, and through later years remains an important industry. While the Winchesters and their successors have been conducting an extensive business at the centre of the town, Mr. Whitney, in his chosen field at South Ashburnham, from a humble beginning, has enlarged his facilities from year to year, and at present is at the head of a more extensive business than is owned and conducted by any single individual in this line of manufacture. His monthly pay-roll, distributed among 250 employés, is $9000, and the annual product of the manufacture includes 380,000 chairs, valued at wholesale at $350,000. Much of the labor-saving machinery is special, and is covered by patents. The chairs made by Mr. Whitney are the modern styles of cane-seat and a great variety of rattan chairs. The designs and styles are original, and frequently change to meet the demands of the trade. In mechanical skill, in ability to personally supervise all the minute details of an extensive business, and in a prompt and clear comprehension of the growing demands of the trade, Mr. Whitney has advanced to a prominent position among the manufacturers of the present time. While his success in business has been founded on industry, perseverance and the fortuitous issue of well-matured plans, his honesty and ready appreciation of the rights of others have been important factors. He has continually maintained fraternal relations with his employés, and has had no experience with strikes nor contests with labor organizations. With the spirit of a good citizen, his success has been reflected in the growth and prosperity of the town, and he has ever manifested a lively interest in local and in municipal affairs. In this direction his effort has been the fruit of principle and the thoughtful act of method and wisdom rather than the sudden and fitful offering of a generous impulse. For many years, with system and exactness, ten per cent. of his annual income has been given to religious and charitable objects, and, with a liberality of sentiment characteristic of the donor, no one sect or class has been the sole recipient.

With the experience of years Mr. Whitney has joined the fruit of an attentive study of the social and political problems of the times. His conclusions are intelligently formed, and his judgment of men and of measures is free from partiality and prejudice. In debate he is apt and logical, and if he is decided in his opinions, he is tolerant in judging of the faith and charitable in weighing the conduct of others. His political opinions have been pronounced but conservative. He has not been closely allied with any party, but his political faith has embraced the purposes of good government, and has been unrestrained by the school of politics. In his daily life he has seldom wounded or disappointed his friends, and he has cultivated no enmities. His sympathies, quick and steadfast, lead him to the presence of the wronged and the suffering, and guided by principle, his ministrations to his fellow-men are ever kind and substantial. In business and in social affairs he has challenged the respect and good opinion of all who know him. His merit has won, and his future will enjoy, the friendship and confidence of his associates. In the personal supervision of an important industry, Mr. Whitney has found full employment, yet he has been an efficient member of the School Committee many years, and has

labored in this work with unfailing interest. He is a director of the Ashburnham National Bank and of the Nashua Reservoir Company. In 1875 he represented this district in the Legislature. In 1878 he was nominated for Congress by the Greenback party and by a convention of Independents. In the canvass he received seven thousand votes. He was renominated in 1882 and 1884. In 1876 and 1877 he was nominated for State treasurer, and in several instances his candidacy was endorsed by the Prohibitionists.

Mr. Whitney is still in the prime of life, and this brief sketch is but the beginning of a completed chapter. Men of his temperament and character summon energy and wisdom with advancing years.

In his domestic relations Mr. Whitney has been fortunate and happy. He was united in marriage, July 17, 1866, to Miss Emeline S. Jewell, daughter of Dexter and Sarah (Mower) Jewell, of Rindge, N. H. Their eldest child, and only son, a lad of great promise and universally beloved, died at the age of fifteen years. Four bright and sunny daughters, from five to fifteen years of age, bring light and gladness to a happy fireside.

DR. NATHANIEL JEWETT.

Dr. Nathaniel Jewett, the subject of this sketch, was born in Boston, March 10, 1841, and was educated in the public schools of that city. He afterwards pursued a course of professional studies under private tutors.

He graduated with honors from the Boston Dental School in 1869, and from the New York Eclectic College in 1871, having attended also, lectures in Harvard Medical College, and at the College of Physicians and Surgeons, New York.

He has been president of the Worcester North Eclectic Medical Society, and for many years secretary and treasurer; also president and counselor of the Massachusetts Eclectic Medical Society, and a member of the National Medical Association.

Through his mother's active interest and sympathy in charitable organizations and reforms during the early years of his life in Boston, his naturally sympathetic and generous qualities were early enlisted in efforts to aid the unfortunate.

Dr. Jewett came to Ashburnham and commenced the practice of medicine in 1871. Of the eighteen physicians who have practiced here, none have been more constantly or successfully employed. Many serious cases have been under his treatment calling for surgical skill and patient care. With much mechanical ability, and quick to feel for all who suffer, he has been very successful and ingenious in devising mechanical appliances and aids, and inventing means for the comfort and convenience of his patients.

He also possesses the qualities of a good nurse, and with much magnetic power, his presence is always welcome in the sick-room, where so much depends on gentleness and encouraging words. Many a family have looked to him as a support in the hour of sorrow, and found him ever ready to aid when the last rites of affection are needed for the dead.

Dr. Jewett is social in his nature, ardent, generous and loyal in his friendships, and keenly sensitive to disloyalty or broken faith in those he has trusted. In his tastes he is very artistic, and music is one of his greatest pleasures. Fond of books and study, he has accumulated a large library of medical, scientific and other works.

When contributions or personal efforts are called for in aid of town, church or social movements, he is always generous in response.

With a large share of the trials, discouragements and constant requisitions upon a physician's life, he has always been faithful in filial duties. To his mother, who was long an invalid, he gave the best of his care and life, freely relinquishing all that would prevent him from ministering to her needs, and faithfully attending her until her death here, in 1887.

The doctor has long been connected with Masonic orders, active and enthusiastic in interest for all that concerned the fraternity. He has held various positions, and is one of the Past Commanders of Jerusalem Commandery, Fitchburg; also a member of the Grand Commandery of Massachusetts and Rhode Island, and is a thirty-second degree Mason. He has also held offices in various other secret orders.

CHAPTER XXXVI.

FITCHBURG.

BY ATHERTON P. MASON, A.B. (HARV.), M.D. (HARV.).

[*Latitude*, 42° 35′ *N.*; *longitude*, 71° 47′ *W.*; *direction and distance from Boston, W. N. W.*, 47 *miles*; *altitude of top step of City Hall above sea level*, 470 *feet.*]

DESCRIPTIVE.

FITCHBURG, the smaller of the two cities of Worcester County, and, after Worcester, the most important place in the county, is pleasantly situated among hills and valleys, and is about twenty-four miles north of its sister city. The township is of average size, being about six and a half miles from north to south, and about four and a half miles from east to west. A small stream, the north branch of the Nashua River, formed by the confluence of several brooks in the southwesterly part of the town, curves to the north and emerges near the southeast corner; and along its course most of the population and all the business interests of the city are located.

The thickly populated and business centre—the city proper—lies a little southeast of the centre of the township. West and south of the city proper are the

villages of West Fitchburg, Rockville and Crockerville, and east and south are Traskville, East Fitchburg and South Fitchburg. The outlying portions of the township are but sparsely inhabited, being mainly utilized for farming purposes, though considerable areas are covered with woods or used simply for pasturage. The township is bounded on the north by Ashby, on the east by Lunenburg and Leominster, on the south by Leominster and Westminster, and on the west by Westminster and a small part of Ashburnham.

Any detailed description of the city and its outlying villages would, of course, be beyond the scope of this sketch. As has been stated, the city lies in a valley along the stream. The territory on the south side of the stream, or, "across the river," as it is called, is occupied almost entirely by dwelling-houses, while the business portion is on the north side close to the river bank; and the hills a little farther north and the more level land to the east are thickly covered with dwellings, many of which are beautiful and costly. Main Street, the principal business street in the city, follows for the most part the course of the stream, its general direction being east and west. On this street are a number of important manufacturing establishments, many substantial business blocks, several public buildings, hotels, handsome churches, and towards the upper end a few fine private residences. From its beginning it is paved with stone as far as the City Hall; and a horse railroad track runs through almost its entire length. There are three parks on this street—the "Lower Common," or Railroad Park, Monument Park and the "Upper Common,"—situated nearly equidistant from one another. The first of these is at the junction of Main and Water Streets, opposite the handsome and commodious Union Passenger Station, and is a small enclosure provided with a band-stand. Monument Park is directly in front of the County Court-House and nearly opposite the Wallace Library and Art Building, while flanking it on the east is Christ Church, a beautiful and picturesque stone building. Taken in connection with these three fine edifices, this park is a most inviting spot and much frequented. In its centre is an expensive and massive soldiers' monument of granite surmounted by three bronze statues. Four brass field-pieces, secured from the government through the efforts of the late Hon. Alvah Crocker, and mounted in regulation style, are placed one at each corner, and the whole park is enclosed by a substantial iron fence upon a base of hammered granite. The "Upper Common" is located towards the upper or western end of Main Street, and is larger than either of the other parks. It has recently been laid out and beautified, and bids fair to rival Monument Park in the favor of the citizens. It is a parallelogram in shape and entirely surrounded by shade-trees. Near the lower end is a very ornamental band-stand, from which the Fitchburg Military Band often gives evening concerts during the summer. The band also gives concerts from the band-stand in the Lower Common, and the music furnished by this justly-celebrated organization always calls together a large concourse of citizens. Opposite the head of the Upper Common is the old First Parish (Unitarian) Church, a structure interesting from an historical point of view; and flanking the Common on its northerly side are several handsome residences. At the easterly terminus of the horse railroad, near the Lunenburg line, are the fair-grounds and trotting park, formerly the property of the Worcester North Agricultural Society. In 1887 this property was purchased by a number of gentlemen, forming an organization known as the Fitchburg Park Company, for the purpose of improving and beautifying it for use as a park.

The upper portion of Main Street is considerably wider than the lower part, and is abundantly supplied with shade-trees. From Putnam Street to the American House, Main Street is altogether too narrow for the tide of business which daily passes through it, and without doubt it will be absolutely necessary for the city to construct a new street before long to relieve the pressure on Main Street. This portion of the street is entirely without shade-trees, or even room for them to grow, and it is becoming more and more evident every year that a great mistake was made in not reserving a more generous width for the street.

Fitchburg is pre-eminently a busy and thriving city, and probably no other place of its size can boast of a greater diversity of industries. The little stream running through the town was a source of great annoyance to the early settlers. The spring floods carried away their bridges, and the river was considered a nuisance and probable bar to the growth of the town. But coming years showed the folly of these fears. Dams were constructed, the water controlled, and manufacturers on a small scale began to locate on the banks of the formerly detested stream. Thus was a seeming curse turned into an evident blessing, for from those few mills have sprung the present great manufacturing concerns located here. Now the stream, whether swollen by the floods of spring, or diminished to a mere rivulet by the drought of summer, is allowed to pursue its way for the most part unheeded by the busy manufacturer. Water-power is still used to some extent, but steam is now the chief motor that propels the machinery, looms and spindles that daily pour forth products which go to the markets, not of this country alone, but of the world. A description of these large manufacturing establishments, of which our citizens are justly proud, must be deferred to a subsequent portion of this sketch.

It is evident that ample transportation facilities are necessary in order to distribute all these varied products, and Fitchburg certainly possesses such facilities to a marked degree. When, about half a century ago, the Hon. Alvah Crocker proposed and advocated a railroad direct from Boston to Fitchburg, the idea met

with great opposition and ridicule. Mr. Crocker persevered in spite of all obstacles, the railroad became an accomplished fact, and the immense benefits arising from its construction are realized by the citizens of to-day. It has grown into the great Hoosac Tunnel Line and affords direct communication, not with Boston alone, but with the great cities of the West. Other railroads have since been built which give direct communication with all important points. An elegant and commodious passenger-station, built about ten years ago, is shared by all these roads in common, and there are large freight depots, car-shops, engine-houses, etc., which will be described further on.

Fitchburg is by no means behind the times as regards the adoption of all methods and means by which the wealth, prosperity and enlightenment of her citizens may be advanced, their business facilitated, and their lives and property protected from danger or destruction. The streets of the city are kept clean and in good condition, and are, for the most part, well lined with shade-trees; a pure and very abundant water supply has been provided at large expense; school-houses are numerous and, as a rule, commodious and well-ventilated; a thoroughly organized and well-equipped Fire Department, in connection with the fire-alarm telegraph and numerous hydrants, affords the best possible protection against serious loss by fire; the efficient police force keeps the city singularly free from theft and murder. All these departments are under the direct control of the city, and their effective work reflects great credit on the authorities, both in past and present time. In addition to these advantages of a strictly municipal character, there are others no less important to the welfare of the city. There are numerous churches, substantial and inviting, both externally and internally, whose pulpits are occupied by good pastors; there is an efficient telephone service with many subscribers; the streets are well lighted with electricity, furnished by the Wachusett Electric Light Company, and in some portions with gas, furnished by the Fitchburg Gas Company; the Fitchburg Street Railway Company provides convenient means of transit from one end of the city to the other, and the government has established the letter-carrier system here.

Having seen, in a general way, what man has accomplished towards making Fitchburg an attractive and desirable place of residence, let us devote a little space to the investigation of what nature has done to beautify and make pleasant this city among the hills. The north branch of the Nashua, which has been previously mentioned as traversing the southerly portion of the township, is formed by the confluence of several brooks having their origin in ponds in Westminster and Ashburnham. These brooks, uniting in the southwesterly part of the township, form the only stream of any size in Fitchburg. There is nothing particularly beautiful or romantic about it at the present time, except in a few spots where the hand of man has not encroached too ruthlessly upon its original condition. Many bridges, both for railroad and public use, have been built across it, and numerous dams have been erected along its course, which form small ponds that lack the element of natural beauty. It is rather singular that, while almost every one of the towns in this vicinity possesses at least one large natural sheet of water, there is nothing of the sort in Fitchburg. So the citizens have to content themselves with brooks, of which there are several in town that are very picturesque and well worth visiting. One of these is Falulah Brook, in the northerly part of the town, towards Ashby. Its course is through wooded country, and in many places it has worn for itself a channel through the solid rock. In spots it has hollowed out deep basins in the rock, forming quiet, transparent pools; and again it dashes down some rocky incline, producing fascinating cascades. This brook crosses the township diagonally, and that part of it in the southeasterly corner has received the name of Baker's Brook. It receives several tributaries, prominent among which are Scott and Shattuck Brooks, whence is obtained the water supply of the city, and Pearl Hill Brook.

In the southerly part of Fitchburg is another brook, quite as interesting and picturesque as Falulah, and certainly better appreciated, from the fact of its being easy of access. The name of it is Wanoosnac Brook. During the past century the spelling of its name has undergone considerable change. Rev. Peter Whitney, in his "History of Worcester County," published in 1793, speaks of it as "Wauhnoosnok Brook." In Torrey's "History of Fitchburg," published in 1836, it is spelled Wanoosnock. By some, at the present time, it is called Monoosnoc. However much the nomenclature may have changed, it is certain that its natural beauty has not followed suit. For some distance it flows along beside the Old Turnpike Road, unmolested by the hand of man, at times hidden among the trees and again appearing in open spaces, tumbling and splashing along its rocky bed. It is especially well worth visiting in the early summer, when it is full of water. At one point, where it flows in a deep and precipitous gully, a massive stone dam was built many years ago. From some imperfection in its construction, the dam never could be made to hold water, and the brook, which, as well as the dam itself, is almost entirely concealed by trees that have grown up since man's futile attempt to obstruct it, flows noisily beneath the heavy stone-work as if filled with defiant joy at its retained freedom. A little farther above is another dam, built with better skill, which has, for over half a century, been occupied as the site of a saw-mill.

The most marked topographical features in Fitchburg are Rollstone Hill, southwest of the city, and Pearl Hill, to the northeast. The former is a rounded

mass of solid gneiss, attaining an elevation of about four hundred feet above the river. Whitney thus alludes to it in his history: "A little southwest of the meeting-house is a high, rocky hill, covered principally with pine, called *Rollstone Hill.*" At the present time the pines have disappeared. Until a few years ago two old and weather-beaten specimens, the sole survivors of former times, were standing like ancient sentinels upon the summit of the hill; but age, combined with the poor quality and small amount of soil and the fierce winds of winter, caused them to succumb, and they fell some years ago, one soon after the other. The writer well remembers the feeling of sadness that arose within him when these aged landmarks were prostrated. The lower portion of their trunks bore a vast collection of autographs, for probably almost every boy who climbed to the top of the hill, for years previous to their fall, and was lucky enough to own a knife, carved his initials on one or the other of them. The top of the hill is now practically bare rock, though the thin soil in spots supports a scanty and stunted growth of bushes. The sides of the hill have a tolerably thick layer of soil, and are covered with a growth of small trees, mostly chestnut, oak and maple. Excellent building stone is obtained from this hill, and the supply seems to be practically inexhaustible. Extensive quarries have been worked for a great many years without any very appreciable diminution in the size of the hill, unless it be on the southwesterly side.

The use of Rollstone granite is by no means confined to Fitchburg alone. It is shipped to various places, and there are several buildings in Boston constructed entirely of it. Some portions of the rock contain extraneous minerals, and fine specimens of beryl and tourmaline have been obtained here in times past. On the very summit of the hill is "the Boulder," a rounded mass of rock, forty-five feet in circumference, and probably weighing one hundred tons. Its composition is totally unlike that of any rock formation within thirty miles, and it is certain that this boulder was conveyed to its present position by ice. Glacial *striæ* are plainly visible beneath it where the surface of the bed-rock has not weathered. The fine view of the city and surrounding country that is obtainable from the summit of Rollstone is well worth the slight trouble necessary to climb the hill by some of the stone roads and paths. At the feet, so to speak, of the observer perched upon the top of the boulder, are the numerous tracks of the Hoosac Tunnel Line, with trains moving upon them almost constantly; just beyond is the river, with the city stretching along its course and forming almost a complete semi-circle; behind the city rise the hills, culminating in the beetling brow of Pearl Hill to the northeast. Big Watatic, in Ashburnham, overtops his brethren in the northwest. In clear weather the sharp summit of grand Monadnock can also be seen in that direction. The rounded outline of Wachusett, about twelve miles distant, fills the southern horizon, and to the east and southeast are the towns of Lunenburg and Leominster, a few miles away. Portions of other towns can also be seen, and the undulating character of the country in all directions presents a pleasing spectacle to the eye.

Pearl Hill is somewhat higher than Rollstone, and on one side rises abruptly in the form of a precipice. It is composed of a micaceous rock of rather peculiar appearance, which, a century ago, encouraged the hope that there were "valuable mines, either of gold or silver, or both, imbosomed there." The Rev. Peter Whitney goes on to say that "attempts have heretofore been made to possess them; but for want of wealth or perseverance in the undertakers, they have not obtained the desiderata." It is exceedingly improbable that capitalists will care to expend money in searching after gold or silver in the bowels of Pearl Hill. Rollstone is a much more profitable investment. A fine view can be obtained from the summit of Pearl Hill, and a drive on the Pearl Hill Road is much in vogue with citizens and visitors. West of Pearl Hill and north of Rollstone is the high land where the water supply of the city is stored. There are four reservoirs located at different levels, the highest being Overlook, about four hundred feet above the river, whose embankment and gate-house are quite conspicuous.

There are many pleasant drives in and about the city. The suburban roads are, for the most part, well made and kept in good condition, though the hilly character of the entire surface of the township renders very considerable washouts inevitable during the spring months, and causes more or less expense annually for repairs. The soil is generally quite fertile, and there are many valuable farms in the town. Woods are abundant in many parts of the town and consist of all the varieties of trees indigenous to this section. Fruit-trees flourish and there are many fine orchards in and around Fitchburg. Small fruits and garden produce are raised in great abundance with ordinary care.

Much more might be said descriptive of Fitchburg and its environs. In the foregoing the writer has intended simply to speak of facts that will not appear elsewhere, or to touch on matters that will be further elaborated in subsequent portions of this sketch. We will conclude this section by giving a few statistics in regard to population and agricultural interests. According to the census of 1885, the population at that time was 15,375. Since then there has been a very considerable increase in the number of inhabitants, and probably 19,000 would not be far from the correct figures at the present time (1888). A few of the agricultural statistics gleaned from the census of 1885 are as follows: there were then 209 farms in town, 3676 acres of cultivated land, 5850 acres of pasturage and 5134 acres of woodland. The aggregate value of agricultural products was $294,558, the largest items

being,—dairy products, $97,414; hay, straw and fodder, $70,696; vegetables, $25,990; apples and small fruits, $19,280, and poultry and wood products about $18,000 each. There were about 40,000 fruit-trees and grape-vines, valued at $76,473. There were 741 cows and about 8000 fowls.

From these few statistics one can see that, though Fitchburg is not given very much to agricultural pursuits, she makes a very respectable showing in that line.

CHAPTER XXXVII.

FITCHBURG—(*Continued*).

EARLY HISTORY (1764–1799).

FITCHBURG was originally a part of Lunenburg, and its history prior to 1764 is identical with that of Lunenburg and may be found in the history of that town. Previous to 1764 several attempts had been made by the people living in the westerly part of Lunenburg to be set off as a separate town, but were unsuccessful. On January 25, 1764, another attempt was made and the consent of Lunenburg obtained, the town voting "to let the people go." The request was granted on condition that "the inhabitants should pay their minister's tax, as heretofore they had done, until they should be formed into a district." As soon as the consent of Lunenburg was obtained, a committee, consisting of John Fitch, Amos Kimball, Samuel Hunt, Ephraim Whitney and Jonathan Wood, was chosen to procure an act of incorporation. So zealously did this committee work that in just nine days after the granting of the request the act passed the General Court and was signed by the Governor. The following is a copy of the act of incorporation in full:

Anno Regni Regis Georgii Tertii Quarto.

An act for setting off the inhabitants, as also the estates, of the westerly part of Lunenburg into a separate town by the name of Fitchburgh.

Be it enacted by the Governor, Council and House of Representatives, that the inhabitants, with their lands, on the westerly part of Lunenburg, beginning at such a place on Leominster line as that a straight line therefrom may run between the lands of Messrs. Paul Wetherbee and Jonathan Wood to a stake and stone a small distance to the westward of Mary Holt's house, then turning and running north, ten degrees and a half east, to the southeast corner of Ephraim Whitney's land, then to keep the easterly line of said Whitney's land to the northeast corner thereof, and from that corner to run northwardly on the eastwardly line of John White's land to the norwesterly corner thereof, and from that corner to run north, four degrees east, to Townsend line; then running west, thirty one degrees and a half north, on Townsend line to Dorchester Canada line, then turning south, nine degrees west, eight miles and a hundred and forty rods on Dorchester Canada line, to Westminster line; then turning east, eleven degrees thirty minutes south, three miles and thirty one rods to a heap of stones on Leominster line; then turning and running to the bound first mentioned, be and hereby is set off and erected into a separate town by the name of Fitchburgh, and that the said town be invested with all the powers, privileges and immunities that other towns in this Province do or may by law enjoy, that of sending a Representative to the General Assembly only excepted; and that the inhabitants of said town shall have full power and right, from time to time, to join with said town of Lunenburg in the choice of a Representative, or Representatives, and be subject to pay their proportionab part of the charges, who may be chosen either in the town of Lunei burg or town of Fitchburgh, in which choice they shall enjoy all the priv leges, which by law they would have been entitled to if this act had n been made; and the Selectmen of the town of Lunenburg shall issu their warrant to one or more of the constables of Fitchburgh, requirin them to notify the inhabitants of the town of Fitchburgh of the tim and place of their meeting for such a choice.

Provided, nevertheless, and be it further enacted, that the said town o Fitchburgh shall pay their proportion of all town, county and Provinc taxes, already set on, or granted to be raised, by said town of Lunen burg, as if this act had not been made.

And be it further enacted, that Edward Hartwell, Esq., be and hereby is empowered to issue his warrant to some principal inhabitant in saic town of Fitchburgh, requiring him to notify and warn the inhabitant of said town, qualified by law to vote in town affairs, to meet at such time and place as shall be therein set forth, to choose all such officers as shall be necessary to manage the affairs of said town.

February 2d, 1764. This bill having been read three several times in the House of Representatives, passed to be enacted.

TIMOTHY RUGGLES, *Speaker.*

February 3d, 1764. This bill having been read three several times in Council, passed to be enacted.

A. OLIVER, *Secretary*

February 3d, 1764. By the Governor: I consent to the enacting of this bill.

FRANCIS BERNARD.

The history of Fitchburg begins therefore on the 3d day of February, 1764. About forty families were then living within the limits of the new town, making the probable number of inhabitants something over two hundred. There was one mill in the town,—the saw and grist-mill erected about 1750 by Amos and Ephraim Kimball,—near the location of the present "Stone Mill," now occupied by J. Cushing & Co. To the Kimballs also belongs the honor of building the first dam across the North Branch of the Nashua. It consisted of a log laid across the stream with spikes driven in above it, and was generally swept away every spring by freshets. It was located a few feet above the present granite dam, near the Laurel Street bridge.

Rufus C. Torrey, in his "History of Fitchburg," gives a complete list of the heads of families living in the town at the time of its incorporation, and also the place of residence of each of them. It contains forty-three names. After this list is the following, which gives an idea of what Fitchburg was a century and a quarter ago: "The above-mentioned individuals and their families composed the population of Fitchburg. Their dwellings, in almost every instance, were far apart,—here and there a house scattered over a large territory. A single dwelling-house stood in the 'Old City,' and in the village, where the population is now so thickly clustered together, not a single house was erected. The winds, which swept down the valley of the Nashua, sighed through the pines which have formed a dense forest." He also adds that "the pitch-pine trees afforded an excellent shelter for deer, partridges and wild turkeys."

It is somewhat singular that uncertainty should have so long existed as to the origin of the name of the town. Mr. Torrey, writing in 1836, wavers between the claims of John Fitch (the chairman of the committee chosen to procure the act of incorporation)

and a Colonel *Timothy* Fitch, of Boston, "who owned extensive tracts of land in the town, and was considered, in those days, as a man of note and distinction." John Fitch also owned much land in town, and Mr. Torrey very frankly states that to which of these gentlemen belongs the honor of furnishing the name of the town "is a point which will probably remain forever in obscurity."

Now in 1831 Nathaniel Wood, Esq., delivered before the Fitchburg Philosophical Society a series of five lectures on the early history of this town. The manuscript is now in the public library, and in the second lecture occurs the following unqualified statement in regard to the matter: "The town was named after John Fitch, the same person taken by the Indians, as mentioned in my last lecture. It appears he was an extensive land-owner, a man of influence, and probably was the principal agent in procuring the act of incorporation. All these circumstances combined induced the petitioners to request that the new town should be incorporated by the name of *Fitchburg.*"

Mr. Torrey, in the preface to his history of the town, says, in reference to these lectures, "Unre stricted use of Mr. Wood's papers has been generously granted me." How he happened to overlook the explicit statement above quoted is a mystery.

Now a few words about the "Col. Timothy Fitch," of whom Mr. Torrey speaks, before we conclude this subject. A thorough investigation in regard to this claimant was made a few years ago by Mr. Henry A. Willis, a prominent citizen of Fitchburg, and much interested in historical matters, with the following result: after a careful search through the histories of Boston, all available genealogical records and the Worcester County registry of deeds, he was unable to find any man of that name who ever owned a foot of land in Fitchburg. He did find, however, in the Worcester County registry of deeds a *Zachariah* Fitch, who died some twenty years before Fitchburg was incorporated. It appears that he owned "one-half part of about 300 acres" in what is now the southerly portion of the township of Fitchburg. So the claim that this Colonel Fitch "owned extensive tracts of land in that town" is reduced to very small proportions.

To sum up the whole matter, it seems that half a century ago, or more, there was an idea prevalent that the town was named for some Fitch other than John Fitch; but so vague was the impression that Mr. Torrey did not even have his first name correct, for the statement in the "History of Fitchburg" evidently refers to *Zachariah* Fitch.

It may then be regarded as settled that the town was named in honor of that sturdy early settler, John Fitch. He lived in the northerly part of the town, which, in 1767, became a portion of the new town of Ashby, in Middlesex County. He was prominent in the early town affairs of Ashby, and died there April 8, 1795, aged eighty-seven years. A monument, commemorating some of the events of his rather more than ordinarily eventful life, was afterwards erected over his grave.

In accordance with the provision in the act of incorporation, Edward Hartwell, Esq., of Lunenburg, on the 15th of February, 1764, issued his warrant directed to Amos Kimball, requiring him to notify the qualified voters "to assemble at Captain Hunt's new dwelling-house in said town, on Monday, the fifth day of March, at ten of the clock in the forenoon, to choose town officers and fix the day for the annual meeting and the mode of warning at town-meetings."

Fitchburg's first town-meeting was accordingly held March 5, 1764, at Captain Samuel Hunt's tavern. The following town officers were chosen: Amos Kimball, moderator; Ephraim Whitney, town clerk; Amos Kimball, David Goodridge, Samuel Hunt, Ephraim Whitney and Reuben Gibson, selectmen. Under the guidance of these gentlemen the infant town entered upon its career, which was destined to far exceed the fondest hopes of its founders. The town fixed the first Monday in March as the day for the annual town-meeting, and voted that in future the constable or constables of the town warn all town-meetings.

Three weeks later the second town-meeting was held to consider various articles, one of which was "to see if the Hoggs shall run at large for the present year." The "Hoggs" were fortunate enough to secure their liberty for the year. The next town-meeting was held at the tavern, September 12, 1764. Captain Thomas Cowdin was then proprietor of this house, having bought out Captain Hunt during the summer. At this meeting the following vote was passed: "that two miles on the westerly Line, beginning at the northwesterdly corner, and Half a mile on the easterdly Line, beginning at the northeasterdly corner, on Townsend Line, thence running a straite Line from corner to corner be Sott off to Mr John fitch and others, in order for them to Joyne a part of Townshend and a part of Dorchester Canady, in order to make a Town or parish among themselves, and that the said John fitch and others be freed from paying anything to the settlement of a minister or for building a meeting-house in said town of Fitchburgh."

This certainly shows great liberality on the part of Fitchburg's early settlers, and such a large concession would seem to indicate that John Fitch was highly esteemed among his fellow-citizens. The several tracts mentioned above were, in 1767, incorporated as the town of Ashby.

In those early days the territory comprising Fitchburg seems to have been largely owned by a few individuals, and it may be of interest to note some of the most extensive landholders. In July, 1764, Cap-

tain Thomas Cowdin moved into the town, and soon became a leading citizen. As above stated, he purchased the Hunt tavern, which stood some thirty rods or more east of the present junction of Blossom and Pearl Streets. He also purchased the farm going with the tavern. This farm, which is now the busiest and most thickly populated portion of the city, extended from about the present location of Mount Vernon Street on the west to East and Boutelle Streets on the east, and from Pearl Street on the north to Main and Winter Streets on the south. He also owned the land comprised between Baker's Brook and the two roads to Lunenburg. Captain Cowdin kept the Hunt tavern for about ten years, and then removed to what was later called the Boutelle house, near the present location of the American House, which he enlarged and opened as a tavern. Until his death, in 1792, he was a very prominent man in town affairs. A few years ago a handsomely polished, massive granite monument was erected to his memory, in Laurel Hill Cemetery, by his grandson, Hon. John Cowdin, of Boston.

Amos Kimball and his cousin Ephraim, who settled here some fifteen or twenty years before the incorporation of the town, also owned a large tract of land. They lived on what is now known as Hale's Hill, at the upper end of South Street, and owned from that point down to the river and a considerable distance to the west along the river, probably including Rollstone Hill.

Another large landholder was a Judge Oliver, of Salem, who owned from Cowdin's westerly boundary along the north side of the river as far as the junction of Phillips' Brook with the Nashua, comprising what is now the upper portion of the city and all of West Fitchburg. He also owned a tract of land a mile square on Dean Hill, in the northwesterly part of the township.

Colonel William Brown and Burnett Brown, both non-residents, owned an extensive tract in the southern part of the town, probably the land between Mount Elam and Rollstone roads, and also a tract southwest of Dean Hill, near the Westminster line, and a piece of land somewhere in the north part of the town.

As yet there had been no preaching in Fitchburg, the nearest meeting-house being in Lunenburg. Accordingly, in November, 1764, the town voted to have six weeks' preaching on their own territory. Rev. Peter Whitney, the future historian of Worcester County, was asked to furnish preaching for this length of time. He accepted the invitation, and the services were held in Cowdin's tavern. At this same November meeting it was also voted to build a house of worship, and a sum equivalent to about $166 was appropriated to begin the erection of it. Captain Cowdin very generously donated a portion of his wheat-field as a site for the building. The location corresponds closely to the present upper corner of Blossom and Crescent Streets. The people very wisely adopted the old-fashioned, honest plan in erecting their meeting-house, and built only as fast as they could afford to pay for it; consequently it was nearly two years before it was completed. The first town-meeting was held in it on September 22, 1766, and from that time until September 17, 1798, town-meetings were held in it. On the latter date, and for nearly forty years thereafter, town-meetings were held in the new meeting-house completed about two years previously. Services for public worship were held in the old house until the dedication of the new one, on January 19, 1797.

No mention will here be made of the early ministers of Fitchburg. A brief account of them will be given in the ecclesiastical history of the town. Neither shall we, in this place, speak at any length concerning the schools, which will be reserved until the portion of this sketch relating to education is reached. Suffice it for the present to say, that in the autumn of 1764 the town voted a very small sum for "2 scools" during the following winter. The next year, and for several succeeding years, a somewhat larger sum was voted for schools. By far the greater portion of the education obtained by the children in those days was acquired by means of private instruction.

Fitchburg began to increase in numbers and valuation very soon after its incorporation. Energetic and thrifty young men came from towns to the eastward and settled here with their families; and in 1771 there were in town some eighty families, and the valuation was equal to about $8000. New roads were opened, and considerable money was expended on bridges. It is evident, however, that the inhabitants were not skilled in bridge-building. In 1770 the bridges were nearly all carried away by the spring freshets, and were rebuilt before the next winter, only to be carried off again in the following spring. The town records for 1771 state that the town voted "to rebuild the bridges carried away and damnified by the floods," and also "to pay for the rum expended at the bridges."

"Torrey's History" affirms that "the good people of Fitchburg, being vexed at the intrusion of 'cattel' belonging to persons having no 'interest' in the town, they promptly forbade the entrance of all such 'cattel,' and proceeded 'to build a pound with logs.' It was enjoined 'that every person in town come and work at said pound, or pay his proportion.' It was a common practice for them, however, to vote that their own 'Hoaggs Go att Large lawfully Yokt and Ringd,' —as the erudite Town Clerk has recorded it."

It will be remembered that, in the descriptive portion of this sketch, mention was made of unsuccessful attempts to obtain gold and silver from Pearl Hill. These attempts were probably made some ten years after the incorporation of the town. In September, 1769, deeds of John Putnam, Reuben Gibson and Isaac Gibson were recorded in the Registry of Deeds, leasing to Edmund Quincy, of Stoughton, their lands

and farms (about two hundred acres in all, probably,) on Pearl Hill, for the purpose of opening mines. The consideration was five shillings in each case. The mines were to be opened within a specified time and the lessors were to have one-sixteenth part of the "hidden treasures" obtained therefrom.

At the same time deeds were recorded by which Edmund Quincy conveyed to "Charles Gleditsch, of Boston, Jeweller," one-half interest in the proposed mines. Mr. Quincy's absence in England rendered it impossible for him to open the mines within the required time, and May 14, 1774, a new lease, made jointly by Mr. Putnam and the Messrs. Gibson, was recorded, granting Mr. Quincy further time. After a recital of the former leases of mines, etc., "in our lands and farms in sd Fitchburg, at a Place called Pearl Hill," the document goes on to say: "In consideration that the said Edmund Quincy has been at Considerable Charges, from time to time, to Comply with the Terms of the leases aforementioned by Reason of his going for England and thereby was not in his power to comply in Opening any Mines that may be in our lands aforesaid, we prolong and give him a further term of three years from the Date hereof to comply with the true intent of said Leases." It was further set forth that Mr. Quincy was to "pay and allow" the said lessors "one-sixteenth part of all Mines, Mine Ores, Minerals, or other hidden Treasures of the Earth, free and Clear of all Cost and Charges, Delivered at the Pits Mouth wheresoever the same may be Dug, had, gotten or obtained by any Means whatsoever." This was dated May 5, 1774. The unsuccessful result of this venture was no more than could reasonably be expected.

Nor was this the only gold-mining scheme that Mr. Quincy had on hand in this town. He laid his plans to attack the bowels of Hale's Hill also; for September 13, 1769, Amos Kimball gave a deed, which was duly recorded October 10, 1769, the substance of which was as follows: "Know all men by these presents that I, Amos Kimball of Fitchburg in the County of Worcester in the Province of the Massachusetts Bay in New England, Gentleman, for and in Consideration of Five Shillings Lawfull Money to me in hand paid by Edmund Quincy of Stoughtonham in the County of Suffolk and Province Aforesaid, Gentleman, the Receipt whereof I do hereby acknowledge and am fully Satisfied and Contented and for divers other good Considerations me hereunto Moving Have given granted Bargained and Sold and by these presents Give grant Bargain and Sell convey and Confirm unto the said Edmund Quincy" etc., "All and Singular Mines Mine Ores Minerals and other hidden Treasures" that existed on his farm which was "Butted and Bounded as follows Southerly on Ephraim Kimball Easterly on Said Ephraim Kimball Northerly on Nashaway River and westerly on Rolestone hill." He further granted to Mr. Quincy and his heirs, "Liberty right and privilege of Ingress Regress and Egress" and to have "Workmen and Laborers Pitts and Shafts to Sink Levells and Driftways to make and drive up and all other Necessarys and Convenients" that might be needed, together with the right of using any streams on the said land for the purpose of "Cleaning the oar got in upon or within said Tract of land." Mr. Kimball further agreed to defend Mr. Quincy's rights to this property against all persons, "excepting the Demands of our Sovereign Lord the King his heirs or Successors." In conclusion, was the following provision, breach of which would make the contract null and void: "Provided Nevertheless it is the true Intent and Meaning of this deed that the said Edmund Quincy his heirs Executors Administrators or Assigns shall commence and Begin to work upon the premises afore granted within the space of three years from the date hereof." As we have already seen, Mr. Quincy's absence in England prevented his beginning mining operations within the three years, and, as in the other cases, the contract was renewed for three years from May 5, 1774; but the "mines" were probably never opened.

As regards trading interests, there seems to have been no regular "store" in town until 1772, when Deacon Ephraim Kimball opened one in his dwelling-house, located near the Kimball saw and grist-mill previously mentioned. Soon afterwards, however, two more stores were opened, one by Joseph Fox, who came here from Littleton, and the other by William Hitchborn, who came from Boston. Both these stores were located near the meeting-house.

About this time, also, David Gibson built a bakery on the spot now occupied by the residence of Ebenezer Torrey, Esq., and he also built his dwelling-house directly across the road from the bakery. These were probably the first buildings erected in this portion of the town, which, fifty years later, was the most thickly settled and prosperous part of Fitchburg, and rejoiced in the title of "The Village," while the earlier settled portion, a half-mile or so to the eastward, had stagnated and lost its prestige, and had the nickname of "Old City" applied to it.

Although the early years of Fitchburg's existence were prosperous, yet there were events preparing which checked, for a time, the wheels of progress. A fire was smouldering which, a few years later, burst out in the ruddy glare of the Revolutionary War.

Fitchburg, of course, did not, like Boston and many other towns in the Province, suffer from actual invasion, but she unflinchingly and patriotically bore her full share of the hardships of the seven years' struggle for freedom, and was ever ready, and, among the inland towns, was one of the first, to contribute both men and money to the extent of her ability, to aid in the resistance of the colonies against the inroads of the British.

FITCHBURG IN THE REVOLUTIONARY WAR.—In September, 1768, the authorities of Boston sent to the

selectmen of Fitchburg, as they did likewise to the selectmen of the other towns in the Province, desiring them to call a town-meeting, to consider what was best to be done in view of the critical condition of affairs between the colonies and Great Britain, and also to choose an agent to meet with them in Boston, and set forth the "views, wishes and determinations of the people of Fitchburg upon the subject." A town-meeting was soon called, and Hon. Edward Hartwell of Lunenburg was chosen to act as agent for both Fitchburg and Lunenburg. The records do not state what course he was instructed to pursue as the representative of the two towns.

For the next five years nothing special, of a political nature, seems to have disturbed the citizens of Fitchburg. Of course, they felt the same uneasiness and dissatisfaction that was experienced throughout the colonies, and most intensely in and about the town of Boston.

At last, when forbearance ceased to be a virtue, the selectmen of Boston sent letters to the various towns, desiring them "to pass such resolves concerning their rights and privileges, as free members of society, as they were willing to die in maintaining, and to send them, in the form of a report, to the Committee of Correspondence in Boston."

Fitchburg took early notice of this letter, a town-meeting being held December 1, 1773, a few days after its receipt, for the purpose of considering it and expressing the sentiment of the citizens. The communication was read and the record of the meeting states that "after the town had deliberated thereon with zeal and candor, unanimously agreed to choose a committee of seven men, and chose Mr. Isaac Gibson, Capt. Reuben Gibson, Messrs. Phineas Hartwell, Ebenezer Woods, Ebenezer Bridge, Kendall Boutell and Solomon Steward as a committee to consider of our rights and privileges in common with other towns in this province, together with the many flagrant infringements that have been made thereon, and to report at the adjournment."

The adjourned meeting was held December 15th, and the report of the committee was read. It clearly and vigorously set forth the fact that the people of Fitchburg were in full accord with all efforts to oppose, and, if need be, strenuously resist any encroachments on the rights of the colonists. The report closed with the following: "And with respect to the East India tea—forasmuch as we are now informed that the town of Boston and the neighboring towns have made such noble opposition to said tea's being brought into Boston, subject to a duty so directly tending to the enslaving of America—it is our opinion that your opposition is just and equitable; and the people of this town are ready to afford all the assistance in their power to keep off all such infringements."

The stand taken by Fitchburg showed that the citizens were determined and courageous, and yet at the same time exercised a commendable discretion. That they wholly disapproved of the perpetration of any outrage is shown by the "instructions" given to Dr. John Taylor, of Lunenburg, who, in May, 1774, was elected jointly by Lunenburg and Fitchburg to represent the two towns in the Great and General Court. He was instructed to "bear testimony against all riotous practices and all other unconstitutional proceedings," and also not to give up any charter rights and privileges, and to use his influence to have rights that had been taken away restored; and further, "to move in the General Assembly that there might be a Congress and union with all the provinces." Whether he moved for such a congress, or not, does not appear, but the deputies of a Congress of that description met in Philadelphia in the following September.

In October of the same year the town sent Capt. David Goodridge as their delegate to the Provincial Congress which convened at Concord and soon after adjourned to Cambridge. This Congress prepared plans for the defence of the province, and passed the resolve relative to the "minute-men," so called.

Fitchburg was now wide awake. Forty men were enlisted as minute-men and the selectmen expended about fifty dollars for "powder, lead and flints." The armory of the minute-men was in Ephraim Kimball's store. These men were regularly drilled and ready to start at a moment's notice.

The winter passed away and the memorable 19th of April, 1775, was at hand. It found the little town on the alert. At seven o'clock on the morning of that day the British reached Concord, and at nine o'clock, just two hours later, the alarm gun was fired in front of Kimball's store. In a very short time about fifty men, under the command of Captain Ebenezer Bridge, started for Concord, and immediately after their departure a large wagon, filled with provisions, was despatched to follow them. The company proceeded as rapidly as possible, but did not reach Concord until evening—too late to take any part in the events of that historic day. Quite a number of the men returned home in a few days, as there was no immediate need of their services; but shortly afterward a company was regularly enlisted composed of Fitchburg and Lunenburg men.

Other men from this town joined the Continental army at various times, and there were some thirty Fitchburg men constantly in the field until Boston was evacuated. There were probably a dozen men from this town engaged at Bunker Hill, and at least one of them (John Gibson) is supposed to have been killed. The last seen of him was in the hottest of the battle, beating down the enemy with the butt of his musket.

"Independence Day" was now drawing near. Before taking the decisive step of declaring the American colonies free and independent, the Continental Congress submitted the matter to the legislative bodies of

the several colonies to ascertain if their support could be relied upon after the die was cast.

The General Court of Massachusetts had already assured the Congress that the people of the Old Bay Colony would undoubtedly support them; but to make the matter doubly sure, a resolve was passed that each town in the colony should take individual action on the matter.

In accordance with this resolve, the people of Fitchburg assembled in town-meeting, July 1, 1776, just three days before the Declaration of Independence was adopted by the Continental Congress. And this is the answer that little Fitchburg returned to the General Court at this alarming crisis: "Voted, that if the Honorable Continental Congress should, for the safety of these United Colonies, declare them independent of the Kingdom of Great Britain, that we, the inhabitants of the town of Fitchburg, will, with ourselves and fortunes, support them in the measure."

In October, 1776, the town voted adversely in regard to the question submitted to it, in common with the other towns of the Province, as to whether the "then Representative House, together with the Council, should make a form of government for the State of the Massachusetts Bay." The objections of the people of Fitchburg to this project took the form of a report and were based on the following well-taken points: that the members of the present House were not elected with a view to any such action, and that many of the inhabitants, who ought to have a voice in the matter, were absent in the army. In other words, they thought it best not to be in too much of a hurry.

Two and a half years later, in May, 1779, the town voted unanimously (forty-five votes) in favor of a new State Constitution. Just a year previous their vote on the same matter was twenty-two in favor and four against. In August, 1779, Capt. Thomas Cowdin was elected delegate from this town to attend the convention held at Cambridge, September 1st, for the purpose of framing the new State Constitution. This Constitution, as prepared by the convention, was submitted to the people for their ratification in May, 1780, and Fitchburg voted unanimously (65 votes) in favor of its adoption.

During this period the inhabitants of Fitchburg who remained at home were by no means reclining on beds of roses. It was "hard times" with them. Money was scarce, prices were high and the soldiers and their families had to be provided for.

In 1777 the town began to get tired of the heavy burden. There was much gloom and not a little grumbling; but through it all no word reflecting on the justice of the American cause would be tolerated by the mass of the citizens. Patriotism was put above everything else and persons who did not come up to the mark in this respect were closely watched. "More than one inhabitant of this town was threatened with a coat of tar and feathers, and even with the destruction of his house," says Torrey.

Everybody was called upon to contribute to the good cause, to the utmost of his ability, and the suspicion and wrath of the citizens fell upon those who did not seem disposed to do their full share.

The people were divided into classes, according to their wealth, and each class furnished soldiers in turn, as they were called for by the government, and had to provide for the bounty money.

In addition to all the money furnished by these classes, the town also expended what amounted to quite a sum in those days. It is difficult to estimate how much the town actually expended during the last five years of the war, because the currency fluctuated so much, but it was probably between $7000 and $8000.

It is very easy to see that all these war expenses, combined with the ordinary running expenses of the town, must have taxed the resources of the inhabitants of Fitchburg to the utmost. To cap the climax, the Continental currency, issued by the Congress, was counterfeited by the British, and the country was flooded with this spurious paper.

In 1777 the currency began to depreciate and continued to do so in a most alarming and ruinous manner. The government, for some inexplicable reason, made them legal tender for debts due, and the result was that many, who were previously in comparatively affluent circumstances, were reduced to almost absolute poverty. On the 1st of January, 1780, this currency had depreciated to such an extent that $1.00 specie was worth $32.50 Continental.

The records at that period show that sums of money were voted by the town that would appear fabulous, did we not understand about the depreciation. Thus, in February, 1780, it was voted that the inhabitants should be allowed three dollars (*i e.*, about nine cents "hard money") per hour for their labors on the highways. Eight thousand dollars was voted to be raised to assist in supporting soldiers' families. "In July, it was voted to raise $1666.66 to hire soldiers with. In the October following, a committee of the town contracted for four thousand eight hundred pounds of beef, and agreed to pay $26,000 for it, or at a rate of over $5.00 per pound." In 1781 Continental money took a still greater drop, and in March of that year two men who had been elected collectors of taxes in Fitchburg for the ensuing year, and refused to serve, were each fined $900, equal to about $10 specie, the usual fine in such cases. At the same time the town voted $20,000 for repairs of highways and allowed each person $5 per hour for his labor.

The last, but not perhaps the least, of the troubles with which the town had to contend during this period was that dreaded disease, small-pox, which broke out here in 1776. A hospital for the purpose of inoculation was established in town by Dr. Thaddæus McCarty, of Fitchburg, and Dr. Israel Atherton, a noted physician of Lancaster. It does not appear that there

were many deaths from the disease. Notwithstanding all these trials and hardships, Fitchburg increased considerably in size during the war, and at the time of the declaration of peace, in 1783, the town had about one thousand inhabitants.

But another trouble was soon to come upon them in the form of

SHAYS'S INSURRECTION.—At the close of the war, trade was stagnant, and there was very little money. The State government, in order to keep up its credit, imposed very heavy taxes on the people. At first the people had recourse to petitions; but finding that no amelioration resulted from their numerous statements of grievances, they broke out into open rebellion against the State authorities. The leading character in the short-lived disturbance was a man named Daniel Shays, a former captain in the Continental army; hence the name Shays's Insurrection was applied to it.

The discretion that had previously characterized the people of Fitchburg, fortunately prevented them from breaking out into open rebellion; but their threats were loud and deep, and not all the taxes ordered by the government were collected.

In June, 1786, Elijah Willard was appointed a delegate from this town to a convention, held in Worcester, to consider the best means of extricating the people from their burdensome difficulties. The town voted to defend his property if he should be arrested for attending the convention, "provided he behaves himself in an orderly and peaceable manner; otherwise he is to risk it himself."

By all means in their power, short of force of arms, did the people of Fitchburg resist all efforts to collect the taxes, and the consequence was that a large company of soldiers was sent here in the fall of 1786, to enforce obedience. This made the citizens exceedingly indignant, and there were several occasions when serious strife was imminent. The company was prudently withdrawn to Townsend in the winter of 1786-87. During all their stay in Fitchburg, the soldiers exhibited great insolence towards the citizens, and when they were ordered to Townsend they put a finishing touch to their impudence by impressing men, horses and conveyances to take them there. A number of the soldiers were taken by Asa Perry, who hated them most cordially, and he managed to tip his load into the snow-drifts several times in the course of the journey. During 1787 the trouble gradually subsided and matters went on with tolerable smoothness.

It may be of interest to give a short description of the appearance of the town as it was about a century ago. In his "History of Fitchburg," Mr. Torrey has given as good and accurate a description as could be written, which is as follows: "A traveler, approaching from the east or south, would first behold the tavern of Thomas Cowdin, Esq. Upon the hill to the northwest might be seen a small, yellow and rather mean-looking meeting-house. In front would appear the 'red store' of Joseph Fox, Esq., and in the rear of that his dwelling-house, with large projecting eaves. The mills and meeting-house of Deacon Ephraim Kimball were just below, and over the bridge were two houses more. Casting his eyes up the hill, he would see the house of Rev. Mr. Payson, where C. Marshall now lives. This was all that could be seen, and all that then constituted the middle of Fitchburg. Thence proceeding westward, over a crooked and rough road, the traveler would next see the house already mentioned as having been built by David Gibson, and opposite to that, on the right, the baker's shop. He would then come on to the present Common. Here his eyes would be greeted by small, stunted pine trees, and such bushes as grow upon the poorest land. A straggling log fence here and there might serve to diversify the scene. Nothing more was to be seen, unless William Brown had commenced building Captain Z. Sheldon's present dwelling-house, till, passing the swell of ground at Dr. Abel Fox's house, the modest, unassuming house of Benjamin Danforth would be visible on the right, and his blacksmith's shop on the left. Continuing his course onward, over one of the most wretched roads that ever bore that name, and passing over the high bridge —and a crazy one it was—near the bellows-shop of Messrs. Thurston & Battis, no marks of human habitation were to be seen till, passing around the hill, he might discern in the distance the solitary cottage of Benjamin Kemp. The river, which is now crowded, so to speak, with mills and factories, then appeared like a useless profusion of water, flowing noisily along over its rocky bed to the parent ocean, unobstructed by a single dam save the one in the Old City. Such, fifty years ago, was the forbidding aspect of what is now the busy and pleasant village of Fitchburg." The reader will bear in mind that the foregoing was written by Mr. Torrey in 1835 or 1836.

In addition to the middle of the town above described there was, a century ago, a flourishing settlement in the westerly part of the township. The land there was elevated, the soil good and there was no river to cause trouble every spring. This region, now known as Dean Hill, was settled early and became quite prosperous. This locality boasted of two taverns, kept by Jacob Upton and Jedediah Cooper respectively, a blacksmith's shop and a doctor, besides the houses of many thrifty farmers.

The people living in this region had to pay their proportion of the taxes for the annual repairs of bridges and highways in the middle of the town. To free themselves from these heavy and, in their opinion, unjust taxes, they determined to be set off as a separate town; and in the warrant for the annual town-meeting March 7, 1785, was an article "to see if the town will take into consideration the request of Mr. Jacob Upton and others, to see if the town will set off the inhabitants of the northwesterdly part of

Fitchburg, with their lands and privileges, free and clear from said Fitchburg, to join the extreme part of Westminster with the northeasterly part of Ashburnham, to be incorporated into a town, to have town privileges as other towns."

The people in all other parts of the town were unanimously opposed to this project, doubtless fearing that, in case this prosperous and growing portion were set off and ceased to contribute to Fitchburg's town expenses, they would be utterly swamped by the taxes necessary to repair the damage done by that grievous nuisance, the north branch of the Nashua. So the article was promptly voted down.

The people in the west, by no means discouraged by this defeat, went to work immediately to gain their point and contrived a very shrewd scheme worthy of "Yankee ingenuity." The time had come when all were agreed that there was need of a new meeting-house in a more central locality. This commonly acknowledged fact was made the basis of a petition brought before the town by the people of the west in May, 1785. The substance of this petition was that a mile or more in width of the northerly part of Westminster, with the inhabitants thereon, be annexed to Fitchburg, these proposed new inhabitants "to be convened with others of the inhabitants of said town, for the public worship of God and to be vested with all other privileges with said town in public matters, to join with the inhabitants of said Fitchburg to build a meeting-house on Ezra Upton's land," etc.

This, at first glance, seemed like a perfectly fair proposition. If adopted, territory would be added to the township and the location of the proposed meeting-house would be quite near the centre of the town. But the men of the east were Yankees, too, and dust could not be thrown into their eyes. They saw the point so speciously concealed by the meeting-house scheme. They saw that if the petition were granted and the new territory annexed, the inhabitants of the new acquisition, combined with the people in the west, would then be strong enough to control the town-meeting, would vote to be set off as a separate town and thus leave the remainder of the town of Fitchburg in the lurch. So the petition was negatived, doubtless much to the chagrin of those who had hoped to pull the wool over their neighbors' eyes.

Nothing more (except complaining of the distance they had to travel to go to meeting) was done by the people of the west until March, 1786, when they very modestly requested of the town, "that Rev. Mr. Payson have liberty to preach some part of the time in the year in the westerly part of the town." This privilege was also denied them, "the town thinking that by yielding an inch they would open a door through which they might unwillingly be thrust a mile," as Mr. Torrey aptly expresses it.

The wrath of the west was now fully aroused. They were bound to have their rights recognized, and to have a new meeting-house as near them as they could get it. At this time began a controversy concerning the location of the meeting-house, which lasted over ten years, and required *ninety-nine* town-meetings to settle. An account of this controversy will be given in the ecclesiastical history.

The town records during this period (1786–96) contain but little that does not refer to the controversy. Two events, however, occurred in the course of these years that are worth noting in this section. One was the census of 1791, from which it appears that Fitchburg's population at that time was one thousand one hundred and fifty-one, showing that the town had grown very slowly during the previous eight or ten years.

The other event was the appearance of Rev. Peter Whitney's "History of Worcester County," published in 1793. It may be of interest to give a few of his impressions about Fitchburg as it was then. After a very brief account of the incorporation of the town and a description of the character of its surface and soil, he says: "Most of the people live in comfortable and easy circumstances, possessing all the necessaries and many of the conveniences of life. They are industrious, and, having a good soil to labor upon, live independent, and, for an inland town, several families among them may justly be deemed rich. The people near the meeting-house are settled pretty thick, and there much business of various kinds is performed; for here runs, a few rods south of the meeting-house, the north branch of Nashaway River. One part of this river comes from Ashburnham, the other part from Watchusett Pond; these unite a little west of Fitchburg Meeting-House. After this junction, and just below the meeting-house, there is one corn-mill, one saw-mill, one fulling-mill, one clothier's works, one trip-hammer and works for grinding scythes. These occasion a great resort of people there to transact their various concerns." Further on he states that it is a flourishing place, and thinks that "if they continue in peace and unity they will still greatly increase in numbers and wealth." He adds: "They subsist chiefly by husbandry; there are, however, the usual mechanicks and a few dealers in European, East and West India goods."

The town records contain very little of interest during the last few years of the century. February 12, 1796, a small part of the southwesterly portion of the township was annexed to Westminster. In 1798 the town laid a tax on "Doggs," and the next year voted to abate it. The tax appears to have amounted to fifty-three dollars. In the fall of 1797 it was voted "to build a pound with stone two rods square within the walls." The contract was given to Thomas Cowdin (son of Captain Thomas Cowdin, who died in 1792), for thirty-three dollars and fifty cents, with the privilege of taking stone off the town's land. The old stone pound still stands in the woods, close

by the Ashburnham hill road, and looks desolate and forsaken. Whether it has been rebuilt or not since 1796 the writer cannot state; but its appearance would indicate that it had not.

CHAPTER XXXVIII.

FITCHBURG—(*Continued.*)

HISTORY FROM 1800 TO 1872.

THE year 1800 found the town in a tolerably flourishing condition. The population had increased to one thousand three hundred and ninety. The people had recovered their equanimity on the meeting-house question, and the new house of worship was much appreciated on Sundays, and often called into use on week-days for town-meetings, its first use for this purpose being on September 17, 1798. A clock had been put into it, for which the town, for some reason unknown, seems to have been rather unwilling to pay.

In 1801 there appears to have been a revival of the desire of the people in the west to be set off; for, at a town-meeting February 23, 1801, there was an article in the warrant "to see if the town will vote to set off all the inhabitants in the northwestern part of the town of Fitchburg, who wish to be set off as a town, agreeable to a plan formerly drawn by some of the inhabitants of the towns of Fitchburg, Westminster, Ashburnham and Ashby." It was voted to pass over this article.

During the following five years there seems to be nothing of special interest entered upon the town records. In September, 1806, the town voted to choose a committee to provide plans for a powder-house, select a location for it and ascertain, "as near as they can," the expense. The committee made a favorable report, and the town voted March 7, 1808, to build the powder-house, and chose a committee of three to attend to it. This powder-house was located near the bend in the present Central Street, and is well remembered by many of our older citizens. It stood there for a considerable number of years.

In 1808 the town concluded a satisfactory agreement with the town of Lunenburg, "respecting paupers, public lands and taxation," matters that for some time had been in dispute. It was the custom in Fitchburg, as in most towns at that time, to let out the poor to the lowest bidders. Regular public auctions were held every year for this purpose: and some of the conditions upon which certain of the paupers were "let out" are worth noting. Thus, for example, one L. W. was bid off by a citizen "to lodge and board and mending for the said L.'s work, till she is otherways disposed of, the town to cloathe her and doctor her in sickness if need. In regard to one of the town charges it was always stipulated that the person who bid him off "resk his conduct if he should be at freedom and be answerable for all damage done by him."

In April, 1808, a certain pauper "was struck off at a public vendue, at 26 cents a week,—all running charges excluded, viz., sickness and clothing." The prices bid ranged from nothing to a little over a dollar a week, according to the capabilities of the paupers to work and the amount of care necessary to look after them. In 1820 a new method was begun, all the paupers, thirteen in number, being let out together to Jacob Upton, for the year, for three hundred and nine dollars and seventy-five cents.

In May, 1810, there was an article in the warrant "to see if the town will raise a sum of money to purchase an engine." There seems to have been a fire just previous, but the people could not have been very greatly alarmed, as no action was taken on this article.

During the first decade of this century the town was only moderately prosperous. The population had increased somewhat, being one thousand five hundred and sixty-six in 1810. People were undoubtedly deterred from settling here on account of the high taxes necessary to keep the roads and bridges in repair and to build new ones. Moreover, there was bitter dissension among the people in regard to theological matters, which will be referred to later. It began early in 1801 and continued until 1823, when the two societies mutually agreed to disagree, to live and let live, and a final separation took place.

It was during this decade that the first cotton-factory was erected in Fitchburg. It was also one of the earliest (the third) built in this State. This factory, known among us for more than half a century as the "Fitchburg Woolen Mill," was built in 1807 by a corporation of some thirty individuals, for the purpuse of trying the then novel experiment of spinning cotton. It was successful for a time, but later was converted into a woolen-mill. In 1887 it was purchased by the Parkhill Manufacturing Company; thus, by a singular coincidence, the first factory built in Fitchburg was, after many years, restored to its original industry. A detailed account of this old landmark will be given hereafter. On "Election Day," 1810, Capt. Martin Newton put in operation two spinning-frames in a building near the present "Stone Mill."

Paper-making was begun in town in 1805, in a mill built on the site of the Rollstone Machine Company's works, by Thomas French. The dam built there the year previous was the third across the Nashua. Up to the year 1810 nothing in the way of manufacturing enterprises, other than those mentioned above, had been established in Fitchburg as permanent industries of the town. Scythes, bellows, hats and a few other articles were made here then on a small scale, but are now no longer among the industries of Fitchburg.

In March, 1811, the town made another unsuccessful attempt to raise money ($100) for the purchase of a fire-engine, and July of the same year chose Paul Wetherbee, John Thurston and Samuel Gibson a committee "to raise a contribution for the relief of the sufferers of Newburyport by a late fire."

The War of 1812 does not seem to have had much effect on town affairs here. The war was unpopular in New England, but Fitchburg appears to have borne her part without any murmuring. In the warrant for a town-meeting in May, 1812, was an article "to see if the town will offer any reward, by way of bounty or wages, to such soldiers as may volunteer, or be detached, to supply the number of troops required by the commander-in-chief from the infantry and cavalry of said town." It was voted that the town make up the soldiers' wages to twelve dollars a month while in actual service.

In May, 1815, it was voted "that Z. Sheldon and others have liberty to erect a liberty pole at their own expense."

For some years previously there had been an article in the town warrants, from time to time, to see if the town would sell the twenty-two and a half acres of land purchased of Thomas Boynton in December, 1788, for the meeting-house site, but never used. The town had not as yet been able to come to an agreement about it. In 1813 there was an article to see whether it should be sold to Jonas Marshall, Jr., and the proceeds applied to the purchase of a bell for the meeting-house, on condition that Mr. Marshall "will give $100 more than two or three men, that shall be agreed upon, shall appraise the land to be worth." The article was not acted upon. In March, 1817, it was finally voted "to sell the town's land bought of T. Boynton, reserving a piece for the pound," and a committee of three was chosen "to sell it to the best advantage." The members of this committee seem to have accomplished their work, and in March, 1818, it was voted that the conveyance be made by the town treasurer and "to appropriate the money arising from the sale of the town's land to repair the bridges carried away by the freshet;" but this vote was reconsidered and it was agreed to appropriate the money "as any other." The spring of 1818 seems to have been particularly disastrous to the bridges.

August 21, 1820, the town voted on the question, "Is it expedient that delegates should be chosen to meet in convention for the purpose of revising or altering the Constitution of Government of this Commonwealth?" The vote was unanimously in favor of choosing such delegates (eighty-five votes). October 16, 1820, the town chose Calvin Willard and John Shepley as delegates to attend a convention held for this purpose in Boston, on the third Wednesday of November, 1820.

During this decade the population of the town increased very little, being one thousand seven hundred and thirty-six in 1820. In these ten years three more cotton-mills were built in town—the first being Newton's cotton factory, built in 1812 by Captain Martin Newton and Solomon Strong. To accommodate this factory the town, in September, 1812, laid out a "town road and private way, two rods wide, to a stake opposite the northwest corner of the new Factory." This "way" (now known as Newton Place) passed through the land of Oliver Fox, "whose damage," as the records say, "is appraised at $101, which Newton and Strong are to pay, as also all expenses of making and keeping it in repair." The second factory was the "Red Mill" (where Pitts' mill now stands), built in 1813, and the third was built on Phillips' Brook in 1814 by a company which failed soon after the close of the war, but was later put into operation as a cotton factory by other parties.

During this period many new roads had been built, and old ones straightened and made more level. The town fathers began to recognize the fact that a straight line is the shortest distance between any two given points. The early settlers, for the sake of protection and defence, lived on the tops of the hills, and the roads, being built for their accommodation, went straggling and twisting over the various hills as best they could. Evidently such roads, besides being difficult to construct and hard to travel on, were really in the end the most expensive that could be made, because of the great damage necessarily done every year when the snows of winter melted and produced torrents of water, which washed them out badly and rendered them dangerous to travel upon. The authorities saw this, and began to "mend their ways" in a double sense. Much improvement in this respect had been made by 1820, but the roads in and around Fitchburg could not be called really good until some ten or fifteen years later.

Let us now return to the consecutive history of the town. The convention in Boston in 1820 prepared articles of amendment to the Constitution, to be submitted to the people for ratification; and April 9, 1821, the inhabitants of Fitchburg were called together to vote on the proposed fourteen articles of amendment, each one to be voted on separately. The result was as follows:

ARTICLES.	YEAS.	NAYS.	ARTICLES.	YEAS.	NAYS
1	41	53	8	87	10
2	83	17	9	51	15
3	81	16	10	29	61
4	48	31	11	65	24
5	35	59	12	52	37
6	65	21	13	68	21
7	51	31	14	55	37

Thus it appears that they voted in favor of accepting all except Articles One, Five and Ten.

Up to this time the town seems to have been unsuccessful in regard to getting a vote to purchase any fire apparatus. There appears to have been, however, an "Engine Company," for in October, 1821, it was voted "that the town provide ten pair leather buckets for the Engine Company." They probably

thought it well to have the name, because the engine must come sooner or later; and come it did, before very long, too, for in March, 1823, it was voted "to raise one hundred dollars to purchase an engine;" also "to close with Oliver Fox's offer," which was that he would build an engine-house and give the land, providing the engine be kept down in the "Old City." This engine was what is now called a "hand tub," and had to be fed with water from buckets. The engine-house was located near the present quarters of Niagara Hose, No. 4, on Day Street. So the "down-towners" had the distinction and gratification of having the fire-engine near them.

During the years 1814 to 1822, inclusive, the town voted not to send a Representative to the General Court, and in 1822 a fine was imposed on the town for neglecting to send any that year. In April, 1823, the town authorized Joseph Simonds, town treasurer, to pay the fine and in the following September, voted to petition the General Court to relinquish the amount of the fine.

In April, 1827, the sum of seventy-five dollars was raised to pay the expense of completing the fire-engine and fifty dollars for buckets. At the same time it was voted "that the overseers of the poor be authorized to purchase a farm for the support of the town's poor, and, if they do so, that they be authorized to stock it, provide farming tools, etc."

They accordingly purchased a piece of land in the southeastern part of the town, on the road to Leominster (now Water Street in South Fitchburg) and it has been used as a poor-farm since that time. In April of the next year it was voted to change the name of poor-house to that of work-house. May 5, 1828, it was voted "to build a reservoir for water on the common, with two pumps, at an expense not exceeding $50."

The year 1830 brought several novelties to Fitchburg. In the autumn of that year J. E. Whitcomb & Co. opened a printing office in town, in a building just below the tavern which stood on the site now occupied by the Fitchburg Hotel. In October, 1830, this enterprising firm began the publication of a newspaper—the first one in Fitchburg—called the *Fitchburg Gazette.*

Another event of this year was the appearance of "A Map of Fitchburg, Mass., Surveyed by Levi Downe: October, 1830." It bore the imprint of "Pendleton's Lithography, Boston, Mass.," and was well executed, and showed very accurately the condition of the town at that time. From it we learn that there were then in Fitchburg three hundred and twenty-five dwelling-houses, two meeting-houses, one academy, twelve school-houses, one printing office, two woolen manufactories, four cotton manufactories, one scythe manufactory, two paper-mills, four grist-mills, ten saw-mills, three taverns, two hat manufactories, one bellows manufactory, two tanneries, two window-blind manufactories and one chair manufactory.

During the ten years, 1821–30, the town made considerable progress. The population had increased much more than it had in any previous decade, being two thousand one hundred and seventy-six in 1830, an increase of nearly four hundred and fifty over the number of inhabitants in 1820. Several substantial dams had been built and a number of new mills and factories erected.

The improvement of the roads and bridges had begun in earnest. Many old roads had been practically discontinued and new ones built. The road to Leominster had been straightened and otherwise improved; in 1830 a new road was opened to Ashburnham, and about the same time another to Lunenburg. The river-road to Westminster was opened a few years later.

Two substantial stone bridges were built in 1829 over the Nashua, on the Keene and Boston mail road (now River Street), a little west of the meeting-house. The cost of these two bridges is stated to have been over two thousand one hundred dollars. The fire-engine seems to have been put into requisition at least a few times during the ten years, for in May, 1828, it was voted that a reward of two hundred dollars be authorized to be offered "for the apprehension of any person or persons who shall be convicted of having set fire to the buildings which have recently been burnt in this town."

The "High School Association of Fitchburg" was formed about 1830, and during that year erected the academy, for which Captain Zachariah Sheldon very generously donated the land. The academy stood a little in front of the present location of the Fitchburg High School building, and cost about twelve hundred dollars. All these things show that the people were awake to the necessities of the times, and that the town was well started on its prosperous career.

The year 1832 witnessed the establishment of the first bank in Fitchburg. The Fitchburg Bank was chartered that year by the Legislature with a capital of one hundred thousand dollars, and went into operation in July. It began business in a small granite building on the site of the brick building now occupied as an office by the firm of Crocker, Burbank & Co.

Nothing else of special note seems to have occurred during the period from 1831 to 1835. The following vote in August, 1832, may, however, be of sufficient interest to copy; for some of the older residents doubtless remember the big sign-post referred to, which stood on the Common half a century ago. "Voted, that Capt. Z. Sheldon have permission to erect a sign-post on the Common, under the direction of the Selectmen, with regard to place, kind and stile of post and guide-boards, all to be done to their satisfaction; and it is expected to be ornamental to the Common."

A brief description of the town, as it appeared

about that time, taken from a letter written by a native of Fitchburg then residing in Wisconsin, is so graphic that it is worth quoting. This letter was written in 1864 in response to an invitation to attend the Centennial celebration of the town in June of that year; and in it the writer goes back in recollection to the time "when the 'old city' was little else than the 'stone factory' and a farm; when boys, and men, too, played ball on the Common, which was then a waste of sand (well covered with granite blocks and chips) from the Unitarian 'meeting-house' to the 'Lower Tavern,' and without any enclosure or improvement of any kind except the town-pump and a huge sign-post; when the old yellow 'town school-house' held a prominent place at the head of the street, and the orchard next, which, I think one member of your committee and all the boys of that period will remember, had no other fence at its front on the main street of the village than a rough stone-wall, containing, I verily believe, more stones than can be found in any one place in all Wisconsin."

A more extended description of the main street about 1836 would show the following: Beginning on what is now West Main Street, one would first see the "Red Mill;" a little below it, on the present corner of Main and River Streets, stood a store; and beyond that, not far from the Common, was the Baptist Church, which is now occupied as a carriage repository. One would next come to the Common, with the First Parish (Unitarian) Church standing at its head and the "yellow school-house" flanking the church and standing at the present junction of Main and Mechanic Streets. On the corner of Main and Rollstone Streets was the Orthodox Church, on the site of the present Calvinistic Congregational Church, and just below was the brick building which still stands there, though somewhat enlarged. The lower portion has always been used as a grocery store, and for half a century, lacking a few months (April, 1836, to October, 1885), it was occupied by Mr. Thomas C. Caldwell, for many years the veteran grocer in active business in Fitchburg. In 1836 the upper portion of this building was occupied by the tailor's shop of Daniel Cross. Mr. Cross is still in the same business, though in much more commodious quarters than those early days afforded, and enjoys the distinction of being the senior merchant in active business in Fitchburg. He began business here in 1833. The building of which we were speaking was afterward raised one story and otherwise enlarged, and for many years the upper portion has been used by the Sentinel Printing Company. The grocery store in the lower portion, though now passed into other hands, will probably always be called the T. C. Caldwell store. Just below was Factory Square, with the Fitchburg Woolen Mill standing in the same place as at present, and substantially the same in appearance then as now, with the exception of an addition to the northwest corner, built in 1887 by the present owners. Factory Square has lost the charm of the noble elm which, until a few years ago, lifted its wide-spreading branches over its centre. Next the square stood a tavern, on the site of the Fitchburg Hotel, and beyond the tavern was a store, in the rear of which was the printing office. On the other side of the street, directly opposite the tavern, was the store of Benjamin Snow & Son, above that a hardware store, then the granite bank building, and above that, on the present corner of Main and and Academy Streets, where the National House now stands, was another tavern. The academy was plainly visible at the then extremity of Academy Street. There were about forty dwelling-houses scattered along the upper portion of the street. In "Newton's Lane" was a cotton-factory, and in the "Old City" were the "Stone Mill," the Burbank Paper Mill, a tavern, a store in the rear of I. C. Wright & Co.'s present hardware store, a brick school-house, occupying about the site of the old meeting-house, and about a dozen dwellings. Such, in brief, is a description of the appearance of Fitchburg a little over fifty years ago.

Until about this time the First Parish Church had been used for town purposes; but in 1836 the Parish began to think seriously of building a new church just above the site of the old one. This made it necessary for the town to take some action in regard to having a town hall, and on December 31, 1836, the following vote was passed: "Voted, to unite with School District No. 1 in erecting a building for town-house and school-house, if it can be done on equitable terms." A committee was chosen to purchase a spot, and another committee to build the house, &c. A site was bought on the corner of Main and Baker (now Circle) Streets, and arrangements were made by which the old meeting-house was moved to that location and fitted up for town purposes. The house, much altered from its original appearance, still stands there and is now known as Crocker's Hall. The first town-meeting was held in it November 13, 1837, at which time the following report of the expenditures of the committees in making this change was rendered: "Cost of spot, $1000. Benches of old meeting-house, $410. Moving it, $200. Stone-work, $518. Painting, $140. Labor and material, $639.86,—less old porches and stuff sold, $29.16 = $2922.57."

During the period between 1830 and 1840 several newspapers were started here, but had only a brief existence. In 1838, however, a new era was inaugurated in the journalism of Fitchburg by the starting of the *Fitchburg Sentinel*, December 20th of that year. This newspaper has continued to be published ever since, and on December 20, 1888, completed a half-century of prosperous existence.

The fourth decade of this century may justly be called a very prosperous one in the history of the town; but it was only the precursor of what was to come. The population in 1840 had increased to two thousand five hundred and seventy; old indus-

tries had flourished and new ones had come into town to stay. The foundation of the large machine manufacturing interests of Fitchburg was laid in 1838 by the establishment of the firm of J. & S. W. Putnam in town.

The records contain very little of interest or importance during the few years succeeding 1840. In April, 1844, it was voted "that the selectmen procure a suitable safe for the preservation of the books and records of the town." About this time also the people began to think of having a town clock, and in November, 1844, it was voted "pay one-half the expense of a first-rate clock to be placed on the Second Parish Meeting-House, provided the said one-half does not exceed two hundred dollars, and that the selectmen be a committee to see this money properly applied." At the same time it was voted "to discontinue the travel on the Common between the two rows of maple trees, as far down as these trees extend, and that the same may be fenced, provided it be done free of expense to the town."

The all-absorbing topic at this time was the Fitchburg Railroad. The first public meeting to consider the project of direct communication between Boston and Fitchburg, by a railroad, was held in the town hall November 12, 1841, pursuant to a notice printed in the *Sentinel* the day previous. The people of Fitchburg were deeply interested in having the road built, and aided, in every way possible, their fellow-townsman, Alvah Crocker, Esq., through whose zeal and untiring energy the railroad became an accomplished fact. The year 1845 will ever be a memorable one in the annals of Fitchburg. In February of that year the track was completed to this town, and on the 5th of the following March the road was opened for use. There was more or less contention in regard to the location of the depot. The site finally decided upon was a part of Deacon David Boutelle's garden; so the "Old City" was again favored, as it was in the case of the first fire-engine; and its prospects began to brighten. Three years later the Vermont and Massachusetts Railroad was completed, and Fitchburg's importance as a railroad centre began to develop. These railroads rendered the natural resources of the town fully available, and inaugurated a new era in business. The people worked hard to secure them, and richly deserved the almost incalculable benefits that have been derived therefrom during the last forty years or more. A powerful impetus was given to the town, and the question "Where is Fitchburg?" was no longer asked, at least in this Commonwealth. Energetic business men saw the capabilities of the town and located here, and the population began to increase in a most gratifying manner. In 1845, according to a census taken by the assessors, the population of the town was three thousand eight hundred and eighty-three.

At a town-meeting, November 10, 1845, a committee was chosen "to name the several streets in the Centre Village, in the town of Fitchburg." Their report was accepted and adopted March 2, 1846, and from it we learn that the following-named streets were then in existence: Main, Mechanic, Prospect, West, River, School, Chestnut, Rollstone, Baker's, Academy, High, Pleasant, Prichard, Central, Blossom, Summer, Water, Laurel, South and Cross Streets. This committee also named Cottage Square and Newton's Lane.

At a town-meeting, November 7, 1848, a committee, previously appointed for the purpose, reported a code of by-laws to be observed by the town of Fitchburg. These by-laws were quite strict, and if rigidly enforced, must have rendered the town a model of law and order. At this meeting these by-laws were accepted, and a committee, consisting of Alpheus P. Kimball, Ivers Phillips and William Carleton, was chosen to procure the sanction of the Court of Common Pleas thereto. The sanction was duly obtained at the December term, 1848, and the by-laws were printed by order of the town and distributed among the citizens.

In 1849 the town took a wise and commendable step by voting "to establish a High School, to be kept throughout the year, with suitable vacations, and the School Committee to put it in operation as soon as convenient." The sum of eight hundred dollars was raised for this purpose.

The year 1850 found Fitchburg a bustling, thriving town of a little more than five thousand inhabitants. The increase in population and business was unprecedented in the annals of the town. During the decade the foundation of the chair business had been laid here by Walter Heywood and Alonzo Davis. Two more banks had been established—the Fitchburg Savings Bank, in 1846, and the Rollstone Bank, in 1849. The Fitchburg Mutual Fire Insurance Company was incorporated March 22, 1847, and began business September 1st of the same year.

Several substantial and, at that time, commodious and ornamental brick blocks had been built in town previous to 1850, among which may be mentioned the Torrey & Wood, Heywood, Comee, Town & Piper, Snow & Wood (now called Central Block) and Rollstone Blocks. The Universalist Church was built in 1847 and had in the lower story three good stores. The Fitchburg Hotel Block was erected about 1850 and furnished four good stores. It is quite evident, therefore, that Fitchburg was at that time well provided with stores and accommodations for offices, etc. The American House was built in 1845 by David Boutelle; but the easterly wing, under which the stores are located, was not erected until 1858. All of these blocks still stand, though a few have been remodeled somewhat.

Since 1850 the advance in all directions has been so rapid, and there has been such a multiplicity of events, that no attempt will be made in this portion of the sketch to speak of anything but matters per-

taining directly to town affairs, which cannot be taken up elsewhere. The progress in education, church affairs, manufacturing, etc., will be given in detail in special chapters hereafter.

In 1851 appeared the second map of Fitchburg. It was a large, full and accurate map, and when compared with its predecessor of 1830 showed what an immense advance the town had made in the twenty-one years.

March 31, 1851, the Legislature passed an act to authorize a Fire Department in the town of Fitchburg, which was accepted and approved by the town May 26, 1851.

About this time the people began to think seriously of building a new town-house. The old one was manifestly too small to accommodate the great increase of voters, and it was necessary that something be done about the matter in the near future. But, as was the case with everything of that kind, there was contention as to where a new town-hall, if built, should be located. The "Old City" people had secured the stone railroad depot and were anxious to have the town-house, too. On the other hand, the town-house had previously been up-town and the people there were bound to have it remain in that vicinity. Fortunately, before much time was wasted, an amicable conclusion was reached, as is shown by the following extract from the *Fitchburg News* of January 28, 1852 (Vol. I., No. 2).

On Monday, the 26th, the citizens of Fitchburg voted to build a Town House, 65 by 100 feet, two stories high, with a basement for a market or other purposes. The probable cost, according to Mr. Wood's statement, will be $20,000.

The Hall is to be in the second story, according to the plan proposed, and the first floor reserved for courts, schools, or other purposes, according to the judgment of the building committee, or future instruction of the Town.

The site most likely to be selected is next below Central Block, where Dr. Blood now resides. The meeting was large and at one time considerable warmth was manifested both pro and con., but the feeling soon subsided and the plan submitted by the committee was unanimously adopted, as was also the report nominating a building committee. This committee consists of Messrs. N. Wood, J. P. Putnam, I. Phillips, C. Marshall, N. Cowdin, A. J. Town and Col. Upton.

It is truly a matter of congratulation, not only that we are at last *sure* of soon having a good House, but also that such harmony prevails in regard to it.

From the first number of the *Fitchburg Reveille*, March 31, 1852, is taken the following:

New Town House.—A handsome and substantial town-house is soon to be erected in Fitchburg. An appropriation for this purpose, of $25,000, was made at the last March meeting, and the new building is to be located on Main street, just south of Central Block. The foundation is to be laid immediately and the building completed during the coming summer.

The land upon which it was built cost four thousand dollars, and the building and its furnishing cost about eighteen thousand dollars. It was a handsome and substantial brick edifice, and, with some alterations and enlargements, has served as town-house and city-hall for the past thirty-five years, besides affording accommodations for the Fitchburg Public Library from 1859 to 1885, and the Fitchburg Post-Office from 1853 to 1872.

During this decade the people of Fitchburg took much interest in the subject of slavery, which, a few years later, became a question of vital importance. Many public meetings were held with regard to the "Fugitive Slave Law," and the people here boldly denounced it.

An important step in the progress of the town was taken in the establishment of the Fitchburg Athenæum in 1852; and a still more important one in the founding of the Fitchburg Public Library in 1859. The Fitchburg Gas Company was organized in 1852, and soon after began to furnish light for the streets. A well-equipped Fire Department had been established, substantial bridges and good streets constructed, more business blocks built, a musical organization, known as the Fitchburg Cornet Band, was established in 1851, and existed for some years—in a word, the promises of previous years were fast being fulfilled. The population of the town had increased to six thousand four hundred and forty-two in 1855 and seven thousand eight hundred and fifty-four in 1860.

The few years following 1860 were almost entirely taken up by the events connected with the Civil War. Fitchburg, as usual, did her full share as regards the furnishing of men and money and the performance of good work for the preservation of the Union, and a condensed account of what the citizens of this town did and suffered during those eventful years will be given in a special chapter hereafter. There was, however, during the war period, one very interesting and important event in the town's history that should be chronicled in this portion of the sketch, viz.:

The Centennial Celebration of the Incorporation of the Town.—At the annual town-meeting, in April, 1863, a committee of fifteen was chosen to make arrangements for and take charge of a fitting observance of the one hundredth anniversary of the incorporation of the town. The committee of arrangements consisted of the following gentlemen: Hon. Alvah Crocker, chairman, and Ebenezer Torrey, Dr. Jonas A. Marshall, John T. Farwell, Abel F. Adams, Joseph Upton, Dr. Thomas R. Boutelle, Lewis H. Bradford, Thornton K. Ware, Nathaniel Wood, Abel Simonds, Moses Wood, James P. Putnam, Amasa Norcross and Henry A. Willis.

The incorporators, in their zeal to have their work quickly accomplished, had caused the anniversary to come in February, an inclement season at which no public demonstration could be held with any degree of comfort. The committee of arrangements accordingly very wisely decided to postpone the festive day to a more comfortable time of the year, and fixed upon Thursday, June 30, 1864, as the date of the celebration.

Though the hearts and thoughts of the people of Fitchburg at that period were with the absent ones who were fighting the battles of our country—for the Union, whose fate seemed then to be trembling in the balance—yet preparations that were elaborate,

considering the circumstances, were made for this noteworthy event in the history of the town. The committee, ably seconded by the ladies of Fitchburg, did all in their power to make the celebration a success; and the day, when past, gave ample proof that their labors had accomplished all that their hearts could wish.

To many natives of the town who had removed to distant States, to those who, at a former period, had been for a time identified with the progress of the town and to many prominent State officials, invitations were sent by the committee, asking them to honor the day with their presence. Many accepted, and many who could not be present sent letters congratulating the town on the completion of its first century of prosperity.

The 30th of June at last arrived. The weather was delightful and the town early astir. People began to pour in from neighboring towns, and the streets of Fitchburg were crowded as they never were before. It was a holiday with the schools, and all the stores closed at 10 A.M. On the arrival of the morning train from Boston, about 10 o'clock, the procession was formed on the park near the depots under command of Chief Marshal Col. Edwin Upton, assisted by Marshals Eugene T. Miles, Charles Burleigh, Robert L. Goddard, John Burney, Alpheus P. Kimball, Lucius Aldrich, Edmund B. Hayward and Henry A. Spooner, in the following order:

Aid.	Chief Marshal	Aid.
	Hall's Boston Brass Band.	
	Committee of Arrangements.	
Aid.	Marshal.	Aid.
	Orator and Poet of the Day.	
	Invited Guests.	
	Fitchburg Drum Corps, E. H. Frost, Leader.	
Aid.	Marshal.	Aid.
	Citizens of Lunenburg and neighboring Towns.	
	Choir of "Old Folks" in Costume.	
Aid.	Marshal.	Aid.
	Citizens of Fitchburg.	
	Children of the Public Schools.	

The procession, when formed, moved through the principal streets of the town and then by Circle Street to the field owned by the late Walter Heywood, nearly opposite what was then the chair shop of the late Hon. Alonzo Davis. Here Yale's mammoth tent was spread. After the vast assembly had entered this pavilion and been seated, the centennial exercises were begun with music by the band. On the platform were the members of the committee of arrangements (only three of whom are now living, viz.: Henry A. Willis, Esq., Hon. A. Norcross and Hon. T. K. Ware), officers and speakers of the day, clergymen and town officials of Fitchburg and many invited guests. Hon. Alvah Crocker presided. On the desk was an ancient Bible, once the property of Colonel Zachariah Fitch, and in front of this desk was a portrait of the same gentleman, for whom, it was at that time erroneously supposed, the town was named.

At the conclusion of the music by the band the Rev. E. W. Bullard, of Royalston, a former pastor of the Second Parish (Orthodox) Church in Fitchburg, read the forty-sixth Psalm from the old Bible, after which prayer was offered by Rev. Calvin Lincoln, of Hingham, for so many years the beloved pastor of the First Parish (Unitarian) Church in Fitchburg. An original hymn, written for the occasion by Mrs. Caroline Atherton Mason, of Fitchburg, was then sung by the "Old Folks" choir, under the leadership of Mr. Eben H. Frost. The address of welcome was then delivered by Hon. Alvah Crocker, after which the choir sang a hymn of thanksgiving, written for the occasion by Mrs. Mary Caroline Lowe, of Fitchburg. The chairman then introduced Hon. Charles H. B. Snow, Esq., the orator of the day, who delivered a scholarly, polished and valuable historical address, an extract from which will be given hereafter. After the address the "Old Folks" choir, led by the veteran teacher, Cyrus Thurston, rendered some ancient pieces most admirably. George E. Towne, Esq., the poet of the day, then read an original poem, running over with wit and full of interesting allusions to days gone by. After more music by the band and singing by the choir, Charles Mason, Esq., read an original poem, written by Mrs. Caroline A. Mason, describing the experience of "an old Continental," returned to the scenes of his terrestrial life, and his astonishment at the immense, and to him incomprehensible, changes that time had wrought in the village of Fitchburg. This closed the exercises in the pavilion.

A procession was then formed of invited guests and those having tickets to the dinner, and marched to the town hall, where plates had been laid for five hundred guests. The hall was handsomely decorated with flags, flowers and streamers, and the walls were adorned with portraits and photographs of various persons notable in the history of the town. Mr. Henry W. Haskell supervised the decorations, and Landlord Day, of the Fitchburg Hotel, provided the excellent dinner. After ample justice had been done to the dinner the toast-master, George E. Towne, Esq., proposed many toasts, which were happily responded to by prominent individuals. The day concluded with a concert in the town hall in the evening, given by the "Old Folks," assisted by Miss Julia Houston, which was largely attended. Thus passed off a day that will ever be memorable in the annals of Fitchburg.

The condition of the town at this time, the rapid and substantial progress it had made, cannot be better described than it is in the following eloquent passage from Mr. Snow's Centennial address:

To-day, as we look around us and see the Nashua, for miles studded with its workshops and manufactories, its valleys and the neighboring hillsides adorned with the neat and comfortable homes with which New England labor rewards its votaries, as we witness on every hand the evidences of happiness and prosperity, and then recall the untamed and wilful Nashua, the bleak and barren steeps, the tangled, swampy valley

and the secluded and infrequent farm-house of one hundred years ago, we may, in a measure, appreciate the results of a century of wonderful mechanical ingenuity and invention, and also of a century of steady New England enterprise and labor. More than fifty different varieties of manufacture are at present successfully carried on within our limits. Our paper-mills supply the market with over five million pounds of paper annually, and the *New York Herald*, whose daily issues fly, as if, on the wings of the wind, to every point of the compass, we might almost say whitening the land like snowflakes, draws a large portion of its vast supplies of paper from one Fitchburg mill. Our manufactories largely supply the South American and Cuban markets with chairs. The ingenuity and admirable workmanship of our great machine company have been rewarded with extensive orders from the most distant parts of the globe. Our scythes, our cutlery, our cloths, our shoes and our hats have been scattered broadcast over the States and, within the last eventful year,—sad change from the arts of peace to those of war!—cannon cast in our foundries, monsters of modern destructive art, frown from our harbor and coast defences, while others, whose beautiful symmetry, lightness and strength half beguile us from the thought of their terrible uses, have helped swell the thunder of the bloody battle-fields of the South. May we not almost appropriate the language of the classic poet and ask, "*Quae regio in terris non plena nostri laboris?*"

The years immediately following the close of the war were very prosperous, and the high pressure continued until the natural result came in the business panic of 1873. Fitchburg came in for her full share of prosperity. Many new and important manufacturing establishments were located here during the last five years of this decade, and in 1870 there were nearly one hundred large manufacturing concerns in town and the population had increased to 11,260. During this period, also, many public improvements were begun which, as well as the new manufacturing establishments, will be spoken of later.

The year 1871 was a busy one in Fitchburg. Building was brisk, and among the many edifices erected that year were two which were by far the most costly, elegant and substantial that have been built in Fitchburg. One was the Fitchburg Savings Bank block on Main Street, not far from the Common; the other was the County Court-house, located in the rear of what is now known as Monument Park. It was during the summer of 1871, also, that the water mains of the new water-works were laid through the principal streets of the town.

Another important event of this year was the action taken in regard to casting off the town form of government and becoming a city. As soon as the town attained to the required twelve thousand inhabitants, the question of applying for a city charter began to be agitated, and at a town-meeting held Tuesday, November 7, 1871, the matter was formally brought before the town for consideration. Article 14 of the warrant for this meeting was as follows: "To see if the town will take the necessary steps for obtaining the Franchise of a City Charter, at the coming session of the Legislature, by the choice of a committee for that purpose, or act anything thereon they may deem expedient."

The town chose as such a committee Alvah Crocker, Eugene T. Miles, Thornton K. Ware, Dr. Alfred Hitchcock and George Robbins. This committee attended promptly to their duty, and during the following winter the "Act to Incorporate the city of Fitchburg" passed through both branches of the Legislature, and was, on March 8, 1872, approved by the Governor.

At the last annual town-meeting, April 8, 1872, the citizens of Fitchburg, by a vote of nine hundred and sixty-eight to fifty-six, decided in favor of accepting the charter. The vote on the question was very light, as it was known that very little, if any, opposition to the charter existed. At the same meeting the citizens also voted in regard to accepting Secs. 30 and 31 of the charter, which provided that at the first city election one-half of the Aldermen and Common Councilmen should be elected for one year and the other half for two years, and that at each annual election thereafter one-half of each board should be elected for the term of two municipal years. These two sections the town rejected by a vote of six hundred and seventy-five to two hundred and eight, thus making the election of all the members of both branches annual. September 18, 1872, the selectmen announced the division of the city into six wards, and defined their respective boundary lines. During November of the same year numerous ward caucuses were held for the purpose of electing the various ward officers, committees, &c., and of getting things into running order. On Tuesday, December 3, 1872, the first city election was held in Fitchburg, and a heavier vote was polled than ever had been in any town election. The result was the election of Hon. Amasa Norcross as the first mayor of the city, he receiving eleven hundred and eleven votes to eight hundred and fifty-three for Eugene T. Miles.

There is little more to be recorded before we close the history of Fitchburg as a town. One event in the year 1872 should be mentioned. This was the death, on February 23d, of Salmon W. Putnam, one of the pioneers of Fitchburg's great machine manufacturing interests, and largely concerned in the founding of the Putnam Machine Company. He was highly esteemed for his worth and ability, and on the day of his funeral business was generally suspended in Fitchburg. Another circumstance that is deserving of mention in this chapter is the substantial and practical expression of good will and generosity given by the town at the time of the disastrous fire in Chicago in October, 1871, and the serious forest fires in Michigan, about the same time. Besides a large amount of clothing, etc., the citizens of Fitchburg sent to the sufferers by these fires the sum of nearly six thousand dollars in money. At the time of the great Boston fire, in November, 1872, their generosity was again shown.

Much more might have been written about Fitchburg as a town, had space allowed, but here we must conclude this section. Since the beginning of 1873 the city form of government has been in force; and the main points in Fitchburg's history as a city, for the past sixteen years, will be briefly outlined in the few following pages, after which her history in

the Civil War, her progress in educational, ecclesiastical, industrial matters, etc.,—in fact, whatever of importance has been done by her citizens to make Fitchburg what she is to-day,—will be given in detail under their appropriate and respective headings.

CHAPTER XXXIX.

FITCHBURG—(*Continued.*)

HISTORY OF THE CITY (1873–1888).

On January 6, 1873, occurred the inauguration of the first city government at the city hall. The Inaugural Address of Mayor Norcross was carefully prepared and contained much of interest to the inhabitants of the infant city. It was a critical time in business affairs, and the mayor clearly and forcibly showed the necessity of the exercise of prudence, sagacity and, as far as compatible with the best interests of the city, economy on the part of those whom the people had chosen to conduct municipal affairs during the coming year.

The construction of the water-works and other public improvements had brought a debt of over six hundred thousand dollars upon the city at its start, and there was still much to be done in completing and maintaining these improvements. Nearly all the water debt was satisfactorily funded and about half the city debt proper. Early in 1873 a special act, authorizing the city of Fitchburg to fund its floating debt and issue additional scrip, passed the Legislature and was approved March 29, 1873. In conformity with this act, bonds of the denomination of one thousand dollars each, with coupons representing accruing interest at six per cent., payable semi-annually, for twenty years, from July 1, 1873, were obtained, and during the balance of the year sixty-three thousand dollars of the floating debt were funded by the sale of these bonds.

The fiscal year of the city ends November 30th, and on that date, in 1873, the net debt of the city was $650,775.50. However, in spite of the hard times and necessarily large outlay, Fitchburg's first year as a city was by no means a discouraging one. The good effect of these public improvements was beginning to be felt; population and valuation had increased, and more business blocks had been erected. The people were well satisfied with the administration of Mayor Norcross, and at the city election in December, 1873, he was re-elected.

The year 1874 was not quite so prosperous, and during the following five years, or so, there was a small but steady annual decrease in the population and valuation of the city. One cause of this decrease was the removal from town of two large and prosperous manufacturing concerns,—the American Rattan Company and the Whitman & Miles Manufacturing Company.

In 1874 occurred an event of great interest, which will be spoken of more fully hereafter. This was the dedication of the Soldiers' Monument, June 24th. The city appropriated two thousand dollars for the dedication, and the oration was delivered by Major-General Nathaniel P. Banks.

November 30, 1874, the net debt of the city was $728,873.84, an increase of nearly $78,000 for the year, due wholly to discount on bonds, extension of the water-works and payment of the balance of the Soldiers' Monument contracts.

During this year another bank was established here,—the Safety Fund National Bank.

At the city election in December, 1874, Eugene T. Miles was elected mayor for the year ensuing.

During 1874 death removed two of Fitchburg's prominent citizens,—Dr. Alfred Hitchcock, the beloved physician, eminent in his profession, and noted for his good qualities of mind and heart, and Hon. Alvah Crocker who, above all other men, brought prosperity to Fitchburg, and was ever ready to inaugurate and carry forward any project conducive to the advancement of the interests of the town.

The year 1875 was quite an active one in Fitchburg, in spite of the fact that the city felt severely the depression in business, the result, as it were, of the recoil of the preceding financial crisis. Another bank—the Wachusett National—was established here, mainly through the efforts of Hiram A. Blood, Esq. Several substantial brick business blocks were erected, among which were Crocker block and the Wachusett Bank block. The large and commodious machine-shop occupied by C. H. Brown & Co. was completed this year, as was also the fine business block built by James F. Stiles.

During this year the city expended upwards of $60,000 more on the water-works in the construction of Scott reservoir, extension of water-mains to West Fitchburg and extensions in the city proper. In consequence of this large necessary expenditure, the net debt of the city November 30, 1875, reached high-water mark, viz: $790,149.66. Since that time the city has had to make no very large expenditure for extraordinary improvements, and almost every year since 1875 has witnessed a considerable decrease in the net debt.

The year 1875 did not pass without taking from our midst a bright and shining light in the person of Hon. Charles H. B. Snow, the orator at the centennial celebration, who, on September 18, 1875, was called away from a busy and useful life. He was a man of great talent, and in the prime of life, and his death was a sad blow to this community, where he had always lived, and for which he was ever ready and willing to expend his best efforts.

On account of the unavoidable absence of Mayor

Miles from the city during the last two months of his term, the office of mayor was declared vacant on November 2, 1875. The Board of Aldermen and the Common Council elected Hon. Hiram A. Blood to fill out the unexpired period. At the annual city election, the following December, he was elected mayor for the ensuing year.

The official census of 1875 gave Fitchburg a population of 12,289, showing a slow growth since 1870.

The three years following 1875 were years of great business depression in Fitchburg. Our mills, factories and machine-shops were, in most cases, obliged to curtail both the number of employés and the number of working-hours, because of the meagre amount of orders for their products. The manufacturing establishments of Fitchburg were put to a severe test during these three years, and the fact that, with a very few exceptions, they all withstood the strain, shows their financial stability, and reflects great credit upon the ability and sagacity of the men who superintended the affairs of these various heavy manufacturing concerns during these trying times.

As a natural consequence of this stagnation in business, the city retrograded, as regards both population and valuation. During this period it was unwise and, fortunately, unnecessary, to enter upon any new work. That which had been done in the years immediately preceding sufficed to tide the city over, and only an amount of money sufficient to keep the public works and institutions *in statu quo* was needed.

In 1876 death continued its ravages among our prominent citizens, removing on June 26th ex-Mayor Eugene T. Miles, a man widely known and esteemed for his integrity and benevolence, and who for many years had been prominent in the business interests and public affairs of Fitchburg; and August 3d Hon. Nathaniel Wood, for over half a century one of our most prominent and active citizens. It was he who collated and preserved much of the early history of Fitchburg, which otherwise would probably have been irretrievably lost.

David H. Merriam was mayor during the years 1877–78. These two years were probably the darkest the city ever experienced, but public affairs were well cared for during Mayor Merriam's administration. The debt was reduced by something over twenty-five thousand dollars; and in spite of the decrease in population, the tax rate during both years was kept at a lower figure than it was in the few years preceding—in fact, the rate was the lowest in 1877–78 that it has been from the incorporation of the city to the present time.

In 1878 the handsome and commodious Union Passenger Station was completed; but aside from that, very little building was going on at that time.

In December, 1878, William H. Vose was elected mayor and served one year, declining a unanimous renomination. His valuable business experience and strict fidelity to the best interests of the city proved of great service to Fitchburg during the year 1879. The city was just beginning to see the glimmer of better times ahead, and a steady hand, guided by business tact, was necessary to keep the people from presuming too much on the "good time coming." During his administration the debt was reduced by nearly twenty-five thousand dollars.

Until this year no direct appropriation had ever been made for water-works construction and extension; but in 1879 such an appropriation was made (four thousand dollars), and an annual appropriation for that purpose has been made since then.

In December, 1879, Eli Culley was elected mayor, and served the city in that capacity for two years. The appropriation bills for these two years (1880–81) were the smallest since our incorporation as a city; and at the same time the accounts show that the debt November 30, 1881, was $704,516.58, making a reduction of nearly $33,000 since the same date in 1879.

Population and valuation began to increase gradually in the course of these two years. In 1880 the population was 12,405. Business, too, began to take on a more healthy tone, and the city started on the up-grade.

In the fall of 1879 a company was formed here which marked the beginning of a new era in the industries of Fitchburg. This was the Parkhill Manufacturing Company. The company began business in February, 1880, and since that time has prospered, and is to-day one of the heaviest concerns in town. During this period there were other signs of business prosperity in town, prominent among which were the starting of the Fitchburg Worsted Company in 1880 and the erection of E. M. Dickinson & Co.'s large shoe factory in 1881.

In 1880 death again entered the ranks of our prominent citizens; January 18th of that year died Stephen Shepley, for over forty-five years an active business man of Fitchburg and much interested in the early history of the town. In 1876 he wrote a paper of value in regard to John Fitch. August 1, 1880, died Walter Heywood, the founder of the extensive chair manufacturing company here.

During 1881 the city expended over thirteen thousand dollars in the construction of sewers, but this sum was more than counterbalanced by money received from sewer assessments, etc.

George Robbins was the next mayor and served during the year 1882. Mr. Robbins was a member of the committee to procure the city charter, and has always taken considerable interest in public affairs. During his year of service matters went on satisfactorily. The debt was decreased by about thirty-two thousand dollars; over ten thousand dollars were expended on sewers, necessitating an appropriation of six thousand dollars by the City Council for that purpose.

The prosperity of the city continued, though no

new enterprises of special note were started that year. The owners of buildings on the lower part of Main Street were beginning to put new fronts to the business blocks and to furnish them with large plate-glass windows, thereby greatly improving the appearance of the street. Notable among the improvements of this kind was the brown-stone front put on to the L. J. Brown Block that year.

In 1882 the city purchased the "Upper Common," previously the property of the First Parish in Fitchburg. Since that time the city has spent considerable for stone-work, grading and laying out paths, etc., and now the Common is a much more attractive spot than it was ten years ago. Moreover, through the generosity of certain citizens in the vicinity, a handsome bandstand has been erected near its lower extremity and makes a striking addition to the beauty of the park.

At the city election in December, 1882, Alonzo Davis was elected mayor, and so acceptable was his administration that he was re-elected to the office the two following years, and is the only man thus far in our history as a city who has held the office of mayor for three successive years.

In 1883 it became necessary to build a fourth reservoir, and Falulah Reservoir was accordingly constructed that year at an expense of a little over fifty-two thousand dollars. As the City Council made no appropriation for this expenditure, it became a part of the city debt, which, November 30, 1883, was $686,-430.70, an increase of about fourteen thousand dollars over the debt a year previous, showing that had it not been for this extraordinary expense there would have been a very material decrease in the city debt that year.

In 1883 the Wachusett Electric Light Company was incorporated, and since the fall of that year has furnished most of the principal streets of the city with brilliant and satisfactory illumination.

The year 1884 will long be remembered by the citizens of Fitchburg as the year when the Hon. Rodney Wallace made and proceeded to carry out his generous proposition to provide the city with an elegant and commodious public library building, together with a site for the same. July 1, 1885, witnessed the completion of his noble project, the dedication of the costly and substantial structure and its formal presentation to the city by the donor. The Wallace Library and Art Building will be spoken of at greater length under the head of Libraries and Lectures, in the section on the educational history and progress of Fitchburg.

In his third inaugural address, in January, 1885, Mayor Davis recommended the construction of a system of sewers of larger capacity than then existed in the city, and, in accordance with his suggestion, plans were drawn and the work of construction entered upon the following spring. During 1885 one and a quarter miles of sewer were built, of which seven hundred and twenty-five feet consisted of a main sewer twenty-six by thirty-nine inches, built of brick and located in Elm, Oliver and Putnam Streets.

The net debt, November 30, 1885, was $635,124.11, a gratifying decrease of over $51,000 during the two previous years. The city was in a prosperous condition, and in 1885 had a population of 15,375 and a valuation of about $12,000,000. Building was brisk during the three years from 1883 to 1885 inclusive, and some new concerns were put into operation, notably the Cleghorn Mills in 1885.

Several prominent citizens died in the course of these three years. Charles Burleigh, one of Fitchburg's most ingenious mechanics and competent business men and a prominent member of the Putnam Machine Company, died May 28, 1883. Of his many valuable inventions the most prominent are the Burleigh Rock-Drill and the Patent Air-Compressor, which have made his name familiar wherever great engineering feats have been accomplished.

March 12, 1884, died Cyrus Thurston—"Uncle Cy," as he was for many years familiarly called—prominent in musical circles in Fitchburg since the early years of this century, and noted for his long and valuable service on the Board of Overseers of the Poor of the town and city of Fitchburg. Only a few days after his decease our citizens were called upon to mourn the loss of a much younger, but more noted musician, Warren S. Russell, leader of the Fitchburg Military Band.

October 27, 1884, ex-Mayor William H. Vose passed away, full of years and universally loved and respected.

In the autumn of 1885 the temperance people of Fitchburg made a strong effort to carry the city for "no license." They nominated Frederick Fosdick, president of the Fitchburg Steam-Engine Company, as their candidate for mayor, and at the election, in December, he was triumphantly elected, and no license was established by a decided majority. Mr. Fosdick served the city two years as mayor, and made a good record for himself and the city in every way; and his efforts to carry out the principles of the temperance party, and the good success that rewarded these efforts, are deserving of the highest praise.

During 1886 and 1887 a number of changes were effected in the city affairs, which have proved to be advantageous. Mayor Fosdick, in his first inaugural address, recommended that Fitchburg follow the example of some other cities, and pay the Water Department for water used by it each year. This plan was adopted in 1886, and resulted satisfactorily, and has since been continued. By this means some $15,000 per year is paid to the Water Department, which helps materially in extinguishing the water debt without making any perceptible increase in the rate of taxation. He also recommended the appropriation of $20,000 to the sinking fund, instead of $10,000, as heretofore, which was done.

About this time bursts were frequently occurring in the cement-lined water mains, and Mayor Fosdick advocated replacing them with iron mains. This work was begun in the spring of 1886. The cement-lined pipe in Main Street was replaced by a 16-inch iron main, and the pipe in several other streets was replaced by iron pipe of suitable size, during the summer, at a cost of a little over $34,000, which was covered by the issue of scrip to the amount of $35,000. This, of course, increased the debt somewhat, but the increase was comparatively small (about $8,000), the net debt, November 30, 1886, being $643,369.16. About $15,000 were expended in the same way in 1887, and the debt increased about $2,500, being $646,012.27 November 30, 1887. It has been found that no repairs, or only very trifling ones, are necessary to keep the iron mains and pipe in good condition, which causes an annual saving of several thousand dollars that would simply have been wasted on repairs of the old cement-lined pipe.

The rapid growth of the city during 1886–87 caused a great demand for new streets and sidewalks, and large sums were expended for these purposes. A brick trunk sewer, 36x29 inches, was built through Laurel Street, and smaller sewers through connecting streets, during the summer of 1887, at a cost of over $31,000; a substantial brick city stable was built in 1886, at an expense of about $5,000. Thus it will be seen, that though the city spent a very large sum of money during these two years, yet it was wisely expended, and we are now in good condition to meet our constantly and rapidly-increasing prosperity.

In 1886 the Fitchburg Street Railway was incorporated, and began to lay their track in the early summer. The track-layers immediately followed the workmen engaged in replacing the cement pipe, so that Main Street was pretty thoroughly torn up during the greater part of the summer of 1886.

Much building was also going on in all parts of the city at this time, the largest building erected being the Orswell mill, built in 1886.

At the city election in December, 1887, Hon. Eli Culley, who was mayor in 1880–81, was elected by the people as their chief executive for the year 1888.

Early in 1888 the Fitchburg Railroad Company made a long contemplated move and one most advantageous to Fitchburg, by purchasing a large tract of land in what is now called East Fitchburg, about a mile east of Union Passenger Station, and announcing their intention of using it as a location for their extensive car-shops, heretofore established and maintained at the Boston end of the road. Work was soon begun on the necessary buildings, a description of which will be given in another section. When these shops are completed and in full operation they will cause a very material increase in the population and add much to the prosperity of the city.

July 4, 1888, witnessed a grand celebration in Fitchburg. E. V. Sumner Post 19, G. A. R., has the credit of getting up this celebration, and the city and our citizens generally helped to make it a success by liberal gifts of money. The principal feature was a very large trades' procession in the morning. The other exercises of the day were at the Fitchburg Park, and included a dinner, addresses, sports and a balloon ascension in the afternoon, and a fine display of fire-works in the evening.

During the portion of 1888 now past death has been busy here, and up to this time (autumn) has taken from us five men who have for a long time been prominent in the history of Fitchburg. February 7th died Gardner S. Burbank, since 1851 an influential citizen, and for fifteen years a member of the firm of Crocker, Burbank & Co. He accumulated a large property, the most of which he left in the hands of trustees, the income to be paid to Mrs. Burbank during her life, and at her death the whole amount is to be paid over to the city of Fitchburg and devoted to the building of a city hospital.

May 23d died Hon. Alonzo Davis, an ex-mayor of Fitchburg and, since 1845, a prominent manufacturer and business man.

July 31st died John Putnam, senior founder of the Putnam Machine Company, and a resident of Fitchburg since 1838.

September 3d died Hon. Ebenezer Torrey, for over sixty years a prominent citizen of Fitchburg. A brief sketch of Mr. Torrey appears in the Professional chapter.

October 11th ex-Mayor David H. Merriam died, being the fifth man of prominence in town to die during the first ten months of 1888.

We will close this portion of the history of Fitchburg with a table showing statistics relative to the growth of the town since its incorporation. The population in 1888 is estimated from the number of polls, May 1st.

Year.	Population.	Valuation.	No. of Polls.
1765	259	.....	.....
1791	1,151	.....	.....
1800	1,390	.....	.....
1810	1,566	.....	.....
1820	1,736	$359,966	321
1830	2,179	540,009	494
1840	2,570	935,342	702
1850	5,120	1,995,749	1,308
1860	7,854	3,527,456	1,938
1870	11,260	10,373,403	3,248
1880	12,405	9,132,844	3,680
1885	15,375	11,494,562	4,561
1888	20,000	13,694,890	5,962

CHAPTER XL.

FITCHBURG—(*Continued.*)

HISTORY DURING THE WAR OF THE REBELLION.

In the preparation of this portion of the sketch the writer has depended largely upon "Fitchburg in the

War of the Rebellion." To Henry A. Willis, Esq., the author of this valuable memorial of what Fitchburg did to preserve the Union, the writer takes this occasion to render grateful acknowledgment for permission to take from it many facts essential to this portion of the history, and which cannot be easily obtained elsewhere.

Before entering upon our condensed history of Fitchburg's part in the Civil War, it may be well to give a brief account of the military companies in the town prior to the breaking out of the war.

In 1861 there were two military companies in existence here. Of these, the organization which was by far the older was

THE FITCHBURG FUSILIERS.—This company was formed from the "Old South" Company of the Fourth Regiment, Second Brigade, Seventh Division, Massachusetts Volunteer Militia, and a charter was granted it under its present name of *Fitchburg Fusiliers*, December 14, 1816. The organization of the company was perfected at a meeting held February 3, 1817, at which time John Upton was elected captain, Alpheus Kimball, lieutenant, and Walter Johnson, ensign. The uniform adopted was "a blue coat, trimmed with bell buttons and lace, pantaloons of the same color as the coat, made to button over the boots and trimmed with bell buttons from the bottoms to the hips, and the caps were bound with red morocco and varnished and otherwise 'ornamented as a committee chosen might think proper.'"

The Fusiliers first appeared publicly in their new uniforms on the Fourth of July, 1817, on which occasion the ladies of Fitchburg presented the company with a handsome banner. A standard was also presented to the company by the ladies in September, 1841.

The Fusiliers were always on hand to attend "muster," and, according to all accounts, used to have very enjoyable times at the old-fashioned muster, which was essentially different from the modern variety.

Many of our prominent citizens have commanded this company during its existence of nearly three-quarters of a century.

Its record during the war will be given further on.

At the present time this company forms a part of the Sixth Regiment Infantry, Massachusetts Volunteer Militia, and is designated as Company B.

The other military company in town at the time of the breaking out of the war was known as

THE WASHINGTON GUARDS.—It was organized in July, 1855, on petition of Charles H. Foss and fifty-nine others, and on the 19th of the same month officers were chosen as follows: John B. Proctor, Captain; Hiram P. Minot, First Lieutenant; Charles H. Foss, Second Lieutenant; Oscar A. Battles, Third Lieutenant; Varius Stearns, Fourth Lieutenant. At a meeting a week later the name of *Washington Guards* was adopted by vote of the company. The uniform consisted of "a cloth cap, smaller at the top than at the base, and surmounted by a blue pompon; dark blue pants and coat with epaulettes; patent-leather body belts and webbing cross-belts." In February, 1859, the company purchased seventy of the well-remembered bear-skin caps.

During the war the Guards formed the nucleus of six Fitchburg companies and its name and organization were given up; but August 23, 1866, a company was formed, chiefly through the efforts of Richard Tucker, in which were many of the old Guards. This company took the name of *Union Veterans* and Hiram P. Minot was chosen captain. Sept. 11, 1868, the company voted to change the name to *Washington Guards*. This is the present existing organization, and it forms a part of the Sixth Regiment Infantry, Massachusetts Volunteer Militia, being designated as Company D. The headquarters of the Sixth Regiment have for some years been at Fitchburg, Henry G. Greene, of this city, holding the position of colonel.

At the time of the breaking out of the war Fitchburg had a population of about eight thousand, and during the whole course of the war the town was ever ready to furnish her full share of men and money to aid the Union. Mr. Willis indeed said truly in the introduction to his book, "A community which has sent nine companies into the field during the war, which has promptly filled its quotas under all calls and has now to its credit seventy-five men surplus above all demands upon it, has certainly a record of which it may well be proud and one well worth preserving."

It is gratifying to note that Fitchburg's zeal and activity were also officially recognized by a man, and in a manner that left no doubt as to the sincerity of the tribute to the loyalty of the town. The occasion on which these words were uttered was the funeral of Lieutenant-Colonel George E. Marshall, of the Fortieth Regiment, at the town hall in Fitchburg, and the one who spoke them was Hon. Alexander H. Bullock, then Governor of Massachusetts. Colonel Marshall, a son of Abel Marshall, of Fitchburg, was killed at the battle of Cold Harbor, June 1, 1864. He was buried on the field, and his remains were not recovered until the spring of 1866. The town voted to give his remains a public funeral on the 19th of April of that year. It was an imposing funeral, and was attended by His Excellency, Governor Bullock, and his staff and other officials. During the course of the solemn ceremonies Governor Bullock made a brief and eloquent address, in which he spoke feelingly of the glorious career of young Marshall through the twenty-four battles he was engaged in, of his well-deserved promotions, and of his gallant conduct in that disastrous charge at Cold Harbor, where he "*fought and died in obedience to orders, and for the sake of his example.*" He then paid the following tribute to Fitchburg:

I do not forget, in the thick-coming memories which the scene en-

forces upon me, that this ancient and beautiful town of Fitchburg—to which by neighborhood ties of birth and youthful residence my heart ever draws me and ever will—distinguished herself by the promptness, by the alacrity, by the prodigality of means and of men with which she entered upon the opening, solemn drama in the early days of the war. Not many towns in the State matched her record, and few, if any, surpassed her.

We will now endeavor to give, in as condensed a form as possible, an account of Fitchburg's part in the Civil War.

On Saturday, April 13, 1861, news reached the town of the attack on Fort Sumter, and Major Anderson's gallant defence. The next day came the news of its surrender. Then, fast following, came President Lincoln's call for seventy-five thousand volunteers. Captain John W. Kimball, of the *Fusiliers*, and Captain Edwin Upton, of the *Guards*, reported their companies ready to march at once if wanted. But already enough whole regiments had been offered, and Governor Andrew hurriedly despatched the Third, Fourth, Fifth, Sixth and Eighth Regiments for Washington, and the old Ninth Regiment, to which both the Fitchburg companies then belonged was obliged to wait.

During the next few days anxiety possessed the hearts of the people, and little business was done. Then came the 19th of April, a day twice memorable in the annals of our country and especially of Massachusetts. Late in the afternoon of that day the wires brought us the following: "The Sixth Massachusetts Regiment is now fighting its way through Baltimore; four men have been killed, many wounded, and the fighting still going on."

The shock produced by this message was terrific. Massachusetts blood had been spilt and must be avenged. A citizens' meeting was hastily called, which was held on the afternoon of Saturday, April 20th. Alvah Crocker, Esq., presided. Mr. Crocker and various other citizens spoke patriotically and eloquently upon the all-engrossing subject, after which the following resolutions were presented and unanimously adopted:

Resolved, That we respond cordially to the Proclamation of the President of the United States; that we declare our unflinching resolution to support our Government in its struggle to maintain its honor, integrity and existence.

Resolved, That we will use our utmost endeavors to secure a vote of the town whereby the sum of ten thousand dollars shall be raised by direct tax, which sum of money shall be appropriated to provide for the support of the families of any of the soldiers who may be called out during the present war, and for fitting out and equipping such men.

The next day was Sunday—the first in war-time—and the services in all the churches in town were of a patriotic nature. During the day the ladies of Fitchburg were not idle. It was expected that on the morrow our companies would be called upon, and their kind hearts, anticipating what might be the needs of the near future, prompted them to busily engage themselves in the preparation of lint, bandages and clothing for the brave men who, like the "minute-men" of the last century, stood ready to go to the front at a moment's notice.

The following week was one of feverish anxiety. Our companies were not called upon, and many of the soldiers assisted the ladies in their preparation of bandages, etc., at the armories. The zeal of the citizens suggested many measures, some of which were not very practical. One of these was that each soldier from Fitchburg should have a revolver and a bowie knife, and one hundred and fifty revolvers were actually bought for this purpose, and Whitman & Miles, with characteristic liberality, offered to manufacture the same number of bowie knives. This scheme was abandoned before the time came to march.

On April 27th a town-meeting was held, at which it was unanimously voted to raise ten thousand dollars for the soldiers and their families, and a committee of seven (Ebenezer Torrey, Moses Wood, Chedorlaomer Marshall, William Woodbury, Levi Downe, Alpheus P. Kimball and Timothy S. Wilson) was chosen to take charge of the appropriation. A committee was also chosen to see what reduction could be made in town expenses for the current year.

By this time the Fusiliers and Guards had recruited their companies, and on the day of this town-meeting a grand parade was held, in which the company from Leominster joined.

On May 4th an adjourned town-meeting was held to hear the report of the committee on retrenchment. This committee made a report recommending a reduction of five thousand dollars in the town appropriations for the year,—two thousand dollars each from schools and highways and the remaining one thousand dollars from other departments. Their report was accepted and the recommendations adopted, though all regretted the reduction in the school appropriation. During the other years of the war, it is but just to say, the school appropriation was not diminished for war expenses. At this same meeting the chairman of the committee having charge of the ten thousand dollars voted for the soldiers and their families, read the following note, which is self-explanatory and an honor to the medical profession:

To the Military Relief Committee,—Gentlemen: The undersigned physicians of Fitchburg members of the Massachusetts Medical Society, through you hereby tender gratuitous professional services, when desired, to the families of the soldiers of this town while engaged in the war to defend the Government of the United States against the present Southern Rebellion.

THOMAS R. BOUTELLE,
JONAS A. MARSHALL,
ALFRED HITCHCOCK,
JAMES R. WELLMAN,
GEORGE JEWETT,
GEORGE D. COLONY.

Fitchburgh, May 1, 1861.

These physicians faithfully fulfilled the promise contained in the above note until the close of the war. Only two of the signers are now living,—Drs. Jewett and Colony.

Thursday, May 16th, was a great day in Fitchburg. The two military companies paraded and the school-

children with their teachers and all the citizens joined in a grand patriotic demonstration. In the evening there was a presentation, at the town hall, of two handsome silk flags, procured by the ladies at an expense of eighty dollars. The hall was crowded, and after the opening of the meeting by the presiding officer, Hon. J. W. Mansur, Miss Emma Twitchell presented one of the flags to the Fusiliers. Captain Kimball made a fitting acknowledgment of the beautiful gift and caused his men to swear that "it should never trail in the dust while a single arm was left to uphold it." Miss Eliza Trask then presented the other flag to the Guards, whose commander, Captain Upton, accepted it on behalf of his company with appropriate remarks.

An account, necessarily very brief, will now be given of the companies sent out from the town, and of the work, both public and private, done by the citizens who remained at home during the war period.

COMPANY D, SECOND REGIMENT.—Soon after President Lincoln issued his call for three years' troops, James Savage, Jr., of Boston, opened a recruiting office in Fitchburg. A company was raised in about a week and was attached to the Second Regiment and designated Company D. Most of the men in this company were from neighboring towns, because there were then in town two full companies, and, as the chances of their being called into service soon seemed to be good, the young men did not care to leave them in order to join Captain Savage's company. But, notwithstanding the fact that only a few of our own citizens enlisted in it, it was always known as the "Fitchburg Company."

The Second Regiment was mustered into service May 11, 1861, and served the entire three years; and a large number re-enlisted at the end of this time. July 14, 1865, it was mustered out of the service and started for Boston, receiving a fine reception in New York as it passed through the city. On July 26th, it was finally discharged, after having served four years, two months and fifteen days. During this long period it made a brilliant record and participated in numerous battles, among which may be noted the following: It was in the thickest of the fight in the battle of Cedar Mountain, August 6, 1861, and lost heavily; at Antietam, September 17, 1862, it served gallantly, capturing a flag from the enemy and losing about seventy of its members; at Chancellorsville it was hotly engaged for an hour and a half and lost one hundred and twenty-eight in killed and wounded; on the 2d and 3d of July, 1863, it made a most honorable record at Gettysburg; it accompanied General Sherman on his "grand march to the sea" in the latter part of 1864. On the 24th of May, 1865, it took part in the grand review of the whole army, after which it performed provost duty near Washington until it was mustered out of the service.

COMPANY B, FIFTEENTH REGIMENT (FITCHBURG FUSILIERS).—As has been before stated, the Fusiliers and Guards belonged to the old Ninth Regiment, and it was expected that this regiment would be filled up and accepted as the old Ninth; but instead of that, its number was assigned to a regiment of foreigners recruited in Boston. This left both of our companies out in the cold, so to speak. On the 11th of May, 1861, the Fusiliers voted to volunteer for the war, and finally the company was ordered into camp at Worcester, and became Company B of the Fifteenth Regiment.

It was on the 28th day of June, 1861, that the Fusiliers left for camp. In the morning of that day the citizens gathered at the town hall to bid them good-bye and God-speed. Remarks were made by prominent citizens, among them Dr. Jonas A. Marshall, captain of the "Old Fusiliers," who exhorted the soldiers to sustain the honor of the "Old Fusiliers" and their native town on all occasions. Captain Kimball responded on behalf of the company. Each soldier was then presented with a New Testament from the clergymen of the town, and a note was read, signed by the clergymen, asking their acceptance of this gift and expressing the hope that the little book might be of priceless value to them in the trying scenes of the future.

After the soldiers had been gratuitously vaccinated by Drs. Hitchcock and Jewett, the company was escorted to the Fitchburg Hotel to partake of a dinner provided by the citizens. After the dinner the "Old Fusiliers," under command of Captain Marshall and the "Second Edition" of the Fusiliers, composed of younger men, under command of Capt. Eugene T. Miles, escorted the company to the depot. Thus left our first company of Fitchburg men, many of them never to return to their friends and native town.

The Fifteenth Regiment was mustered into service July 12, 1861, and left the State August 8th, arriving in Washington three days later. On August 1st Capt. Kimball was promoted to major and Lieut. Clark S. Simonds to captain.

The first engagement of the Fifteenth was at Ball's Bluff, October 21, 1861, in which its loss amounted to upward of three hundred men in killed, wounded and prisoners.

April 29, 1862, Major Kimball was promoted to lieutenant-colonel and assumed command of the regiment, as its colonel was absent on account of wounds received at Ball's Bluff. Under Lieut.-Col. Kimball's command the Fifteenth took part in the siege of Yorktown and in a number of battles, the two most notable being Fair Oaks, May 31, 1862, and Antietam, September 17, 1862. In the first-mentioned battle the regiment behaved gallantly, and the bayonet charges by it at several critical periods during the battle won the admiration of Gen. Gorman, who commanded the brigade of which it was a part. In a private letter to Governor Andrew he asked "that the history of the Fifteenth Massachusetts Volunteers may be made a

part of the history of the State, as associated with one of the most brilliant exploits of the war."

At Antietam the Fifteenth also distinguished itself, though at the great cost of three hundred and forty-three men, killed, wounded and missing. Lieutenant-Colonel Kimball was recommended for promotion for his gallantry and good management of his command during this terrible battle.

After this the regiment was engaged in a campaign in the Shenandoah Valley and at Fredericksburg, December 12, 1862. Nothing of note occurred until June 25, 1863, when it began a forced march from the Rappahannock to Gettysburg. It was a hard march, but that the members of the regiment performed it well is shown by the following order read to them June 27th:

HEADQUARTERS 2D DIVISION, 2D CORPS.

June 26th, 1863.

General Orders, No. 105.—The Fifteenth and Nineteenth Massachusetts Volunteers for marching in the best and most compact order, and with the least straggling from their ranks, are excused from all picket duty and outside duty for four days.

By command of

BRIG.-GEN'L GIBBON.

The record of the Fifteenth at Gettysburg July 2–4, 1863, was very brilliant. "The regiment went into action with eighteen officers and two hundred and twenty-one enlisted men. During the three days it lost three officers (Col. Ward, Capt. Murkland, of Fitchburg, and Lieut. Jorgensen) killed, eight officers wounded, nineteen enlisted men killed, eighty-five wounded, many of them mortally."

In the spring of 1864 there were about three hundred officers and men in the regiment, and nearly half of this number were killed and wounded in the battle of the Wilderness early in May of that year. During the next few weeks it took part in all the marches and battles in which the Second Corps was engaged, from the Rapidan to Petersburg, and on the 22d of the following June, *reduced to five officers and seventy men*, it confronted a large force of the enemy "near the Jerusalem plank road before Petersburg." Here, by a hidden manœuvre of the enemy, it was flanked, and all, except one officer and four men, were taken prisoners. This officer was wounded the same day, and the four men were placed in another command until more of the officers and men came from the hospitals. Its three years' term of service having expired, the regiment was, on July 12, 1864, ordered to proceed to Worcester, where it arrived on the 21st, about one hundred and fifty strong. The State and city officials gave it a rousing reception, and on the same evening all that were left of the Fusiliers and were able to travel (about twenty men) arrived in Fitchburg and were given a public reception.

Such is a brief account of the brilliant, though sad, record of one of the best regiments Massachusttts sent out; and Fitchburg has every reason to be proud of the prominent part which the officers and men furnished by the town took in the making of its glorious history.

COMPANY D, TWENTY-FIRST REGIMENT (WASHINGTON GUARDS). — For some cause or other the Guards were not allowed to go with the Fusiliers, though desirous of so doing; and it was not until July 19, 1861, that the company was ordered into camp at Worcester and became Company D of the Twenty-first Regiment. Their departure was the occasion of another public demonstration by the citizens, consisting of a meeting in the town hall, a dinner at the American House and a grand parade.

The Twenty-first Regiment left Worcester August 23, 1861. It was first under fire at the battle of Roanoke Island, February 8, 1862, when it acquitted itself nobly and was the first to plant a Union flag inside the enemy's works. It lost fifty-seven men, killed and wounded, in this battle. Our own Company D was honored after the battle by the presentation to its captain, Theodore S. Foster, of a flag by Lieutenant-Colonel A. C. Maggi, commanding the Twenty-first. Accompanying the flag was a note which concluded thus: "You may inscribe on the flag these words: *The Officers of the Twenty first Regiment, M. V., to the brave Captain T. S. Foster, of Co. D.*" The flag and note were sent by Captain Foster to the Fitchburg Public Library, to be there preserved.

March 14, 1862, the regiment took part in the battle of Newbern, and was highly commended in the official report for its bravery. General Burnside, after the battle, presented to it the first gun (a brass field-piece) which it captured from the enemy. Its loss in this action was three officers and fifty-four men, killed and wounded.

April 19th it arrived at Elizabeth City, and, after a forced march of twenty miles, took part in the battle of Camden.

July 9th it arrived at Newport News and became part of the Army of the Potomac, and, during the rest of 1862, it was almost constantly on the move. It took part in General Pope's campaign, and, in the disastrous retreat that followed, it suffered great hardships. It also participated in the following battles, with great credit to itself, during the latter part of 1862: Second Bull Run, Chantilly, Antietam and Fredericksburg. The regiment's losses in these four battles were two hundred and sixty-six officers and men killed, wounded and taken prisoners.

During most of 1863 the regiment did picket duty in Kentucky and Tennessee. It was a part of the besieged force that was shut up in Knoxville for some weeks in November, and was on duty constantly and made several brilliant charges during the siege; and when the siege was finally raised, December 5, 1863, the Twenty-first was one of the regiments ordered to pursue the enemy. "From that time the regiment saw weary marches and constant exposure, and was reduced to such an extremity that *two ears of raw corn* per day were issued to each man as his

ration. Thus situated, in the woods of East Tennessee, on the 29th of December, 1863, the proposal was made to the regiment to re-enlist for the new term of three years, and in *thirty-six hours all but twenty-four of the regiment had re-enlisted.*"

January 8, 1864, the Twenty-first started for home on a "veteran furlough," and received a public reception on its arrival in Worcester. At the expiration of the furlough it returned to the scene of operations, and was in season to take a prominent part in the battle of the Wilderness, May 6, 1864, but was fortunate enough to suffer a comparatively light loss,—three officers and twelve men.

June 16th the regiment arrived before Petersburg, having been almost constantly engaged in skirmishes and battles with the enemy during their entire march, and having lost upwards of one hundred officers and men within the five weeks preceding. On the following day it participated in a brilliant charge on the enemy's works; and from that date to July 30th was constantly in the rifle-pits at the front.

"On the 30th occurred the explosion of the mine, and this regiment was in the division which rushed into the 'crater,' only to be repulsed with severe loss."

This was the last engagement in which the Twenty-first participated, as soon afterward "it was decided that the Regiment was not a 'veteran regiment,' because of the three-fourths that had re-enlisted, fifty-six had been rejected for various reasons, and it was ordered that the Regiment be broken up, and the officers and non-enlisted men proceed home to be mustered out."

On August 30, 1864, the regiment was accordingly mustered out at Worcester. This breaking up of the organization was a great disappointment to all who had ever been connected with it, and certainly its history during the three years of its existence reflects much honor and credit on both officers and men. It is gratifying to state here that Captain Foster, who went out as the commander of Company D, was promoted to major May 17, 1862, and to lieutenant-colonel September 2, 1862.

COMPANY F, TWENTY-FIFTH REGIMENT.—In the autumn of 1861 authority was granted to raise the Twenty-fifth Regiment, and Edwin Upton, of this town, was appointed its colonel. The old *Guards* formed the nucleus of the company raised in Fitchburg, of which Charles H. Foss was appointed captain.

Recruits came in rather slowly, and September 23, 1861, a large meeting of the citizens was held at the town hall to help recruiting in town. David H. Merriam, Esq., presided, and Hon. Goldsmith F. Bailey made an eloquent address. This meeting had good results, and Capt. Foss had Company F filled in less than a month after he began to raise it.

About October 1, 1861, the company left town for Worcester, and on the day of their departure from Fitchburg a parade was held, after which the company enjoyed a dinner provided for its members at the American House, through the liberality of Charles T. Crocker, Esq. After the dinner remarks were made by Mr. Crocker, Amasa Norcross, Esq., and Rev. George Trask, and later in the afternoon Company F left us amid great enthusiasm and hearty God-speeds.

On the 10th of October some of the friends of Col. Upton united in the presentation to him of a fine horse and set of equipments as a token of their esteem and regard. The presentation speech was made by Amasa Norcross, Esq., and Col. Upton feelingly returned thanks to his fellow-citizens for their splendid gift, after which he invited them to partake of a collation at the American House. Earnest remarks were made by Hon. Moses Wood, Hon. J. W. Mansur and other gentlemen present.

October 31, 1861, the Twenty-fifth left Worcester and went to Annapolis, where the next two months were spent in drilling, during which time it acquired such proficiency that it was complimented officially as one of the best of the large number of regiments gathered there.

As in the case of the Twenty-first Regiment, the Twenty-fifth's first baptism of fire was at Roanoke Island. At this battle it did good service, fighting in the front ranks for three hours, when, their ammunition being exhausted, the regiment was ordered to the rear. Its loss in this battle was forty-eight killed and wounded. A month later the regiment was engaged at the battle of Newbern. Here it made a gallant charge on the breast-works of the enemy, and was the first to plant the State colors on the work. It was also the first regiment that entered the city of Newbern. Its loss was miraculously small,—twenty killed and wounded.

From this time until about December 1, 1863, the regiment was in the vicinity of Newbern, doing picket duty and having occasional skirmishes with the enemy.

On account of poor health Col. Upton was obliged to resign his command of the Twenty-fifth, much to the regret of his men; and at the time of his retiring he was presented by the enlisted men of the regiment with a beautiful sword, belt and sash, costing one thousand dollars. Col. Josiah Pickett succeeded him in the command.

Early in 1864 a furlough was granted, and the Twenty-fifth returned to Massachusetts, receiving a most hearty welcome in Boston and Worcester. It left Boston for the field March 21, 1864, and early in May was engaged in several sharp conflicts not far from Richmond. In one of these engagements, by a singular coincidence, the Twenty-third, Twenty-fifth and Twenty-seventh Massachusetts Regiments were directly opposed to the Twenty-third, Twenty-fifth and Twenty-seventh South Carolina Regiments. On this occasion Massachusetts got the better of South

Carolina. It was a sharp struggle, and among the killed was First Lieut. Charles E. Upton, of Fitchburg. A week later, while moving towards Richmond, the regiment was attacked by the Rebels, and came near being captured. The official report of this action says:

"The Twenty-fifth fought splendidly, holding their ground with the utmost tenacity, inflicting on the charging columns of the enemy the most terrible slaughter until surrounded, and with their ammunition exhausted, they were ordered to face by the rear rank and charge the Rebel line in the rear, thereby throwing the enemy into such confusion as to enable the regiment to extricate itself from one of the most perilous positions troops were ever placed in, and completely checking the advance of the enemy."

The losses of the regiment in all these contests during the month of May, 1864, amounted to twenty-six killed and one hundred and fifteen wounded.

On the 3d of the following June the Twenty-fifth underwent its most terrible experience of the war in the battle of Cold Harbor. During the day this regiment made a most heroic assault upon the Rebel lines, and held the position they attained, though at a terrible expense of life. The total loss of the regiment in this battle was as follows: 4 officers and 23 men killed; 11 officers and 128 men wounded; 2 officers and 47 men missing. Among the killed were—James Graham, Jr., of Fitchburg, second lieutenant of Company F, and Lieut.-Col. George E. Marshall, of the Fortieth Massachusetts Regiment, who was also a Fitchburg boy.

This was the last regular battle in which the Twenty-fifth participated. June 13th it went to the "Point of Rocks," on the Appomattox River, and two days later made an assault on the enemy's works, carrying the position and capturing two cannon, and on the 18th made another charge which was unsuccessful. The loss in these two assaults was seven killed and thirty-one wounded.

October 5, 1864, the portion of the regiment whose term of service had expired was ordered to Worcester and mustered out October 20th. The remainder, consolidated into a battalion of four companies, remained in North Carolina, taking part in only one engagement (Wise's Forks) during the period of its stay. July 13, 1865, it was ordered to Massachusetts to be mustered out, thus closing the record of the gallant Twenty-fifth.

COMPANY A, THIRTY-SIXTH REGIMENT.—In July, 1862, President Lincoln issued a call for three hundred thousand men, and authority was given to raise the Thirty-sixth Regiment. Fitchburg's proportion was found to be ninety-seven and Captain Thaddeus L. Barker, of the "Old Guards," was appointed to raise a company.

On July 12, 1862, a large citizens' meeting was held in the town-hall, at which resolutions, presented by Thornton K. Ware, Esq., were adopted, recommending the calling of a town-meeting at an early date to take measures for offering a bounty of seventy-five dollars to every recruit. A committee was also chosen to canvass the town for recruits.

A town-meeting was held just a week later at which it was voted to "authorize and instruct our selectmen to appropriate and pay one hundred dollars, as a bounty, to each and every acceptable recruit, when he shall have been mustered into the United States service and shall have joined the Volunteer Company now forming in this town, or either of the three companies from this town, now at the seat of war; not to exceed in all the sum of ten thousand and one hundred dollars."

Our quota was soon filled, and on August 1, 1862, the company left town amid cheers and great enthusiasm.

Lieut.-Col. John W. Kimball, of the Fifteenth, was designated as colonel of the Thirty-sixth, but being unable to obtain his discharge from the Fifteenth, Major Bowman, of the Thirty-fourth, was appointed its colonel.

The regiment arrived in Washington September 7, 1862, and on the 20th joined Gen. Burnside's army at Sharpsburg, Md., arriving a little too late to take part at Antietam. For some time it was in various parts of Virginia and witnessed its first battle at Fredericksburg, but was not actively engaged, being held in reserve, and having only two men wounded.

During the following winter nothing of note occurred. Early in April, 1863, the Thirty-sixth was sent to Cincinnati to guard the polls at the election of the mayor of that city. After the surrender of Vicksburg, July 4, 1863, this regiment, with others, pursued the enemy and lost eight men in skirmishes. Then followed their trying campaign in Mississippi, in which the regiment lost one hundred and fifty men by death and discharge on account of disease and exhaustion.

During the autumn it was engaged in several minor battles, losing about thirty men. It was present at the siege of Knoxville and suffered with the rest from lack of food. After the siege was raised the Thirty-sixth joined in the pursuit of the enemy, and during the winter of 1863–64 suffered very severely from lack of food and clothing. At one period the rations were "*six spoonfuls of flour a day for seven days and what corn could be picked up from under the feet of mules and horses.*"

On the 6th of April, 1864, the regiment arrived at Annapolis, where the men received new clothing and good food and enjoyed a much-needed, though short, rest. A month later it took part in the battle of the Wilderness, where "the regiment acquitted itself nobly, charging the enemy three times with a loss of two officers and sixty-two men killed and wounded." The battles of Spottsylvania and Cold Harbor followed soon after, and the regiment was engaged in both and lost heavily,—one hundred and twenty-six officers and men killed and wounded.

June 16, 1864, the Thirty-sixth arrived before Petersburg and on the following day made a gallant charge on the enemy's works, capturing four cannon and four hundred and fifty prisoners; and for the next four weeks it was in the rifle-pits, at the front, and lost some twenty men, picked off by the rebel sharpshooters. It remained in the vicinity of Petersburg until April 1, 1865.

The regiment was mustered out of the service June 8, 1865, and arrived in Worcester two days later, where it received a hearty public reception by the citizens.

Captain Thaddeus L. Barker, of Company A, was promoted to major, May 6, 1864; lieutenant-colonel, October 12, 1864, and to colonel, November 13, 1864.

COMPANIES A AND B, FIFTY-THIRD REGIMENT.—In August, 1862, a call was issued for troops to serve nine months. Fitchburg's citizens took hold in earnest, and in a few days two entire companies were enrolled. After the ranks were filled, the town voted, August 30th, to give each of the nine months' volunteers from this town one hundred dollars bounty. Eugene T. Miles was commissioned captain of Company A, and Jonas Corey captain of Company B, both companies being attached to the Fifty-third Regiment.

Lieutenant-Colonel John W. Kimball, of the Fifteenth, was designated colonel of the Fifty-third, and assumed his command of it November 29, 1862. On that date he received a fine horse and set of equipments from a few of his many friends in Fitchburg.

The Fifty-third started for New York November 29th, to join General Banks' expedition. On account of the prevalence of a mild form of scarlet fever among the men, the regiment did not leave for the South until January 17, 1863. It then went by steamer from New York to New Orleans, and thence to Baton Rouge.

The regiment was first under fire April 12, 1863, at Fort Bisland, and was actively engaged on the following day. During the next night the enemy evacuated the works, and at daybreak on the 14th, Fort Bisland was in possession of the Union army, and the flag of the Fifty-third was the first to be planted on its ramparts. In this battle Lieutenant Nutting, of this town, in command of Company A, was killed, as were also thirteen privates.

The regiment participated in the pursuit of the enemy, capturing many prisoners and driving in a lot of cattle. It accompanied the army to Opelousas and Alexandria, and arrived at Port Hudson May 22, 1863, where it remained until July 11th, much of the time being actively engaged with the enemy. The first general attack on the works at Port Hudson took place May 27th, and during that day and the next the Fifty-third was at the front, in hot conflict a large portion of the time. Its loss was thirty killed and wounded. From the 1st to the 4th of June the regiment was in the rifle-pits to the front, and from the 5th to the 8th joined in an expedition to Clinton. It was a severe march, and several men in the regiment were sunstruck. The enemy retired from Clinton without giving battle. The Fifty-third returned to Port Hudson on the evening of the 8th, and remained in comparative quiet until the 13th; on the evening of the 13th orders were given for it to join in an assault on the works of the rebels at three o'clock the next morning. Four regiments were designated to make this assault—the Fourth Wisconsin, Eighth New Hampshire, Thirty-eighth and Fifty-third Massachusetts—and at the appointed time they moved upon the enemy's works. The rebels opened a murderous fire upon the heroic men, but their line did not waver. It advanced on the double-quick close to the works, but was not strong enough to carry them, and no supports came to its aid. It was a gallant, but most disastrous, charge. The Fifty-third lost eighty-six men killed and wounded. One of the killed was Captain Taft, of Fitchburg, the third commander lost by Company A in two months. The bravery of the Fifty-third in this charge was highly commended, and Colonel Kimball, for special gallantry, was recommended for promotion.

Just previous to the first general attack on Port Hudson a most deplorable accident befell the Fifty-third. It happened thus: On the night of May 25, 1863, it was ordered to do picket duty, General Paine, who gave the order, honoring the regiment by saying "he wanted *this* Regiment, because he knew he could depend upon it to hold the position during the night." Soon after taking their position for the night, the rebels at their front opened fire, which was unwittingly returned by two New York regiments in the rear, thus placing the Fifty-third between two fires. Fortunately the firing was stopped before much damage was done; but it was at this time that Captain George H. Bailey, of Fitchburg, was killed. He was in command of Company A, having received his appointment only one week previous to his death.

Port Hudson surrendered July 9, 1863, and the Fifty-third, after doing picket duty for two days, started for Baton Rouge, and on the 15th went to Donaldsonville, where it was in camp, and engaged in drill and picket duty till August 2d, when it returned to Baton Rouge. Its nine months' term of service having expired, it was ordered to Massachusetts.

A grand public reception was given it at Fitchburg August 24th, on which day fully eight thousand people from surrounding towns were present to witness the return of the brave soldiers. An address of welcome was delivered by Amasa Norcross, Esq., to which Colonel Kimball responded for the regiment. A procession was then formed and marched to the upper Common, where a bountiful collation, prepared by the ladies, was enjoyed by all.

The regiment was mustered out of the service September 2, 1863, at Camp Stevens.

The Fifty-third was in service for only a comparatively short time, but it made for itself a most brilliant record, and, in the words of the various generals it served under, "it ought to have been a three years' regiment."

Considering the short time it was in service, its loss from disease was something fearful, as the following statement, given by Mr. Willis, in his book, shows:

Original strength of regiment		950
Killed in battle and died of wounds	33	
Died of disease	132	
Discharged for disability	53	
Deserted	22	
	—	240
Mustered out		710

Many of the members of the regiment who returned home had disease fastened upon them, from which they never recovered; some twenty dying within a few days after reaching home.

Company F, Fifty-seventh Regiment.—October 17, 1863, President Lincoln issued a call for three hundred thousand more men. Fitchburg's quota was found to be one hundred and twenty, and Captain Levi Lawrence was authorized to raise a company in town.

It took a long time to fill the ranks, and many meetings were held and strenuous efforts made by the citizens before the company was ready to start. Finally, on February 6, 1864, it left for camp at Worcester, under command of Captain Lawrence, and became Company F, of the Fifty-seventh Regiment.

The Fifty-seventh left Massachusetts April 18th and arrived at Annapolis two days later, whence it proceeded to Washington and was immediately ordered to the front.

Its first battle was at the Wilderness, where it was hotly engaged for one hour, in which time its loss was two hundred and fifty-one officers and men killed, wounded and missing.

May 12th it took part at Spottsylvania and lost seventy-two officers and men, and on the 18th, in a reconnoisance, lost seventeen more. On the 24th it was ordered to cross the North Anna River to test the strength of the rebels, was attacked on both flanks and lost its lieutenant-colonel and thirty-six men.

The regiment then went to Cold Harbor, and was engaged in that vicinity for a few days and then marched to Petersburg, where it arrived June 16, 1864, and remained for several months. On the 30th of July it participated in the assault at the explosion of the mine, and lost six officers and forty-five men in the disastrous attempt.

During the following two months the Fifty-seventh was engaged in picket duty near Petersburg, and on September 30th was in the battle of Poplar Grove Church. At this time there were *only sixty men* in the regiment present for duty, and eight of them were lost in this action.

During the next three months the regiment, or rather what there was left of it, was engaged in reconnoitering and skirmishing, losing, during the period, some twenty men.

In a movement on the Weldon Railroad in December, 1864, the men suffered extremely from cold. For some time afterward it lay in the lines before Petersburg, with the exception of a short period when it joined in a reconnoisance towards Weldon about the middle of February, 1865. The intense cold during much of the winter caused severe suffering.

On March 25, 1865, the Fifty-seventh was engaged in the memorable repulse of Gordon's corps, and earned for itself a proud record.

Petersburg was evacuated on April 3d, and on that day the regiment entered the works and was ordered to guard the roads to Richmond and Chesterfield. Soon afterward it went to Washington and performed provost duty at various points in that vicinity until July 30th, when it was mustered out after a service of about fifteen months, during which time it made for itself a most honorable and enviable record.

Company H, Fourth Heavy Artillery.—This was the last company raised in this town, and was recruited under President Lincoln's call, issued July 18, 1864, for one year troops. As the bounty was large ($200), and the term of service short, the company was very quickly raised, a large proportion of the men in it having seen service in other Fitchburg companies. Eben T. Hayward, of this town, was chosen captain, and the company left Fitchburg for Readville August 15th, and left the State for Washington September 13, 1864. It was then consolidated with various other unattached companies as the Fourth Heavy Artillery Regiment, and designated Company H.

This regiment was assigned the duty of garrisoning various forts on the Virginia side of the Potomac, and Company H, during most of its term of service, occupied "Fort Garasche," where there was little to do except to drill in artillery and infantry practice. It was an uneventful year for the men. They faithfully performed their allotted tasks and received much praise "for their good drill and soldier-like conduct."

The regiment was mustered out of service June 17, 1865.

The Call For Three Months' Troops.—Toward the end of May, 1862, when Gen. Banks' army was routed and the rebels were rapidly approaching the national capital, the President hurriedly issued a call to the Governors of all the States to send on all three months' troops that could be spared for the defence of Washington.

Gov. Andrew's call upon the Massachusetts militia reached Fitchburg early Monday morning, May 26, 1862. Both the *Guards* and *Fusiliers* had efficient organizations at that time, and were ready to respond

to any sudden call. The men assembled at their armories, and at 5 o'clock in the afternoon took the train for Boston, the *Fusiliers*, with sixty-six men, under Capt. Eugene T. Miles, and the *Guards*, with fifty-eight men, under Capt. Jonas Corey.

"Among the incidents of this exciting day may be mentioned the fact that when the order of Captain Miles reached the shop of Whitman & Miles (of which firm the captain was a member) fifteen men dropped their tools and stepped forward to join the ranks of the 'Fusiliers,' and the firm, not at all disturbed at this wholesale reduction of their 'available force,' at once gave another proof of their patriotism by presenting ten dollars to each of the fifteen."

Our men, together with other companies that had been hurried to Boston, were quartered for two nights in Faneuil Hall. But the alarm at Washington soon subsided and Governor Andrew received a telegram saying that the troops were not needed; so the men were dismissed and Wednesday afternoon, May 28th, the *Fusiliers* and *Guards* returned to Fitchburg in high feather, had a parade through the streets and were treated to a collation by the jubilant citizens.

Though these men did not go to the "seat of war," yet it was their expectation and intention so to do, and their prompt response is worthy of record in a history of Fitchburg. The majority of them saw service and fought bravely in the companies sent out later from this town.

March 13, 1865, Colonel Kimball was made brevet brigadier-general United States Volunteers, "for gallant and distinguished services in the field and during the war."

By way of summary, it may be stated that of the citizens of this town who went to the war, one was brevet brigadier-general, two were colonels, two lieutenant-colonels, two majors, two surgeons, four brevet majors, seventeen captains, twenty first lieutenants, seven second lieutenants, three navy officers and sixteen seamen in the navy, six hundred and ninety-three non-commissioned officers, musicians and privates, making a grand total of seven hundred and sixty-nine men—nearly one-tenth of Fitchburg's population at that time. Of this number sixty were killed in battle, sixty-eight died from wounds, disease or starvation in rebel prisons, twenty-five were taken prisoners and eighty-four received wounds from which they recovered.

Much more might have been written about our brave soldiers if space would permit, and the writer would be glad also to give some history of the naval experience of the sixteen war-ships and gunboats, on board of which were citizens and natives of this town. Suffice it, however, to say that there were very few great battles in the War of the Rebellion in which Fitchburg men did not participate with credit to themselves and honor to the town.

It remains to speak of what was done by the citizens of Fitchburg who remained at home during the war. Of the large amount of private benevolence and assistance no record has been, or ever can be, written: but of the work of the town and of various benevolent societies, a record can be given which, if elaborated, would form one of the most interesting portions of Fitchburg's history.

It will be remembered that at the very beginning of the war the town appropriated $10,000 for the equipment of our soldiers and support of their families; and at every annual town-meeting during the war the following vote was passed: "*Voted*, That the Selectmen be authorized to pay for the support of the families of Volunteers such sums as they think their circumstances require."

The money thus voted was in addition to the "State Aid" authorized by the Legislature to be paid by towns. By this generous provision of the town the selectmen, aided by the hearty co-operation of the citizens, were enabled to relieve all cases of need; and it is safe to say that no soldier's family in Fitchburg suffered from lack of the necessaries of life during all the period of the war.

Of the two principal societies organized in this town for the relief and assistance of soldiers we propose to give a brief account, and the first to be spoken of is

THE LADIES' SOLDIERS' AID SOCIETY.—The ladies of Fitchburg, as has been stated before, began their work of preparing clothing, etc., previous to the departure of our soldiers; and this work they unremittingly continued while the war lasted.

In order that their good work might be carried on in a methodical and efficient manner, it was thought best to organize a society, and, at a meeting held September 16, 1861, this "Soldiers' Aid Society" was formed, and Mrs. Ebenezer Torrey was chosen president, with Mrs. Amasa Norcross as secretary. The prime object of this society, as stated in its constitution, was "to furnish to the soldiers engaged in the present war of our country such aid as may be in our power." Most faithfully did the members carry out this object to the end. Any lady could become a member on payment of twenty-five cents, and it is needless to say that the membership was very large. All the preparation of work, purchasing and general direction of affairs were vested in a board of twelve directresses, chosen, with the other officers, annually.

The funds of the society were derived from membership fees and annual assessments, but were largely increased by private donations and church contributions; and the Dramatic Club, the Musical Association and the "Relief Committee" placed goodly sums at its disposal. The "Old Folks" choir also gave concerts at various times and donated the proceeds to the society.

One of the first things done by this society was the preparation of boxes of clothing, etc., which were sent to the Twenty-first and Twenty-fifth Regiments at Annapolis, and also blankets and winter clothing

sent to the Fifteenth at Poolesville; and in return the secretary of the society received letters from the commanders of the Fitchburg companies conveying their sincere and heartfelt thanks. The Thirty-sixth and Fifty-third Regiments were similarly provided for before they left the State.

At the time the Fifty-third was detained in New York, in the winter of 1862–63, under very uncomfortable circumstances, the society, on January 1, 1863, sent to the members of Companies A and B an *inviting dinner* of roast turkey and New England plum-pudding and pies. That the dinner "went to the right spot" was amply attested by the acknowledgments received in return.

Of course the intention of our Soldiers' Aid Society was to make the Fitchburg boys its chief care; but its work was by no means limited to them. During the war it sent large amounts of various supplies and necessaries to the Sanitary and Christian Commissions, the Massachusetts Relief Association at Washington, the New England Soldiers' Relief Association at New York, the Worcester Relief Society and to persons known to the society who were caring for the wounded in the hospitals. From all these societies and individuals thus aided came scores of appreciative and thankful letters.

The actual amount of money received and expended for relief by this society during its existence was something over one thousand five hundred dollars; but of the innumerable gifts of clothing, bedding, delicacies for the sick and wounded, no estimate of value can ever be made.

The society held stated meetings, but there were times in its history when sudden and imperative calls were made upon it; and its earnest members, putting aside their household duties, worked, as we may say, day and night, for the soldiers. One such occasion as this was when, in May, 1862, the Fusiliers and Guards were ordered to report in Boston, ready for duty, at a few hours' notice. In relation to this emergency the records of the society contain the following:—"Forthwith, the ladies, Monday morning though it was, snatched sewing implements, and in rapid haste gathered at the Town Hall, to fit out our men with flannel shirts and other appropriate garments, and sewing-machines and busy fingers vied with each other to achieve the work."

And in the same way, when the wires flashed to us the news of some terrible battle raging, as at Gettysburg, the Wilderness, or other fields of carnage and suffering, the ladies flew to their work of mercy and comfort. All honor to the ladies of Fitchburg who performed this vast amount of noble work! Many of them have long since left us and gone to their reward; but, whether living or dead, their labors during those long, dark years are, and ever will be, remembered, and will remain as an everlasting memorial of their self-sacrificing devotion to the cause of liberty and the relief of suffering.

When the Rebellion was crushed and the army disbanded, the necessity of this society ceased. Its last meeting was he'd June 22, 1865, "no member regretting she had been identified with its labors, but rather that it could not more truthfully be said of her, 'she hath done what she could.'"

The second relief organization in Fitchburg, of which we propose to give a brief account, was known as

The Soldiers' Relief Committee.—This was a large organization composed of gentlemen living in all sections of the town, and did a vast amount of good work during the two years of its existence.

It was started at a citizens' meeting in the town hall, September 26, 1861, its object being "to organize for the more effectual aid and comfort of the soldiers in the field from this town and their families."

A sub-committee of eighteen was chosen "to raise funds to aid enlistments, to procure comforts for our soldiers and their families and take such other action in the matter as may be deemed expedient."

This committee to raise funds, etc., went to work immediately, and collected considerable money, farm produce and clothing; and the following-named gentlemen were appointed an executive committee to distribute the same: Dr. Thomas R. Boutelle, Alvah Crocker, Lewis H. Bradford, Hanson L. Reed and Henry A. Willis.

This executive committee immediately issued a circular, which was distributed among the citizens requesting that all cases of destitution in the families of volunteers be reported without delay.

On October 21, 1861, occurred the battle at Ball's Bluff, in which the Fifteenth Regiment lost heavily. Our own Company B, of that regiment, suffered terribly in the battle, and Capt. Clark S. Simonds and eighteen of his men were captured and imprisoned at Richmond. Nothing was known here concerning their fate till letters were received from Capt. Simonds informing us of the imprisonment of himself and his men, and making an earnest appeal for his men, who were suffering for lack of clothing and money. This news did not reach us till November 20th, a month after the battle. A meeting of the citizens was forthwith called, and held on the evening of the 20th, at which seven hundred dollars in cash were raised, and about one hundred dollars' worth of clothing contributed by the merchants. This money and clothing, together with blankets, etc., given by the Soldiers' Aid Society, were consigned to the hands of Henry A. Willis, Esq., who started with them for Fortress Monroe on November 26th, whence they were in due time forwarded to our boys at Richmond. At this time Mr. Willis visited the camps of the Fifteenth, Twenty-first and Twenty-fifth Regiments. About three weeks after the supplies were forwarded from Fitchburg, a letter was received from Captain Simonds, acknowledging the receipt of the money and clothing and conveying his thanks, on be-

half of his men, for the prompt and generous response which the people of Fitchburg had made to his appeal. The letter also contained the following, which is certainly worthy o f record in this place:

It is a fact of which I shall ever speak with pride, that *Fitchburg was the first and only town as yet to aid her prisoners*, and Massachusetts the only State. Since the clothing came from Fitchburg, clothing of all kinds, enough for three hundred and fifty men, has arrived, sent by the State authorities of Massachusetts, for the relief of her men now here in captivity, placing them in comfort, in this respect, for the winter.

This statement that Fitchburg was the *first town in the whole North* to send aid to suffering prisoners is indeed one that may justly inspire a feeling of pride. Many other towns soon followed her example, but ere long the inhuman orders of the rebel authorities made it impossible for our supplies ever to reach the starving and almost naked Union prisoners.

Our citizens most willingly contributed money to be placed at the disposal of the Soldiers' Relief Committee, and the town, on December 14, 1861, voted to appropriate the sum of one thousand dollars to help it in its noble work, and until the committee ceased to exist, in October, 1863, it carefully sought out the needy families of soldiers and relieved their wants. About two thousand dollars was thus disbursed, beside a very large amount of clothing, farm produce, &c., of which no accurate account was ever kept. After October, 1863, this work was conscientiously carried on by the citizens and the town until the close of the war.

During the whole course of the war, when news reached us of great battles, either the Soldiers' Relief Committee or the citizens very quickly despatched committees to the front with generous amounts of supplies, and to look after and bring home the wounded. Such action was taken after the battles of Ball's Bluff, Roanoke Island, Antietam, Fredericksburg, Gettysburg, the Wilderness, Cold Harbor and the battles before Petersburg.

Lack of space prevents us from giving an account of all this, and the mere details of a few of the more important contributions after some of the great battles must suffice. After the battle of Gettysburg there were sent, on July 14, 1863, in charge of Henry F. Coggshall, Esq., $1079.60 in money, and nine barrels and five large boxes packed solidly with clothing, bandages, liquors, wines and delicacies for the sick and wounded.

News of the battle of the Wilderness reached Fitchburg May 8, 1864. It was Sunday, and that evening a meeting of the citizens was held in the town hall, the result of which was that *in less than twenty-four hours after the meeting* Dr. Alfred Hitchcock and Messrs. H. A. Goodrich and E. B. Hayward started for the front, taking with them seventeen hundred dollars in cash and sixteen barrels and bundles of carefully selected stores for the sick and wounded. This promptness and generosity of our citizens received wide notice in the newspapers "and Fitchburg, for her repeated efforts in this direction, became noted for the very liberal care she bestowed upon her soldiers."

There is no accurate account of all the money thus sent away to the fields of battle for the relief of the sick and wounded soldiers; but the whole amount received and disbursed by the various societies and committees in town was not far from twelve thousand dollars. Most of this sum went to the soldiers themselves, together with large amounts of supplies. Besides this, much was done by the town and societies for the soldiers' families in the way of money and supplies. Certainly Fitchburg did all that could be expected and the gratifying feature of it is that everything was done and given freely and spontaneously.

SOLDIERS' FUNERALS.—Soldiers from this town met death in almost every one of the great battles of the Civil War and on scores of battle-fields of minor importance.

Seven public funerals were held in Fitchburg during, or shortly after, the war, over the remains of eleven of our boys, and a brief mention will here be made of them.

The first was that of Clark S. Simonds, captain of Company B, Fifteenth Regiment. Captain Simonds was killed at Antietam, September 17, 1862, while conversing with Colonel Kimball after the battle was nearly over. His funeral was held September 23d, with military honors, and all business in the town was suspended.

The second public funeral was that of Henry A. Beckwith, first lieutenant of Company D, Twenty-first Regiment. Lieutenant Beckwith was mortally wounded at the battle of Chantilly, September 1, 1862, and died, four days later, in the hut of an old slave woman near the battle-field. His body was brought home by his wife and Henry A. Willis, Esq., and given a public military funeral on Sunday, October 5, 1862, in the town hall, which was densely packed.

The third was that of George G. Nutting, first lieutenant of Company A, Fifty-third Regiment. He was killed at Fort Bisland, La., April 13, 1863, and on account of the absence of Capt. Miles, was in command of the company at the time of his death. His body was at once sent to Fitchburg, where it was given a public burial, May 1st. On that day business was suspended in town during the afternoon, flags were at half-mast, and the town hall, in which the services were held, was beautifully decorated. A long procession followed the remains to the cemetery, and the fallen hero was laid to rest in Laurel Hill with military honors.

The fourth was that of Frederick H. Sibley, first lieutenant of Company I, Thirty-sixth Regiment. He died of disease at Louisville, Ky., August 17, 1863, and his remains were brought home by his father. His funeral occurred at the Universalist Church, August 27, 1863, and he was buried with military honors.

The fifth was the funeral of George H. Bailey and

Jerome K. Taft, both captains of Company A, Fifty-third Regiment, and both killed at Port Hudson, La. We have already related the unfortunate accident by which Captain Bailey was mortally wounded, May 25, 1863. Captain Taft, his successor in command, was commissioned only four days before he fell in the gallant assault on the works at Port Hudson, June 14, 1863. Their remains were brought home and funeral services held October 5, 1863. The bodies of the two brothers-in-arms rested on one bier. The Fifty-third had returned from the war a little over a month previous, and both the Fitchburg companies of the regiment did escort duty and many of the officers of the Fifty-third were present. "The obsequies were a credit to those who had them in charge, and a noble tribute to the brave men they commemorated."

The sixth public funeral was held April 6, 1864, over the bodies of four of our Fitchburg boys,—Sergeant Simon F. Marshall, of the Third Cavalry, and privates Edward P. Farwell, J. Henry Kendall and Charles W. Stuart, all of Company A, Fifty-third Regiment.

Sergeant Marshall was wounded at Baton Rouge, and died soon afterward, August 17, 1862, at the St. James Hospital in New Orleans.

Privates Farwell and Kendall were two of the youngest soldiers that went out from this town. The former was but eighteen when he enlisted. His friends tried to dissuade him from entering the army, but his answer was, "Some must defend the country and I feel it my duty to go." He went, but never returned. At Port Hudson he was stricken with a fatal disease. He lived to see the surrender of the stronghold, and on July 19, 1863, died within its fortifications. Kendall was still younger, not quite seventeen when he enlisted, and a delicate boy. Twice before had he volunteered and been rejected on account of his youth. When every effort was being made to fill up Companies A and B of the Fifty-third, he again volunteered and was accepted; and when his mother besought him not to go, he said "Mother, if the *men* will not go to the war, the *boys* must." He endured the marches, privations and suffering remarkably well, and was courageous in battle. He was in the front ranks at the heroic charge on the works at Port Hudson, June 14, 1863, where he received the wound from which, ten days later, he died, at the New Orleans hospital. Truly both these young men were heroes.

Private Charles W. Stuart was killed in the first battle in which the Fifty-third engaged,—that of Fort Bisland.

In the spring of 1864 Mr. Josiah Spaulding, of this town, made a journey to Louisiana to procure the remains of these four men, was successful and soon returned with them in charge. The funeral occurred April 6, 1864, and the services were conducted by the various clergymen of the town, Rev. Alfred Emerson preaching the sermon. A hymn, written for the occasion by Mrs. Caroline A. Mason, concluded the services. Then, with martial solemnity, they were borne to the city of the dead "over the river," and laid to rest in their soldier graves.

Of the seventh and last soldier's funeral in Fitchburg mention has already been made in the opening section of our war history. It was that of Lieutenant-Colonel George E. Marshall, of the Fortieth Regiment, and occurred April 19, 1866. The services were held in the town-hall, which was most beautifully and artistically decorated, and there was a large concourse of citizens and organizations, both military and civic. Ex-Governor John A. Andrew, Governor Alexander H. Bullock and his staff and other officials and several members of the Legislature occupied seats on the platform.

The exercises opened with the singing of a hymn, written for the occasion by Mrs. Mason; Rev. Henry L. Jones, rector of Christ Church, delivered the funeral oration, and a brief but eloquent address was made by Governor Bullock. The remains were escorted to the receiving tomb, where the casket was deposited, after which the customary salute was fired. In a grave on the hillside now repose the remains of Lieutenant-Colonel Marshall beside those of his brother, Sergeant Marshall; and the aged father still lives to tenderly care for and keep green the graves of his two noble sons who died in the preservation of the Union.

The writer painfully realizes that the story of Fitchburg's part in the Civil War has not been half told in the few preceding pages. Only the briefest outline has been given. Those terrible years were filled with private sufferings, anguish, heart-rendings and sacrifices, a record of which has been preserved only in the Book of Life and the hearts of the sufferers; no manuscript or printed page ever has portrayed them, or ever will, in their real significance.

The writer feels that this sketch of the war, imperfect as it is, ought not to be concluded without at least a brief mention of those of our citizens who fell victims to the systematic inhumanity of rebel prisons. As far as is known, there were seven of these unfortunates from Fitchburg, as follows: John H. Prichard, died in the horrible prison-pen at Andersonville, January 18, 1865.

Charles E. Goodrich, who was only sixteen years old when he enlisted as a drummer-boy in the Twenty-first, was captured at the battle of the Wilderness and sent to Andersonville, where he was kept four months, until his robust frame wasted to a mere shadow of its former self, when he was sent to the foul prison at Florence, S. C., where he died in October, 1864.

William T. Peabody and Henry K. Hill were both captured at the Wilderness, and sent to prison. The former died at Andersonville, September 1, 1864, and the latter at Florence, but the date is unknown.

George P. Cotting was taken prisoner in the attack

made by the rebels, May 16, 1864, on the Twenty-fifth Regiment while moving towards Richmond. He was sent to Andersonville, where he wasted away. He was finally exchanged, but was too much weakened to go further than Annapolis, where he died in the hospital.

William H. Hayden was in the navy, and was on the gun-boat "Granite City" when it was captured, May 8, 1864, while cruising up one of the bayous of Texas. He was taken to Galveston and died in a so-called "hospital" there, on September 16, 1864.

Cyrus Putnam was captured at Drury's Bluff in the same engagement in which Cotting was taken prisoner. He was sent to Richmond, where the wound he had received, just previous to his capture, was neglected, and he died there after a lingering illness —how long we know not—a victim of man's inhumanity to man.

A short account of the beautiful and costly memorial which Fitchburg erected in honor and commemoration of her fallen heroes seems to be a fitting termination to our record of the war. We will therefore conclude this section with a condensed history of the inception, construction and dedication of

THE SOLDIERS' MONUMENT.—Soon after the close of the war the question of building either a soldiers' monument or a memorial hall began to be agitated.

April 9, 1866, the town voted that a committee of five be appointed by the chair "to report the names of seven to constitute a committee on the subject of erecting a monument, as a sacred memorial to our citizens who fell in their country's service, during the late rebellion." The chair appointed as this committee Messrs. L. H. Bradford, Ebenezer Torrey, William H. Vose, Amasa Norcross and George F. Fay, who presented the names of Alvah Crocker, George E. Towne, Eugene T. Miles, Lewis H. Bradford, Alpheus P. Kimball, Stephen Shepley and Henry A. Willis, and these seven gentlemen were duly constituted the Soldiers' Monument Committee, which was subsequently organized by the choice of Mr. Crocker as chairman, and Mr. Bradford, secretary.

April 8, 1867, Mr. Towne made a verbal report for this committee and asked for further time, which was granted. It was also voted to add to the committee General John W. Kimball, Colonel Theodore S. Foster and Walter A. Eames.

April 13, 1868, Mr. Shepley made an able and eloquent report for the committee and the town voted that "the Soldiers' Monument Committee be authorized to purchase the two lots of land situated upon Main Street, owned by William W. Comee and Isaac Hartwell, and erect thereon a Soldiers' Monument at an expense not exceeding fifty thousand dollars, whenever twenty thousand dollars of the same shall have been raised by private subscription."

On the 28th of the same month it was voted to instruct the committee to buy these two estates for forty thousand dollars, and to rent the buildings and estates and sell the buildings as soon as the construction of the monument required it. These two estates were accordingly purchased for the sum named, and came into the hands of the Soldiers' Monument Committee, who rented them for some years.

April 12, 1869, Mr. Crocker made a report on the soldiers' monument, which was accepted and placed on file. It was then voted that a sum not exceeding forty thousand dollars be appropriated for a monument, ten thousand dollars of which was to be raised by taxation the current year. At an adjourned meeting, May 3, 1869, this vote was rescinded in order to investigate the feasibility of erecting a memorial hall instead of a monument. A committee of nine, consisting of Frederick F. Woodward, Alvin A. Simonds, David H. Merriam, Gardner S. Burbank, Jabez Fisher, George Robbins, Edwin P. Monroe, Hale W. Page and Edwin Upton, was appointed "to prepare and present plans and specifications, together with the estimated cost of a Memorial hall and report at a future meeting." The original committee was not, by this action of the town, discharged or relieved of its trust, but, the appropriation having been withdrawn, it was decided best for the Monument Committee not to proceed further until the Memorial Hall Committee had rendered a report. The investigations of this committee did not appear to be favorable to the Memorial Hall project. A verbal report was made on the matter, April 11, 1870, by David H. Merriam, which report was accepted and the committee discharged.

Meanwhile, in September, 1869, Ebenezer Torrey, town treasurer, was instructed to give a deed of right of passway over the Comee and Hartwell estates to the county of Worcester, on condition that the County Court-house be erected in the rear of these estates and front towards Main Street, "said right to continue as long as said court-house shall remain standing, as aforesaid." The right was duly conveyed and the court-house built very soon after, in accordance with the provision therein.

May 2, 1871, the town authorized the Monument Committee "to grade, fence and otherwise improve the lot in front of the court-house."

October 2, 1871, Mr. Crocker made a report to the town, and presented plans and designs for the proposed monument, all of which was accepted; and the Monument Committee was instructed "to proceed forthwith to carry out the designs and plans submitted, at a cost not exceeding $25,000." In accordance with this instruction the committee made the following contracts:

November 15, 1871, with Samuel A. Wheeler & Son, of Fitchburg, for the construction of the foundation to receive the granite superstructure and bronze statues.

April 1, 1872, with Martin Milmore, of Boston, who had furnished the designs accepted by the town the previous autumn, for the execution of the bronze statues and tablets.

April 8, 1872, with Runels & Davis, of Lowell, to erect the superstructure of Concord granite.

Agreements were also entered into by the committee with J. L. Roberts, of Boston, to furnish and erect a substantial iron fence around the enclosure, and with David Damon & Co., of Fitchburg, to execute the granite base for the fence and the steps at the two entrances to the park, both of which agreements were fulfilled in a manner creditable to the artisans and highly satisfactory to the committee.

There was a strong feeling among the citizens that the superstructure should be made of granite quarried from old Rollstone, a dear and familiar object to the eyes of the brave boys whose death the monument was to commemorate; and the members of the Soldiers' Monument Committee felt the claims of Rollstone as deeply as did any of the other citizens. Unfortunately, however, at that stage of development of the Rollstone quarries, the granite obtained was apt to contain here and there iron pyrites, and exposure to the weather caused staining of the granite in spots with iron. No contractor was willing to assume the responsibility of furnishing Rollstone granite that would keep unblemished by iron stains. It is gratifying to state that there has been much improvement in the granite in this respect since then; the deeper the quarrymen go, the cleaner and purer does the granite become. The committee, feeling that no blemish ought to mar their costly memorial, decided, much against their will and inclination, that Rollstone granite was out of the question as a material out of which to construct the superstructure, and fixed upon what is called "Concord" granite, as the stone best suited to the purpose.

Beginning with 1873, the city government replaced that of the town, and on January 28, 1873, it was ordered by the City Council that the Soldiers' Monument Committee, appointed by the town, be continued as a committee of the City Council until the business for which it was appointed was completed.

Meanwhile the work on the various contracts was progressing, and on June 2, 1873, the Soldiers' Monument Committee deposited within the die of the monument a box containing books, papers and documents relating to the history of Fitchburg, its war history, copies of deeds and contracts relating to the monument, newspapers, fractional currency and coin then in use, etc., and a written report, signed by all the members of the Monument Committee save one or two who were absent from the city, of the action of the town and the work of the Soldiers' Monument Committee in regard to the erection of this memorial.

It was expected that the dedication would take place in the autumn of 1873, but an accident occurred in making the cast of the central bronze figure, "America," causing a necessary delay of four months.

It was then decided that June 17, 1874, should be the day, but unavoidable circumstances necessitated a further postponement of one week, and on June 24, 1874, the dedicatory exercises were held. Elaborate preparations were made for this event, and the City Council appropriated the sum of two thousand dollars for the occasion. Gen. John W. Kimball was appointed chief marshal, and authorized to select marshals and aids. The gentlemen whom he appointed had all seen service in the war, and were as follows:

Marshals.—T. S. Foster, colonel, 21st Regiment; Edwin Upton, colonel, 25th Regiment; C. H. Foss, captain, 25th Regiment, and senior past commander of Post 19, G. A. R.; T. L. Barker, colonel, 36th Regiment; George Jewett, major, 51st Regiment; E. A. Brown, major, 53d Regiment; Levi Lawrence, captain, 57th Regiment; G. T. Hayward, captain, 4th Regiment Heavy Artillery.

Aids.—George Lawrence, lieutenant, 1st Regiment; Charles C. Walker, private, 2d Regiment; Edwin Newton, private, 10th Regiment; Albert H. Andrews, major, 19th U. S. Infantry; Russell O. Houghton, captain, 26th Regiment.

Bugler.—Edward R. Campbell, private, 1st Vermont Artillery.

The day of dedication was fine, there was a large attendance of citizens from neighboring towns and most of the business blocks and many private houses in the city were handsomely decorated. The procession, which was an imposing one, was made up of ten divisions, and moved promptly at eleven o'clock; and after passing through the principal streets, was, with the exception of the carriages, battery and fire apparatus, massed in Monument Square.

The exercises opened with the hymn, "Great Jehovah, turn Thine eye," which was finely rendered by the Choral Union.

Rev. Dr. S. B. Grant then offered prayer, after which Hon. Alvah Crocker made a brief address of welcome, from which is taken the following extract:

My friends, I do not claim that Fitchburg, in character, tone and spirit, is above our sister towns and municipalities, but I do claim with a population of 8000 souls, including 2000 able-bodied men, furnishing eight companies and a balance in isolated individual cases sufficient to make a regiment of 1000 men, that there was the same spirit as in the Revolutionary War when she furnished the germ (in her letters to Boston) of the immortal Declaration of Independence, that Bancroft alludes to, and can be read by any one, as when her old iron cannon, on the 19th of April, 1775, boomed the call to her minute-men; the same spirit as when Capt. Bridge, with fifty men, before the metal was cold, was on his way, or "line of march," to Concord and Lexington, and was at Pitcairn's heels before he got into Boston.

The report of the Soldiers' Monument Committee was then read by Capt. Eugene T. Miles. At the close of the report Capt. Miles presented the Soldiers' Monument to the city in the following words:

Mr. Mayor and Gentlemen of the City Council: Trusting implicitly in your patriotism, in your sympathy with the bereaved ones who to-day mourn the loss of dear ones who fell in the bloody conflict to sustain our liberties, in your true love of country, in your integrity as municipal officers, nothing now remains but to commit to your care and keeping, and through you to the people of our young city, this beautiful structure—the Soldiers' Monument—together with so much of its surroundings as are completed.

In the interests of those for whom they were erected, care for them kindly, with fidelity and tenderly:

"For there are deeds which should not pass away,
And names that must not wither."

At this time the monument was unveiled, salutes fired and patriotic music played by the eight bands present.

Hon. Amasa Norcross, mayor, then in a few well-chosen and eloquent remarks, accepted the Soldiers'

Monument in behalf of the people of the city of Fitchburg.

A poem written for the occasion by Herbert Ingalls, Esq., was then read by Eli A. Hubbard, Esq., superintendent of schools.

At the conclusion of the reading of the poem, Hon. Alvah Crocker introduced Major-General Nathaniel P. Banks, the orator of the day, who delivered a stirring and eloquent address; and at its close General Kimball stepped to the front of the platform and called for three army cheers for General Banks, which were given with a will. General Banks stepped forward, bowed and said: "Comrades, from my heart I thank you for your kind remembrance."

Thus was our memorial to the fallen Fitchburg soldiers dedicated; and since that day its stately, symmetrical and ornate form has been to the citizens of this place a sacred object, and well worthy the care and attention bestowed upon it and the beautiful park whose centre it occupies.

We will close with a statement, in round numbers, of the total cost of the monument and park and a brief description of the monument. The statement in regard to the cost is taken from the report read at the dedication:

"Cost of lot, $40,000; granite base for fence, $3600; iron fence, $3000; foundation for monument, $2000; granite superstructure, $9000; bronze statues and tablets, $15,400; which, with the grading and miscellaneous expenditures, will make the total cost at least $75,000."

About ten thousand dollars were received for rent of the estates prior to the removal of the buildings thereon and from the sale of the buildings, and the net cost, without interest, was found to be $66,699.23.

The monument itself rests upon tiers of solid masonry, so graduated as to form three broad steps on all sides of it. From this base rises the massive square shaft, broader at the base than at the top, to a height of some twenty feet above the level of the park. A large granite cap crowns the top of the shaft and bears the colossal bronze statue "America," holding in each hand a myrtle wreath, as if in the act of crowning the two large bronze statues on either side and below her. These two statues represent a soldier and sailor, respectively, and are placed on pedestals forming, on either side, a portion of the granite superstructure, their top being only a few feet above the level of the park. Though these magnificant bronze statues were designed by Mr. Milmore, it is but just to state that they were made by the Ames Manufacturing Company, under the supervision of Mr. M. H. Mossman.

Into each side of the monument, just below the cap-stone, is let a large bronze tablet. The tablet, looking toward Main Street, bears upon it an inscription proclaiming that the monument is Fitchburg's tribute, not only to her brave sons who fell in battle, but also to those who went forth and fought nobly for the "just cause," and were spared to return once more to the home of their youth. The tablets on the other three sides of the shaft are inscribed with the names of one hundred and thirty-five men who perished in the War of the Rebellion, and whom Fitchburg claims as belonging to her "Roll of Honor." The four tablets were made by Samuel Hooper & Co., and are finely executed.

A sufficient description of Monument Park was given in the opening chapter of this history, and need not be repeated.

CHAPTER XLI.

FITCHBURG—(*Continued.*)

ECCLESIASTICAL HISTORY.

THE history of the beginning, growth and progress of religious life and organizations in a town like Fitchburg would easily make a volume of itself; and this fact may be realized more fully when we say that from 1786 to 1823 the town was almost all the time in a ferment concerning religious and church matters.

During the first forty years of Fitchburg's existence church and town affairs were almost inextricably blended. All church business was settled in town-meeting, and, very naturally, controversy arose between people in different sections of the town; and during the first quarter of the present century doctrinal disputes were carried on with considerable bitterness.

We have already spoken, in the section on the early history of the town, about the "six Sabbath days' preaching," by Rev. Peter Whitney, in the Samuel Hunt tavern, during the winter of 1764–65, and of the building of the first meeting-house.

November 21, 1765, the town voted "not to have preaching this winter."

September 22, 1766, voted to have preaching during the coming winter, and appropriated £40 for that purpose, and chose Amos Kimball, Elisha Fullum and Jonathan Wood "for to git a minister to preach;" also voted "to have Mr. Petter Whitney, Mr. Angier, Mr. Payson, if they will come and preach with us."

Rev. Samuel Angier preached for them that winter and was so well liked that the people gave him an invitation to become their permanent pastor; but Mr. Angier declined the call, chiefly, if not wholly, on account of some difficulty arising between him and Deacon Kimball. It appears from the records that the deacon boarded the minister, for the town voted, March 2, 1767, "to allow Deacon Kimball six shillings per week for boarding the minister till the time agreed upon is expired for Mr. Angier to preach."

May 11th the town voted to appoint Thursday, May 21, 1767, as "a day of fasting and prayer in order to ask divine assistance in giving some Gentleman a call to settle in the Gospel ministry in this town."

During that summer Rev. John Payson, a graduate of Harvard in 1764, son of Rev. Phillips Payson, of Chelsea, and a brother of the young and much-lamented minister of Lunenburg, Samuel Payson, who died in 1763, preached for the people of Fitchburg. He gave great satisfaction, and September 24, 1767, the town voted to give him a call, and offered him the same terms of settlement and salary as had been proposed to Mr. Angier a few months before, viz. £133 13*s.* 4*d.*, as a settlement, one-half to be paid one year after ordination, and the balance two years after, and an annual salary of £60, "until there shall be sixty families settled in town, after that to pay him annually £66 13*s.* 4*d.*" Two months later, November 23d, the town voted to find and provide for him thirty cords of wood annually. On this date Rev. Mr. Payson gave his answer in the affirmative, and accepted the town's call to settle on the terms proposed.

The First Church in Fitchburg was formed January 7, 1768, and on the 27th of the same month Rev. John Payson was ordained its pastor, and his pastoral relations with the town continued until May 2, 1794. By vote of the town the two churches in Lancaster, the church in Lunenburg, the First Church in Leominster and the two churches in Westminster and Shirley were invited to participate in the ordination.

For the next few years matters ecclesiastical ran along very smoothly and nothing worth recording occurred till the "hard times" and depreciation of the currency came in 1777. During the three years 1778–80, it was hard work to pay Mr. Payson's salary and the poor man came near starving to death. The town, however, did not allow him to come to absolute want, and March 30, 1778, voted to appoint a committee of four to circulate a subscription paper among the inhabitants to give them a chance "to subscribe some of the necessaries of life, or anything they please to subscribe for Mr. Payson's support." Two weeks later, April 13th, the records state that this committee reported to the town and presented the paper to Mr. Payson, "which was kindly accepted by Mr. Payson and said he was well satisfied with what the town had done, until September next, which will be one year from the time the subscription paper was dated."

In October, 1778, he received one thousand dollars Continental currency, and the next month two hundred and sixty-six dollars more (equivalent, in all, to about one hundred and eighty-four dollars), as his salary.

In September, 1779, the town voted him £1479 16*s.* as his salary for the ensuing year and to make up the depreciation for the last year.

May 23, 1780, the town voted "to pay Mr. Payson £3320 4*s.* to make his salary good since said salary was granted."

October 9, 1780, it was voted to raise one hundred pounds, "hard money," "to pay the Rev. Mr. Payson his salary the year ensuing, to be paid in hard money or produce, that is, wheat at 9*s.* per bushel; rye at 6*s.* per bushel; Indian corn at 4*s.* per bushel; labor in the summer, 4*s.* per day; flax, 1*s.* per pound; sheep's wool, 2*s.* per pound; pork, 5*d.* per pound; beef, 3*d.* half penny per pound, and other produce in proportion."

The same vote was passed in 1781 and 1782; and during the remaining years of Mr. Payson's pastorate the annual salary voted him was £66 13*s.* 4*d.*

Nothing worth noting occurred in church affairs until the famous "meeting-house controversy" began. We have previously recorded the two futile attempts made by the people living in the westerly part of the town, in 1785, to be set off from the town of Fitchburg. These attempts, however, were but a skirmish.

The date of the beginning of the real contest was September 12, 1786, when the town voted "to build a new meeting-house in the center of the town, or the nearest convenient place to the center." To fix upon this much-desired "center" took over nine long years, and occupied the attention of the people during the whole or some portion, of ninety-nine town-meetings. We propose to give here only a history of the most important acts of the people in this matter.

For the next two years no public action was taken in regard to the new meeting-house, partly because the people became involved in a side issue concerning the manner of singing in church. The custom was for the minister to read the psalm or hymn, then the oldest deacon present would read the first line, which the congregation would then sing, and so on to the end, each line being read and sung separately. In the winter of 1786–87 an attempt was made to introduce something similar to our present mode of singing, together with some new tunes. The veteran singers did not approve of these innovations, and many characterized them as irreligious and unscriptural. Quite a dispute occurred in which the whole town became interested, and in May, 1787, there was an article in the town-meeting warrant as follows: "To see if the town will vote to come into any general rule in regard to carrying on the singing part of the public worship of God, and whether the singers shall sing a part of the time without reading, and how the psalm shall be read, whether by line or verse, or act any thing thereon." A committee was chosen to consider the matter and report at the next meeting.

In accordance with the report of this committee rendered at a town-meeting soon afterward it was voted "to sing five times in the worshipping on the Lord's day, in the following manner,—the first singing before prayer, without reading; after prayer, with reading line by line, and set such tunes as the Congregation can in general sing: first in the afternoon, before prayer, without reading; after prayer, with reading; after sermon, without reading." This

was a compromise which suited both parties, and the innovators had the satisfaction of carrying three out of five of their points.

During these two years considerable private controversy was going on in regard to the location of the new meeting-house. Meanwhile Jedediah Cooper and Jacob Upton, the two tavern-keepers in the westerly part of the town, despairing of getting any satisfaction out of the town, determined, together with some of their neighbors, to have a meeting-house among themselves at any rate. They accordingly erected a frame, which was covered after a time, and used occasionally for worship. It was just within the limits of the town, and was a desolate looking building. The proprietors did not take much care of it and its shabby and dilapidated appearance earned for it the name of "the Lord's Barn." It was sold and taken down about 1825, and the proceeds of the sale (about thirty-six dollars) were divided among the proprietors.

September 9, 1788, the subject was again brought before the town by means of an article in the warrant,—"To see if the town will erect a meeting-house in the center of the town, or receive any part of Westminster that shall be willing to join with us, and then erect a meeting-house in the nearest convenient place to the center."

This article was inserted by the people of the west and no action was taken on it at this meeting; but at an adjourned meeting September 23d, a committee, consisting of Moses Hale, Daniel Putnam, Jacob Upton, Asa Perry and Oliver Stickney, was chosen "to examine and find out a place to erect a meeting-house in the most convenient place to accommodate the inhabitants of the town of Fitchburg." The result of the investigation of these five gentlemen was that two of them found "the most convenient place" to be in the west, two in the east, while the remaining one was upon the fence. Their report was rendered to the town October 2d, and was rejected as soon as given, and the gentlemen were promptly discharged from further service in that direction. Immediately thereafter a motion was made to place the new house on the site of the old one; this was forthwith negatived. Then, "after some consideration on the matter," as the records state, it was voted "to erect the new meeting-house in the nearest convenient place to the center." Such brilliant progress must have astonished the people, for a few minutes later it was voted "to reconsider all votes hitherto passed relating to this matter," after which the meeting was adjourned to the following day.

At nine o'clock the next morning the parties proceeded to business. The first thing done was to vote "not to erect the meeting-house where it now stands." It was then moved to place it "on the hill near Phineas Sawyer's house, on the land belonging to the heirs of Mr. Ezra Upton."

This location was in the westerly part of the town, and the motion to place the house thereon was carried, thirty-two voting in favor of it and seventeen against. Thus, by a vote of nearly two to one, it was decided to build the new house in the west, and the people in that section were greatly rejoiced thereat. A committee was chosen, consisting of Reuben Smith, Asa Perry, Phineas Sawyer, Elijah Carter and Jacob Upton, to inform the inhabitants of the west part of the town of this action and consult with them. It was voted that this committee "be invested with power to agree with the owners of the new frame erecting for a meeting-house in the northwesterly part of the town, if that appears cheapest for the town,—otherways be invested with power to provide materials and timber for building a new meeting-house in the prudentest manner for said town, on said plat of ground." This committee was directed to report at the next meeting.

This was a bitter pill for the east, and the people of that section, resolved on retaliation, called a town-meeting October 21st, "To see if the town will comply with a request of a number of the inhabitants of the town of Fitchburg, to grant that they, together with their respective estates and interests, may be set off from Fitchburg and annexed to Lunenburg." This was one alternative proposed by the east. The other was that the town allow the petitioners the old meeting-house, with Mr. Payson as their pastor, and let them be incorporated as a "poll parish." It was voted "to give those petitioners that called the meeting leave to withdraw."

The honest people, who, for the sake of peace and reconciliation, had favored the west at the meeting October 2d, were now very much alarmed. Holding the "balance of power" as they did, they were in rather an awkward predicament. If they favored the east, the west threatened to form a new parish; if they favored the west, the east evinced strong symptoms of either forming a new parish, or returning to the parent town of Lunenburg.

Meanwhile, the gentlemen of the committee appointed by the town October 2d, undaunted by this blast from the east, were prosecuting their labors with great zeal and confidence. They had bargained for the new frame belonging to Jacob Upton and others, prepared a site for the new house on the land of Ezra Upton's heirs and done sundry other wise things.

November 17, 1788, a town-meeting was held to hear their report, which was duly submitted, whereupon it was voted not to accept the report, and insult was added to injury by summarily discharging the committee from further service. This was done by the peacemakers, who were at their wits' ends, and this time threw their influence into the eastern scale. At this meeting a committee was chosen "to find the center of the town."

December 18, 1788, this committee reported in town-meeting that the centre of the township had been found, after a careful survey, to be on the land of one

Thomas Boynton, about five hundred feet north of the pound. This report was accepted, and Thomas Cowdin, Phineas Hartwell, Oliver Stickney, Daniel Putnam and Paul Wetherbee were chosen a committee to bargain for a site in that locality. This committee bought of Mr. Boynton twenty-two and a half acres of land, a little south of the pound, paying therefor two dollars and thirty-three cents per acre, and the town approved this action.

This location did not suit the people in the west, and they forthwith resorted to their old scheme of forming a new town, and called two meetings for that purpose, thereby frightening the conscientious peace-makers nearly out of their wits. The petitioners, however, did not put in an appearance at either meeting, and in consequence these two meetings were uncommonly peaceable. The petition was of course dismissed each time. In fact, the whole thing was but a ruse on the part of the men of the west to keep the attention of the people from a deep-laid scheme which they proposed soon to spring upon the unsuspecting public.

November 2, 1789, it was voted "to erect a new meeting-house on the land purchased of Thomas Boynton," and a committee of seven was chosen to take charge of the matter. Two weeks later the town voted to reconsider all votes heretofore passed on this subject; and thus, at the end of four years, the town was in the same position regarding this matter as when operations were first entered upon, with the exception of owning twenty-two and a half acres of real estate. The reason of this strange action was the culmination of the move on the part of the west, alluded to above. The people in that region, together with the inhabitants of adjoining portions of Ashby, Ashburnham and Westminster, had presented to the General Court a powerful petition for an act of incorporation into a town.

This petition set forth in glowing colors the delightful situation of the contemplated town—how nature had lavished all her skill upon it—how admirably adapted for a township by itself was the noble swell of land—and that nothing in nature or in art could exceed the grand and imposing spectacle of a meeting-house towering from its summit, while beneath the said swell was a region of low, sunken land, which almost cut off the petitioners from intercourse with the rest of mankind.[1]

This meant business, and the inhabitants of Fitchburg and the three adjoining towns not included in the proposed new town speedily drew up a spirited remonstrance, in which every statement of the petitioners was denied, and the whole project denounced as visionary. During all of 1790 the attention of both parties was wholly engrossed with this matter, and the result was that the General Court refused to incorporate the new town.

Both parties were much in need of a breathing spell after this vigorous contest, and it was not until September 7, 1791, that the battle was renewed. On that date it was voted, forty-one to twenty-three, "to erect a new meeting-house in the center of the town, or in the nearest convenientest place thereto." This double-barrelled superlativeness is proof postive that the spirit of the people was in no wise cast down by the fruitless struggle of the past five years. Though the people could not decide upon a location, they were bound to have plans drawn for a new meeting-house at all odds, and at this meeting a committee was chosen to plan a new house. October 10th, this committee reported to the town "to build a house sixty by forty-six feet, with a porch at each end twelve by eleven feet, with stairs into the galleries." There were to be forty-six pews on the ground floor and twenty-five in the galleries, to be sold to the highest bidders, and three years were to be allowed for the completion of the house. This report was accepted November 14, 1791, and on the same date a committee was chosen to clear a spot on the land purchased of Thomas Boynton and build the house.

For as long a period as six weeks thereafter it really looked as if the matter was settled; but everything was completely upset December 27, 1791, by a vote "to dismiss the committee chosen to build a new meeting-house from further service."

Almost three years then elapsed before any further action was taken by the town in this matter. The people, however, showed their dogged obstinacy by refusing, on several occasions, "to repair the meeting-house windows, and to paint the outside of the meeting-house."

The town again renewed operations September 3, 1794, by voting "to erect a meeting-house in the center of the town, or in the nearest convenientest place thereto, to accommodate the inhabitants thereof for divine worship." Joseph Stearns and David Kilburn, of Lunenburg, and Benjamin Kimball, of Harvard, were chosen by ballot as a "committee of three disinterested persons out of town" to discover that much-to-be-desired spot, "the nearest convenientest place to the center." This committee found the centre to be about a quarter of a mile northeast of the pound, and decided that the most eligible location for the house was about half a mile south of this point, which would have placed it not far from the present junction of Main and River Streets. Their report was rendered to the town October 21st, and rejected, thirty-six to twenty-nine. So the opinions of interested and disinterested persons seem to have been considered of about equal value—as good for nothing.

A month later a motion to place the house on the site selected by the out-of-town committee was defeated, forty-eight to forty-five. A committee was then chosen to select a suitable location, and December 1, 1794, reported in favor of "setting the meeting-house near the high bridge under the hill" (the same place the out-of-town committee selected). This report was accepted, strange to say, sixty-one to forty-seven. A town-meeting was called January 8, 1795, to choose a committee to purchase this site;

[1] Torrey's "History of Fitchburg:" Fitchburg, 1836.

but, with its customary obstinacy, the town refused, at this meeting, to choose such a committee, and so ended the project of building the house there.

January 26, 1795, it was voted "to erect a meeting-house on the town's land they purchased of Thomas Boynton, about five rods southwest from a large white oak tree, and to pattern it after the Leominster meeting-house." It was to be completed by December 31, 1796.

February 16, 1795, it was voted to pattern it after the Ashburnham meeting-house. "Likewise voted to have the length of said house sixty-two feet by forty-eight feet, the posts to said house to be twenty-seven feet in length, and that the undertaker to build the house give bonds, with good bondsmen, to fulfil the contract." The contract was given to John Putnam, Jr. At subsequent town-meetings minor details in regard to the construction of the house were settled.

September 1, 1795, a committee of five was chosen "to stake out and oversee the clearing and levelling of the meeting-house spot for the underpinning on the town land," and also "that the Selectmen lay out a four-rod road in the best place to accommodate the travel to the new meeting-house spot."

There seemed at this time to be a very good prospect of building the new house on the town's land; but it was not so to be, for October 19, 1795, a town-meeting was called "to know the sense of the town, whether the former vote in placing said meeting-house should be altered." After considerable discussion it was decided, by a vote of forty-four to thirty, "to place the new meeting-house at the crotch of the roads, near Capt. William Brown's house" (where the Upper Common now is). This was a final decision, though why it should have been is rather difficult to see, because this location was a trifle east of the town's land. It was intended to have the house face directly "down street," but the opposition mustered sufficient strength to change this plan so that it should face south and "stand cornerwise to the street."

So at last this momentous question was settled, and early in the summer of 1796 occurred the raising. Great preparations were made for this important event. May 9, 1796, a town-meeting was called "to see if the town will make any provision for the refreshment of the Raisers and also the Spectators that shall attend upon the raising of the new Meeting-house." This was a most amicable meeting, and it was unanimously voted "that the town provide one barrill W. I. Rum and Loaf Sugar sufficient to make it into Toddy for refreshment for the Raisers and Spectators that shall attend the raising of the new Meeting-house." A committee was also appointed, consisting of Deacon Kendall Boutelle, Deacon Ephraim Kimball, Deacon Daniel Putnam, Reuben Smith, Joseph Polley, Dr. Jonas Marshall and Asa Perry, "to deal out the Liquor to the Raisers and Spectators on Raising Day." Any one would suppose that a barrel of rum ought to make an amount of "Toddy" sufficient to satisfy the cravings of those who would be present at the raising; but the people were bound to have a rousing time after waiting so long for it, and to prove conclusively to the country round about that there was nothing small about them; for, before this meeting adjourned, it was voted "that the committee to deal out the Liquor and Sugar sufficient for the Raisers and Spectators, in case the barrill of W. I. Rum and Sugar already voted should be insufficient, procure more and bring in their account to the town for allowance."

This was the only meeting held to consider the subject of the new house during the ten years, where there was no contention or exhibition of spleen. For once the good people of Fitchburg were all of the same mind, and a "barrill of W. I. Rum," which, at the present time causes so much controversy, in the presumably degenerate days of 1796, acted like oil upon the troubled waters.

A few days later the raising came off successfully, but there is no definite statement as to the amount of rum and sugar consumed thereat. The following copy of the order to reimburse Deacon Boutelle for the refreshment expenses may, however, throw some light on the subject:

FITCHBURG, May y^e^ 12 : 1796.

To Ebenezer Thurston Town treasurer you are hereby Directed to pay De^n^ Kendall Boutwell thirty eight Dollars and one Cent it being for providing rum and shugar for the Raising of the new Meeting house and this with his Rec^t^ shall be your discharge for the above sum.

D C

JOHN THURSTON
PAUL WETHERBEE
} Selectmen.

On the back of this order is written the receipt and settlement as follows:

May y^e^ 12 : 1796 Recd a Note in behalf of the Town of fitchburg of thirty Eight Dollers and one Sent in full of the within order.

KENDAL BOUTELL.

April 19 : 1797 Order Settled with the Treasurer.

Such is the history of probably the most stubbornly fought and protracted meeting-house controversy on record. Zeal, obstinacy and bitterness on the part of both factions characterized the contest throughout, and so fierce was the strife that the people of neighboring towns for miles around were in the habit of coming in large numbers to attend the town-meetings held in Fitchburg during these ten years.

The edifice was dedicated January 19, 1797, Rev. Zabdiel Adams, of Lunenburg, preaching the sermon.

The controversy produced a very serious effect upon the town's good minister, Rev. Mr. Payson, who, moreover, was much troubled by the inroads made upon his flock by the Methodists, Baptists and Universalists. He became enfeebled in body and mind, but continued to preach most of the time until the autumn of 1793. By that time his mental infirmity had increased so much that the church and town united to call a council to consider the matter. This council met about the middle of November, 1793, but

was unable to settle anything to the satisfaction of all concerned.

During the following winter and spring the town hired other ministers to preach, and April 7, 1794, all parties agreed to reassemble the council of the previous year and abide by whatever decision it should arrive at. The council accordingly met April 29th, and decreed that the town should pay Mr. Payson a sum equivalent to about five hundred and thirty dollars and dismiss him from the pastorate. This proposition was accepted by the town May 2, 1794, and Mr. Payson's connection with the town, as its pastor, was finally dissolved.

Mr. Payson continued to live here without any improvement in his mental condition, and on May 28, 1804, while visiting at the house of his brother-in-law in Leominster, committed suicide. He was buried in the town cemetery in Fitchburg, where the tombstone erected to his memory by his son can still be seen.

The two councils assembled here in November, 1793, and April, 1794, were provided with board and lodging at the expense of the town. The members thereof were cared for at the tavern of Mrs. Cowdin, the widow of Thomas Cowdin. The bill for their entertainment is somewhat of a curiosity in its way and is as follows:

FITCHBURG, Nov. 11th, 1794.

The Venerable Council's Bill.

28 meals of victuals at 1s. 6d	$7 00
17 suppers at 1s	2 83
17 breakfasts at 1s	2 83
34 dinners at 1s. 6d	8 50
9 suppers at 1s	1 50
2 breakfasts at 1s	33
10 lodgings at 4d	54
Horse keeping	10 00
Liquor	7 50
Total	$41 03

Rec'd Pay't Hannah Cowdin.

For about a year after Mr. Payson's dismissal Rev. John Kimball preached for the people. The church voted to give him a call and November 21, 1794, the town concurred. His salary was fixed at £90 per year, with a settlement of £200, to be paid as follows: £25 at the ordination, £75 one year therefrom, and £100 seven years after ordination. Mr. Kimball delayed his answer, and April 6, 1795, the town voted to give him an annual salary of £112. May 6, 1795, Mr. Kimball declined the call.

November 26, 1795, the town voted to concur with the church in extending to Rev. John Miles an invitation to become their pastor at a salary of four hundred dollars per year. Mr. Miles declined.

Various ministers then preached here, among them the Rev. Thomas Noyes, whom the church, early in 1787, voted to call. The town was notified of this action at a meeting April 3, 1797, and voted not to concur. Then, by a vote of forty-three to twenty-four, the town signified its willingness to extend a call to Rev. Samuel Worcester. During a brief adjournment of the town-meeting, the church met and voted to call Rev. Mr. Worcester, agreeably to the preference of the town; and the town, reassembled after the adjournment, then voted to concur with the church. The title of the church to precedence in calling the pastor was thus distinctly recognized.

Mr. Worcester's salary was fixed at four hundred dollars per year, with the privilege of taking his supply of wood from about twenty acres of the town's land. June 20, 1797, this was changed by voting to deduct twenty pounds from his annual salary (making it $333.33), and give him a "settlement" in addition of two hundred pounds ($666.66), one-half to be paid one year after ordination, and the remainder two years after, with interest. Mr. Worcester accepted the call July 22, 1797, and the last Wednesday of the following September was selected as the day for his ordination, and on that day, September 27th, he was duly ordained, Rev. Dr. Samuel Austin, of Worcester, preaching the sermon.

In the month of October, after his ordination, Mr. Worcester was united in marriage with Miss Zervia Fox, of Hollis, N. H., which was Mr. Worcester's native town. He then "settled down" in Fitchburg and entered with zeal on the work of the ministry, and for a time everything went on prosperously; but new beliefs and doctrines were fast gaining ground, which led, in 1801, to the division of the town into three societies and a year later to Mr. Worcester's dismissal.

In March, 1798, the town voted that "the Selectmen try and see what market they can make of the old meeting-house." June 21st, following, it was voted that it be sold at public auction, the pew-holders having liberty to take out their pews before the sale, if they desired. Benjamin Fuller bought it at the auction and proposed to move it away, but Mrs. Cowdin, the widow of Thomas Cowdin, to whom the land, on which the house was, belonged, threatened to proceed against him if he did so. September 17, 1798, the matter was brought before the town, and it was voted "to give up Mr. Fuller's obligation for the old meeting-house and give him three dollars for his trouble." The matter was finally settled by giving the underpinning to Mrs. Cowdin and selling the house; and in May, 1799, the proceeds of the sale were equally divided between the town, the pew-holders and Mrs. Cowdin.

At this time considerable attention was paid in town-meeting to the request of the Methodists and Baptists in town to have their "minister tax" abated; and a little later the town actively opposed a petition to the General Court made by the people in the northwest part of Fitchburg and in adjoining parts of Ashby, Ashburnham and Westminster, to form a "pool parish" among themselves. The "Fitchburg Universal Christian Society" had been formed and rapidly gained power in town affairs. The result of all this dissension was that in 1801 the majority of the people became dissatisfied with Mr. Worcester

and the town was divided into three societies. March 2, 1801, the town chose a committee consisting of the assessors to proportion the number of Sundays each society should use the meeting-house, according to the amount of taxes paid by the members of each. On the 13th of April following, the report of this committee was accepted, giving the use of the house as follows: Society in the east part of the town (Universal Christian Society), twenty-four Sundays; Rev. Mr. Worcester's society, seventeen Sundays; the society in the west, eight Sundays; and the remaining three Sundays in the year were apportioned to the Baptists and Methodists.

One week previous to this, April 6, 1801, the town had voted that it would be "for their peace and happiness to dissolve the contract with the Rev. Samuel Worcester as their minister, agreeable to the contract made with him at the time of his settlement." A committee was appointed to wait on Mr. Worcester and inform him of this vote and get his answer in regard to dissolving the contract. Mr. Worcester, after conferring with the church, returned an answer to the effect that he desired to dissolve the contract, but claiming the right, solely for his church and himself, of appointing a council of five churches to dismiss him in regular ecclesiastical form, the town to defray the expenses of such a council. The town accepted this proposal. The council, composed of Rev. Messrs. Cushing, of Ashburnham, Lee, of Royalston, Payson, of Rindge, N. H., Austin, of Worcester, and Hill, of Mason, N. H., and eight delegates from their churches, convened June 22, 1801, and decided that it would be best for Mr. Worcester to continue in his pastorate. This decision was formally accepted by both the church and the town. This truce, however, did not last long. Committees of conference were appointed, *ex parte* councils held, etc., and the upshot of the matter was that on December 7, 1801, the town declared the contract with Mr. Worcester null and void, raised one hundred and thirty dollars and appointed a committee to hire preaching, and voted "that the sexton be directed not to open the meeting-house doors upon any occasion unless by direction of the Selectmen or the committee to hire preaching."

During the following six months numerous councils were convened, and on one occasion there were two councils in session here at the same time. Finally, a mutual council was agreed to, and the pastor was regularly dismissed, September 8th.

Thus, notwithstanding the votes of the town, dividing the house of worship between different societies, with the reiterated threats of the "Universal Christian Society" to take possession of his pulpit for the number of Sabbaths allowed them; and notwithstanding the vote explicitly declaring "the contract for his support dissolved," with other measures of a corresponding character, he *retained his pulpit to the last*, and received his salary, according to the terms of his settlement, until, in due order and form, and agreeably to his own wishes, he ceased to be the pastor of the church and the minister of the town of Fitchburg![1]

[1] "The Life and Labors of Rev. Samuel Worcester, D.D.," by S. M. Worcester, D.D.: Boston, 1852.

Rev. Mr. Worcester preached his "Farewell Sermon" on August 29, 1802, on which occasion a very large congregation gathered to hear him.

The most important result of this protracted controversy was the dissolution, soon after Mr. Worcester's dismissal, of the parochial powers of the town. Two societies were formed. The First Parish held the church property, and in 1804 Rev. William Bascom became its pastor. In the same year the other society settled Rev. Titus T. Barton, and in 1805 built a small house of worship on the corner of what are now known as Main and Rollstone Streets. Mr. Barton was dismissed in February, 1813, whereupon the First Parish made overtures for a re-union of the two societies which were accepted the latter part of that year. About that time Mr. Bascom requested to be dismissed, which request was granted.

For over a year the church had no settled pastor, but in August, 1815, Rev. William Eaton accepted a call, and preached until June 30, 1823, when he was dismissed at his own request. A considerable minority did not agree with him in religious opinions, and October 31, 1823, a final separation of the two societies occurred. The majority retained the church property, and its organization has since been known as

THE FIRST PARISH (Unitarian).—Rev. Calvin Lincoln, Jr., the first Unitarian pastor in Fitchburg, was ordained June 30, 1824, and continued as pastor until 1855, a period of thirty-one years. From 1851 to 1854 he had as his colleague Rev. Horatio Stebbins. Rev. William P. Tilden was pastor from 1855 to 1862; and since then the church has had five ministers, the last and present pastor being Rev. William H. Pierson, who was installed in 1881.

This society used the house dedicated in 1797 as their place of worship for about forty years. In the autumn of 1836 this house was removed, and the present brick church, completed in 1837, was erected on nearly the same site. It stands in a very picturesque situation at the head of the Upper Common. Its interior has been materially changed several times since the church was built. About 1871 an addition was built in the rear, and a very large and fine organ put in; and ten years later new pews were put in, the side galleries taken away, stained-glass windows substituted for the old-fashioned kind, and the whole interior generally renewed at a cost of several thousand dollars. The auditorium is now one of the brightest and finest in the city. During the summer of 1888 a brick chapel, named Phillips Chapel and costing some twelve thousand dollars, was erected in the rear of the church.

THE CALVINISTIC CONGREGATIONAL SOCIETY.—The early history of this society is, of course, identical with that of the First Parish, with the exception of the few years of separation prior to the latter part of 1813. In October, 1823, those individuals who could not sympathize with the religious opinions of the First Parish formed a new society, and

on the 31st of that month it was voted by them "that this church remove its connection from the First Parish and unite with the Calvinistic Congregational Society, formed this day in the town of Fitchburg." The church, numbering one hundred and two persons, immediately removed to the house built in 1805. In 1828 the building was enlarged. In 1848 the present brick church was built, and some twenty years later the high flight of stone steps on Rollstone Street was removed, the entrance and vestibule of the church materially changed and improved, and a commodious and handsome brick chapel built on Rollstone Street, next to, and connected with, the church.

Rev. Rufus A. Putnam was the first pastor of this society. He was ordained in February, 1824, and dismissed, at his own request, in March, 1831. Since then the society has had nine ministers, the longest and most important pastorates being those of Rev. Ebenezer W. Bullard, 1838 to 1852; Rev. Alfred Emerson, 1858 to 1870; Rev. Henry M. Tyler, 1872 to 1876; and Rev. Dr. S. Leroy Blake, 1880 to 1887.

The present pastor is Rev. Clarence R. Gale, who began his ministry over this society January 1, 1888.

As time went on the building occupied by this society became inadequate to accommodate the increased congregation, and the need of another society, in the easterly part of the town, became very evident; and in 1868 a portion of its members organized

THE ROLLSTONE CONGREGATIONAL SOCIETY.—The first public services of this new society were held in the hall of the American House, beginning March 8, 1868. The church was organized on April 16th following, and Rev. Leverett W. Spring was engaged as pastor for one year. A site for a new church was soon purchased, at the corner of Main and Snow Streets, and the corner-stone of the edifice was laid October 5, 1868. The church, which is a large and handsome brick structure, was dedicated February 24, 1870. In connection with it is a fine chapel, also built of brick, and named in honor of the donor, Dea. David Boutelle, Boutelle Chapel. Dea. Boutelle contributed liberally to the needs of this society, his gifts towards the building fund aggregating upwards of twenty-eight thousand dollars.

The pastors of the Rollstone Church have been Rev. L. W. Spring, 1868 to 1875, and Rev. George R. W. Scott, D.D. Dr. Scott began his ministry here in the autumn of 1875, and remained in active service till December, 1885, when he was obliged to give up work and seek needed rest. He immediately went to Europe, and Rev. Dr. W. S. Alexander was engaged to supply his pulpit during his absence. Dr. Scott, finding that continued poor health forbade his return to the charge, sent in his resignation, which his people very reluctantly accepted. The present pastor, Rev. Charles S. Brooks, was installed on May 11, 1887.

Some twenty-five years before the Rollstone Church separated from the parent stem, there was a division of the Calvinistic Congregational Society of a far different character. In 1843 the intense feeling on the slavery question gave rise to this division and resulted in the formation and organization of

THE TRINITARIAN CONGREGATIONAL SOCIETY.—This society erected a church building at the corner of what are now known as Main and Church Streets, soon after the secession of its members. Rev. George Clark was the first pastor, and the succeeding pastors were: Revs. Foster Pettibone, Charles Bristol, George Trask and Elnathan Davis.

The members of this church performed active and earnest work in the interests of the slaves, and through their efforts Fitchburg became known as one of the stations on the "Underground Railroad to Canada," in the flight of the slave to freedom. The slavery question was the only strong bond of union among these people, and when the slaves were emancipated, the object of its organization was gone. Its last sermon was preached on the day when the equality of the negro, before the law, was guaranteed. November 15, 1871, the church building was sold to Mr. John M. Carpenter for fourteen thousand three hundred dollars. Chiefly through the efforts of Rev. George Trask, the proceeds of the sale were given to the Freedmen's Aid Society, with the exception of the sum of two thousand dollars, which was presented to Rev. Elnathan Davis, a former pastor, as a token of appreciation. Since November 18, 1872, the building has been occupied, in part, by the Fitchburg post-office.

THE FIRST BAPTIST SOCIETY.—Undoubtedly there have been Baptists in Fitchburg ever since the incorporation of the town, but no mention is made of the denomination until 1783. In December of that year, "thirteen profest Baptists" sent in a petition to the town, asking that their "minister tax" be abated. The names of the petitioners were Charles Willard, David McIntire, Samuel Gibson, David Whittemore, Ephraim Nile, Ephriam Howard, Elijah Willard, Elijah McIntire, Solomon Gibson, William Haskell, Daniel Willard, Abraham Willard, Lemuel Haskell, Thomas Gibson, Joseph Polley, Jonathan Page and Simeon Shattuck.

No special attention seems to have been paid to this petition until May 16, 1787, when there was an article in the town warrant, "To see if the town will abate any of the profest Baptist Minister Rate." Deacon Kendall Boutelle, Daniel Farwell and William Brown were chosen to investigate the matter, and reported to the town two days later, when, "after some deliberation on s^{d} matter," the town voted "that the people in s^{d} town that are profest Baptists, that petitioned to the town in the year 1784, be discharged from paying the Minister Rate after s^{d} year."

In the northerly part of the town were other Baptists, but they were of the "Free-Will" order, and

had no connection with the beginnings of the present Baptist Church in Fitchburg. These people built a shabby, barn-like meeting-house near the Ashby line, and in June, 1810, "The First Baptist Society of Fitchburg and Ashby" was incorporated, and continued in existence for some years.

Let us now return to our "seventeen profest Baptists" who were exempted from paying a minister-tax. They dwelt in the westerly part of the town, in the vicinity of Dean Hill, and, in conjunction with the Methodists in that locality, utilized the building heretofore spoken of as "The Lord's Barn" as a place of worship. But this society in the west gradually dwindled away and became merged in the other societies in town.

In 1801, as we have seen, there were, however, a sufficient number of Baptists and Methodists in the town to entitle them to the use of the meeting-house for three Sundays in the year.

The beginnings of the Baptist Church and Society in Fitchburg were identified with two residents of Leominster,—Mr. and Mrs. Samuel Crocker,—who, about 1828, removed to Fitchburg. March 2, 1831, Mr. Crocker and nine other gentlemen formed the "Fitchburg Village Baptist Society." The *society* thus antedated the *church*, which was organized as a branch of the Princeton Church June 8, 1831, on petition of Mr. and Mrs. Crocker, Mr. and Mrs. Stephen Bemis and Mr. Augustus H. Searle.

For over two years services were held in the old (then new) Academy building hall. New members were rapidly added. The place of baptism, in those early days, was the pond on Punch Brook, just north of Academy Street. For some years this pond has not been in existence.

In 1833 the society bought a lot and erected a new and commodious church on what is now Main Street, a little west of the Common. The building, now used as a carriage repository, still stands in the same location. November 14, 1833, the building was dedicated and the branch church was, on the same date, severed from the parent stock. The independent church then had sixty-two members.

The rapid growth of the society during the next twenty years made it necessary to either enlarge the old church or build a new one. The latter course was wisely decided upon, and March 1, 1854, the present handsome edifice, costing twenty-five thousand dollars, was dedicated.

June 8, 1881, this church observed its semi-centennial anniversary, which was largely attended, and proved to be an occasion of great rejoicing. An important feature of this celebration was the reading by the pastor, Rev. I. R. Wheelock, of a valuable historical address, to which the writer of this present history is indebted for much of the foregoing.

In 1887 the interior of the church was thoroughly renewed, a fine organ put in and a handsome brick chapel erected, largely through the munificence of Samuel E. Crocker, Esq., for whom the chapel has been appropriately named. It was dedicated February 14, 1888. The total cost of the chapel and improvements was twenty thousand dollars.

The First Baptist Society has had fourteen different pastors settled over it since its organization, the longest pastorates being those of Rev. Kendall Brooks, 1855 to 1865; Rev. Stillman B. Grant, 1867 to 1874; and Rev. Isaac R. Wheelock, 1875 to 1885. The present pastor is Rev. Frank Rector, who was installed over this church in November, 1886.

The First Methodist Episcopal Society.—Fitchburg seems to have been first visited by a Methodist preacher about 1794, when Rev. John Hill, of the Needham Circuit, came here for a brief season. A small Methodist society was then organized and meetings were held from time to time for a few years in the "Lord's Barn," built by Jacob Upton and others in 1786.

About 1803 several Methodists moved into town, among them Mr. and Mrs. William Walton, who, during their stay of seven or eight years in town, did good work in sowing the seed of Methodism. Services were held from time to time by itinerant preachers.

No Class was organized in town until March, 1831, at which time Rev. Warren Emerson organized a Class of only three members. It was formed at the house of Mrs. Jane Mack, widow of Thomas Mack, who came to Fitchburg from Ireland in 1824. The leader of this Class was Mr. Samuel Marsh, of Lunenburg, and the two other members of it were Mrs. Jane Mack and Mrs. Jane McCormick.

In April, 1831, Mr. Elijah Brigham moved into town from Worcester and was immediately appointed leader of the Class.

In 1834 Rev. Joel Knight began to labor in Fitchburg, and in March of that year the Methodist society was organized. Twenty-two members were added during Mr. Knight's first year here. He remained another year, during the course of which Mr. Elijah Brigham was licensed as a local preacher.

In 1836 Fitchburg became a Methodist Station, and Rev. Joseph S. Ellis was appointed pastor of the society during that year; but the people were not able to support a minister, and no one was appointed to preach in Fitchburg during 1837–8–9.

In the spring of 1840 the Class was revived, two hundred dollars appropriated by the district, and in the following July Rev. John Tate was appointed to preach here. The hall in the Academy building, where meetings had previously been held during Mr. Knight's ministry, was again hired, and before long was found insufficient to accommodate the rapidly increasing attendance. The need of a church edifice was evident, but the people did not feel able to incur the necessary expense. Accordingly, on February 15, 1841, the people here had a conference with brethren in Ashburnham and Lunenburg. The result of their deliberation was a resolve "to build a

meeting house, 60 feet by 42 feet, provided that fifteen persons could be found to be responsible for building and paying for the house."

The names of the fifteen persons who became thus responsible are: Major Ephraim Jones, William S. Jones, James Gilchrist and Samuel Marsh, of Lunenburg; Eben Frost and Walter Russell, of Ashburnham; James Puffer, of Westminster; and Elijah Brigham, Daniel Emory, Nahum Wetherby, Nathan Caswell, Roswell Graham, Ebenezer C. Hayden, Edward Aldrich and James Hartwell, of Fitchburg.

March 1, 1841, Major Jones and Messrs. Puffer, Brigham, Emory and Graham were appointed a building committee. A site was purchased near the foot of the present Upper Common, and the building erected during the following summer. It was dedicated September 14, 1841, Rev. Miner Raymond preaching the sermon. On the next day the first board of trustees was elected, consisting of the following: Roswell Graham, William Wilder, Elijah Brigham, Samuel D. Phelps and Daniel Emory.

Since 1841 this society has prospered, and the original church edifice, which still stands in its old location on Main Street, was twice enlarged—once during the pastorate of Rev. Samuel Tupper, in 1853–54, when an addition of fifteen feet was made to its length, and a second time in 1868, when upwards of four thousand dollars were spent in repairs and enlargement.

In October, 1885, this society purchased of Dr. Thomas S. Blood a lot on the corner of Fox and Elm Streets, and in the course of the next three years erected a large and handsome brick structure on this land. The cost of the edifice was thirty thousand five hundred and eighty dollars, of which amount twenty-five thousand two hundred dollars had been pledged previous to the dedication of the church, which occurred February 29, 1888. The exercises were held on the afternoon and evening of that day, and there was a large and notable gathering each time. Bishop Andrews, of Washington, D. C., preached the sermon, and it is worthy of record that before 10 P.M. that day the entire deficit of five thousand three hundred and eighty dollars was pledged. After the money had been all pledged, the trustees formally surrendered the church into the hands of Bishop Andrews, who then dedicated it, according to the Methodist Episcopal Church ritual, to the worship of Almighty God.

The first pastor of this church was Rev. Joel Knight, and since then it has had twenty-seven different pastors settled over it. The present pastor is Rev. Jesse Wagner, who began his work here in April, 1888.

West Fitchburg Methodist Episcopal Society.—In November, 1874, a Methodist Sunday-school was organized in West Fitchburg, and a chapel was soon after built. November 17, 1881, the West Fitchburg Methodist Episcopal Society was organized. The chapel being found too small, their present church was built in 1882, and dedicated May 11, 1883. Rev. F. T. Pomeroy was pastor the year preceding the organization, and remained, at the earnest request of the people, till April, 1884. Since then there have been three pastors, the present pastor being Rev. W. W. Baldwin, who began his work here in April, 1887.

The First Universalist Society.—One of the chief difficulties with which the Rev. Dr. Worcester had to contend during his pastorate here was a religious sentiment within his flock, denominated "Universalism;" and it is recorded that the Rev. John Payson, Fitchburg's first pastor, was also troubled in spirit from this same cause. All this goes to show that the principles of the Universalist faith were early developed in this town.

These sentiments gradually gained adherents, and Universalist meetings were occasionally held. Soon after the old meeting-house was fitted up for a town-house, in 1837, the Universalists began to have meetings in it occasionally, with preaching by ministers of their faith in neighboring towns; and as a result, the First Universalist Society of Fitchburg was organized October 9, 1844, after which date services were regularly held in the town-hall each Sunday.

August 4, 1846, the society appointed a committee to see about building a church edifice, and on February 11, 1847, it was voted "that there is a sufficient amount of funds raised on the subscription paper to take measures to commence building a meeting-house." At the same time Hiram Davis, Everett Sprague, Charles Upton, Albert C. Upton, Abel Derby, Harrington Sibley and E. S. Bowditch were chosen a building committee, with full authority to purchase land and build a church.

This committee purchased a site at the corner of Main and Rollstone Streets, prepared plans and reported their doings to the society a week later. The report was accepted, and work begun at once. The church was of brick and stone, and was completed during 1847, and was at that time considered one of the finest buildings in town.

For nearly forty years the society continued to occupy this church, but in the summer of 1884 a lot was purchased on the corner of Day and Union Streets, at a cost of three thousand eight hundred dollars; and March 30, 1885, it was unanimously voted to proceed at once to erect on this site a church edifice in accordance with plans previously prepared by a committee chosen for the purpose. Rev. F. O. Hall and Messrs. J. S. Wilson, H. L. Rice, F. S. Lovell and J. D. Littlehale were chosen as a building committee. The corner-stone was laid June 18, 1885, and during the succeeding eight months their present fine and attractive house of worship was erected at a cost of thirty thousand six hundred and twelve dollars. Its doors were first opened to the public on the evening of February 23, 1886.

Rev. Mather E. Hawes was the first pastor of this society, and continued his ministry until the spring of 1849. Since then the society has had ten pastors, the longest pastorate being that of Rev. Frank Maguire,—1870–79.

The present pastor, Rev. Frank O. Hall, is a graduate of Tufts College Divinity School, and began his ministry here on June 1, 1884.

THE FIRST EPISCOPAL SOCIETY (*Christ Church*).—Episcopal services appear to have been first held in Fitchburg during the latter part of 1862, in the lower town-hall, and were conducted by Rev. W. G. Hawkins.

October 7, 1863, the Episcopal Society was organized here, and one week later the church was duly organized under the statutes of the Commonwealth by the name of Christ Church.

Rev. Mr. Hawkins preached until April, 1863, when he was succeeded by Rev. Henry L. Jones, of New York City, and on October 14, 1863, Mr. Jones was unanimously chosen the first rector of Christ Church. At the same time the following officers were chosen: Wardens, Alvah Crocker and Augustus Whitman; Vestrymen, C. H. B. Snow, G. F. Fay, L. B. Jaquith, C. L. S. Hammond and Thomas Trees.

For about five years after Mr. Jones first came to Fitchburg, the society held services regularly in the lower town-hall, but the need of a church home soon became very evident, and about 1866 the society purchased of Dr. George D. Colony his estate, situated on Main Street, between Hartwell and Fox Streets, for eight thousand dollars. During 1867 their present fine, stone church edifice was built at an expense of over fifty-three thousand dollars. The corner-stone was laid April 22, 1867, and just one year later, April 22, 1868, the handsome and attractive church was consecrated by the Rev. Manton Eastburn, D.D., Bishop of the Diocese of Massachusetts.

Rev. Mr. Jones continued as rector until February, 1875. Since then there have been three settled rectors.

Rev. Charles Morris Addison, the present rector, is a graduate of the Episcopal Theological School at Cambridge, and assumed the charge of Christ Church parish on June 1, 1885.

SAINT BERNARD'S PARISH (Roman Catholic).—Catholic services seem to have been held in Fitchburg as far back as 1842, but no society was organized until 1847. In 1848, under the pastorate of Rev. M. F. Gibson, a church was built on Water Street. There were then about eight hundred in the whole parish.

Rev. Edward Turpin became pastor in 1856, and remained ten years. He was succeeded, in 1866, by Rev. C. M. Foley, who, in 1869, built the present brick church edifice, which is one of the finest in town. Rev. P. J. Garrigan took charge of the parish in 1875. He greatly embellished the interior of the church, and dedicated it with imposing ceremonies in 1879. Father Garrigan also built the parish house on Water Street, next to the church, and the parochial school and convent on First Street. He also purchased land and built the Catholic Church in West Fitchburg.

In the summer of 1888 Father Garrigan was asked to accept the position of vice-rector of the Catholic University recently established in Washington, D. C., and after much deliberation concluded to accept the position. He left Fitchburg early in November, 1888, closing a long and valuable pastorate, and will be greatly missed by his parishioners, now numbering over four thousand.

Since he came to Fitchburg, Father Garrigan has been a prominent citizen. He has been a member of the School Committee, but is chiefly noted, as a public man, for the noble and effective work he has accomplished here in the cause of temperance.

WEST FITCHBURG ROMAN CATHOLIC PARISH—*Church of the Sacred Heart.*—This parish was organized in 1878 in West Fitchburg, and Father Garrigan, as before stated, purchased a lot and built thereon the present neat church edifice. For a time it was sustained as a branch of Saint Bernard's Parish, but it is now self-supporting.

Its first pastor was Rev. James Canavan. He was followed by Rev. James Donahoe. The present pastor, Rev. J. L. Tarpey, began his work here in June, 1886.

Connected with these two Catholic Churches are twelve different societies, organized in the interests of temperance, doctrinal instruction and charity.

The French Catholic Society.—This society was organized in 1886. Rev. C. Beaudoin has been its pastor since organization.

In December, 1886, the society purchased fifty-two thousand feet of land on Walnut Street, and a dwelling-house thereon was converted into a parsonage and school. A small chapel was erected, and it is the intention of the society to build a church on this land in the near future.

CHAPTER XLII.

FITCHBURG—(*Continued.*)

EDUCATIONAL HISTORY.

THE educational history of Fitchburg will, for the sake of convenience, be considered under two heads, viz.: Public Schools and Libraries. Neither of these all-important departments of our history has, as far as the writer is aware, ever been written upon in a way by any means complete. It is therefore proposed, in this history, to give special prominence to the subject of education, and to place before the reader a large number of facts relating to the history of the beginnings and progress of education in Fitchburg.

The writer is fortunate in having access to a very large number of reports and original documents and

papers relating to this subject, collected and preserved by his father, Charles Mason, Esq., who has always been deeply interested in the education of youth, and was, for some years, prominent and active in the school and educational affairs of the town of Fitchburg.

PUBLIC SCHOOLS.—The early settlers of this town do not seem to have paid much attention, or devoted much money to the fostering of public education. The earliest mention in the town records of any public action respecting the establishment of schools in town occurs in the report of a town-meeting held September 12, 1764, and is as follows:

Voted, that there be two scools in s^{d} town and that mr. John fitch and Kindal Boutwell and their neighbors shall have the benifitt of their scoole money in order to provide scooling among themselves.

Voted, that eight pounds be raised in order to provide a scoolemaster in s^{d} town.

Voted, Amos Kimball Eph^{m} Whitney and Thos. Dutton be a scoole comite.

The amount of money appropriated was very small, being equivalent to only a trifle over twenty-six dollars.

The "two scools" appear to have been kept, however, during the winter of 1764–65,—one in William Chadwick's corn-barn, near the present Pearl Hill School-house, and the other in Samuel Hunt's tavern, —but who the "scoolemaster" was is not stated.

November 21, 1765, it was voted in town-meeting "to have 2 scools in s'd town and Mr. Poole and Mr. John fitch with their neighbors have the benefit of their scoole money in order to provide among themselves."

"*Voted*, that £3 be raised for scooling. Thomas Cowdin, Kindal Boutell and Jon^{a} Wood Com."

So the town had only about ten dollars to expend for education in the winter of 1765–66.

The next fall, however, the people returned to their first appropriation of £8, and voted "that two-thirds be laid out in the middle of the town, and the rest by the Com. as they shall think proper on the outsides of the town."

During the following three years a like sum was annually appropriated, and equitably distributed.

January 11, 1770, the town, for some reason unknown, voted "not to have any scoole this winter, but reserve their money till next fall."

Oct. 1, 1770, the town raised £5 13*s.* 4*d.* for schools, and the next fall £9 3*s.* 4*d.*; and October 19, 1772, £20 were raised; and it was also voted to build four school-houses in the town, "each quarter of the town to build their own school-house at their own expense, free from any town tax, only that each quarter have their proportion of the Town's Boards and Nails left after finishing the Meeting-house." A committee of five was chosen to fix the location of the school-houses.

During the next four years the annual appropriation was £20.

October 4, 1774, the following votes are recorded, showing that a sharp lookout was maintained with regard to the expenditure of the school money:

Voted, that all the quarters of the town that don't see that their part of the scool money that is not scooled out within the year be returned into the Town Stoke. (This vote is rather blindly recorded, but one can catch the idea.)

Voted, to add what scool money remains not yet laid out that was raised the last year to the £20 now raised to be laid out in providing a scool or scools.

In 1777 the appropriation was raised to £30.

The effect of the depreciation in the currency is seen in the amounts raised for school purposes during the next three years, which were £200 in 1778, £500 in 1779 and £2000 in 1780. In the last-named year Thomas Cowdin generously added £500, "to be scooled out in the scool-house sot on said Cowdin's land."

In 1781 the town raised "£60, hard money, to hire school Master, Masters or Mistresses." The same sum was raised in 1782, but the appropriation for each of the two following years was reduced to £40.

In 1785 it was voted "to hire a Grammar School Master for the town; the said Grammar School to be kept four months, and each quarter to have their month, the said Grammar School to begin in town before December next." The appropriation this year was £45, and remained at that figure until 1789, when it was increased to £50.

April 5, 1790, it was voted "to new district the town," and a committee of seven was appointed for this purpose. September 9, 1790, raised £50, and voted "that the several schools in town be free schools for the use of the town."

At a later meeting the report of the committee to redistrict the town was rejected, and it was not till 1798 that a report on this matter was accepted. The town was then divided into eleven districts.

In March, 1798, £100 were raised for schools. This was the first year that the annual appropriation was voted at the March meeting.

It was necessary to build school-houses for the new districts, and at a town-meeting, June 21, 1798, a committee was appointed "to estimate the bigness of the school-houses." The committee reported at the same meeting, and their report was accepted,—"that the houses be twenty-four feet by twenty feet, and finished with Gallery seats; lathed and plastered overhead, to be glassed with six windows, 12 squares of 7 by 9 glass in each, and to be finished outside and in, all except clap-boarding." The report further provided that the old school-houses be appraised, and their value refunded to the proprietors, and that the building of the new houses be let out to the lowest bidder. A committee of three was chosen to let out and inspect the building of the new school-houses.

September 17, 1798, the selectmen were appointed a committee to appraise the old houses, and, at an adjourned meeting, October 8th, reported their valuation as follows:

The School house nigh Mr. Daniel Wetherbee's	$92 00
The School house nigh Mr. Simeon Farwell's	93 00
The School house nigh Mr. Amos Lawrence's	90 00
The School house nigh Mr. Abraham Farwell's	80 00

The School house nigh Mr. Elijah Carter's..... 80 00
The School house (frame) nigh Mr. Daniel Harris'..... 6 00

At the same meeting it was voted to raise ten hundred and eighty dollars to expend in building and furnishing the school-houses.

In 1799 one hundred and fifty pounds were raised for schools, and the committeemen were directed "to agree with the teachers that they are not to be allowed anything for keeping schools Saturdays in the afternoon." The selectmen were authorized to provide locks and keys and window-shutters for the several school-houses.

In 1800 one hundred and fifty pounds were raised, and in each of the three following years, five hundred dollars. From 1804 to 1808, six hundred dollars was the sum appropriated; and in the latter year forty dollars were added "to be distributed among those school districts the selectmen shall think most need it." A committee of eleven was also chosen in 1808 to examine schools, and it was voted "that the committee be requested to attend the schools at their commencement and close, and it be the duty of the school committeemen to inform the examiners when the school begins." It was also voted that the School Committee furnish the selectmen, during the last week in August, an exact return of the number of scholars in their respective districts, so that the school money could be equitably divided.

In 1809 raised six hundred and forty dollars "to be laid out as last year," and chose a committee consisting of Rev. Mr. Barton, Rev. Mr. Bascom, Dr. Peter Snow, Leonard Burbank and Joseph Simonds, to inspect the schools.

In 1810 seven hundred dollars were appropriated for schools, and in 1811 six hundred and forty dollars; and in the latter year, a committee of seven was chosen, "to consider the expediency of any alteration in the Middle School District" (District No. 1). At an adjourned meeting April 1, 1811, this committee reported "that the district should be divided and a new district formed." This new district, as outlined by the committee, corresponded to that portion afterwards called the "Old City."

The report was accepted, and in the following July it was voted to divide District No. 1, in accordance with the report of the committee, and call the new district No. 12. Also voted to give the new district ninety dollars toward building a school-house. This vote was reconsidered, and it was then voted to pay the sum of ninety dollars for this purpose in March, 1815.

In 1812 the school district boundaries were more accurately defined by a committee chosen for that purpose. The school appropriation that year was seven hundred dollars, and the next year eight hundred dollars.

The foregoing is an abstract of the more important actions of the town in regard to public instruction during its first half-century of existence. During the early years of this period the town furnished very meagre facilities for the education of the children; and, as a matter of fact, the larger part of the instruction given in those days was furnished by private teachers.

For the first few years there were no school-houses even, the schools being kept in vacant rooms of private houses, or taverns. Fuel was gratuitously supplied by the neighborhood, and the teachers "boarded round." The first school-houses were probably built in 1773,—one in the middle of the town and the other three in the west, north and south parts of the township respectively.

In 1798 there appear to have been five school-houses in town, according to the appraisal report previously cited, and the frame of a sixth in process of erection.

In 1800 the school-house in the "Center District," or No. 1, stood on what is now Main Street, a few rods west of the present junction of Circle and Main Streets. It was a low, unpainted wooden building, standing with its end to the road. The other ten were in locations probably closely corresponding to those now occupied by our present long-established suburban school-houses.

In 1812, the year after District No. 1 was divided, a brick school-house was built in the new district, No. 12, and still remains there, forming a portion of a dwelling-house at the upper corner of Crescent and Blossom Streets.

In 1815, by vote of the town, a new school-house was built in District No. 1. It was a wooden building, painted yellow, and containing two rooms. It stood at the present junction of Main and Mechanic Streets, on the site now occupied by D. H. Merriam's house.

The early School Committees seem to have been chosen for prudential purposes only, until 1808, when an additional committee of eleven (reduced to five the next year) was appointed to examine and inspect the schools. After 1826, in accordance with legislative enactment, School Committees were chosen to exercise substantially the same powers and functions as at present.

This law was passed in 1826, and at an adjourned town-meeting in that year it was voted "that the Selectmen be a committee for the superintendence and regulation of schools agreeably to an act of the General Court passed 1826." Later at the same meeting it was voted to add the clergymen of the town to the committee. The first School Committee actually chosen by the town under this law was in 1827, and consisted of Rev. Calvin Lincoln, Rev. Rufus A. Putnam, Dr. Jonas A. Marshall and Messrs. Ebenezer Torrey, David Brigham, Ivers Jewett and Abel Fox.

During the second half-century of the town's existence considerable progress was made in educational matters. Fitchburg grew rapidly, and increased accommodations and more teachers were necessary, and

the people seem to have been willing to appropriate money to meet the increasing needs.

In 1830 the appropriation was eleven hundred dollars, and in 1840 had risen to fifteen hundred dollars.

In 1819 the custom of enumerating the school-children in town May 1st was adopted.

About 1830 the High School Association, of Fitchburg, was formed by a number of prominent citizens who were interested in education. The directors of the Association were Benjamin Snow, Francis Perkins and Dr. Charles W. Wilder, and its secretary and treasurer was Dr. Jonas A. Marshall. This Association proved to be of very material assistance in promoting the cause of education here, and many of our older citizens owe their knowledge of the higher branches of learning to the instruction rendered available by it.

A building called the Academy was erected in 1830 by the Association at a cost of twelve hundred dollars. It stood just in front of the location of the present High School building, on land given for the purpose by Capt. Zachariah Sheldon. The Academy was let to private persons, who taught therein almost all the higher branches. At one time Hebrew was included in the list of studies. Benaiah Cook, A.B., with Mr. Ezra Reed as his assistant, kept the first school in the Academy, and the building was used for private instruction until 1849, when the town purchased it of the Association and established a high school in it.

In April, 1831, a committee of one from each school district was chosen "to examine into the evils of our schools and point out remedies." The report of this committee was read June 11, 1831, and "accepted very unanimously," and it was voted to print and distribute four hundred and fifty copies of it.

In 1835 the number of children attending the district schools in Fitchburg was 560—289 girls and 271 boys—and the teachers employed numbered 25, of whom 14 were ladies. The average wages per month were, in winter, $16.67; in summer, $4.30.

Of the Academy, which was intended only for young persons who had already acquired a common-school education, Mr. Torrey, writing in 1836, says in his "History of Fitchburg": "It is a commodious, two-story building, situated a few rods easterly of the common. It is furnished with two school-rooms on the lower floor, the former of which will accommodate 65 scholars, and the latter 30. The average number attending for several years past has been about 30."

In 1835 an attempt was made to have the higher branches of learning taught in the district schools, but the town refused to sanction any such proceeding.

In 1840 the need of a new school-house in District No. 1 became very evident. The "yellow school-house," built in 1815, was filled to overflowing, and the pupils were soon all transferred to a new brick school-house—the pride of the town—erected on what is now School Street, near Main Street. This house is still standing, and is occupied by schools of the primary grade. During the summer of 1888 an extensive addition was built, reaching nearly to Main Street.

In 1846 the brick house in District No. 12 was abandoned and the pupils transferred to a new and commodious brick school-house on Day Street.

The first printed school report of the town of Fitchburg was for the year ending April 3, 1843. It was not printed by vote of the town, but by the subscriptions of public-spirited citizens, and is an eight-page pamphlet in large type, bearing the imprint of "W. J. Merriam, Printer, Fitchburg, Mass."

It contains no tabulated statistics, but deals chiefly with the defects in the school system of that day. Some of the "causes unfavorable and, in some cases, almost ruinous to our schools, which neither good teachers nor faithful committees can obviate" are enumerated as follows:

First. *Bad School Houses.*—Under this head it is stated that a few of the school-houses in town are good ones, pleasantly located, in good repair and provided with suitable grounds, etc., while the rest are very bad in all these respects.

Second. Many of our schools suffer from inadequate tuition.

The committee recommended as remedies for this evil larger appropriations and a reduction in the number of school districts.

The irregular attendance of pupils is spoken of as a third serious drawback to the prosperity of the schools, and also the non-attendance of "young people between the ages of sixteen and twenty-one," of whom there were said to be over two hundred in town, "only eighty of whom attend our public schools at all." The report closes with an earnest exhortation that parents and guardians exert their utmost influence to have the young persons under their care attend school.

No school report was printed the following year, but since then annual reports have been printed, and the writer is fortunate enough to possess a complete set of them, including the report for 1842–43.

The report for the year ending March, 1845, was printed by vote of the town. It is a pamphlet of twenty-eight pages, closely printed and containing in addition six tables of attendance, &c. It was prepared by Charles Mason, Esq., chairman of the School Committee, and is an exhaustive document containing much valuable information regarding the conduct and condition of the schools and useful suggestions in the way of their improvement.

The year 1845 was a lively one in the school affairs of Fitchburg. At the annual town-meeting, March 3, 1845, sundry articles in the warrant relating to the establishment of a town school, new districting, &c., were referred to a committee composed of one chosen from each district, as follows: No. 1, Charles Mason; 2, Robert L. Friar; 3, John Whitcomb; 4, Abram

Osborn; 5, Levi Downe; 6, Ivers Phillips; 8[1], David D. McIntire; 9, Asa Raymond; 10, David Lowe; 11, John Andrews; 12, David Boutelle; 13, Isaac B. Woodward.

This committee met March 18th and thoroughly discussed the subject and adjourned to the morning of April 7th, when a report, prepared by the chairman, Mr. Mason, was read in committee and unanimously agreed to. In the afternoon of the same day this report was presented in town-meeting and the measures therein recommended were adopted. Of these measures the following were a part:

> That the present division of the town into school districts be discontinued, such discontinuance to take effect on the 15th day of May next, from and after which day the existing school districts of the town, including No. 12½, shall be abolished; and that the town purchase of the several districts, at a fair and just appraisal, their respective schoolhouses, and their right and interest in the land on which the same stand, . . . and that henceforth the town provide, at the common expense of the town, school-houses for the several school districts that shall be formed within its limits.

It was the portion of the above relating to school districts that produced contention. No objection was made to the purchase of the school-houses by the town, though it was an unusual proceeding in those days.

At this meeting, April 7th, a committee was chosen to appraise the school-houses and report their value to the assessors, to be by them credited to the taxpayers in the several districts toward payment of their taxes. This was attended to and the transfer duly made to the town.

A committee was also chosen at this meeting to divide the town into suitable school districts. This committee performed their duty and presented a report at a town-meeting held May 5, 1845. The report was accepted and referred, together with the whole subject matter, to a special committee for revision. This committee, which consisted of Nathaniel Wood, Levi Downe, Ivers Phillips, Abel F. Adams and Levi Kendall, was requested to report August 11, 1845. This date found nothing done by the committee and the four first-named gentlemen sent in their resignations. Charles Mason, John Whitcomb, Dr. Thomas R. Boutelle and William Woodbury were chosen in their places respectively, and the members of this new committee were "authorized to have their Report or Reports printed and distributed among the inhabitants of the town for their examination prior to the next March meeting."

There resulted from the labors of this committee two reports,—a majority report, signed by Messrs. Mason and Whitcomb and Dr. Boutelle, recommending the division of the town into eight school districts, to be wholly under the supervision of the School Committee; and a minority report, signed by Messrs. Woodbury and Kendall, recommending the division of the town into ten school districts, each district to have entire control of its own school, and the School Committee to serve only for the purpose of examining teachers and occasionally visiting the schools.

In the majority report was a table of the school districts as then existing, which is, perhaps, worth inserting here:

District.	Name.	Established.	Remarks.
1.....	Centre.....	1798.	
2.....	South Fitchburg	1798.	
3.....	Whitcomb's.....	1798.	
4.....	Turnpike.....	1798.	
5.....	Downe's.....	1798.	
6.....	Baldwinville.....	1798.	
7.....	Williams'	1798.	United with No. 8 in 1844.
8.....	Dean's	1798.	
9.....	Page's.....	1798.	
10.....	Phelps'.....	1798.	
11.....	Pearl Hill.....	1798.	
12.....	Old City.....	1811.	Taken from No. 1.
12½...	Half District.....	1836.	Taken from Nos. 10 and 12.
13.....	Crockerville.....	1838...	Taken from Nos. 6.

These two reports were read in town-meeting, March 2, 1846, and were both accepted and laid on the table. It was then voted "to adopt the territorial limits for school districts as they existed in 1844, except the half-district." A committee, consisting of Levi Downe, Abel Marshall and William Carleton, was chosen "to assign the territory which was formerly the half-district, and fix the limits of the old districts." This committee reported April 6, 1846, and their report was accepted. The town clerk added to the record the following comment: "So ended our great effort to new district the town."

The year 1845 was also noted in the educational annals of the town because of a very large and successful Teachers' Institute held here. The Institute began its sessions October 28th and closed November 7, 1845. The attendance was fifty males and eighty-five females, most of whom were teachers in Fitchburg and neighboring towns.

The following gentlemen contributed their services as lecturers or instructors, or both, during the session: Hon. Horace Mann, Boston; R. B. Hubbard, Esq., Worcester; W. B. Fowle, Esq., Boston; Thomas Sherwin, Esq., Boston; Rev. Barzillai Frost, Concord; N. Tillinghast, Esq., Bridgewater; Amasa Walker, Esq., North Brookfield; George S. Hillard, Esq., Boston; Charles Mason, Esq., Fitchburg; and Asa Fitz, Esq., Boston. Mr. Hillard was unable to be present, and the lecture prepared by him was read by Charles Sumner, Esq., of Boston, at that time just entering upon his glorious public career.

The pecuniary means necessary for holding this Institute, as well as three others held at about the same time in Pittsfield, Bridgewater and Chatham, were furnished by Hon. Edmund Dwight, of Boston, who placed in the hands of Hon. Horace Mann, then Secretary of the State Board of Education, the sum of one thousand dollars for this purpose; and at a special meeting of the Institute, November 7th, a set of resolutions were adopted expressing the obligation

[1] Nos. 7 and 8 were, in 1844, united into one district, called No. 8.

and thanks of the members to Hon. Edmund Dwight for his munificence, to Hon. Horace Mann and Charles Mason, Esq., "for the efficient service they have rendered to the cause of popular education by their labors in the establishment of this Institute," to the lecturers and instructors for their valuable gratuitous services, and to the citizens of Fitchburg for their hospitality.

All the local work was performed and arrangements made by Mr. Mason, and at the close of the sessions, November 7th, the ladies of the institute presented to him a handsome gold pencil in recognition of his efforts to make the Institute a success.

In 1845 the School Committee established a small library for the use of the public school teachers. A subscription paper, now in Mr. Mason's possession, was circulated, and the money thus obtained was used for the purchase of some forty books and pamphlets on educational subjects. These were afterward presented to the Fitchburg Public Library.

The town did not vote to print the school report for the year ending March, 1846, and in April of that year a subscription paper, also now in Mr. Mason's possession, was carried around and $23.16 raised, for which sum the report was printed the following May.

After 1846 the report was annually printed by vote of the town.

On several occasions since 1836 there had been articles in the warrants relating to the establishment of a high school in town, but these had always been "passed over." March 5, 1849, however, the town voted "to establish a High School to be kept throughout the year, with suitable vacations, the school committee to put it in operation as soon as convenient," and eight hundred dollars were appropriated for this purpose.

The town purchased the Academy of the High School Association and enlarged it. Mr. Anson S. Marshall was engaged as the first principal of the Fitchburg High School, and in March, 1850, there were eighty-two pupils in attendance.

The town was now thoroughly awake on the subject of education. During the year ending March 1, 1850, over two thousand dollars were expended for new school-houses in South Fitchburg and Crockerville and the addition to the Academy building, and about eleven hundred dollars for painting and repairing the old houses. The annual appropriation had risen to about four thousand dollars.

During the next ten years much was done towards bringing the schools into good working condition. The High School was well attended, and proved a success from the start. The scholars in the school were divided into two grades called the First and Second Departments. This method was retained until the spring of 1855, when the town voted to abolish the Second Department of the High School and establish in lieu thereof three grammar schools—one on Day Street, one on West Street and the third in West Fitchburg. These schools were put in operation before the end of April, 1855.

In 1856 seven thousand dollars were raised, to be equally divided between the high, grammar and district schools.

It was becoming very evident that increased accommodations would soon be necessary, especially for the High School; but it was not till 1859 that buildings were actually erected, though in 1858 the South Street house was enlarged at an expense of nearly two thousand dollars.

In 1859 the East Street School-house was built, and also a new house in District No. 11, the two costing about five thousand dollars.

In 1860 what is now the High Street Grammar School building was erected at a cost of about twelve thousand dollars. This was a commodious, well-built, brick house, with accommodations for three hundred and sixty scholars; it was heated by furnaces. The High School occupied the upper portion, and several schools of lower grade were kept in the rest of the building.

The West Fitchburg Grammar School building was also erected in 1860, at a cost of about three thousand three hundred dollars, and furnished accommodations for seventy-two scholars. Both these houses reflected great credit on the building committee, consisting of Edwin Upton, William O. Brown and Arnold Wilson.

The appropriation for schools in 1860 was seven thousand four hundred and fifty dollars.

After the removal of the High School to the new building the Academy was used for various purposes. It was here that Mr. E. Butterick began the business of making shirt-patterns. He was successful and later removed to New York City, where he established one of the largest pattern and fashion houses in the world. About 1865 the town sold the Academy building for seven hundred dollars, and a few years later it was moved, and became a portion of the Rollstone House.

In 1867 began another period of school-house building. During that year the Middle Street house was erected at a cost of upwards of thirteen thousand dollars.

In 1868 the town appropriated $16,000 for the support of schools and expended nearly $100,000 for new buildings and alterations and repairs of old houses.

The High School had outgrown its quarters, and in 1868 the erection of a handsome High School building was begun on the old Academy lot. It was completed in 1869, and cost upwards of $50,000. It still serves the purpose for which it was built, and is a well-arranged, commodious school edifice—an ornament and credit to Fitchburg.

In 1868 the Day Street School-house was almost entirely rebuilt and considerably enlarged, at an expense of about $30,000.

Since 1870 much has been done toward improving the facilities for the instruction of the youth of this city.

Early in 1873 Mr. Eli A. Hubbard, who was principal of the High School, 1854–57, was secured to fill the newly-established office of superintendent of schools. He began his duties in April, 1873, and held the position about two years, when he resigned, much to the regret of our citizens. In 1875 Mr. Joseph G. Edgerly was elected his successor, and has held the office to the present time. Mr. Edgerly has attended faithfully to his duties, and his annual reports are documents full of interesting and valuable information regarding the progress and needs of the schools of the city.

The general condition of our public schools since the city form of government was adopted can perhaps best be shown by the following table giving the annual appropriations, number of teachers employed and average daily attendance of pupils from 1873 to 1888 inclusive :

Year.	Appropriation.	No. of Teachers.	Avrg. Daily Attend'ce.
1873	$29,000	55	1686
1874	35,000	56	1728
1875	35,000	54	1750
1876	38,000	57	1783
1877	33,500	56	1868
1878	32,100	55	1917
1879	34,140	54	1834
1880	32,200	55	1771
1881	33,500	57	1865
1882	37,200	59	1977
1883	37,500	59	2094
1884	40,300	65	2233
1885	46,470	63	2305
1886	48,100	67	2306
1887	51,000	68	2204
1888	55,500	68	2185[1]

The appropriations above given do not include the amounts voted for repairs and new school-houses, but simply the appropriations for teachers' salaries, fuel, care of school-houses and rooms, and minor incidental expenses.

The law passed in 1884, requiring cities and towns in this State to furnish school-books to the pupils, caused an average increase of $4500 in the annual school appropriations for the last four years, and this is included in the figures for 1885–88 in the above table.

In 1886 the Catholics established a parochial school here, and converted their old church into a school-house for this purpose. A large proportion of their children attend this school, thus causing a considerable falling off in the attendance of the public schools. A parochial school building is now in process of erection in West Fitchburg.

Our school-houses are kept in good repair, the city making a special appropriation of several thousand dollars annually for this purpose.

In 1874 the High Street Grammar School building was considerably enlarged, at an expense of $10,000, and within a few years the Day Street house has been much enlarged and improved, at considerable expense.

During the past five years a number of new and substantial brick school-houses have been built, the most important of which are the Rollstone Street house, erected in 1883, one on Maverick Street and another on Highland Avenue, built in 1885, and the Clarendon Street house, built in 1887. The aggregate cost of the four structures was about $50,000, nearly one-third of which was expended on the Clarendon Street house, which has several improvements that the older buildings lack. It is said to be the best lighted, best heated and best ventilated building in town.

The city now owns school property valued at about $250,000. There are twenty school buildings, in which are kept forty-nine schools, graded as follows; one High School, four grammar schools, twelve intermediate, twenty-five primary and seven suburban ungraded schools. These are taught by some seventy teachers, most of whom are graduates of our own public schools. Instruction in singing and drawing is also given throughout the school year by two competent teachers.

For several years past a number of evening schools have been maintained during the winter season.

The passage of the Illiterate Minor Bill by the Legislature in 1887 obliged the city to largely increase its provisions for evening schools. During the fall session in 1886, and the two sessions in 1887, 622 pupils registered at these schools, though the average nightly attendance was only sixty-three. At the session early in 1888, 588 pupils registered, and the average nightly attendance was 227.

An evening drawing-school is also maintained every winter, and is very well attended.

We will conclude this section on the public schools of Fitchburg with a few remarks concerning the High School. The building, which is pleasantly located on a lot bounded by Academy, Davis, Pleasant and High Streets and is surrounded by well-kept grounds, contains one large school-room, one smaller and five recitation-rooms, besides a laboratory, mineralogical cabinet, reception-room, etc., all of which are exclusively devoted to the High School.

The school has prospered and been a credit to the town and city since it was established, in 1849, and has been under the care of competent instructors, both principals and assistants, who have labored faithfully to maintain a high standard of scholarship.

The names and terms of service of the principals of the Fitchburg High School since its establishment are as follows:

Anson Southard Marshall, A. B.....1849-51
Enoch Gibson Hook, A.B.....1851
Martin Heald Fisk, A. M.....1852

[1] Spring and summer te. ms of 1888.

Rev. Ezekiel Hale Barstow, A. M.	1852–53
Jonathan Clarkson Brown, A. B.	1853–54
Rev. Milan Hubbard Hitchcock, A. B.	1854
Eli Andrews Hubbard, A. M.	1854–57
Hanson Leland Read, A. M.	1857–62
Francis Huntington Snow, A. B.	1862–63
Edward Dorr Pritchard, A. M.	1863–64
Rev. Walter Whitney Hammond, A. M.	1864–65
Ruel Baxter Clark, A. B.	1865–75
Ray Greene Huling, A. M.	1875–86

Herbert William Kittredge, A.M., the present principal, began his duties here in September, 1886, and under his management the school has been satisfactorily carried on since. He is efficiently aided in his work by six assistant teachers—four being ladies and two gentlemen.

The number of pupils in the High School at the present time (autumn of 1888) is two hundred and fifty-six—the largest number ever enrolled in the school.

In one respect, we regret to say, our High School has not kept up the high standing it once had. Fifteen years ago the Fitchburg High School was recognized as an excellent fitting-school for college, and ranking with the High Schools of Worcester, Somerville and other large cities. During the eight years following 1867 thirteen of its graduates entered Harvard College alone, and every one passed through the entrance examinations with credit to himself and the school; and during the same eight years as many graduates entered other colleges.

Since 1875 the school has lost its prestige in this respect, not because of lack of ability or desire on the part of the principals of the school to fit boys for college, but because the popular sentiment decreed that so much time and attention should not be devoted to classical study in the High School; but it is to be hoped that some time in the future the Fitchburg High School may regain its former high rank as a fitting school.

Libraries.—The Fitchburg Public Library, which is one of our most valuable and highly appreciated educational institutions, was not established until 1859; but for thirty years previous there was in Fitchburg some description of library, whose volumes were more or less accessible to the citizens.

Inasmuch as our present library is the natural outgrowth of these early collections of books, it is proper and advisable to give a short history of these efforts of the citizens to get a library together, prior to 1859, when the town came to the rescue, appropriated money and provided accommodations for a free public library.

The Fitchburg Philosophical Society.—This appears to be the first literary association in Fitchburg of which we have any knowledge. It was organized about 1828 for the purpose of having lectures and debates,—what, in the rural parlance of to-day, is called a "Lyceum." It was before this society that Mr. Wood, in 1831, delivered his course of lectures on the early history of Fitchburg.

It was the intention of this society to accumulate a library, and, with this purpose in view, a number of books were purchased with money subscribed by the members, and Drs. Marshall and Abercrombie kindly furnished accommodations in their office for these books. The principal portion of this early collection consisted of a set of forty-seven large volumes, entitled "The Cyclopedia; or, Universal Dictionary of Arts, Sciences and Literature." This work was compiled by Abraham Rees, D.D., F.R.S., and comprised forty-one volumes of print, the other six containing maps and plates. These books were in themselves almost a complete library, and must have been quite expensive. The entire set has come down to our day, having been successively the property of the Philosophical Society, Library Association, Athenæum and Public Library.

At the present time the "Cyclopedia" is in the Wallace Library and Art Building, and one day in July, 1888, the writer took occasion to go there for the special purpose of seeing this relic of by-gone days. All forty-seven volumes were found packed away in a basement room, and the librarian informed the writer that no one had ever before, to his knowledge, asked to see these books since he became librarian, fifteen years ago.

The volumes are in an excellent state of preservation, and it seems as if they ought to occupy a place of honor in the library, and be carefully preserved, for unquestionably Rees' "Cyclopedia" may be considered the foundation of the Fitchburg Public Library.

The Philosophical Society existed until 1838, but did not accumulate much of a library. It was succeeded, in 1838, by

The Fitchburg Library Association.—This was a stock organization, each member thereof holding one or more shares. The Association purchased the books belonging to the Philosophical Society and in the course of the next fourteen years added enough to make, in 1852, a total of about five hundred volumes.

The library of the Association was kept in Mr. Phineas S. Crocker's book-bindery and stationery store, a small, one-story wooden building on the site now occupied by the Stiles Block. Mr. Crocker was for several years librarian, and some of our older citizens well remember his genial and accommodating manners. George E. Towne, Esq., in his address at the dedication of the Wallace Library and Art Building, July 1, 1885, speaking of Mr. Crocker as a librarian, said, "The care bestowed by him upon the few volumes, the satisfaction with which he aided applicants in their selections, and the pride he felt in having been selected as worthy to bear such tremendous responsibility, were something marvelous to see."

Books were loaned to members, and it is probable that no very strict account of the delivery and return of books was kept, for when the affairs of the Asso-

ciation were wound up in 1852, eighty volumes, or about one-sixth of the total number, were found to be missing.

The Fitchburg Library Association cannot be said to have been a flourishing institution. The people did not take hold of the enterprise with the enthusiasm that was essential to make it a success. The membership was not large, there being only thirty-three shareholders in 1852.

By that time it had finished its mission of preserving and gradually increasing a collection of books, the nucleus of a future public library, and was ready to give way to, and be absorbed by, a new and stronger library organization,—

THE FITCHBURG ATHENÆUM.—December 6, 1851, a number of citizens who were desirous of having a new library association formed in town, met at the Fitchburg Hotel to talk the matter over. At this meeting it was decided to start a subscription paper, and also to confer with the shareholders of the Fitchburg Library Association, and ascertain upon what terms they would dispose of their library to the new association. A committee of five, consisting of Charles Mason, Rev. C. Woodhouse, Asher Green, W. B. Wood and L. H. Bradford, was chosen to take the matter in charge and report at a future meeting, "to be called at such time as the committee shall see fit." It was also voted that this committee report, at the same time, a plan of organization for the proposed library association.

It was not until March 4, 1852, that the committee made their report to the citizens interested. The meeting was held in the town-hall and a preliminary report read by Mr. Mason, chairman of the committee.

The substance of this report was that the names of one hundred and twenty-five subscribers, at five dollars each, had been obtained by Mr. William B. Wood; that the members of the Fitchburg Library Association had voted to transfer their library to the proposed new association, provided each of its members be entitled to one share in the new association, and become a member of it, with all the privileges of new subscribers. As the membership of the Library Association was thirty-three, and each share in the new association was worth five dollars, this would be equivalent to paying one hundred and sixty-five dollars for the library which contained, as was supposed, about five hundred volumes. The committee considered this a fair price and recommended that the library be purchased on the terms stated.

The report then proceeded to enumerate the advantages that would arise from the institution of such a library in Fitchburg, and marked out, in a general way, a plan of organization and the methods to be used in carrying on the association. Each member (except those who came in from the Fitchburg Library Association) was to pay five dollars, and thereby be entitled to one share in the association and to pay one dollar per year, to be applied to the increase of the library. Provisions were also made for officers, board of directors, etc., and suitable regulations for the loaning and returning of books.

It was also recommended to have a course of lectures each winter, that vigorous efforts be made to increase the number of subscribers and that, "at a proper time, the Association be organized, as Proprietors of a Library, as a corporation, under the provisions of the Revised Statutes."

This report was printed in full in the *Fitchburg Sentinel* of March 12, 1852, and at its conclusion was the following:

The above report was unanimously accepted and the committee were instructed to present a plan of organization at a future meeting and, in the meantime, to take measures to procure additional subscribers and to obtain suitable accommodations for the Library in the new Town House.

In accordance with the last instruction, the matter of providing a room in the town-house, that was to be built immediately, was brought before the citizens at the annual town-meeting, April 5, 1852, and it was voted "that the building Committee be authorized to procure or provide a room for the Library Association in the new Town House."

Matters progressed favorably in all respects, and by the following autumn the association was about ready to begin its work. The name fixed upon was the Fitchburg Athenæum, and the shareholders were duly organized as a library association under that name.

One of the first acts of the Athenæum was to make arrangements for a course of lectures by well-known men during the winter of 1852–53. The committee on lectures was Charles Mason, Rev. John Jennings and Rev. Horatio Stebbins, and no pains were spared by this committee to secure an able and popular course of lectures.

This was essentially an experiment, but the citizens appreciated the earnest labor of the committee and made it a success in every way. Season tickets for the course were put at a price certainly within the reach of all, a price that seems ridiculously small in these days, viz., one dollar for gentlemen and fifty cents for ladies.

In the *Sentinel* of December 17, 1852, appeared the following:

FITCHBURG ATHENÆUM LECTURES.

A course of *twelve* Lectures will be delivered before the Fitchburg Athenæum the current winter. The Introductory lecture will be by the Rev. Mark Hopkins, D.D., President of Williams College, on Tuesday evening, Dec. 21st, at the Meeting House of the Calvinistic Congregational Society. The exercises on the Tuesday evening succeeding will be a POEM, by the Rev. John Pierpont, of Medford.

The announcement then went on to state that the list had not yet been completed, and mentioned the names of five prominent lecturers with whom dates had already been arranged.

The following is a correct copy of the list of lecturers and the dates on which they appeared before the Fitchburg Athenæum audiences. It is a list with which any lecture bureau might well be satisfied and
